

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

SOCIETIES—*continued.*

BRITISH ASSOCIATION.—*Letter of Directions from P. M. T.*, 671. *Preliminary Gossip*, 693, 739, 844. *Meeting of Gen. Committee and Report*, 772. Evening Meeting—President's Address, 780. Treasurer's Report, 781. Meeting of Gen. Com. 782. Meet. of Gen. Com.; Grants of Money, 804. Dr. Robinson's Address, 866 [see also pp. 885, 945, 982, 1027]

SEC. A.—*Mathematical and Physical Science.*—Robinson on Catalogue of Stars, 772. Powell on Elliptic Polarization of Light—Lloyd on Phenomena of Metallic Reflection—Draper on Change by Exposure to Beams of Sun, 773. Meteorological Observations at Plymouth and Devonport—Nott on New Electrical Machine, 796. Lloyd on Graphical Representation—Apjohn on Barometric Formula, 797. Russell's Report on Tides in Scotland—Hodgkinson on Inelasticity, 798. Robinson on Captive Balloons—Robinson on Fifty Telescopic Stars—Brewster's Reports, 799. Report on Reduction of Meteorological Observations (*with a diagram*)—M'Cullagh on Theory of Total Reflexion, 823. Herschel's Report on Nomenclature of Stars—Lloyd on Magnetic Force—Scoresby on Artificial Magnets, 824. Joule's Galvanometer—Hamilton on Calculus of Probabilities—Hunt on Changes of Bodies in Dark, 825. Wheatstone on Electro-Magnetic Meteorological Register—Report on Kew Meteorological Observations—Report on Simultaneous Magnetical and Meteorological Observations, 846. Herschel on Photographic Process—Brewster on Action of Oils upon Light—On Iceland Spar—Robinson on Barometric Compensation of Pendulum—Report of Committee on Waves, 847. Larcom on Contoured Maps—Moyes' Thermometrical Observations at Aden—Nott on Terrestrial Magnetism—Green on Specula of Telescopes—Robinson on Index Error of Circle, 848. Knox on Rain in S.W. of Ireland and Suffolk—Brown on Tide at Arbroath—Thomas on Abnormal Tides, 849

SEC. B.—*Chemistry and Mineralogy*—Hunt's New Photographic Process—Hunt on Influence of Light on Plants—Tamnau on Harmotome—Andrews on Heat of Combination—Spencer on Paracyanogen—West on Corrosion of Lead by Water, 774. Kane on Colouring Matters—Draper on Decomposition of Carbonic Acid Gas, 775. Hunt on Influence of Light on Metallic Compounds, 799. Mosander on Cerium, &c.—Tamnau's Specimens—Dircks on Production of Smoke, 800. Jennings on Agriculture of Cork—Apjohn on Arsenites, 825. Joule on Magneto-Electricity—Apjohn on Hygrometric Formula—Townsend on Minerals of Cork—Lucas on axles of Locomotive Engines—Will on Alkalies (*with a diagram*)—Knox on Iodine and Fluorine—Armstrong on Hydro-Electric Machine, 826

SEC. C.—*Geology and Physical Geography.*—Lyell on Appalachian Mountains—Rogers on Earthquakes, 775. Griffith on Direction of Currents, 776. Griffith on Limestone Series of Ireland, 800. Phillips on Ordnance Geological Museum—Binney on New Red Sandstone—Phillips on Stratified Rocks, 801. Murchison on Permian System, as applied to Germany, 802 [see also p. 822]. Hopkins on Glaciers, 802. Report on Earthquakes in Scotland, 803. Williams on Rocks of Lundy Island—Peach on Remains of Fish in Cornwall—Haines on Limestone in Cork—Griffith on Old Red Sandstone—Murchison on Tertiary Basin of Middle Rhine, 827—Relievo Map of England and Wales, 849—Portlock on Geology of Corfu—Beamish on Water in Baltic—Jennings on Geological Phenomena in Cork—Griffith on Shells in Sand in Mayo, 850. Forbes's Report on Mollusca and Radiata of Ægean Sea, 867

SEC. D.—*Zoology and Botany.*—Milliken on Fructification of Violet—Forbes on Nucleobranchia, 776. Mackay, Hincks, and Allman, on Specimens of Plants—Blackwall on Araneidæ—Clarke on Irish Specimens of Limax—Allman on *Plumatella repens*, 777. Peach on Marine Testacea—Humphreys on Mollusca of Cork, 778. Hincks on Fuchsia—Report on Zoological Nomenclature, 827. Strickland on Upupa and Irrisor—Catalogue of Birds in Corfu and Ionian Islands—Report on Varieties of Human Race—Heath on People of Navigator's Islands—Dowden on Common Marigold—Clear on Insects found in Cork—Power on Plants of Cork, 828. Carpenter on Microscopic Structure of Shells, 829. Owen's Report on Mammalia of Great Britain (*continued*)—Strickland on Insessorial Order of Birds—Allman on Cirropteron—Allman on Six-banded Armadillo—On Irish Zoophytes—On a new Gasteropod—Hincks on Uses of Lichens—Waterhouse on Classification of Mammalia, 851. Alder and Handcock on New Mollusca—Thompson on Invertebrate Fauna of Ireland, 852

SEC. E.—*Medical Science.*—Olliffe on Disease of Biliary Ducts—Houston on Hæmorrhage—Harris on Cure for Aneurism, 778. Pickells on Œnanthe Crocata, 779. Houston on Acardiac Fœtuses—Popham on Gangrene of Lung—Olliffe on Intestinal Obstructions—Erichsen on Introduction of Air into Veins—Cronin on Statistical Results of Amputation—Bevan on Tests for Arsenic—Blake on Physiological Action of Medicines, 852

SEC. F.—*Statistics.*—Leatham on State of Travelling Poor of England—Beamish's Report of St. Michael's Parish, Cork—Powell's Contributions to Academical Statistics—Taylor on Irish Silk Manufacture—Catlow on Birth and Death—Bullen on Statistics of Kilmurry, 779. Bianconi on Conveyances in Ireland—Taylor on Pauper Lunatics of Ireland—Dowden on Vital Statistics, 803. Lawson on Connexion between Statistics and Political Economy—Osborne on Statistics of Lunacy—Report of Census of Ireland for 1841—Mayer on Infant Industrial Schools of Tuscany, 853. O'Flanagan on Blackwater River, 854

SEC. G.—*Mechanical Science.*—Ryan on Water as a Moving Power—Russell on Laws of Sound applied to Construction of Buildings (*with a diagram*), 780, 804—Dircks on Lamps and Gas Burners, 780. Hawkins on Manner of Procuring Oil—Taylor on Engine for Draining the Haarlem Lake—Hodgkinson's Report on Elasticity of Solid Bodies, 804. Dircks on Prevention of Smoke—Report of Committee on Form of Ships, 829. Report of Experiments on Steam Engines, 830. Bevan's Paddle-Wheel, 831. Cooke's Clock Movement—Leahy on Method of ascertaining Distances—Hawkins on Concrete—Deane's Method of Raising Sunken Vessels—Fairbairn's Report of Committee on Constitution of Metals—Taylor on Simple Steam Engine—Scoresby on Trigonometrical Indicator—Henessy on Machine for Determining Distances, 854

Jan. 4, 1843. W. HERRING, Hon. Sec.

COMMERCIAL SCHOOL, GOTHIC HALL, ENFIELD, MIDDLESEX, by T. WEARE, Son and Successor to the Rev. W. WEARE.—T. WEARE respectfully informs his friends, and those parents who are desirous of combining domestic comfort and liberal treatment with a sound and useful Education, that he continues to RECEIVE PUPILS on his usual moderate terms. Referees: Rev. J. J. Davies, Tottenham; Rev. T. Bourne, A.B., Hinckley; D. M'Niel, Esq. Stock Exchange; and the Parents of the Pupils. No day scholars are admitted. Accommodation for Parlour Boarders. The present Vacation terminates on the 14th instant.

EDUCATIONAL ESTABLISHMENT, TWICKENHAM.—The scholastic labours will be RESUMED on the 26th instant. The object of this Establishment is to give that Education which embraces the formation of character along with a *real* as well as a verbal intellectual instruction. It is conducted, as far as possible, on the plan of a family. The Principal, Mr. Raymond de Vericour, resided two years at the same time as Professor and on a Mission, in Mr. de Fellenberg's Institution at Hofwyl, and he endeavours to blend a moral education and general culture with the classical instruction usually given; thus forming a careful and systematic course of training, physical, moral, and intellectual, according to the advanced views of the present day.—References of the first order.

EDUCATION, HEALTH, and ELEGANCE of FORM.—In an ESTABLISHMENT for YOUNG LADIES, delightfully situated near Town, conducted by a Physician and his Family, the usual accomplishments are combined with attention to the figure. Apparatus of an improved description for preventing and remedying curvature has been prepared, and met the approval of some of the most eminent of the faculty, to whom references will be given. Schools and Private Families supplied with newly-invented Educational Couches, of the best construction, from 7 guineas upwards.—Particulars of A. B. C., Vanbrugh Castle, Maize Hill, Greenwich Park.

EDUCATION on plans founded on the practice of PESTALOZZI, FELLENBERG, and other celebrated Educators.
The attention of parents is respectfully called to a school for Young Gentlemen, in which the views of the above celebrated men are combined with the extensive personal experience of the advertiser to effect a liberal and improved education.
The Course of Instruction includes:—
The English, French, German, Latin, and Greek Languages.
Arithmetic, Algebra, Geometry, Mensuration, Trigonometry, &c.
Natural History, Experimental Philosophy, and Chemistry.
Ancient and Modern History, Geography, and Astronomy.
Writing, Drawing, Singing, Gymnastics, &c.
The TERMS, for a complete course of instruction in English, with Board, &c., are Twenty-four Guineas per annum. The French, German, Latin, and Greek Languages, each 3 Guineas extra. To render the instruction more effective, a select Library is provided, and an extensive collection of Philosophical Apparatus, with Cabinets of Minerals and Shells, a Laboratory and apparatus for chemical investigations, Bath, Workshop, Gymnastic Apparatus, &c. &c.
Prospectuses may be had of Messrs. Jones & Co. 30, Lower Holborn, or by addressing to S. P., Hofwyl House, Stamford-hill, Middlesex.

WESTMINSTER REVIEW.—BILLS and ADVERTISEMENTS intended for the forthcoming Number, should be sent on or before the 23rd instant.
H. Hooper, 13, Pall Mall East.

A NARTICLED PUPIL, CIVIL ENGINEERING, &c.—A CIVIL ENGINEER to a Public Board, having some important works in progress under his immediate superintendence, intends TAKING AN IN-DOOR PUPIL for three years, at a premium.—Apply by letter (pre-paid) to Y. Z., R. E. Barnes', Esq. 12, Mark-lane.

LIVERPOOL MECHANICS' INSTITUTION.
WANTED a PRINCIPAL TEACHER for the ENGLISH DEPARTMENT of the HIGH SCHOOL of this Institution. Minimum salary 210*l.* per annum. The attendance required is six hours every day, and two hours on two evenings in each week. The qualifications expected are, a thorough acquaintance with the English language, its derivation, history, and literature; with geography, history, and all other subjects generally included in an *English* education. The successful Candidate will be required to enter on his duties immediately after his appointment.
Applications, with testimonials of character, ability, and experience in tuition, to be sent on or before Monday, the 23rd January, to W. B. HODGSON, Secretary.

CONCHOLOGY.—LOVELL REEVE begs respectfully to invite the attention of Amateurs to his Collection of exotic SHELLS, which has received many new and valuable additions since the last announcement. Gentlemen residing in the country may have Specimens forwarded, catalogued and priced, to select from at their leisure.
This day is published, (size, quarto,) price 2*s.* 6*d.* coloured, No. 1, to be continued weekly, of the
Conchologia Iconica; a new and complete Repertory of Species of Shells, pictorial and descriptive; the cheapest and most elaborate work of Conchological Illustration ever offered to the public.
Lovell Reeve, Bookseller and Naturalist, 8, King William-street, Strand.

GEOLOGY.—Persons wishing to become acquainted with this interesting branch of Science, will find their studies greatly facilitated by means of small Collections, which can be had at 2, 5, 10, 20, to 50 Guineas each, of J. TENNANT, Mineralogist to Her Majesty, 149, Strand, London.
A Collection for Five Guineas, which will illustrate the recent works on Geology, contains 200 Specimens, in a Mahogany Cabinet with five trays. The following is an outline of the contents.
MINERALS which are either the components of Rocks, or occasionally imbedded in them:—Quartz, Agate, Calcedony, Jasper, Garnet, Zeolite, Hornblende, Augite, Asbestus, Felspar, Mica, Talc, Tourmaline, Calcareous Spar, Fluor, Selenite, Baryta, Strontia, Salt, Sulphur, Plumbago, Bitumen, &c.
METALLIC ORES:—Iron, Manganese, Lead, Tin, Zinc, Copper, Antimony, Silver, Gold, Platina, &c.
ROCKS:—Granite, Gneiss, Mica-slate, Clay-slate, Porphyry, Serpentine, Sandstones, Limestones, Basalt, Lavas, &c.
FOSSILS from the Llandeilo, Wenlock, Ludlow, Devonian, Carboniferous, Lias, Oolite, Wealden, Chalk, Plastic-clay, London-clay, and Crag Formations, &c.

EXTENSION OF THE PRINCIPLES OF ART UNIONS.
THE Public are now respectfully invited to inspect some of the FINISHED ETCHINGS illustrative of the SONGS of SHAKESPERE by the ETCHING CLUB.
The whole series will be ready in the third week of January for every Subscriber to the ROYAL POLYTECHNIC UNION of LONDON for the year 1843.
The PRIZES will be drawn on the 25th of April, 1843.
Two most material points should be perfectly understood by the Prize-holders:—
First,—That they are to select for themselves the prizes adapted to their taste from the PRINCIPAL EXHIBITIONS IN LONDON.
Secondly,—That as the COMMITTEE is honorary, the whole subscription fund is exclusively devoted to the PRODUCER of the work of Art or Science (advertisements and correspondence alone excepted). The specimens are to be seen at 5, Cavendish-square: they will also be shown by the Honorary Secretary at the ROYAL POLYTECHNIC INSTITUTION, of whom the prospectus may be had, and to whom subscriptions may be paid.

TERMS of SUBSCRIPTION to CHURTON'S LIBRARY, 26, HOLLES-STREET.
FOR A SINGLE FAMILY, 1*l.* 5*s.*, or 10 guineas per annum.
FOR A BOOK SOCIETY, 6*l.* 8*s.*, 10, 13, or 16 guineas per annum.
Any number of Members can join in the same Book Society subscription,—no charge is made for Box or Catalogue. The standard collection consists of 25,000 volumes, and every New Work is added the day it issues from the press.
Full particulars, and Hints to Secretaries of Book Societies, sent by post.

NOW READY, GRATIS AND POST FREE,
THE NEW LIBRARY TERMS on which Families and Book Societies in Town or Country are furnished with the NEW PUBLICATIONS for Perusal.
Saunders & Otley, Public Library, Conduit-street. Of whom may be had,
HINTS FOR THE FORMATION OF READING SOCIETIES.

PRIZE ESSAY—TWENTY GUINEAS.

THE CENTRAL COMMITTEE of ASSISTANT DRAPERS, appointed for the purpose of obtaining an Abridgment of the Hours of Business, offer TWENTY GUINEAS for the best practical Essay 'On the Evils of the present Late-hour System of Trade generally, but more especially as they affect the Physical, Intellectual, and Moral Condition of the Drapers of the Metropolis; and on the Advantages likely to result from an Abridgment in reference to the Employed, the Employers, and the Public.'

The Central Committee, desirous of securing a complete and searching exposition of this question, expect that the Essay will not only treat the subject on principle, but also lay it open in all its details.

The MS. must be sent to the Secretary on or before the 6th February, 1843, with a sealed note attached, containing the name and address of the author.

The Essay not to exceed 32 octavo pages, and to become the exclusive property of the Committee.

The following Gentlemen have kindly consented to act as Adjudicators:—

The Hon. and Rev. BAPTIST W. NOEL.
W. D. OWEN, Esq. Great Coram-street; and
A MEMBER of the Central Committee.

Any further information may be obtained on application to C. MAYHEW,
Secretary to the Central Committee,
17, Upper Eaton-street, Pimlico.

Committee Room, Crown and Anchor Tavern, 4th January, 1843.

NAVIGATION AND NAUTICAL ASTRONOMY.

The Fourth Edition, Corrected, in a large vol. 8vo. price 10s. 6d. boards, or 12s. bound,

A TREATISE on NAVIGATION and NAUTICAL ASTRONOMY, adapted to the Purposes of Elementary Instruction; with an Extensive Series of Examples for Exercise, and all the Tables requisite for Nautical Computations; with Rules and Examples adapted to the 'Nautical Almanac' in its New and Improved Form.

By EDWARD RIDDLE, F.R.A.S.,
Master of the Nautical School, Greenwich Hospital.
London: Robert Baldwin, 47, Paternoster-row.

Also, extracted from the above work, price only 2s. 6d.,

Tables of the Logarithms of Numbers, and of Sines, Tangents, and Secants, to Six Places of Decimals.

FRENCH GRAMMAR FOR PRIVATE TUITION.

In 8vo. price 12s. in cloth, the Eighth Edition of

A GUIDE to the FRENCH LANGUAGE, (especially devised for Persons who wish to Study the Elements of that Language without the assistance of a Teacher.

By J. J. P. LE BRETHON.
London: Robert Baldwin, 47, Paternoster-row.

A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the elements of the French language practically, as surely as if a professed teacher were sitting by his side; and, with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed. Price 8s.

The Fourth Edition, in 12mo. price 5s. bound,

A PRACTICAL SYSTEM of ALGEBRA, designed for the Use of Schools and Private Tuition.

By PETER NICHOLSON and J. ROWBOTHAM.

*** In this edition the authors have not only introduced some important original matter, particularly on proportion, imaginary quantities, binomial theorem, series, &c., but have also endeavoured to illustrate many parts of the work by such alterations as will make it still more acceptable to the public.

London: Robert Baldwin, 47, Paternoster-row.

Also, price 8s. bound,

A Key to the above work, containing the Solutions of more than 900 Problems, by the use of which, and the Algebra, a person may acquire a knowledge of this valuable Science without the assistance of a Master.

CASWALL'S HISTORY OF MORMONISM.

In post 8vo. price 7s. 6d.,

THE PROPHET of the NINETEENTH CENTURY; or, the Rise, Progress, and Present State of the MORMONS, or LATTER-DAY SAINTS. To which is appended, an Analysis of the BOOK of MORMON.

By the Rev. HENRY CASWALL, M.A.,
Professor of Divinity in Kemper College, Missouri; and Author of 'America and the American Church.'
Rivingtons, St. Paul's-Churchyard, and Waterloo-place.

Also, by the same Author,

The City of the Mormons; or, Three Days at Nauvoo, in 1842. Price 1s. 6d.

Now ready, at all the Libraries, in 3 vols.

COLLEGE LIFE.

By J. HEWLETT, M.A.
Late of Worcester College, Oxford,
Author of 'Peter Priggins,' 'The Parish Clerk,' &c.

"A work which will gratify many tastes."—*Athenæum.*
"Remarkably pleasant and amusing volumes."—*Times.*
"Decidedly the best of the author's works."—*Age.*
"This clever production presents College Life to us with as much spirit as fidelity. All readers who are fond of a hearty laugh will derive much amusement from the perusal of these highly humorous volumes."—*Sun.*
"A most amusing and informing book—full of reality, of character, of humour, of spirit, and of fun; and which will be perused with pleasure and advantage by every class of readers."—*Naval and Military Gazette.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

—— The Garland; Song, with Pianoforte Accompaniment, the Words by Thos. Moore, Esq. 1s. 6d.

A Pianoforte Score of Mendelssohn's latest Work, 'The Choruses to the Antigone,' will also shortly be published By J. J. Ewer & Co. 69, Newgate-street.

ATKINSON'S AFFGHANISTAN.

Post 8vo. cloth, 10s. 6d.

THE EXPEDITION into AFFGHANISTAN; Notes and Sketches descriptive of the Country, contained in a Personal Narrative during the Campaign. By JAMES ATKINSON, Esq.

"This Volume contains the most detailed account that has appeared of the Expedition into Affghanistan. The writer appears to have been a most active and intelligent observer. Many interesting particulars regarding the fortunes of Dost Mahomed will be found in this volume."—*Morning Herald.*

London: W. H. Allen & Co. 7, Leadenhall-street.

SECOND EDITION, WITH NUMEROUS ADDITIONS.

Now ready, in 2 vols. small 8vo. with a finely coloured Portrait of the Emperor of China, a Map, and other Illustrations, 21s. bound,

NARRATIVE OF THE

WAR IN CHINA,

From the Commencement to the Close.
With Sketches of that almost unknown Country.
By Commander J. ELLIOT BINGHAM, R.N.

"The completest account of the Chinese war yet given to the world."—*John Bull.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

N.B. A few copies of the finely coloured Portrait of the Emperor of China, may be had separately, price 5s. each.

HONE'S EVERY DAY BOOK, TABLE BOOK, and YEAR BOOK.

Just published, New Editions of Mr. Hone's Every Day Book, Table Book, and Year Book. Each Volume of these valuable works being complete of itself, may be purchased separately during the Christmas Holidays, at the low price of 8s., originally published at 14s.

It is frequently a subject of deep consideration amongst parents how they can best entertain and instruct their children during the Christmas Vacation. The Publisher begs to recommend Mr. Hone's 'Every Day Book,' as a Work calculated to charm and entertain all ages, and to convey information and instruction to the young in that delightful manner which transforms a task into an amusement, and renders the book a most acceptable holiday present.

London: printed for Thomas Tegg, 73, Cheapside; and sold by all other Booksellers.

WARDEN'S REVEALED RELIGION, BY NICHOLS.

In 1 large vol. 8vo. price 12s. bound in cloth,

SCRIPTURE Exhibited in its PURITY and SIMPLICITY; being a system of Revealed Religion, digested under proper heads, and composed in the express words of Holy Writ: containing all that the Sacred Records reveal with respect to Doctrine and Duty, Praise and Precept, Faith and Practice; by the late Rev. JOHN WARDEN, M.A. The 3rd edition, corrected and enlarged, by JAMES NICHOLS, M.A.

London: printed for Thomas Tegg, 73, Cheapside; and sold by all other Booksellers.

MEADOWS'S SPANISH AND ENGLISH DICTIONARY.

In a very large pocket volume, printed in pearl type, price 7s. bound in cloth; or 7s. 6d. in roan,

A NEW SPANISH and ENGLISH DICTIONARY, in Two Parts: 1. Spanish and English; 2. English and Spanish. The first comprehends all the Spanish Words and their proper Accents, and every noun with its gender. The second, with the addition of many new Words, contains all the various meanings of English Verbs, in Alphabetical order, all expressed by their correspondent Spanish in a simple and definite sense. By F. C. MEADOWS, M.A., Author of the New French Pronouncing Dictionary, also the New Italian and English Dictionary, Grammars, &c.

London: printed for Thomas Tegg, 73, Cheapside; and may be had of all other Booksellers.

Just published, in 8vo. price 10s. 6d. bds.

SELECT WORKS of the Rev. CHARLES LESLIE, M.A. Containing a short and easy Method with the Deists—a short and easy Method with the Jews—the Truth of Christianity demonstrated—the Case stated between the Church of Rome and the Church of England—the Qualifications requisite to administer the Sacraments.

The Treatises in this Volume have been selected from the Works of the Rev. Charles Leslie, with the approbation of the Prelates of the Established Church in Ireland, for the use of Students of Divinity and Candidates for Holy Orders. They are carefully reprinted from the edition of his Theological Works in two volumes folio, published in 1721. And in some parts they are corrected by a comparison with the previous editions, which had been published under the superintendence of the Author himself.

Dublin: Andrew Milliken, Bookseller to the University.
London: Whittaker & Co.

MR. JAMES'S NEW WORK.

Nearly ready, in 3 vols. post 8vo.

FOREST DAYS.

III.

LIFE AND TIMES OF RICHARD CŒUR DE LION.

SAUNDERS & OTLEY, Publishers, Conduit-street.

AGENTS—for IRELAND, J. CUMMING, Dublin; for SCOTLAND, BELL & BRADFUTE, Edinburgh.

Also, the New Editions of

LODGE'S PEERAGE AND BOYLE'S COURT GUIDE

FOR 1843,

THOROUGHLY REVISED AND CORRECTED.

TO ALL WHO HAVE CONSERVATORIES, GREENHOUSES, AND GARDENS.

On Saturday, January 7, price 6d., stamped to go free by Post,

THE FIRST NUMBER FOR 1843 OF

THE GARDENERS' CHRONICLE;

A Weekly Record of Rural Economy and General News.

The HORTICULTURAL PART edited by PROFESSOR LINDLEY.

Such has been the success of 'THE GARDENERS' CHRONICLE,' that it has already a sale far beyond any contemporary of a like character—a sale which has gone on progressively increasing from the commencement. This fact, gratifying as it is to the Proprietors, will only stimulate them to further exertions; AND THEY, THEREFORE, MERELY REFER TO THE PAST AS AN EARNEST OF THE FUTURE, and announce, for the information of the public generally, the nature of the Publication.

THE GARDENERS' CHRONICLE is, in the first place, a weekly record of everything that bears upon Horticulture, Floriculture, Arboriculture, or Garden Botany, and such Natural History as has a relation to Gardening, with Notices and Criticisms of all works of importance on such subjects. Connected with this part are WEEKLY CALENDARS OF GARDENING OPERATIONS, given in great detail, and adapted to the objects of persons in every station of life; so that the Cottager with a few rods of ground before his door, the Amateur who has only a greenhouse, and the Manager of extensive gardens, are alike informed each week of the routine of operations which the varying seasons render necessary. It moreover contains very extensive Foreign and Domestic Correspondence upon Horticultural subjects—Reports of Horticultural Exhibitions and Proceedings at home and abroad—Notices of Novelties and Improvements—in short, everything that can tend to advance the profession, benefit the condition of the workman, or conduce to the pleasure of his employer; accompanied with Woodcuts, whenever the matter treated of requires that mode of illustration. Replies to all questions connected with the object of the Paper are also given weekly in great detail; and although the Paper is not, strictly speaking, an Agricultural Journal, yet it contains full Reports of the Proceedings of the Royal Agricultural Society, and much valuable information upon the more interesting subjects of discussion in this branch of inquiry.

IN THE SECOND PLACE, that description of domestic and political News is introduced which is usually found in a Weekly Newspaper. It is unnecessary to dwell on this head further than to say, that the Proprietors do not range themselves under the banners of any party; their earnest endeavours are to make THE GARDENERS' CHRONICLE a full and comprehensive *Record of Facts* only—a Newspaper in the true sense of the word—leaving the reader to form his own conclusion and opinions: their object being the elucidation and discussion of the laws of Nature, not of man. The reader is thus furnished, IN ADDITION TO THE PECULIAR FEATURE OF THE JOURNAL, with such a variety of information concerning the events of the day, as supersedes the necessity of his providing himself with any other Weekly Paper.

Each year commences a new Volume, and is complete in itself.

A Prospectus, with List of Contributors, may be had on application, or by letter, at the Office, 3, Charles-street, Covent-garden.

PARTIES INTENDING TO COMMENCE WITH THE NEW VOLUME had better give their orders at once to any Newsvender.

"It is an admirable performance, and should find a place in every family establishment."—*Bath Herald.*

"It contains a mass of information indispensable to those for whom it is intended, and surpasses in value any other book of its character."—*Blackwood's Lady's Magazine.*

NEW COMMENTED EDITION OF THE AUTHORIZED VERSION OF THE HOLY SCRIPTURES, Dedicated to their Graces the Archbishops of Canterbury and Armagh.

Preparing for publication, to be completed in about Twenty Monthly Parts, handsomely printed in royal 8vo. price 2s. 6d. each, the First of which will appear early in 1843,

THE HOLY BIBLE, Containing the OLD AND NEW TESTAMENTS; Accompanied throughout with a brief HERMENEUTIC AND EXEGETICAL COMMENTARY AND REVISED VERSION,

By the Rev. T. J. HUSSEY, D.D. Rector of Hayes, Kent.

Sufficient grounds for offering to the public at the present time this New Edition of the Holy Scriptures will be found, it is hoped, in the work itself, when compared with the religious wants of the community. The first two columns of this edition will present a correct reprint of the authorized version of the Bible. In the fourth column, corresponding to the first, the Chronology of Dr. Hales will be introduced, with such various readings and renderings as are entitled to respect. The third column will contain the authorized version carefully revised, embodying in italic characters a brief Hermeneutic and Exegetical Commentary with a Paraphrase, to no greater extent, however, than is absolutely necessary to elucidate the text. Additions from the Samaritan Pentateuch, from the Septuagint, or from any other version, will appear in a smaller roman character.

Henry Colburn, Publisher, 13, Great Marlborough-street. Orders received by every Bookseller throughout the Kingdom.

NEW SCHOOL BOOKS.

ELEMENTS of ASTRONOMY; adapted for Private Instruction and Use in Schools. Illustrated by Fifty-six Engravings on Wood. By HUGO REID, Lecturer on Natural Philosophy. 12mo. 3s. 6d. bound.

"This is by far the best manual of Astronomy with which we are acquainted. Mr. Reid is evidently a man of real science, and has done what no other compiler of similar books has done—he has begun at the beginning. The mathematical part of the book is clear and comprehensive, and the 'results' are detailed in an able and lucid manner."—*Church of England Quarterly Rev.*

"We willingly recommend Mr. Reid's volume as one of the best of the kind we have met with. The careful teacher in his school, or the self-teacher in his study, if our recommendation should lead them to procure the book, will thank us for it."—*Methodist Magazine.*

RATIONAL READING LESSONS: or Entertaining Intellectual Exercises for Children. With a Key. By the Author of 'Diversions of Hollycot, or the Mother's Art of Thinking,' &c. 18mo. 2s. 6d. cloth.

"A capital and well-considered book for beginners. The author of this volume is a practical philosopher amongst children, and has tested in every way every possible mode of reaching their hearts and understandings. She has thoroughly succeeded, and this little book may be regarded as a boon to children of the tenderest age."—*Atlas.*

"An excellent selection of reading lessons upon all sorts of subjects likely to interest children, arranged in the elliptical manner, and with (in a pocket in the cover of the book) a 'Key' containing the omitted words."—*Westminster Review.*

Oliver & Boyd, Edinburgh; Simpkin, Marshall & Co. London.

8, New Burlington-street, Jan. 7, 1843.

In one closely-printed volume, 508 pages, price 10*s.* 6*d.*

A POPULAR HISTORY of BRITISH INDIA, CHINA, and the Insular Possessions of England in the Eastern Seas.

By W. COOKE TAYLOR, LL.D.

"It is precisely such a summary as was wanted by the general reader. Such a volume, in particular, has long been wanted in our schools, where little is taught of India more than may be learnt as a geographical exercise; and yet the stirring and romantic interest of the theme, leaving out of view its importance, should recommend it to the teacher as likely to prove a welcome and animating addition to the usual course of historical instruction."—*John Bull*, Nov. 18.

J. Madden & Co. 8, Leadenhall-street.

APPROVED SCHOOL BOOKS, AND WORKS ON THE FOREIGN LANGUAGES.

JUST PUBLISHED,

1 very thick vol. 8vo. 2*l.* 12*s.* 6*d.* handsomely bound in cloth,

AN ENCYCLOPÆDIA OF ARCHITECTURE,

HISTORICAL, THEORETICAL, and PRACTICAL.

By JOSEPH GWILT.

Containing 1,102 pages, illustrated with more than 1,000 Engravings on Wood by R. Branston, from Drawings by John Sebastian Gwilt.

Forming the Fourteenth of the Series of

ENCYCLOPÆDIAS AND DICTIONARIES.

Opinions of the Press.

From *John Bull* of Nov. 12, 1842.

This valuable Encyclopædia embraces a complete body of architecture, which has hitherto been a desideratum in the literature of the fine arts; since, though many are the treatises on separate departments of the art, this is the first attempt which has been made to embody its several branches into one complete whole. The object has been to present the student with the knowledge indispensable to the exercise of his profession, and this end Mr. Gwilt seems fully to have attained. But the use of the work is not confined to the architect. As a guide to the formation of a correct taste on the part of the amateur, it will be found for the most part an equally sure and delightful one. The opening chapters, in which architecture is traced from its origin, and through all its varieties, down to the time of George III., form a volume of themselves, full of curious and instructive details, and profusely illustrated with plans and elevations of the principal buildings, ancient and modern. Of a different interest, but possessing a more immediate practical utility, are the sections treating of the most desirable constructions of edifices at the present time. Much of the information embodied will not readily be found elsewhere, while nothing of importance, to be found in preceding writers, is omitted.

The work is completed by an index; and by a *Glossary*, which is a work of itself, and might almost serve alone as a dictionary of architecture. The illustrative cuts are of the first order of art, and upwards of one thousand in number.

From *The Standard* of Nov. 17, 1842.

There is not a subject which applies to architecture but what has been carefully collated and dilated upon in this valuable Encyclopædia,—a work which not only to the practical man must be of use, but of interest to every reader who wishes to inform his mind upon a subject fast becoming a necessary portion of elegant education. The remarks upon the laws relating to buildings, dilapidations, and valuations of property, would alone justify a strong recommendation; and the Glossary, containing a list of the principal architects of all times and countries, and their works, adds to its value as a book of reference. Upwards of 1000 illustrations adorn its pages, all of which appear to be drawn with the greatest care, and are engraved upon wood with artistic clearness and effect. Those in illustration of the Elizabethan period are as beautiful as any we have had of late the satisfaction of calling attention to.

From *The Spectator* of Nov. 19, 1842.

This elaborate and learned work constitutes a complete body of architecture, and gives such information concerning its history, theory, and practice, as students and practitioners should acquire, and which the amateur and general reader may wish to refer to. The vast mass of matter is admirably arranged, put into a condensed and clear form, and illustrated with woodcuts that of themselves are valuable examples, independently of the text. The history of architecture from the earliest ages is traced through various countries and periods, and the relations of the several styles to each other are distinctly shown: this portion may be read throughout as a complete treatise. Mr. Gwilt is eminently qualified for this laborious task, which he has executed with ability and *en amore*. The Glossary alone is a dictionary of architecture sufficient for casual use, and it includes a chronological list of architects, with their principal edifices, as well as a classified catalogue of works on the subject. An index completes the value of the book as one of reference. The engravings are beautifully executed. We shall have occasion to return to the consideration of one or two points suggested by the perusal of this volume.

From *The Globe* of Nov. 22, 1842.

Accuracy is the first requisite in works purely scientific, for the absence of which neither beauty of style nor expensiveness of illustration can be a compensation. The next desideratum is that they be sufficiently elaborate in description to afford full instruction to the student; and where illustration of the principles and results, by diagrams, plans, and reviews, be required, that these be given in sufficient numbers, so that no void be felt in studying the science or art to which they relate; and, at the same time, that economy be so kept in view, as that the works be accessible to as many as possible who are desirous of availing themselves of the assistance they afford. We feel no hesitation in pronouncing the volume before us a *chef-d'œuvre* of this class of publication.

From *The Britannia* of Dec. 10, 1842.

It is no idle compliment to Mr. Gwilt, to say that in the composition of his work he seems to have had the eternal durability of the great principles of architecture constantly before him, and that he has lavished on a single volume all the care, and knowledge, and talent, necessary to fit it for ages of popularity. A work on one department of art so complete in all its parts, so ably executed, containing so vast a store of information, enriched so abundantly with illustrations, and so handsomely produced, is, even in these enterprising times, a novelty which it is not only a pleasure but a duty to commend for its manifold use and exceeding value. The volume opens with a description of the history of architecture, in which every distinctive style is not only noticed but delineated, its leading characteristics marked, and its origin, progress, and decline distinctly traced. From the first rude huts or caves designed for shelter, we are carried gradually forward until splendid columns, and arches, and domes arise, and the art which began by constructing habitations to shelter man from the inclemency of the weather, becomes the greatest triumph of the human capacity, the most enduring record of a nation's grandeur, and the sublimest outward evidence of a people's prosperity and elevation of mind. The theory of the art is next fully treated of, and then its practice, illustrated with numberless sections, drawings, elevations, and plans. The volume includes a compendious digest of all laws relative to building, a copious encyclopædia of terms, and an index, to facilitate the task of reference.

BOOKS FOR SCHOOLS AND FAMILIES,

PUBLISHED BY

JOHN W. PARKER, West Strand.

THE INSTRUCTOR; or, Progressive Lessons in General Knowledge. With Questions for Examination upon each Lesson. In 7 vols., each being complete in itself, and illustrated by numerous Woodcuts, price 2*s.*

Vol. I. EXERCISES and CONVERSATIONS, with easy Lessons from History—Vol. II. LESSONS on HOUSES, FURNITURE, FOOD, and CLOTHING—Vol. III. LESSONS on the UNIVERSE; the Animal, Vegetable, and Mineral Kingdoms; and the Human Form—Vol. IV. The BOOK of the CALENDAR, the MONTHS, and the SEASONS—Vol. V. DESCRIPTIVE GEOGRAPHY, with Popular Statistics of the various Countries and Divisions of the Globe—Vol. VI. ELEMENTS of ANCIENT HISTORY—Vol. VII. ELEMENTS of MODERN HISTORY.

A PRACTICAL INTRODUCTION to ENGLISH COMPOSITION; adapted to the use of both Sexes. By the Rev. J. EDWARDS, M.A., Second Master of King's College School, London. 2*s.* 6*d.*

OUTLINES of SACRED HISTORY; from the Creation of the World to the Destruction of Jerusalem. 7th edition, with Engravings, 3*s.* 6*d.*

BIBLE MAPS for SCHOOLS. A Series of New and Accurate Maps, with Geographical and Historical Illustrations of the Holy Scriptures. Sewed, 3*s.*

Bound in cloth, with the Maps beautifully coloured, 7*s.* 6*d.*

BIBLE MAPS; accompanied by Explanatory Memoirs, and a copious Index of Scriptural and Modern Names, and forming a complete Historical and Descriptive Atlas of Scripture Geography. By WILLIAM HUGHES, F.R.G.S.

BIBLE NARRATIVE chronologically arranged, in the words of the authorized Version; continued by an Historical Account of the Jewish Nation; and forming a Consecutive History from the Creation to the Termination of the Jewish Polity. Dedicated by permission to the Lord Bishop of Winchester. By Miss R. M. ZORNLIN. 2nd edition, revised, with a set of Maps, 7*s.*

BIBLE BIOGRAPHY; Histories of the Lives and Conduct of the Principal Characters of the Old and New Testament. By E. FARR. 4*s.* 6*d.*

READINGS in NATURAL THEOLOGY; or, the Testimony of Nature to the Being, Perfections, and Government of God. By the Rev. H. FERGUS. 4*s.*

ABBOTT'S READER: a SERIES of FAMILIAR PIECES, in PROSE and VERSE; calculated to Exercise a MORAL INFLUENCE on the HEARTS and LIVES of YOUNG PERSONS. By the Authors of 'The Young Christian,' &c. 4th edition, 3*s.*

THE CLASS READING-BOOK; designed to furnish Youth with Information on a variety of subjects. Compiled by GEORGE LUDLOW, Master of the Reading and Writing School at Christ's Hospital, Hertford. 4th edit. enlarged and improved, 3*s.* bound.

A SCHOOL HISTORY of ENGLAND; with a copious Chronology, Tables of Contemporary Sovereigns, and Questions for Examination. Abridged from the 'FAMILY HISTORY OF ENGLAND.' Strongly bound, 6*s.*

READINGS in POETRY; a Selection from the best English Poets, from Spenser to the present Times; with Specimens of the American Poets; Biographical Sketches, and Notes. 6th edition, 4*s.* 6*d.*

READINGS in ENGLISH PROSE LITERATURE; choice Specimens of the best English Writers, from Lord Bacon to the Present Time. With Biographical Sketches and Essays on English Literature. 4th edition, 4*s.* 6*d.*

READINGS in BIOGRAPHY; a Selection of the Lives of Eminent Men of all Nations. 4th edition, 4*s.* 6*d.*

THE STUDENT'S MANUAL of ANCIENT HISTORY; the Political History, Geographical Position, and Social State of the Principal Nations of Antiquity; carefully Digested from the Ancient Writers, and Illustrated by the Discoveries of Modern Scholars and Travellers. By W. C. TAYLOR, LL.D. M.R.A.S. 3rd edition, enlarged, 10*s.* 6*d.*

By the same Author, 2nd edition, enlarged, 10*s.* 6*d.*

THE STUDENT'S MANUAL of MODERN HISTORY; the Rise and Progress of the Principal European Nations, their Political History, and the Changes in their Social Condition: with a History of the Colonies founded by Europeans.

READINGS in SCIENCE; familiar EXPLANATIONS of Appearances and Principles in NATURAL PHILOSOPHY. 3rd edition, with many Engravings, 5*s.*

EASY LESSONS in MECHANICS; with Familiar Illustrations, showing the practical Application of the various Mechanical Principles. 2nd edition revised, with numerous Woodcuts, 3*s.*

MINERALS and METALS; their Natural History and Uses in the Arts: with Accounts of Mines and Mining. 2nd edition, with Engravings, 2*s.* 6*d.*

REVIEWS

Military Operations at Cabul. With a Journal of Imprisonment in Affghanistan. By Lieut. Vincent Eyre, Bengal Artillery. Murray.

THIS is the first voice that has reached us from the late prisoners at Cabul—the first clear and consistent account of the disasters that overwhelmed a British Army, and brought disgrace on the British name. That voice is, to our taste, somewhat loud and sharp. Mr. Eyre speaks over-confidently—as one having authority to condemn; as if, indeed, he were the representative of many, and backed by their declared judgment. Now if this be so, it may be a question how far he was at liberty to indulge in such severe censures on his superior officers, whose conduct is, perhaps, at this very moment undergoing official inquiry. We are, indeed, told in the preface, that "all such investigations will have been closed before a copy of the book can find its way to India;" but may not those who have written it, or sanctioned its publication, have been called as evidence? and does it not tend to warp the judgment of any man, that he has already recorded his opinion in the face of Europe? Our courts of law, we believe, act on this supposition; and such a publication would in England be held as a valid objection to a juryman, and as tending to shake confidence even in a witness. Is the witness more entitled to credit, because the fact of publication does not happen to be known? We are quite sure that Mr. Eyre speaks the truth, and nothing but the truth, according to his belief; every page of his book confirms this opinion: but in the progress of the inquiry going on in India, a thousand circumstances may be brought forward, that were unknown to him as a subordinate officer, and which must materially affect the question at issue, on which, however, he stands pledged in the face of his country. There is hardly one person who was in authority at Cabul, who is not, in this book, severely censured. The Envoy, Sir William Macnaghten, comes off best, and is, indeed, highly praised for his chivalrous intrepidity; but at last "his mind lost its equipoise:" and throughout Macnaghten and Burnes are both censured for their political remissness and want of foresight before the rebellion broke out; Burnes especially:—

"No man, surely, in a highly responsible public situation—especially in such a one as that held by the late Sir Alexander Burnes—ought ever to indulge in a state of blind security, or to neglect salutary warnings, however small. It is indisputable that such warnings had been given to him; especially by a respectable Affghan named Taj-Mahomed, on the very previous night, who went in person to Sir A. Burnes to put him on his guard, but retired disgusted by the incredulity with which his assertions were received."

The outbreak itself, we are subsequently informed, was got up by Shah Soojah, to get rid of Burnes!

"Capt. Conolly obtained convincing proof that Shah Shoojah originated the rebellion with a view to get rid of Burnes, whom he detested, and of several chiefs, whom he hoped to see fall a sacrifice to our vengeance; little anticipating the ruinous result to himself and to us. Poor Burnes had made but few friends among the chiefs, who now never mention his name but in terms of the bitterest hatred and scorn. He seems to have kept too much aloof from them; thus they had no opportunity of appreciating his many valuable qualities, and saw in him only the traveller, who had come to spy the nakedness of the land, in order that he might betray it to his countrymen. The King considered him as a personal enemy, and dreaded his probable succession to the post of Envoy on the departure of Sir W. Macnaghten."

As to the military commanders, they were, according to Mr. Eyre, mere old women, or worse; Elphinstone, an amiable man, but worn out; "illness had materially affected his nerves, perhaps his intellect." "His fate," we are told, "ought to serve as a warning to others of his class, who, priding themselves on a *Peninsular* fame of some thirty years' standing, are too apt to forget the inroads time may have meanwhile made on mind and body;" and the General's incapacity, "not being redeemed by the qualities of his second, proved the ruin of us all." Here we have reputations knocked down like nine-pins! Now, for our own part, we shall wait the issue of the Inquiry, before we allow our judgment to be prejudiced against men hitherto of unsullied reputation; and shall, therefore, confine ourselves to the painful narrative of suffering, about which there can be no doubt.

It was early in the morning of the 2nd of November, that intelligence was brought into the cantonment that a popular outbreak had taken place in the city, and that an attack had been made on the houses of all the British officers residing in Cabul. Before 9 o'clock on the same day Burnes and his companions were murdered. Yet little danger was apprehended. It was still believed to be a mere tumult, and no measures were taken demonstrative of British energy and power. The next day, Major Swaine and his regiment, proceeding to join Brigadier Shelton's force near the Lahore Gate, were driven back into the cantonment; and the 37th regiment, on its return from Khoord Cabul, was attacked by 3,000 Giljyes, but "managed" to save all its baggage, excepting a few tents. The enemy also took possession of the King's Garden, and thus cut off all communication with the commissariat fort; indeed, the latter was abandoned the next day:—

"It is beyond a doubt that our feeble and ineffectual defence of this fort, and the valuable booty it yielded, was the first *fatal* blow to our supremacy at Cabul. * * It no sooner became generally known that the commissariat fort, upon which we were dependent for supplies, had been abandoned, than one universal feeling of indignation pervaded the garrison; nor can I describe the impatience of the troops, but especially the native portion, to be led out for its recapture—a feeling that was by no means diminished by their seeing the Affghans crossing and recrossing the road between the commissariat fort and the gate of the *Shah Bagh*, laden with the provisions upon which had depended our ability to make a protracted defence."

Active and aggressive measures were now taken, marked, as usual, with personal gallantry and heroic daring, but with little credit in a military point of view:—

"At this time not above two days' supply of provisions remained in garrison, and it was very clear that, unless the enemy were quickly driven out from their new possession, we should soon be completely hemmed in on all sides. At the Envoy's urgent desire, he taking the entire responsibility on himself, the General ordered a force to hold themselves in readiness under Brigadier Shelton to storm the Rica-bashee fort. * * The whole issued from cantonments, a storming party consisting of two companies from each regiment taking the lead, preceded by Capt. Bellew, who hurried forward to blow open the gate. Missing the gate, however, he blew open a wicket of such small dimensions as to render it impossible for more than two or three men to enter abreast, and these in a stooping posture. This, it will be seen, was one cause of discomfiture in the first instance; for the hearts of the men failed them when they saw their foremost comrades struck down, endeavouring to force an entrance under such disadvantageous circumstances, without being able to help them. The signal, however, was given for the storming party, headed by Col. Mackerell. On nearing the wicket, the detachment encountered an excessively sharp fire from the walls, and the small passage, through which they endeavoured to rush in, merely served to expose the bravest to almost certain death from the hot fire of the defenders. Col. Mackerell, however, and Lieut. Bird of Shah's 6th infantry, accompanied by a handful of Europeans and a few sepoys, forced their way in; Capt. Westmacott of the 37th being shot down outside, and Capt. M'Crae sabred in the entrance. The garrison, supposing that these few gallant men were backed by the whole attacking party, fled in consternation out of the gate, which was on the opposite side of the fort, and which ought to have been the point assailed. Unfortunately, at this instant a number of the Affghan cavalry charged round the corner of the fort next the wicket: the cry of 'Cavalry!' was raised, a cry which too often, during our operations, paralyzed the arms of those, whose muskets and bayonets we have been accustomed to consider as more than a match for a desultory charge of irregular horsemen; the Europeans gave way simultaneously with the sepoys—a bugler of the sixth infantry, through mistake, sounded the retreat—and it became for a time a scene of *sauve qui peut*. In vain did the officers, especially Major Scott of H.M.'s 44th, knowing the fearful predicament of his commanding officer, exhort and beseech their men to charge forward—not a soul would follow them, save a private of the 44th name Steward, who was afterwards promoted for his solitary gallantry. Let me here do Brigadier Shelton justice: his acknowledged courage redeemed the day; for, exposing his own person to a hot fire, he stood firm amidst the crowd of fugitives, and by his exhortations and example at last rallied them; advancing again to the attack, again our men faltered, notwithstanding that the fire of the great guns from the cantonments, and that of Capt. Mackenzie's juzailchees from the N.E. angle of the Mission Compound, together with a demonstration on the part of our cavalry, had greatly abated the ardour of the Affghan horse. A third time did the Brigadier bring on his men to the assault, which now proved successful. We became masters of the fort. But what, in the meantime, had been passing inside the fort, where, it will be remembered, several of our brave brethren had been shut up, as it were, in the lions' den? On the first retreat of our men, Lieut. Bird, with Col. Mackerell and several Europeans, had hastily shut the gate by which the garrison had for the most part evacuated the place, securing the chain with a bayonet: the repulse outside, however encouraged the enemy to return in great numbers, and it being impossible to remain near the gate on account of the hot fire poured in through the crevices, our few heroes speedily had the mortification to see their foes not only re-entering the wicket, but, having drawn the bayonet, rush in with loud shouts through the now re-opened gate. Poor Mackerell, having fallen, was literally hacked to pieces, although still alive at the termination of the contest. Lieut. Bird, with two sepoys, retreated into a stable, the door of which they closed; all the rest of the men, endeavouring to escape through the wicket, were met and slaughtered. Bird's place of concealment at first, in the confusion, escaped the observation of the temporarily triumphant Affghans; at last it was discovered, and an attack commenced at the door. This, being barricaded with logs of wood, and whatever else the tenants of the stable could find, resisted their efforts, while Bird and his now solitary companion, a sepoy of the 37th N. I. (the other having been struck down), maintained as hot a fire as they could, each shot taking deadly effect from the proximity of the party engaged. The fall of their companions deterred the mass of the assailants from a simultaneous rush, which must have succeeded; and thus that truly chivalrous, high-minded, and amiable young gentleman, whose subsequent fate must be ranked among the mysterious dispensations of Providence which we cannot for the present fathom, stood at bay with his equally brave comrade for upwards of a quarter of an hour, when, having only five cartridges left, in spite of having rifled the pouch of the dead man, they were rescued as related above. Our troops literally found the pair 'grim and lonely there,' upwards of thirty of the enemy having fallen by their unassisted prowess."

This gallant action had, for the moment, its influences. On the 15th Major Pottinger and Lieut. Haughton arrived from Charekar, both severely wounded. The sufferings and hair-

Digitized by Google

breadth escapes of these officers were almost beyond belief. Surrounded, in a distant fortress, by thousands of enemies, they held out until all hope of relief was past, and further resistance appeared to be a mere wanton sacrifice of life.

"From this time the unfortunate horses and cattle of the garrison were obliged to endure the extremity of thirst, there being *no* water for *them*, and the supply for even the fighting men scanty in the extreme, obtained only from a few pools in the ditch of the rampart, which had been formed by a seasonable fall of rain. * * On the 10th, the officers drew their last pool of water, and served out *half a wine-glass* to each fighting man. * * Major Pottinger considered that the only remaining chance of saving any portion of the regiment was a retreat to Cabul; and although that was abundantly perilous, he entertained a hope that a few of the most active men who were not encumbered with wives and children might escape. * * Dr. Grant then amputated Mr. Haughton's right hand, and hastily dressed the severe wounds which he had received in his left arm and on his neck. In the evening the doctor spiked all the guns with his own hands, and the garrison then left the barracks by the postern gate. * * Notwithstanding the previous sufferings of these unfortunate men, it may be said that here commenced their real disasters. In vain did Major Pottinger attempt to lead his men to seize a building generally occupied by the enemy after nightfall, by the possession of which the exit of the main body from the barracks might be covered. In fact, it was with much difficulty that he eventually succeeded in halting them at about half a mile from the barracks until the main body and rear should close up. The men were naturally occupied entirely with their families, and such property as it had been impossible to prevent their bringing away; and discipline, the only source of hope under such circumstances, was at an end. After the junction of the main body and rear, Dr. Grant suddenly disappeared, and was not afterwards seen. * * At Sinjit Durrah they quitted the road to avoid alarming the villages, and any outposts that might be stationed there; and much time was lost in regaining the track from the other side: at Istaliff the same manœuvre was practised. Major Pottinger now found very few inclined to push on; exhaustion from the pain of his wound precluded the possibility of his being of any further use as a leader; and he determined to push on with Mr. Haughton towards Cabul, although with faint hope, that the strength of either would prove adequate to the exertion. Having no guide, they got into many difficulties; and day was breaking by the time they reached the range of mountains half way between Charekar and Cabul. Men and horses were by this time incapable of further endurance: the latter, it must be remembered, had been ten days without water previously to starting, and five days without food; they were still upwards of twenty miles from any place of safety; their sufferings from their wounds, fatigue, hunger, and thirst, made life a burden, and at this time despair had almost obtained a victory—But God sustained them. By Mr. Haughton's advice they sought shelter in a very deep but dry ravine, close to a small village, hoping that their proximity to danger might prove a source of safety; as it was probable that the inhabitants, who by this time must have been on the alert, would scarcely think of looking for their prey close to their own doors. The companions of Major Pottinger and Mr. Haughton were a sepoy of the regiment, a moonshee, and the regimental *buniah*. In the forenoon they were alarmed by a firing on the mountains above them; the cause of this, as it appeared afterwards, was that a few of the fugitive Goorkhas had ascended the hills for safety (which, indeed, it was Major Pottinger's wish to do, until he yielded to the arguments of his companion), whither they were pursued and massacred by the country people. The rest of the day passed in tranquillity; and again, under the friendly shroud of darkness, having previously calculated their exact position, did this sorely-bestead little party resume their dangerous route. * * Weak and exhausted, their hardy and usually sure-footed Toorkman horses could scarcely strain up the almost impracticable side of the mountain, or preserve their equilibrium in the sharp sudden descents which they encountered, for path there was none. On one occasion Mr. Haughton, whose desperate wounds I have already described, fell off, and being unable to rise, declared his determination of awaiting his fate where he lay. The Major refused to desert him, and both slept for about one hour, when, nature being a little restored, they pushed on until they descended into the plain of Alifat, which they crossed, avoiding the fort of that name, and struggling up the remaining ridge that separated them from the plain of Cabul, they entered it by the southern end of the Cabul lake. Intending now to cross the cultivation, and to reach cantonments by the back of the Shah's garden, Major Pottinger missed his road close to Kila-i-bolund, and found himself within the enemies' sentries; but being unwilling to alarm them by retracing his steps, after discovering his mistake, he led the way towards Deh Affghan. Here they were challenged by various outposts, to whom they answered after the fashion of Affghan horsemen; but they were compelled, in order to avoid suspicion, actually to enter the city of Cabul, their only hope now being in the slumberous security of the inhabitants at that hour (it being now 3 A.M.), and in the protection of their Affghan dress and equipments. The Goorkha sepoy, who, strange to say, had kept up with them *on foot*, had *his* outward man concealed by a large *postheen*, or sheepskin cloak. They pursued their way through the lanes and bazar of the city, without any interruption, except the occasional gruff challenge of a sleepy watchman, until they gained the skirts of the city. There they were like to have been stopped by a picket which lay between them and the cantonment.—The disposition to a relaxation of vigilance as the morning approaches, which marks the Affghan soldier, again befriended them; they had nearly passed the post before they were pursued.—Desperation enabled them to urge their wearied horses into a pace, which barely gave them the advantage over their enemies who were on foot; and they escaped with a volley from the now aroused picket, the little Goorkha freshening his way in the most surprising manner, considering his previous journey. A few hundred yards further brought them within the ramparts of our cantonment, where they were received by their brethren in arms as men risen from the dead."

Those in authority began now to speculate on the future; and questions were raised, whether it was possible to hold out in cantonment, advisable to remove to the Bala Hissar, or retreat to Jellalabad. It was resolved, however, and at once, in consequence of the inconvenience arising from the interruption of the supplies, to attack a village in the neighbourhood, and maintain the position; and the whole disposable force was employed in this service under General Shelton. This day, says Mr. Eyre, decided the fate of the Cabul army; "in this miserable and disastrous affair there were no less than six great errors." Be that as it may, it is enough for our readers to know, that the attempt was unsuccessful, and ended in an utter rout. All confidence was lost—yet even now, says Mr. Eyre, "we might have steered clear of destruction, had the helm of affairs been grasped by a hand competent to the important task." At the "pressing representation of the military commanders," and contrary, we are told, to the judgment of the Envoy, negotiations were opened with the enemy, and on the 11th of December a treaty was concluded, the general purport of which is well known. Briefly, it was agreed that we should evacuate Cabul, and surrender all the fortresses in the country, and be permitted to retire, not only unmolested, but under the protection of the enemy! How infamously this treaty was violated, the slaughtered thousands of our army is lamentable proof. But the treachery was not all on one side. This treaty was entered into on the 11th of December, and every preparation forthwith made for carrying it into execution. A division of the troops had even commenced their march, when Sir William Macnaghten entered into secret negotiations with Mahomed Akber Khan, by which,—

"Amenoollah Khan, the most influential of the rebels, was to be seized on the following day, and delivered up to us as a prisoner. Mahomed Khan's fort was to be immediately occupied by one of our regiments, and the Bala Hissar by another. Shah Shoojah was to continue king; Mahomed Akber was to become his wuzeer, and our troops were to remain in their present position until the following spring!"

It is with deep humiliation that we record here, that the British Envoy was a consenting party to these disgraceful proceedings, and gave a written sanction to the arrangement. From that moment the British forces were doomed to destruction. The whole project, it appears, was a piece of complicated cunning, to test the sincerity of our professions, and our intention to surrender the fortresses and abandon the country. At the next meeting, when all this double dealing was to bear its fruit,—when the military were under arms in the cantonments and prepared for "secret service"—Sir William Macnaghten, Captains Trevor, Lawrence, and Mackenzie, set forth on their disastrous expedition. We shall now quote from the narrative furnished by the latter officer:—

"After the usual salutations Mohammed Akber commenced business, by asking the Envoy if he was perfectly ready to carry into effect the proposition of the preceding night? The Envoy replied, 'Why not?' My attention was then called off by an old Affghan acquaintance of mine, formerly chief of the Cabul police, by name Gholam Moyun-ood-deen. I rose from my recumbent posture, and stood apart with him conversing. I afterwards remembered that my friend betrayed much anxiety as to where my pistols were, and why I did not carry them on my person. I answered that although I wore my sword for form, it was not necessary at a friendly conference to be armed *cap-à-pie*. His discourse was also full of extravagant compliments, I suppose for the purpose of lulling me to sleep. At length my attention was called off from what he was saying, by observing that a number of men, armed to the teeth, had gradually approached to the scene of conference, and were drawing round in a sort of circle. This Lawrence and myself pointed out to some of the chief men, who affected at first to drive them off with whips; but Mahomed Akber observed that it was of no consequence, as they were in the secret. I again resumed my conversation with Gholam Moyun-ood-deen, when suddenly I heard Mahomed Akber call out, 'Begeer, begeer,' (seize! seize!), and turning round, I saw him grasp the Envoy's left hand with an expression in his face of the most diabolical ferocity. I think it was Sultan Jan who laid hold of the Envoy's right hand. They dragged him in a stooping posture down the hillock, the only words I heard poor Sir William utter being, 'Az barae Khooda' (for God's sake)! I saw his face, however, and it was full of horror and astonishment."

The survivors, as may be supposed, were treated with scorn and insult—"vehemently accused of treachery, and everything that was bad." Mr. Eyre is indignant at the baseness of the Affghans—we think this censure ought to be modified. There was treachery on both sides. The only difference, we fear, is, that the Affghans outwitted their enemies.

The little energy that remained in the camp was now paralyzed: the retreat commenced forthwith. But we must defer the particulars of its horrors, and the "Journal of Imprisonment," until next week.

The Life of Sir A. Cooper, Bart. By Bransby Blake Cooper, Esq. 2 vols. Parker.

THE oft-quoted maxim, that no man is a hero to his *valet de chambre*, is not of universal application. If the intimacy of this relationship leads to a knowledge of depreciating weaknesses, it may also beget a familiarity with them, that ends by blunting, in the observer, all sense of their import: and another tendency,—that towards hero-worship,—ofttimes converts failings (like the evidences of the Dalai Lama's mortal nature,) into subjects for reverence and admiration. On the other hand, there is this much truth

Digitized by Google

in the aphorism, that the valet can only see with a valet's eye. Whatever is received, say the schoolmen, is received *pro rations recipientis;* which, being translated, means that you cannot *put more into a quart bottle than a quart.* On both these accounts, therefore, it is desirable that the lives of intellectual persons should be written by men of mental calibre approaching their own: and whatever advantage may be found in the superior opportunities which relatives may be supposed to possess, for obtaining much and accurate information, there are many chances against a near relation possessing this intellectual equality. Again, from the very propinquity arises considerable danger of distortion. There is much risk of the absence of a due discrimination, both as to the value and the meaning of individual traits. Hence a frequent disposition to magnify trifles, to dwell upon points proving nothing but the impudence of the man in the eyes of his biographer,—nay, to bring into evidence blemishes and infirmities, which had better been withheld. All these evils are unfortunately prominent in the biography now before us, which, with an overpowering quantity of matter, either wholly uninteresting, or having no very close relation to the proposed end of the work, fails in displaying the characteristic merits of the man, if it does not give a less favourable impression than that which previously had been entertained of him by the public. In addition to difficulties thus arising, Mr. Bransby Cooper has encountered another scarcely less embarrassing, from the necessity under which he has found himself, of separating the man from the surgeon. Generally, the whole existence of a man of science lies in his works; and there seems to be no reason for regarding Sir Astley as an exception to the rule. Medical and surgical practitioners, indeed, spend their lives almost exclusively in the close pursuit of their studies or their business; and an incessant round of fee-taking activity affords little room for incident, either of general amusement or of general profit. Accordingly, in the Life before us, although an estimate of Sir Astley's surgical labours is studiously avoided, the main interest lies, not the less, in a development of his professional resources and opportunities, and in scientific details only acceptable to the hospital pupil, or the contemporary and colleague. The result must be, that the book, as a biography, will less than gratify either the general reader or the student; while, after all, there is quite sufficient surgical matter in the volumes to be occasionally distasteful or unintelligible to those not of the profession. As an instance of narrative at once but remotely illustrative of the main subject of the work, and unfitting and unpleasant for the general reader, we must mention the long chapters relating to the craft of the resurrectionist, and to the personal adventures of those engaged in it. The beneficial change which has been made in the laws affecting anatomy, has removed all occasion for trespassing upon public feeling, by going over again that ground, and divulging the "secrets of the prison-house;" and the whole bears too close a resemblance to chapters torn from the adventures of some Jack Sheppard, to merit a place in a work like the present.

One fixed impression with which we rose from a perusal of these volumes is, that of the wondering admiration of the author (neither unnatural, by the bye, nor unamiable, in Mr. B. Cooper) for his relation and benefactor. This has, in many instances, operated disadvantageously to the subject of the memoir, by bringing forward traits much better suppressed. Thus, we have a superabundance of anecdotes touching the youth of Sir Astley, which depict him too strongly in the light of an idle, rash, and daring athlete, with all but aversion for scholastic labours, and a spice of mischief sometimes extending beyond the thoughtlessness of youth, and trenching on a want of proper feeling for others. For example, we are told,—

"Whilst out shooting near Yarmouth, he one day killed an owl—a bird familiarly known in Norfolk by the soubriquet of 'Brother Billy.' Having arrived at home, he went up into his mother's room, with the bird concealed beneath his coat, and assuming a countenance full of fear and sorrow, called out, 'Mother! mother! I've shot my brother Billy!' but the alarm and distress instantly depicted on the distracted countenance of his parent, induced him as quickly as possible to pull the owl from under his coat. This at once exposed the truth and allayed the apprehension of his mother's mind, but the effects of the shock it had caused did not so immediately pass away. So thoughtless a joke his father determined should not go unpunished, and he therefore confined him, according to his usual mode of correction, in his own room. Astley, however, was but little disposed to remain passive in his imprisonment, and in the wantonness of his ever active disposition, amused himself by climbing up the chimney, and having at last reached the summit, endeavoured, by imitating the well-known tone of voice of a chimney-sweeper, and calling out as lustily as he could, 'Sweep! sweep!' to attract the attention of the people below."

Another instance of this disposition occurs a little further on, which did not turn out quite so pleasantly for the facetious youth:—

"One day, when Mr. Turner, the apothecary, was in the surgery, giving orders to one of the apprentices, Astley Cooper, who was standing behind him, attempted to excite laughter in the apprentice, by twisting his face into various grimaces, and practising other antics. The disturbance which soon followed in the apprentice's features caught the notice of Mr. Turner, who quickly turning round in the apparent direction of its cause, discovered Astley Cooper in the midst of the employment above mentioned; and seemingly in extreme astonishment at his strange behaviour, at once, with eagerness, inquired its cause. Astley, without exhibiting any signs of discomposure, or ceasing to make the contortions in which he was detected, returned no answer to the inquiry but an exclamation in a tone of much distress, of 'Oh! my tooth! my tooth!' 'God bless me! let me see,' said Mr. Turner; and on the instant, removing young Cooper's hand from his cheek, and forcibly opening his mouth, with a hasty remark, he whipped in a pair of forceps, and to the amusement of the astonished apprentice, before Astley had time to recover himself or explain the deception, had wrenched out one of his double teeth. The tooth which Mr. Turner thus extracted was decayed, and so, not thinking it worth while making any explanation, Cooper merely expressed himself much relieved, and thanked his benefactor. Sir Astley used to say, however, that he never could determine in his own mind whether it was not intended as a punishment for the interruption he had made, or whether, believing him really in earnest, Mr. Turner had, in pity for his supposed sufferings, displayed such activity in applying the remedy."

Again, at a far later period of life, we have the following:—

"Upon the occasion to which I allude, my uncle, being excessively anxious to examine some very peculiar disease of which a patient had died, had surreptitiously secured the key of the room where the bodies are placed before interment, and as soon as lecture was finished, ordered the coachman to take the carriage to the end of St. Thomas's Street, and wait for him. He then desired Canton to get a light, and to come to him. * * Unluckily, just as they were about to conclude their operations, the candle was overset, and extinguished, and they were thus suddenly thrown into complete darkness. It at once occurred to Sir Astley, that it would be an excellent joke to leave Canton a prisoner in the room for an hour or two, until the watchman on going his rounds might hear him and liberate him, and he therefore tried to effect his departure unheard by his companion. Canton, however, perceived that Sir Astley was groping his way out with silent and marked caution, and at once suspected his object. He therefore as quietly sought to effect his escape, and happening at the time to be the nearer of the two to the door, and younger, he was enabled to do this without the knowledge of Sir Astley, who was soon left far behind him, still engaged in overcoming the intricacies of his way from the room. Presently Sir Astley was outside the door, when, hastily turning the key, he made some remark to his supposed imprisoned companion, and hastened away. Canton, however, a nimble fellow, was by this time seated quietly in the corner of Sir Astley's carriage."

It is fair, however, to add, that the love of practical jokes seems to have been a part of Sir Astley's personal character, and, being so, may have been thought to warrant the notice thus taken of it, however inconsistent with the dignity of the subject.

If not the most valuable, by far the liveliest portions of these volumes are of a character purely anecdotic, and, though frequently relating to persons rather gone by in public recollection, are of some intrinsic humour. Such is the reply of a young Irishman, related on Sir Astley's authority:—

"I have heard my uncle, in adverting to his attendance at a medical debating society, mention a witty retort which occurred in a discussion at one of its meetings, between two young surgeons, one an Irishman, the other a Scotchman. The former maintained that cancer never occurred in women who had borne children. The young Scotchman vehemently opposed this doctrine, and mentioned the case of a lady who had twice had twins, and yet had cancer afterwards. To this apparently conclusive evidence, the Irishman immediately replied, 'Ah, by my soul, but don't you know that's an exception to the general rule,—where's the wonder in Cancer following Gemini?—it always does."

We shall next give an anecdote, related by Sir Astley, of Sir John Leach:—

"The late Mr. Jekyll told me an anecdote which created a great laugh against Sir John Leach at Cashiobury. They were staying with the late Lord Essex, and slept in adjoining rooms. From each of their apartments was a door opening into a closet which was common to the two chambers, and divided only by a slight partition. On the first day of his visit, Mr. Jekyll had retired to his room to dress for dinner, when he was surprised by hearing the Vice-Chancellor vociferating loudly in the adjoining room, and in the most vehement manner abusing his valet for having neglected to put up his satin breeches in the portmanteau. As he paced in a violent passion up and down his apartment, he continually, with much emphasis, inquired of the servant, whether he thought it possible,—whether it would be proper,—in him to go down to dinner without his nether garments. At last the valet, who acknowledged the awkwardness of such a proceeding, told him that he had brought down with him a pair, which his Honour had a short time before given to him, and which he had never worn. The suggestion of this expedient at first increased his master's anger, and the indignation he expressed was more than ever vehement. At last, however, the dinner-bell was rung; he was obliged to acquiesce, and accordingly resumed his acquaintance with his left-off garment. The whole of this dialogue Mr. Jekyll related to Lord Essex, who, immediately on the removal of the cloth, introduced a conversation about dress, and, after avowing that he considered Sir John Leach the best dressed man of his day, corrected himself by observing that he was not so smart as usual. This subject of conversation was maintained for some time to the amusement of all the party but Sir John Leach."

The following is characteristic, and touches on a quality which went for much in producing Sir Astley's eminence,—his proneness to self-confidence, and a concomitant high appreciation of his own endowments;—qualities which, in ordinary persons, are commonly the causes of deplorable failures. Sir Astley had met with a severe fall from a horse, which, indeed, placed his life in considerable jeopardy:—

"Mr. Cooper was one morning after the accident, when in the full belief that he was about to die, lamenting to Mr. Cline the event, not so much on his own account, as because it arrested a train of professional inquiry in which he was then engaged, and

Digitized by Google

which he thought would prove of the highest public benefit. 'Make yourself quite easy, my friend,' replied Mr. Cline, 'the result of your disorder, whether fatal or otherwise, will not be thought of the least consequence by mankind.' The eager aspiring ambition of the young patient, and the calm philosophic coolness of his preceptor, form a curious contrast,—but at the same time the anecdote exhibits feelings highly characteristic of each of the two parties."

The following puts us in mind of Abernethy:

"Mr. Howden had a patient with an obstinate running sore, and he said, 'We will consult Mr. Hunter about your case.' As they walked from the city to Mr. Hunter's, the patient said to his medical attendant, 'What must I give Mr. Hunter?' and he answered, 'Two guineas to such a man.' They went into Mr. Hunter's room, and the case was explained. Mr. Hunter folded his arms, and said:—'And so, sir, you have an obstinate running sore?' 'Yes, sir.' 'Why then, sir,' said Mr. Hunter, 'if I had your running sore, I should say,—Mr. Sore, run and be ——.'"

Mr. Cooper, in his quality of pupil to Mr. Cline, had been brought into contact with several of the leading political characters of the day, who at that time were favourable to the French Revolution. Their opinions he seems to have adopted with fervour; and it is curious to learn that he, too, was nearly becoming a victim to the bigotry, espionage, and persecution, which were brought to bear upon the private lives of the obnoxious.

At the time when Mr. Cooper was candidate for the place of Surgeon to Guy's Hospital, the following anonymous letter was launched against his pretensions:—

"*To the Treasurer of Guy's Hospital.*

"Sir,—The candidates proposed for your choice at Guy's Hospital on Wednesday, are three gentlemen of tried abilities, who have served their king and country during the present war, and one who is a Jacobin, friend of Horne Tooke, and an associate of the celebrated Thelwall. By the nomination you may judge the sense of the present committees.

"CAUTION."

By what abjuration and renunciations Mr. Cooper escaped the intended ostracism, it is needless here to recapitulate. But it is a subject of painful and melancholy retrospection to observe how narrowly two of the greatest lights of medical science escaped being extinguished, for exercising that right of private judgment which is essential to the existence of a conscience, and which it is the inherent right of every man (no matter what his profession) to enjoy. The display, indeed, of any fervour for public interests is in itself sufficiently dangerous to the pecuniary interests of professional men; the public choosing to have for its guinea the whole time and the whole faculties of those whom they consult; they resent therefore any and every departure from the straight path of prescribing, which they have traced out for their favourites. At the same time they ought to know, that he who can tamely submit to such dictation, is seldom likely to be a man of energy and mental vigour, such as alone can effectively wield the science of medicine.

In an odd old *cinque cento* Italian volume on popular errors in medicine, we once encountered an interesting chapter on the error of underpaying the physician. A very long addition might be made to that chapter, curiously illustrative of human nature. Among the anecdotes of these volumes, however, we find some counterbalancing statements of the princely liberality of the merchants of London towards Mr. Cooper, which it is a pleasure to quote:—

"While my uncle was living in Broad Street, many, if not most, of the first merchants in London had residences in the city; those who had also houses in the country leaving London generally on the Friday evening, and returning on the following Monday or Tuesday morning; so that the appearance of many streets, to the eastward of St. Paul's, is now so different as hardly to permit them to be recognised by any one familiar with them in those days. Most of the great houses, which, at the present day, have their street doors left open for more speedy access to the common stairs, which again lead to numerous offices on the several floors, were then private mansions, exhibiting abundant signs of the wealth and magnificence of their proprietors. * * This state of the city had an immense influence on my uncle's practice, for although, at that time, perhaps, he did not see so many people in a day as he afterwards did in New Street, the remuneration which he received was much more liberal. The manner in which he was usually paid, was different from that afterwards adopted at the west end of the town. It was not uncommon for him, after a hard morning's work, scarcely to have received more than five fees, although he might have seen upwards of twenty patients, and yet the sum he received might be large, for they almost all paid in cheques. This plan was a source of great advantage to my uncle, for he used to say, no one wrote for less than five guineas, however slight the occasion, when two guineas would have probably been the fee had the money been taken from the pocket. When sent for out of town, the liberal manner in which he was paid was extraordinary. It may perhaps be estimated by the recital of a fact, that Mr. William Coles, of Mincing Lane, the first merchant of his day, for years paid him the sum of 600*l.* a year for attendance, his visits being chiefly made to the seat of that gentleman, near Croydon. * * In the year 1813, my uncle performed the operation for stone upon Mr. Hyatt, a West Indian merchant, who presented him with a fee of a thousand guineas, the largest, perhaps, that had ever been received for such an operation. * * The manner in which the fee was presented, was not, perhaps, the least extraordinary part of the circumstance. Mr. Hyatt had recovered from the effects of the operation, and necessary confinement to his house, when a day was appointed by him for the last formal visit of the medical men. My uncle arrived rather late, and the physicians, Dr. Lettsom and Dr. Nelson, had already seen the patient, and were talking upon the liberality of his remuneration for their services, he having presented them each with 300*l.* Mr. Cooper therefore went up alone, talked to Mr. Hyatt, congratulated him on his recovery, and listened with emotion to the grateful expressions which he poured forth towards him as his benefactor. At last he rose to leave the room, and had reached the door, when his patient, who was sitting by the fire, took off his nightcap, and jocularly threw it at him: saying at the same time, 'There, young man, put that into your pocket.' My uncle, however, guessing the contents of the missile, inserted his hand, and took out from it a piece of paper; chucking back the cap to his patient, and at the same time saying, that he would not rob him of so useful an article, he put the paper into his pocket, and took his departure. On subsequently examining it, he found it to be a cheque for one thousand guineas."

In the foregoing extracts we have consulted the amusement of our readers more than justice to the author. We are bound, therefore, to add, that the professional contemporaries of Sir Astley will find in his volumes many pleasant reminiscences, and some professional chit-chat of graver importance.

Poetry of Béarn. [*Poésies Béarnaises.*] By M. Vignancour. Paris, Lecointe & Durez.

THIS is a curious and interesting work, written by a native of the country of Henri Quatre, and introducing to the French public poets with whom they are little acquainted, the chief and most remarkable of whom, the idol of his own mountains, from having written only in the patois of his country, is nearly unknown beyond it, and probably a stranger to most English readers. Those of our countrymen who visit the Pyrenees, generally seek their healing springs with a view to health alone, if not mere amusement, and to them the literary labours of the many men of talent Béarn has produced, are as if they had not been. The great stir that has of late been made in consequence of the publication of the Patois poetry of Jasmin the barber of Agen, to which we lately drew attention (*Athen.* No. 784), has however caused a revival of interest with respect to the works of Despourrins, the pastoral poet of Béarn, and as the existence of his poems is scarcely dreamed of by the many, the account of him and the specimens of his peculiar genius, furnished by M. Vignancour, may not be unacceptable.

Cyprien Despourrins, though he wrote as one of the people and for them, was not, like Jasmin, a man of obscure birth; his family was originally of a race of shepherds, but one of his ancestors having made his fortune in Spain, returned a great man to his native valley, the beautiful *vallée d'Aspe*, and there bought the Abbey of Juzan, and became a proprietor with many privileges. The father of the poet inherited his estates, and distinguished himself in the career of arms, being cited for his bravery, the character of which bears the impress of the times in which he lived, namely the end of the seventeenth century. Numerous anecdotes are told of him, amongst others, that he had had a dispute with three foreign gentlemen, and in order to get the quarrel off his hands at once, he challenged them all three at the same time, and came off victorious in the combat. To perpetuate the memory of his victory, he obtained from the King permission to have engraved over the principal entrance of his house *three swords*, which may still be seen on the stone of the old building shown as his residence. After this notable exploit Pierre Despourrins visited the *Eaux de Cauterets*, where, in the neighbourhood of Argelez, he formed an acquaintance with the family of Miramont and an attachment to the fair Gabrielle, daughter of that house, through his marriage with whom he afterwards became possessor of the chateau of Miramont, near St. Savin, destined to become famous by means of his son, the famous poet Cyprien. The chateau is still to be seen, and is a great lion in the neighbourhood.

There are constant disputes between the people of Bigorre and Béarn, as to which has the greater right to claim the poet as their own, for he belonged to both, but as he chose the musical patois of the latter in which to sing his pastorals, it appears but just that the Béarnese should have the preference. He was born at Accous, in 1698: his two brothers, Joseph and Pierre, became, one the vicar the other the curate of the village, and he was called, *par excellence*, the *Chevalier*. There is a curious trait told illustrative of the simple manners of these mountaineer priests. The two brothers were very musical: one played the flute—the other the violin, and every Sunday their talents were exerted for the benefit of their parishioners. All the young people of the place were accustomed to meet in the courtyard of their house, and, seated at a casement, the reverend pair played to their dancing. As soon as the bell sounded for vespers, the ball was suspended, and all the docile flock accompanied the good pastors to church.

The Chevalier had inherited his father's warlike qualities, and was, it seems, always ready with his sword. He was at the *Eaux Bonnes* when he received an affront from a stranger, which, as Sir Lucius O'Trigger has it,—"his honour could not brook." Unluckily, he had not his sword with him, and the affair must be decided at once; he therefore sent his servant to Accous to fetch it, recommending him great promptitude and address in inventing some story to prevent his father from guessing his errand. The servant used his utmost dispatch, and thought he had managed very cleverly to avert suspicion: the old knight, however, was too clear-sighted in such matters, and having divined the

Digitized by Google

state of the case, mounted his mule instantly, and secretly followed the messenger. He traversed the mountains of Escot and Benou, and braving all their difficulties, arrived at the Eaux Bonnes. On asking for his son, he was informed that he was closeted with a stranger: he repaired thither, and, pausing at the door, heard the clashing of swords. Satisfied that all was as he surmised, the imperturbable old knight remained quietly at his post, awaiting the issue of the combat. At length the noise of arms ceased; young Despourrins came out precipitately, and found his father on the watch, who, embracing him tenderly, exclaimed—"Your servant's hasty departure prevented my setting out with him, but I followed closely, guessing that you had an affair of honour on your hands; and in case you should fall, I brought my sword with me, which has never yet failed at need." "I am your son," replied the Chevalier; "my adversary is grievously wounded, let us hasten to afford him assistance."

After Despourrins, the son, was established near St. Savin, and the estates of the Vallée d'Aspe were abandoned by his father for his new domain, he seems to have given himself up to the charms of poetry and music, living the life of a shepherd, and familiarizing himself with the habits, customs, manners, and pleasures of that simple race, until he spoke with their words and thought with their thoughts. Whoever has visited the beautiful valley of Argelez, and wandered amongst the wilds in the neighbourhood of the once famous abbey of St. Savin, can well understand the poet's delight in such a retreat, and will not wonder when he is told that Despourrins often passed whole nights in the woods, singing his verses, like one transformed to a nightingale. Even now the songs he sung are remembered and cherished, and though the *pastous* of his native mountains probably know nothing of the poet, his lays are constantly on their tongues. One of the most famous is a romance called 'La Haüt sus las Mountagnes,' which we give entire, with a translation, in order to show the nature of this Troubadour language, which differs from the Gascon dialect in being softer and less guttural; in fact resembling rather more the Italian than Spanish language:—

La haût sus las mountagnes, û Pastou malhurous
Ségut aü pè d'û Haü, négat de plous,
Sounyabe aû cambiamen de sas amous.

"Cô leüyé, cô boulatye!" disé l'infourtunat,
"La tendresse et l'amou qui t'ey pourtat
Soun aco lous rébuts qu'ey méritat?

Despuch que tu frequentes la yen de counditiou
Qu'as prés û tà haût bôl, que ma maysou,
N'ey prou haûte entà tu d'û cabirou.

Tas oüilles d'ab las míes, nous dégnen plus mescla;
Touns superbes moutous, despuchença,
Nou s'approchen deûs més, qu'entaûs tuma!

De richesses me passi, d'aünous de qualitat:
You nou soy qu'û Pastou, més noun n'y a nad
Que noûs surpassi touts en amistat.

Encouère que sy praübe, dens moun pétit estat,
Qu'aimi mey moun Berret tout espélat,
Qué nou pas lou plus bèt Chapeü bourdat.

Las richesses deü mondé nou hèn que da turmen;
Et lou plus bèt Seignou, dab soun aryen,
Nou baü pas lou Pastou qui biû counten.

Adiû, cô de tygresse, Pastoure chens amou,
Cambia, bé pots cambia de serbidou:
Yamey noun troubéras û tau coum you!"

High up, amongst the mountains, an unfortunate shepherd was seated at the foot of a beech, drowned in tears, musing on the changes of his love.

"Oh light, oh fickle heart!" said the unhappy youth; "for the tenderness and the affection which I have borne towards you, is this wretchedness a fitting reward?

Since you have frequented the society of persons of condition, your flight has been so high that my humble cottage is too low for you by at least a stage.

Your flocks no longer deign to mix with mine, your haughty rams, since that period, never approach mine but a battle ensues.

I am without wealth or dignity; I am but a simple shepherd, but there is none that can surpass me in affection.

And methinks, according to my simple ideas, that I prefer my *berret*, old and worn as it is, to the finest ornamented hat that could be given me.

The riches of the world only bring uneasiness with them, and the finest lord with all his possessions cannot compare to the shepherd who lives content.

Adieu, tigress-heart! Shepherdess without affection; change, change if you will your adorers, never will you find any so true as I have been."

The melody which accompanies these pastorals is simple and full of sweetness, and, heard amongst its native mountains, has a peculiar charm: it has however found its admirers beyond those limits. The royal circle of Neuilly has been enlivened sometimes by the sound of the Béarnese minstrelsy; and, on one occasion, listened to a band of mountaineers from Luchon, who undertook, a few years since, a journey through Europe, singing their choruses in all the principal cities. On hearing the above song of Despourrins, the King exclaimed, with his usual ready kindness,—"Your songs alone would be sufficient to make one love your country." Several celebrated singers, favourites in the Italian world, were natives of Béarn; one of these, Garat, surnamed "the musical Proteus," was born at Ustaritz: nothing appeared impossible to this prodigious singer. His voice was splendid, and his taste exquisite: his only defect was an inordinate vanity, by no means an uncommon fault in artists of this description: a person on one occasion, thinking to embarrass him, inquired how high in the scale he could go; "I can mount as high as it pleases me to go," was his reply. He used frequently to surprise the Parisians by the introduction of Basque and Béarnese airs, whose peculiarity and originality never failed to cause the most lively admiration and enthusiasm: but he did not announce them as mountain songs till he had secured the praise he sought for them, having passed them for Italian productions. A similar *ruse* was practised by Mehul, when he brought out his 'Irato,' which the public was given to imagine was composed by an Italian *maestro*. Its success was very great, and Geoffrey, the editor of a popular paper, in noticing the opera, exclaimed,—"O, if Mehul could compose as well as this, we might be satisfied with him." When the triumphant composer threw off his incognito, the unlucky critic was not a little mortified. The celebrated singer Jelyotte was from Béarn, and Louis the Fifteenth used to delight in hearing him sing his native melodies, in particular one beginning, 'De cap à tu soy Marion,' one of Despourrins' most spirited pastorals:—

I am your own, my Marion,
You charm me with each gentle art,
Even from the first my love was won,
Your pretty ways so pleased my heart;
If you will not, or if you will,
I am compelled to love you still.

No joy was ever like my joy,
When I behold those smiling eyes,
Those graceful airs so soft and coy,
For which my heart with fondness dies:
And when I seek the charm in vain
I dream the pleasure o'er again.

Alas! I have no palace gay,
My cottage is but small and plain,
No gold, nor marble, nor display,
No courtly friends nor glitt'ring train;
But honest hearts and words of cheer
Are there, and store of love sincere.

Why should we not be quite as blest
Without the wealth the great may own?
A shepherd life, methinks, is best,
Whose care is for his flock alone,
And when he folds them safe and warm,
He knows no grief, he dreams no harm.

If you, dear Marion, would be mine,
No king could be so blest as I;
My thoughts, hopes, wishes should combine
To make your life pass happily;
Caresses, fondness, love, and glee,
Should teach you soon to love like me.

Another very favourite song is the 'Aü mounde nou y a nat Pastou,' in which mention is made of the national dances for which Béarn is celebrated, as well as the *pays Basque* which produces *baladins*, famous throughout France for their feats of agility and grace. There is a great variety of these dances, and those executed by the young men of St. Savin are remarkable in their kind: bands of the dancers go from village to village in the times of *fêtes*, and are much sought after: they appear very like our May-day mummers, or morice dancers, and have probably the same, namely, an eastern, origin: instead of Robin Hood, the Chevalier Bayard is the personage represented in their disguise, and a female always appears amongst them, who answers to our Maid Marian: they are covered with flaunting ribbons and hold little flags in their hands:—

Song.

There's not a shepherd can compare
With him who loves me well and true,
French he can speak with such an air
As if the ways of courts he knew:
And if he wore a sword, you'd say
It was the King who passed this way.

If you beheld, beneath our tree,
How he can dance the Mouchicou,—
Good Heaven! it is a sight to see
His Manuguet and Passe-pié too!
His match for grace no swain can show
In all the valley of Ossau.

Lest Catty, in the summer day,
The noon-day sun too hot should find,
A bow'r with flow'rs and garlands gay,
By love's own tender hand entwined,
Close to our fold, amidst the shade,
For me that charming shepherd made.

There is considerable variety of style and expression in the poetry of Despourrins, although his subject does not change, being "love, still love." The following might pass for a song by a poet of the school of Suckling:—

Malaye quoan te by!

Oh! when I saw thee first,
Too beautiful and gay and bland,
Gathering with thy little hand
The flow'r of May,
Oh! from that day
My passion I have nurst—
'Twas when I saw thee first!

And ever since that time
Thy image will not be forgot,
And care and suff'ring is my lot;
I know not why
So sad am I,
As though to love were crime—
Oh! ever since that time!

Those eyes so sweet and bright
Illume within my trembling breast
A flame that will not let me rest;
Oh! turn away
The dazzling ray—
They give a dang'rous light,
Those eyes so sweet and bright!

Thou hast not learnt to love,
But, cruel and perverse of will,
Thou seek'st but to torment me still.
Faithful in vain
I bear my chain,
Only alas! to prove
Thou hast not learnt to love!

But perhaps one of the most striking of all Despourrins' poems, from the beauty of the patois and the pretty conceits, is the 'Deus attraits d'ûe youenne pastoure,' which reminds one of Ronsard's 'Une beauté de quinze ans, enfantine":—

'Tis to a maiden young and fair
That my poor heart has fallen a prey,
And now in tears and sighs of care
Pass all my moments, night and day.

The sun is pale beside her face,
The stars are far less bright than she,
They shine not with so pure a grace,
Nor glow with half her charms to me.

Her eyes are like two souls, all fire,
They dazzle with a living ray,
But ah! their light which I desire
Is turn'd from me by love, away.

Her nose, so delicate and fine,
Is like a dial in the sun,
That throws beneath a shadowy line
To mark the hours that love has run.

The fairies formed her rosy mouth
And filled it with soft words at will,
And from her bosom breathes the South,
Sweet breath! that steals my reason still.

Her waist is measured by the zone
The Graces long were wont to wear;
And none but love the comb can own,
That smooths the ringlets of her hair.

And when she glides along like air,
Her feet so small so slight are seen,
A little pair of wings, you'd swear,
Were flutt'ring where her step has been.

Digitized by Google

Dear object of my tender care,
My life, my sun, my soul thou art,
Oh! listen to the trembling prayer
That woos thee from this aching heart!

It has been said of the shepherd of the Pyrenees, that he has nothing coarse about him but his dress. The national character is a quick and ready wit, and vivacity in repartee, joined with civility and hospitality to strangers. There are so many superstitions and traditions attached to his mountains and valleys, that his imagination is always at work, and it is only singular that not more poets and romancers have started up amidst such scenes as are always before the eyes of the Béarnese peasant. Rolando and the breach his sword made in the snowy mountain which divides France from the country of the ancient Moors—the print of the foot of the Hypogriff plainly to be seen on one of the peaks—the knights still fighting in the valley of Roncevaux, are favourite subjects in the winter evenings' tales; and in the forests King Arthur is still seen in his enchanted state, witches are known to meet and hold their sabbath in many a gloomy cavern, and the Loup Garou howls to the blast as fiercely as he is said to do in Brittany, where, in the time of the poetess, Marie de France, he was called *Bisclaveret*. There is scarcely a dangerous pass, or a secluded vale, where a miraculous virgin does not work miracles even at the present day, and romance abounds everywhere. Nevertheless, it is in pastoral that the Béarnese poets most excel, and the Chevalier Despourrins stands foremost of their order.

Our Mess. Edited by Charles Lever (Harry Lorrequer). Vol. I. *Jack Hinton.* Curry & Co.
The Commissioner; or, de Lunatico Inquirendo. Ditto.

THE hardest condition of the reviewer's lot is the necessity he is under of reading the works which he undertakes to censure or to praise. The irksomeness of this task, in a hundred cases, is so well understood, that it has led to the notion that this preliminary duty of the critic is not universally performed with the due degree of strictness. We are occasionally suspected of deciding literary causes somewhat in the same way that Mr. Justice Bridlegoose was wont to dispose of civil suits, and absolve or condemn by the hazard of the die. For ourselves, we can safely affirm, that we have never adopted the method of trial by the dice-box; but at the same time, we freely acknowledge and confess, that at sundry times we have experienced strange hankerings after that simple and expeditious method. Often have we had to wrestle with a fiend at our elbow, tempting us, not to judge first and to read afterwards, but to improve upon the system of Rhadamanthus, and pronounce sentence without hearing or reading at all. Many are the works to which we have sat down with the feeling of sullen desperation experienced by the young lawyer in Red-Gauntlet, when, in compliance with his father's wishes, he addressed himself to the voluminous and interminable cause of Peebles *versus* Plainstanes. What carries men through trials of this severe kind, is the sense of moral obligation, when it is sufficiently strong to master the indolent propensities. When we have to face a formidable book, we begin by mustering our moral forces; we summon up our principles of ethics; we put on our Christian armour. "Read," says our conscience; "review," says the fiend, who at times will quote the opinion of Lord Bacon, that some works are to be read by deputy. True; but the tempter forgets that the reviewer in such cases is a deputy himself, and can no more appoint a proxy than a member of the House of Commons, or the vicar of a parish.

We should certainly read the whole tribe of novels that follow the revolutions of the moon by deputy, if it were allowable so to do. Many of the remarks which we lately offered in noticing 'Handy Andy' will apply to the publications now before us. There is the same eternal straining after some farcical or melo-dramatic effect, to give *éclat* to the number for the month, and split the *sides* "of the groundlings." We cannot designate these writers better than as the pantomimic school. All their women are Columbines, and their men Clowns, Harlequins, or Pantaloons. They are never quiet or in earnest for an instant. Their idea seems to be that a novel should be like the county of Tipperary in disturbed seasons, all hubbub of one description or another, from beginning to end; and accordingly there is not a chapter in which there is not perpetrated some outrage for which the *dramatis personæ* ought either to be sent to a lunatic asylum or the county gaol. Harry Lorrequer ought to be Harry Rollicker. We have laughed at some of his rollickings, but we cannot laugh for ever; and we now declare, that we mean to laugh no more. It is a gross abuse of words to call such helter-skelter effusions novels, and a most absurd mistake to receive them as pictures of any condition or phase of human life. Let any one just cast his eye over the illustrations by Phiz, two of which are prefixed to every monthly part of 'Jack Hinton' (and the same observation will extend to 'The Commissioner'), and he will see a most faithful characterization of the style and spirit of the work. The broadest caricature is properly employed to illustrate the broadest farce. A more appropriate title for 'Jack Hinton' would have been 'Higgledy Piggledy,' with the motto—"A mad world, my masters." But though the world be a mad one, its madness is not always exhibited in the extreme forms. There is a great deal more of serious and sober lunacy than of roaring and rampant frenzy; and ten moping idiots for one tearing maniac. It is certainly judicious to issue works of this description in detachments, for three volumes of these Jacks and Harrys would surpass the digestive powers of the most voracious feeder on broad grins and monstrosities. The only distinction between Jack Hinton and Jack Sheppard, is the difference between all frolic and all horror: but though frolic is far the better of the two, we are not prepared to dance an Irish jig through a century of chapters, particularly when we have our doubts whether our author himself is master of the step. There is here the same one-sided view of Irish manners and society that we have recently had occasion to censure in noticing Mr. Lover's work; and the error is doubtless attributable to the same cause—writing from hearsay, instead of personal knowledge and observation. Another striking resemblance is the unscrupulous interweaving of the most notorious incidents and anecdotes, related at every table, not only in Dublin, but in London, where there happens to be amongst the guests an anecdotical Irishman of "the old school," or traditionally familiar with it. To many, of course, the anecdotes alluded to have been related for the first time in Mr. Lever's riotous pages; and to such 'Jack Hinton' may possibly have been a fund of considerable entertainment; but it is our business to consider the structure of a work of fiction out of such common-place materials as a question of art, and in this point of view we must assign it a very low place indeed amongst the literary productions of the day. We are reduced at present to the very lees of prose fiction; indeed, the cask is so dry, that Diogenes might reside in it, without so much as the smell of wine to disturb his sober speculations.

We should not be surprised, judging from what we have read of the Lever and Lover school, if some entertaining writer were to conceive the notion of fabricating a novel out of the *facetiæ* of Mr. Joseph Miller. There would be nothing more to do than to call into being some Bob, Tom, or Jerry, to be made the hero of every trick, and the utterer of every waggery; nay, we do not see why the idea should not cross some intrepid mind to impersonate Miller himself, and spin out one incarnate joke for the space of a mortal twelvemonth.

That Mr. Lorrequer has not taken his views of life in Ireland from history, is tolerably plain, from the passage following:—

"Life in Dublin, at the time I write of, was about as gay a thing as a man can well fancy. Less debarred than in other countries from partaking of the lighter enjoyments of life, the members of the learned professions mixed much in society; bringing with them stores of anecdote and information unattainable from other sources, they made what elsewhere would have proved the routine of intercourse, a season of intellectual enjoyment. Thus, the politician, the churchman, the barrister and the military man, shaken as they were together in close intimacy, lost individually many of the prejudices of their caste, and learned to converse with a wider and more extended knowledge of the world. While this was so, another element, peculiarly characteristic of the country, had its share in modelling social life: that innate tendency to drollery, that bent to laugh with every one and at every thing, so eminently Irish, was now in the ascendant. From the viceroy downwards, the island was on the broad grin. Every day furnished its share, its quota of merriment. Epigrams, good stories, repartees, and practical jokes, rained in showers over the land. A privy council was a *conversazione* of laughing bishops and droll chief justices. Every trial at the bar, every dinner at the court, every drawing-room, afforded a theme for some ready-witted absurdity; and all the graver business of life was carried on amid this current of unceasing fun and untiring laughter, just as we see the serious catastrophe of a modern opera assisted by the crash of an orchestral accompaniment."

Had this been limited to Dublin, it might pass without remark. Dublin was, no doubt, a gay place in the time of the Duke of Rutland: the viceroys before the Union were much pleasanter fellows, and kept much more agreeable courts, than the viceroys since; but when it is stated that "the *Island* was on the broad grin" in 1784, the position is at variance with the chronicles of the period, and is the result of a rash generalization of incidents belonging entirely to the records of a small metropolitan circle.

However, let us not do the author the injustice of subjecting his work to the laws of criticism applicable to the historical novel. Whether Ireland grinned or not in the days of the Duke of Rutland, 'Jack Hinton' has no other object but to produce that species of muscular contortion on the countenances of his readers. We shall give one of his "broad grins," by way of specimen.

A caricature of a Dublin attorney, hight Mr. Rooney, gives a grand ball, to illustrate and adorn which the aides-de-camp of the Lord Lieutenant are invited. But alas for those "glasses of fashion and moulds of form," a dinner at the castle, and a command play after it, interpose between them and the Rooney revelries. Just as the play is over, the ensuing dialogue takes place:—

"'I say, O'Grady,' said he, what are these good people about; there seems to be a general move among them. Is there any thing going on?' 'Yes, your Grace,' said Phil, whose impatience now could scarcely be restrained, 'they are going to a great ball in Stephen's-green; the most splendid thing Dublin has witnessed these fifty years.' 'Well, then, don't let me detain you any longer. I see you are both impatient; and faith, if I must confess it, I half envy you; and mind you give me a full report of the proceedings to-morrow morning.' 'How I wish your Grace could only witness it yourself!' 'Eh? Is it so very good then?' 'Nothing ever was like it; for,

Digitized by Google

although the company is admirable, the host and hostess are matchless.' 'Egad! you've quite excited my curiosity. I say, O'Grady, would they know me, think ye? have you no uncle or country-cousin about my weight and build?' 'Ah, my lord, that is out of the question; you are too well known to assume an incognito: but still, if you wish to see it for a few minutes, nothing could be easier than just to walk through the rooms and come away. The crowd will be such, the thing is quite practicable, done in that way.' 'By Jove, I don't know; but if I thought—— To be sure, as you say, for five minutes or so one might get through. Come, here goes: order up the carriages. Now mind, O'Grady, I am under your management. Do the thing as quietly as you can.'"

The Duke goes to the ball, and is received by the following exaggeration of a Dublin attorney's lady:—

"As he spoke, the musicians struck up the grand march in Blue Beard, and Mrs. Paul Rooney appeared in the open space, in all the plenitude of her charms—a perfect blaze of rouge, red feathers, and rubies—marching in solemn state. She moved along in time to the music, followed by Paul, whose cunning eyes twinkled with more than a common shrewdness, as he peered here and there through the crowd. They came straight towards where we were standing; and while a whispered murmur ran through the room, the various persons around us drew back, leaving the duke and myself completely isolated. Before his Grace could recover his concealment, Mrs. Rooney stood before him. The music suddenly ceased; while the lady, disposing her petticoats as though the object were to conceal all the company behind her, courtesied down to the very floor. 'Ah! your Grace,' uttered in an accent of the most melting tenderness, were the only words she could speak, as she bestowed a look of still more speaking softness. 'Ah, did I ever hope to see the day when your highness would honour——'"

Then the gentleman attorney "enters his appearance" after this fashion:—

"Mrs. Rooney moved gracefully to one side, waving her hand with the air of a magician about to summon an attorney from the earth, when suddenly a change came over his Grace's features; and as he covered his mouth with his handkerchief, it was with the greatest difficulty he refrained from an open burst of laughter. The figure before him was certainly not calculated to suggest gravity. Mr. Paul Rooney for the first time in his life found himself the host of a viceroy, and, amid the fumes of his wine and the excitement of the scene, entertained some very confused notion of certain ceremonies observable on such occasions. He had read of curious observances in the east, and strange forms of etiquette in China, and probably, had the Khan of Tartary dropped in on the evening in question, his memory would have supplied him with some hints for his reception; but with the representative of Britannic majesty, before whom he was so completely overpowered, he could not think of, nor decide upon any thing. A very misty impression flitted through his mind, that people occasionally knelt before a lord lieutenant; but whether they did so at certain moments, or as a general practice, for the life of him he could not tell. While, therefore, the dread of omitting a customary etiquette weighed with him on one hand, the fear of ridicule actuated him on the other; and thus he advanced into the presence with bent knees and a supplicating look eagerly turned towards the Duke, ready at any moment to drop down or stand upright before him as the circumstances might warrant."

Now another touch of Mrs. Rooney:—

"Meanwhile, I could just catch the tones of Mrs. Rooney's voice, explaining to the duke Miss Bellew's pedigree. 'One of the oldest families of the land, your Grace; came over with Romulus and Remus; and, if it were not for Oliver Cromwell and the Danes'—the confounded fiddles lost the rest, and I was left in the dark, to guess what these strange allies had inflicted upon the Bellew family."

And again:—

"'Ah! my dear!—the Lord forgive me, I mean your Grace.' 'I shall never forgive you, Mrs. Rooney, if you change the epithet.' 'Ah! your Grace's worship, them was fine times; and the husband of an O'Toole, in them days, spent more of his time harraying the country with his troops at his back, than driving about in an old gig full of writs and latitats, with a process-server beside him."

Then there is supper, and rivers of champagne; and the pencil of Phiz exhibits half the company rolling like swine under the tables and chairs, while his Excellency the Lord Lieutenant is tumbling down stairs in quest of his carriage, and his aides-de-camp are pulling Mister Rooney out of a jug of punch, to have him knighted by the tipsy viceroy.

"Into the supper-room we rushed: but what a change was there! The brilliant tables, resplendent with gold plate, candelabras, and flowers, were now despoiled and dismantled. On the floor, among broken glasses, cracked decanters, pyramids of jelly, and pagodas of blanc mange, lay scattered in every attitude the sleeping figures of the late guests. Mrs. Rooney alone maintained her position, seated in a large chair, her eyes closed, a smile of elysian happiness playing upon her lips. Her right arm hung gracefully over the side of the chair, where lately his Grace had kissed her hand at parting: overcome, in all probability, by the more than human happiness of such a moment, she had sunk into slumber, and was murmuring in her dreams such short and broken phrases as the following:—'Ah! happy day——What will Mrs. Tait say?——The lord mayor, indeed!—— Oh! my poor head: I hope it won't be turned—— Holy Agatha, pray for us! your Grace pray for us!——Isn't he a beautiful man? hasn't he the darling white teeth?' 'Where's Paul?' said O'Grady, 'where's Paul, Mrs. Rooney?' as he jogged her rather rudely by the arm. 'Ah! who cares for Paul?' said she, still sleeping: 'don't be bothering me about the like of him.' 'Egad! this is conjugal at any rate,' said Phil. 'I have him!' cried I, 'here he is,' as I stumbled over a short, thick figure, who was propped up in a corner of the room. There he sat, his head sunk upon his bosom, his hands listlessly resting on the floor. A large jug stood beside him, in the concoction of whose contents he appeared to have spent the last moments of his waking state. We shook him, and called him by his name, but to no purpose; and, as we lifted up his head, we burst out a-laughing at the droll expression of his face; for he had fallen asleep in the act of squeezing a lemon in his teeth, the half of which not only remained there still, but imparted to his features the twisted and contorted expression that act suggests. As Lord Dudley had gone to order up the carriages, his Grace was standing alone at the foot of the stairs, leaning his back against the bannisters, his eyes opening and shutting alternately as his head nodded every now and then forward, overcome by sleep and the wine he had drunk. Exactly in front of him, but crouching in the attitude of an Indian monster, sat Corny Delany. 'Give me your sword,' said his Grace, turning to me, in a tone half sleeping, half commanding; 'give me your sword, sir.' Drawing it from the scabbard, I presented it respectfully. 'Stand a little on one side, Hinton. Where is he? Ah! quite right. Kneel down, sir; kneel down, I say!'"

This is not extravagant enough, but the honour of knighthood must fall on Corny Delany, a serving-man, whom the representative of majesty mistakes, through the fumes of wine, for the irrecoverable Mr. Rooney.

"'Do you hear his Grace?' said I, endeavouring with a sharp kick of my foot to assist his perceptions. 'To be sure I hear him,' said Corny; 'why wouldn't I hear him?' 'Kneel down, then,' said I. 'Devil a bit of me'll kneel down. Don't I know what he's after well enough? *Ach na bocklish!* Sorrow else he never does nor make fun of people.' 'Kneel down, sir!' said his Grace, in an accent there was no refusing to obey. 'What is your name?' 'O murther! O heavenly Joseph!' cried Corny, as I hurled him down upon his knees,' that I'd ever lived to see the day!' 'What is his d——d name?' said the duke passionately. 'Corny, your Grace, Corny Delany.' 'There, that'll do,' as with a hearty slap of the sword, not on his shoulder, but on his bullet head, he cried out, 'Rise, Sir Corny Delany!'"

Then comes the last trick of the pantomime:—

"Leaving Corny to his lamentations, the duke walked towards the door. Here above a hundred people were now assembled, their curiosity excited in no small degree by a picket of light dragoons, who occupied the middle of the street, and were lying upon the ground, or leaning on their saddles, in all the wearied attitudes of a night-watch. In fact, the duke had forgotten to dismiss his guard of honour, who had accompanied him to the theatre, and thus had spent the dark hours of the night keeping watch and ward over the proud dwelling of the Rooneys. A dark frown settled on the duke's features as he perceived the mistake, and muttered between his teeth, 'how they will talk of this in England!' The next moment, bursting into a hearty fit of laughter, he stepped into the carriage, and amid a loud cheer from the mob, by whom he was recognised, drove rapidly away."

This last incident is, to a certain extent, a matter of fact. It occurred, however, not at the door of a Dublin attorney, but at that of a celebrated Aspasia of the day, who flourished in the same city. This is an instance of the modern method of pressing all manner of wanton pranks and ridiculous transactions into the author's service, so as to produce the maximum of extravagance and farce. It is against this system we wish to protest; and it strikes us that Mr. Lever has powers which might enable him to dispense for a few chapters with his "broad grins." We think he could *laugh* if he liked; and after a little, he might learn to smile; and thence proceed, by another step, to a little occasional gravity, which would give wonderful zest to his scenes of mirth! His style is, we think, improved since he published 'Harry Lorrequer.' There are fewer flippancies and vulgarisms; he seems to have been made aware that in portraying vulgarity, it is not necessary to be vulgar; and he appears to have made some progress towards amendment in that important point. However, until he attempts something loftier than a *rechauffé* of Dublin table-talk, or a collection of thrice-told anecdotes, kneaded up into a string of adventures, it is idle to speak of him as a writer of fiction, although unquestionably he takes a high rank amongst the antic writers of the day.

As to the other work, 'De Lunatico Inquirendo,' we know no more what the author would be at than the man in the moon; and we feel that we deserve a visit from the Commissioner for our insanity in devoting an hour to its perusal. The idea is good, but the execution feeble beyond measure. The writer mimics Mr. Dickens, and occasionally gives us an appalling touch of Mr. Ainsworth. His Honourable Mr. Fitzurse is as much like the son of an English nobleman, as the son of a Chinese mandarin. The mere names of Jerry Tripe, Joey Pike, Mr. Rotundity, and Mr. Deputy Popeseye, destroy all inclination to make their acquaintance; we know they come of a bad family, and expect nothing from them but offensive vulgarisms and second-hand buffoonery—an expectation which is not disappointed.

Narrative of a Yacht Voyage in the Mediterranean, during the years 1840—41. 2 vols. Murray.

This book will be regarded as another monument of female enterprise by all who hold

> The old sea in reverential fear,

They will wonder why one so daintily bred that not the winds of heaven might "visit her face too roughly," should have braved "the roarers" that care not for Nobility, and the penances, privations, and disgusts which are as much part and parcel of the voyager's fare, as the "jasper, turkis, and almondine," of which the Tennysons, and other ocean-lovers, sing so harmoniously. But Lady Grosvenor betrays no traces of the fine lady; she leaves lamentations at inevitable inconveniences to more fastidious travellers. She appears to have troubled herself but little about royal audiences, diplomatic attentions, or consular civilities. Her temper is

Digitized by Google

good and patient; her eye observant; her artist's hand modest but faithful; and, truly woman-hearted, her courage always mounteth with occasion. Thus she has produced an agreeable book; though it can only be received for what it professes to be, a hurried journal, the writer "not having," as she observes in her dedication, "stayed anywhere long enough to make observations of much research and consequent value."

Our extracts need no further preamble. The first will convey to the reader impressions of Tanger:—

"At eleven, A.M., we embarked in the gig to row about a mile and a half to the town; the sea being very rough, and the wind straight against us, we were plentifully sprinkled with salt water, and when we arrived at the shore, found only a shelving gravelly beach to land upon; as to the method of effecting which, some doubts were raised in our minds, added to which a strange, uncouth-looking race were drawn up on the shore: but with the encouragement of the Captain of the Port, a tall old man in the Moorish dress, with a long white beard (well described as an old lion by a former traveller), we at length accomplished it, but were obliged to be carried through the surf by our sailors, and were deposited on the beach in the midst of a most curious scene. Groups of wild-looking negroes and moors were lying about in all kinds of picturesque dresses; some wrapped up in white woollen garments, called 'haiks,' of which they draw a fold over their heads; others in brown and white striped pelisses, with a 'bournous,' or peaked hood, which is an admirable protection against sun or rain. Many of the Moors were handsome, but fierce-looking, with sharp white teeth, and gleaming black eyes. * * Though it was not one of the best market-days, which are Thursdays and Sundays, the market presented a very curious scene, from the groups of Moors, Arabs, and Jews, standing, sitting, and lying, huddled up in their bournouses, buying and selling. Some look gentle, but the generality have a wild and ferocious expression. The women are completely covered up in their dirty white drapery, and conceal their faces, so that nothing is seen but one eye and their hands and feet, the latter being coarse and ugly; but it is to be observed, that we only saw the lower classes, as the ladies always remain shut up at home. The principal articles for sale were 'comestibles,' innumerable kinds of grain, onions, tomatas, dates, raisins, eggplants, and jars of an oily white-looking ointment, which turned out to be butter, perhaps two or three years old, which is supposed to improve the flavour. On the open counter of nearly every shop, there was at least one cat, which the owners keep as a sort of brush to wipe their hands upon; as after measuring out soft yellow soap with those natural implements, they do not scruple to give a handful of raisins, or flower, or rice, all handed out in the same sweetly simple manner, which creates an occasional necessity for an apology of a towel. Almost all the natives had the hair shaved; some wore a large tuft on one side, occasionally lengthened into a plait. The negroes who come from the interior were singularly frightful, in all their varieties, which were many. We mounted by very narrow, tolerably dirty, and shockingly paved streets, to what had been the treasury, a Moorish building, with a cloistered arcade round a court, now in a very ruinous state; thence up to the citadel, where we saw traces of the original walls of Tanger, and so on to a graceful and beautiful gateway, looking down a steep hill to the lovely country surrounding the town. The mountains in the distance are covered with low wood, sheltering wild boar; and in the foreground are thickets of stupendous cactuses, with stems like small forest trees; carobs, or the locust tree; fig trees, palmettos, and many other shrubs. * * In a large ditch below the old walls, in the midst of all this beauty, was a horrid sight and smell, of the carcasses of horses and mules left there to decay."

A large fig-tree was shown to Lady Grosvenor, which served as a sanctuary for people of all religions, "at which the offender, whether a Christian, Jew, or Mohammedan, might find a temporary refuge."

"On returning, a string of camels, loaded with corn from the interior, passed us; and on proceeding to another market-place, on a large sloping hill outside the walls, we found about two hundred camels and their drivers. These were unloading the corn they had brought; and to make the camels kneel down, the driver seizes them by the throat—on which they make a sort of groan, and kneel directly. The poor animals give the idea of suffering from ill-treatment; but generally, animals, even including the horse, appear miserably ill-managed, as the Moors are very brutal. Over all the ground of this market-place, which is much trampled by being the usual resort of the camels, are little mounds of earth, the entrances to the Matamores, or subterranean granaries, where the Moors have kept their grain from time immemorial, and the custom still continues. In these large holes, lined with straw, and about twelve feet deep, the corn, well covered up, keeps good for many years. It is a point of their religion not to steal or profane anything relating to bread or corn. I saw a Moorish woman in the street pick up a bit of bread from the ground, kiss it, and put it in a hole in the wall, under the idea that it might not be lost, but that a bird or something might profit by it."

Lady Grosvenor's excursion to Granada is pleasantly described; but Mr. Borrow's Spanish pictures make all others look pale: and it would not be courteous, therefore, to expose a sketcher to such comparison. Another ramble is that to Ephesus, detailed in the second volume; of which we shall give the principal portion:—

"We rose at six for our expedition to Ephesus, and landed at nine. M. Alexacchi met us on the beach, and we immediately ascended a rugged flight of steps cut in the rock, which led under a wooden roof, with an old vine covered with grapes twisting itself out of the fissures. This almost perpendicular staircase conducted us into a narrow street, and close to the vice-consul's door; and a few more steep steps led down into his house,—an irregular little building, completely overhanging the sea. The saddles were soon arranged; and after having tried the respective merits of a high-peaked Turkish saddle and my own, I preferred the latter. We then set out,—our two selves, the consul's son, the cavassi or guide, and another Turk, who rode with us for company, as it was part of his way to Ainsolouk, just beyond Ephesus. The outset was down a sort of paved staircase, called the street, through a small market-place, well provided with vegetables, grain, and dried fruit, by an old wall and fort by the sea, and for some way along the sea-shore, and very pretty, the sea bounding the road on one side, and extensive fields of grain, vegetables, cotton, and pomegranates, with vineyards, on the other; and some camels grazing in the fields. We then ascended a hill of very rugged pavement, crossing a promontory covered with vineyards and cultivation, underwood, and innumerable flowers, down to a valley, in the narrow lane leading to which we met two strings of camels, carrying loads into the town, and led by strange-looking creatures, men and women, like baked clay (which, to be sure, they were): there were two youthful camels,—the adolescent ugly, as they all are, but the infant diabolically hideous; and, to add to its attractions, it began braying at us with the most marked spite. The horses, however, did not care for them any more than for the troops of large stinging flies with which they were covered, and went on very well, trotting, and even cantering whenever the ground was tolerable; and what was of more consequence, with great security and confidence over the pointed and slippery rocks which constituted the road a great part of the way. Soon after passing the camels, we came to a small and pretty plain, or valley of meadows, where were encamped some of the wandering tribes who own no other home than their tents, which are simply a few poles stuck in the ground, with coarse canvas extended as a roof over them, without sides. The owners were lying extended underneath, on their baggage and carpets. They had a large herd of good-looking cattle with them. Beyond this valley we crossed a small stream, and burst on a fine open sweep of the sea-shore, and then struck up further inland, through thickets of the finest myrtles, white with blossom, and oleanders glowing with their rich rose-coloured flowers; these, with cistuses and a thousand other dwarf plants, were really beautiful. We passed two cool fountains under trees unheeded,—one near a village lately bought by Tahir Pacha, the high admiral; and being too fresh on our journey to stop, we continued our course up and down paved pinnacles, like staircases, and through defiles of sharp pointed rocks, which in England would be considered hardly practicable even for a foot passenger. Our horses, however, got on with great security, stepping on the very edge of precipices, till at length, having ascended a hill at a distance of about eight miles from Scala Nuova, and turning a point, we looked down on the immense plain of the Cayster."

The view was wretched in no ordinary degree. The district swarms with reptiles and insects, and the plain is a vast extent of flat ground, one half marsh and stagnant water, "the other a jungle of weeds."

"What remains of Ephesus stands in a position elevated above the valley, in a kind of corner formed by a sweep of the hills on the southern side of the plain. In this scene we dismounted; but there was no shade, the sun being nearly vertical; and we reposed ourselves some time under our umbrellas, sitting on a pile of enormous stones, regularly built, and evidently the remains of a massy square foundation, perhaps bases of columns, as they stood at regular distances, with the holes in them for iron cramps. There were also large fragments of walls, and the top of a very large arch appeared out of masses of earth and ruins, which concealed the lower part, probably the accumulation of ages. We inquired of our guide if there were not some columns in the neighbourhood, but he knew nothing whatever of the place. After a little search, however, we found, very near at hand, but concealed by weeds and brambles, two enormous but broken columns, of very fine grained red granite, lying prostrate; and near them two others, of gray granite, equally large and fine, one almost embedded in the earth; the polish of the red granite was the finer of the two, being still quite smooth, and perfect. It was grievous to leave these magnificent relics, unseen and unvalued, amidst this chaos of desolation; but we did not possess the power which had transported, ages back, some of the columns of Diana's temple to Stamboul, where they still decorate the mosque of Santa Sophia; so we struggled on, through thickets of stiff thorny bushes; and when one foot approached the ground, it perhaps plunged deep into a hole, while the other attained the sharp edge of some enormous block, the bushes all the time seizing and detaining our clothes, with the addition of slippery grasses growing in loops, to embarrass our course, and forests of thistles, which we measured, and found to be eight and nine feet high, with immense purple heads like artichokes; this mode of progression in a broiling sun, prolonged for two or three hours, was a very fatiguing operation, though the scene more than repaid us for our trouble. We passed a group of three broken columns of gray granite, standing upright, and, a little beyond, four others of the same kind. We found also the arch so accurately described by Tournefort; it is of a good style of architecture, with a dilapidated frieze, which, old as it is, was evidently made out of the remains of something much older. * * On proceeding to the left, northward, from this arch, we came upon what is evidently the site of the Circus; it is six hundred and eighty-seven feet in length, and still perfectly defined as to size, shape, and boundary. An immense vaulted subterranean passage or gallery runs along on the northern side, which still remains to some extent in good preservation, with a large arch for an entrance. The walls are of great thickness, with old fig-trees growing out of them. The space within the circus was cultivated with corn. Immediately beyond this, and terminating the buildings altogether on this side above the valley, rises an immense raised platform, terminating in an abrupt cliff overlooking the whole of the plain; its foundation was the rock, assisted by masonry. I believe that the Temple of Diana is supposed by those who are best informed, to have been in another direction, but no indication or trace now remains by which its site can be positively ascertained,—no vestige left of its hundred and twenty-seven columns of Parian marble, each sixty feet high, and composed of a single shaft, forming one of the seven wonders of

Digitized by Google

the world; but if this were not the site of that renowned temple, still it must have been that of some very distinguished building, from the solidity of its foundations, which comprise an immense mass of masonry, consisting of gigantic hewn stones, still presenting a perfectly smooth surface. In fact, the spot is like a small mountain with a flat surface, on which rested the ancient building, whatever may have been its destination. One very broad lower terrace runs along its front, on the side looking to the river; and on the surface of the upper building still remain, at regular intervals, large blocks of marble, built together, probably as foundations for columns, or piers of arches; and on the terrace beneath, existed most likely another row of colonnades with steps leading down to it. Nothing can be conceived finer or grander than these lonely and mysterious remains."

Here we must take leave of this book. Its authoress modestly disclaims the idea of its possessing any permanent value: but to us it has its value and interest, as marking the progress of feminine cultivation and accomplishment in England.

Memoirs of the Literary Ladies of England. From the Commencement of the Last Century. By Mrs. Elwood. 2 vols. Colburn.

Among the revolutions which literature has undergone within the period embraced by these volumes, the share which women have assumed in its labours is not the least striking; nor can there be much hesitation in assigning to this cause, in a considerable degree, that other change in public opinion, now progressing with a railroad rapidity, concerning the general rights and duties of the sex.

Between the literary women of the present day and their predecessors, there is, with few exceptions, a remarkable difference, which suggests itself on a glance at the personages selected by Mrs. Elwood for illustration. At the commencement of the century, not only was the female writer a more rare and exceptional character, but she appears to have, in some degree, assumed the peculiarities of the opposite sex, as a qualification for her task; the blue-stocking lady of that time resembling an old gentleman in petticoats, much more nearly than a proper woman, both in her deportment, and in her choice of subjects. A man's education, she appears more or less to have deemed a necessary preliminary for writing: translation from the learned languages, criticism, or, still more frequently, theology, was her chosen arena; and Bishops and other dignified divines were her favourite associates. On the other hand, the female wits and play-writers, who flourished at or about the commencement of the century, if they unavoidably suffered to transpire in their writings, somewhat more of their feminine characteristics, still strove to emulate their male contemporaries in freedom of thought and of speech (not to say licentiousness), and sometimes even in a masculine cynicism of personal morals. Mrs. Elwood takes up her subject with the biography of Lady Mary W. Stuart; who, although in her letters sufficiently a woman, was, in her poetry, a man for hardihood and independence; and she assiduously strove to rival the male poets and wits of her day. But she and Mrs. Sheridan are the only writers among the several individuals noticed in the present work, before we come to Mrs. Charlotte Smith; who afford the semblance of an exception to our remark. It should seem, therefore, as if the female author was considered as an interloper, and as in some degree losing caste by her daring; nor was the idea altogether false, as long as authorship involved this stepping out of self, this assumption of something foreign and almost unnatural.

It was not very long before the period of the French revolution, that female literature began to exhibit more of a character of its own;—that the writings of women began, generally, to assume the genuine characteristics of the sex, and to reflect the proper qualities and the impulses of the female intellect. The peculiar *finesse* of observation and intuitive penetration into the innermost recesses of the human heart, so characteristic in females, and first turned to account by them in works of poetic and prose fiction, have gradually been brought to bear upon subjects of graver and more extended interest; and their warm and impulsive eloquence, and their rapid and comprehensive glances at truth, have formed a valuable supplement to the colder and more logical forms of masculine literature, and have contributed much in advancing the march of civilization. If the peculiar attributes of the female intellect be a necessary complement to those of the male, and adapted by nature to forward the woman's mission of helpmate, there is no reason why her influence should not prove as beneficial in perfecting the literature of nations, as it has been acknowledged to be in refining domestic manners and purifying morality. It would not, indeed, be very difficult to show that within the petty space embraced by a portion only of the volumes before us, the beneficial influence of the sex upon literature may be traced, not only in style and external peculiarity, but in a substantive purity of sentiment and elegance of thought. It has been productive of a nicer respect, not merely for the rights, but for the feelings and the infirmities of others; it has developed a wider range and a warmer glow of human sympathies; and if it has not added much to the accuracy of prevailing metaphysical notions, or extended the scope of the higher philosophy, it has clothed them occasionally in more graceful forms, and brought them into closer contact with general readers.

In looking for the causes of the present unceasing literary activity of the sex, the developement of the book trade comes prominently into notice. In glancing even at the very limited view presented of the subject by Mrs. Elwood, we arrive at the painful conclusion, that the availability of literary talent as a pecuniary resource, and not the idle though laudable impulse of vanity, has been the most effective inspiration of the sex, and called forth, not only the most numerous, but the best female contributors to the modern press. Adopted as the means of personal independence, or still more frequently as a means of assisting and providing for others, the literary energies of women have been seen as the consequences of their moral elasticity, of their intense feeling concerning the obligations of duty, and of the warmth of their honest and devoted sympathies. Of those among the females recorded in Mrs. Elwood's pages who have turned a carefully conducted course of study, or (as it is termed) a regular education, and a wealthy leisure to the account of literature, there are few whose productions (however respectable) can compare with those of the women who have written under opposite circumstances; yet, large as have been the claims made by the latter on our admiration, in their qualities of authors, more vivid still has been the sense they have inspired of their excellence as women.

On this latter account, if on no other, we must wish that the subject had fallen into hands more capable, or more willing to do it justice, and to draw large and just views from the particular facts to be recorded. The work before us is a mere compilation, from sources neither rare nor difficult of access. It is evidently one of a rather rapid series of publications, which have lately appeared to meet a growing market. Woman is the heroine of the day; and the lives of queens, literary women, or of women remarkable in any station of life, are greedily bought and perused by the public. Booksellers are shrewd guessers on this point, but they are more bent upon enlarging the quantity, than improving the quality of the supply. One consequence to be expected from this mercantile view, is an overscrupulous attention to the prudery and sham delicacy of the age, an avoidance of persons and of themes, which, however disagreeable to the squeamish, may be necessary to the whole philosophy and the whole morality of the subject. The number of female authors, who, by their writings or their personal misconduct, have brought disgrace on the sex, are as nothing when compared to those who have exercised their calling honourably, amid scenes of difficulty and privation, with an unwearied industry and an unsullied virtue. But though thus exceptional, they still present one aspect of the social position of women too important in its bearings on general humanity to be contemptuously disregarded.

How far a fear of giving offence may in some instances have influenced Mrs. Elwood's selection, we cannot undertake to say; but a merely passing and hurried retrospect calls to recollection a vast number of her omissions, for which even this cause cannot be assigned. Why, for instance is Mrs. Cowley omitted, whose 'Belle's Stratagem' was the precursor of 'The School for Scandal,' and to whom Sheridan was indebted for more than he has acknowledged? Mrs. Macaulay, too, the historian, why is she excluded? The Misses Lee, whose 'Werner' gave Byron the first idea of his tragedy of the same name, were *omni exceptione majores;* and the authoress of 'The Recess,' more especially, was well entitled to a respectful notice. Then we have no account of Mrs. Pilkington, and Mrs. Grierson, the friends and companions of Swift, nor of Mrs. Griffith, the author of the Letters of Henry and Frances; no word of Clara Reeve, who produced that delight of our early infancy, 'The Old English Baron;' none of Lady Wallace, of Mrs. Bennet, whose 'Beggar Girl,' and numerous other novels, were eagerly read by our mothers; none of the Margravine of Anspach, of Mrs. Lenox, who produced 'The Female Quixote;' none of the authoress of 'The Life of Petrarch;' none of Miss Plumtree, Priscilla Wakefield, or Helen Maria Williams, *cum multis aliis.* Mrs. Centlivre was living in the eighteenth century; but "the cook's wife," the witty writer of the 'Bold Stroke for a Wife,' a comedy that yet keeps its place on the stage, was probably tabooed, as without the circle of literary *proprieties.*

While, however, on this subject of omissions, we must mention one for which we are thankful to Mrs. Elwood. In these times of catch-penny literature, the biography of living writers affords a tempting theme; and the compiler has shown as much taste as good feeling in forbearing to enter on it. Independently of the doubtful morality of tampering with the feelings of the parties by dragging their private life before the public, there are good literary reasons for leaving to the living authoress a priority in the narration of her own story. There is no reading so delightful as auto-biography; and when conducted with candour and philosophy, none more suggestive or profitable. For the rest, if there is no originality in these memoirs, it is because the greater number of the subjects have been too amply or too recently handled to admit of novelty; and the authoress has too freely employed inverted commas to designate her borrowings from her predecessors, to admit of the reproach of wearing false colours. The volumes, it is frankly avowed, "are intended only for such of her sex, who, not feeling themselves equal to profound and abstract subjects, can derive amusement and information from what is professedly too light for the learned, or too simple for the studious." Humbler preten-

sions could not well be put forward; we are grieved to be obliged to add, that the volumes would not have justified higher.

OUR LIBRARY TABLE.

System of Universal Geography, founded on the Work of Malte-Brun and Balbi, &c.—This volume presents us with an abridgment of the celebrated work of Malte-Brun, an inestimable work of its kind, and which loses nothing of its real value by judicious curtailment. The task of reducing within just limits the somewhat prolix eloquence of the learned Dane, has been ably executed by the editor of this volume, which, though we have styled it an abridgment, yet extends to more than a thousand closely printed pages. It has an index also, which contains more names than are to be found in most gazetteers. We perceive that the editor (Mr. James Laurie) affects to slight Malte-Brun, and would lead us to suppose that he has rather taken Balbi as his guide and chief authority. There is certainly a great charm in novelty, and the last-named writer has the undoubted advantage of having been recently in fashion; but we cannot concede all the praise which is claimed for him on the score of perspicuity and systematic arrangement. System and perspicuity, when in their proper places, follow after accurate knowledge; but this is often wanting in geography; and therefore a geographical writer who affects, like Balbi, to go on every occasion into exact details and to exhibit complete arrangements, must often have recourse to conjecture and sacrifice authenticity to a show of completeness. It is with geographical treatises as with maps; the most trustworthy and honest will present the greatest number of blanks and most marks of doubt and uncertainty. But we have no wish to hint disapprobation in this instance, nor to seek for blemishes in a work the careful elaboration of which is equal to its utility. We think that the editor of the 'System of Universal Geography' is fully justified in assuming that "in respect of accuracy and extent of information, the present work will be found, at the least, not inferior to any similar publication."

History of the Church of Christ, by H. Stebbing, D.D. 3 vols.—It is to be regretted that Dr. Stebbing appears here as the continuator of Milner, and not as the author of an independent work: he is superior to his predecessors in discrimination and the due estimate of authorities, and he is free from that spirit of sectarian partisanship which led the Milners to exclude from the Church of Christ those who did not hold every article of their calvinistic creed. Still Dr. Stebbing has obviously felt himself trammelled by opinions and sentiments previously set forth, and has been obliged to insinuate rather than state directly his own views on many points of great ecclesiastical importance. Incidentally we learn that he contemplates writing an Ecclesiastical History entirely original, and we shall reserve for its appearance an examination of the theory of a Church which he has here shadowed forth.

Liebig's Organic Chemistry.—We have already noticed the translations which have appeared of Liebig's invaluable works; but it is only within these few days that we have seen a copy of the Organic Chemistry in the original German. We were so much struck with the dedication to Alexander von Humboldt, and the interesting account therein given of Liebig's first acquaintance with that great and excellent man, and the influence which it exerted on his subsequent career, that we have translated it, for the purpose of making it known in England. And we cannot but express our regret that it was omitted in the excellent translation of the work; because, at the same time that it reflected honour on the author, it would, to a considerable extent, have removed the unfavourable impression entertained by some persons that Liebig assumed more to himself than was altogether just, and forgot or overlooked the labours of his predecessors:—

To A. von Humboldt.

During my residence in Paris, in the winter of 1823, I was successful in having an account of an analytical examination of Howard's "Fulminating Compounds of Silver and Mercury," my first investigation, read before the Royal Academy. At the close of the meeting (on the 24th of March, 1824), whilst I was occupied in collecting together my preparations, a gentleman approached from amongst the members of the Academy, and entered into conversation with me. With the most winning friendliness, he drew from me an account of the object of my studies, my occupations, and my plans; we separated, without my venturing to ask, through shyness and inexperience, the name of him who had so kindly taken an interest in me. This conversation was the foundation of my subsequent career; I had gained for my scientific pursuits a most powerful and amiable friend and patron. You had returned only the day before from a tour in Italy; no one was aware of your presence. Unknown, without introductions, in a city where the assemblage of so many persons, from all parts of the world, is the greatest obstacle to an intimate acquaintance with the distinguished and learned philosophers assembled there, I, like so many others, might have remained unnoticed in the crowd, and perhaps lost altogether; this danger was now completely removed. From that day every door, every institution and laboratory, was open to me; the lively interest which you honoured me with gained me the affection and intimate friendship of my much esteemed teachers Gay-Lussac, Dulong, and Thenard. Your good opinion smoothed the path to a sphere of usefulness which for the last sixteen years I have incessantly laboured worthily to occupy. How many whom I know have, like myself, to thank you for patronage and favour in the prosecution of their scientific inquiries! The chemist, the botanist, the natural philosopher, the traveller to Persia and India, the artist, all rejoiced in the same advantages, the same patronage; with you there was no distinction of nations or countries. The world in general does not know how deeply Science is indebted to you in this respect, but it is for ever engraven in our hearts. May I be permitted thus publicly to express the profound respect, the sincere and pure gratitude which I feel. I hardly know if I can claim as my own any part of this little work which I take the liberty of dedicating to you. When I read the introduction which, forty-two years ago, you wrote to Ingenhousz's book 'On the Nutrition of Plants,' it always appears to me as if, in fact, I had merely endeavoured to extend and verify the views which were there put forth by the most zealous and active philosopher of the age. I received from the British Association, at their meeting at Liverpool in 1837, the flattering request to draw up a report on the present state of our knowledge of organic chemistry. At my proposal, the Association agreed to invite M. Dumas, of Paris, a Member of the Royal Academy, to undertake, in conjunction with me, the drawing up of this report. This was the original cause which led to the publication of the present book; I have endeavoured to describe in it the relation of Organic Chemistry to Vegetable Physiology and Agriculture, as well as the changes which organic substances undergo in the processes of fermentation, decay, and putrefaction. At a time like the present, when that restless striving after novelties, which are so frequently worthless, scarcely permits the rising generation to bestow even a cursory glance on the foundations which support so noble and mighty a structure; and when even those foundations themselves can hardly be distinguished by the ordinary observer, disguised as they are by external ornaments; when at such a time an intruder in branches of Science hitherto foreign to himself, dares to direct the attention and powers of naturalists to subjects which ought long ago to have been made the end and object of their exertions and labours, it is impossible to feel sure of success; for although the desire of man to do good knows no limits, his means and his abilities are confined to narrow bounds. Quite independent of the original observations which I have brought forward in this work, it would afford me the greatest satisfaction if the philosophical principles which I have applied to the growth and nutrition of plants should be found worthy of your approbation.

Giessen, Aug. 1, 1840. T. LIEBIG.

Milford Malvoisin, by F. E. Paget, M.A.—Mr. Paget possesses an extraordinary faculty in deducing right conclusions from wrong premises. In his present tale he takes the field against pews, and particularly those monstrous wooden closets which disfigure so many of our country churches. By some process of reasoning peculiar to himself, he identifies the cause of pews with that of the Puritans in Cromwell's days and of the evangelical party in our own. Surely he ought to have known that the Puritans were strenuously opposed to maintaining any distinction of rank in sacred edifices, and insisted that every assembly for divine worship should realize the holy declaration, "The rich and the poor meet together; God is the maker of them all."

Intimidation; a Political Satire, by Cato the Censor.—There are few of the forms of literary composition in which success is more certain than satire; but then, the reason is one by no means calculated to recommend it to general adoption. A satire *manqué*, it should be remembered, is a satire, still—only not wounding in the direction which the author intended. The sarcasm aimed against another, if it fails to pierce, rebounds upon the party aiming it:—and he who "writes down" his neighbour "an ass," if he do not succeed in pinning the label to that neighbour's back, must keep it for himself. Satire is a two-edged weapon—and has a very sharp handle; and he who meddles with it, not being dexterous, is sure to do himself a mischief. The present satire, as its author calls it, does not deserve to have much said of it, in any way. The satirist is by no means so dangerous a person as he thinks himself; and we do not see that any body is much hurt in this onslaught. He threatens to do a great deal more yet, in the "cut-and-thrust" way:—but, so far, none of his opponents are any the worse; and, we think, if he will examine his own fingers, he will find that he has cut them in two or three places.

The Fair Chinese Maid; a Tale of Macao, by an Officer in China.—This first canto of a poem was written, its author states, to beguile an idle fortnight on shipboard; and under such circumstances, perhaps no more need be said about it. Idleness is the avowed parent of many a folly; and may be admitted to take the blame of this among the rest. The author laments that a return to active life prevented his carrying the matter beyond the first canto; but promises a second, in case the English public shall express any great anxiety for it. Our advice to him, on their behalf, is, that if he can find any other occupation for his time, to think no more about the Chinese Maid.

Verses, Original and Translated, by Rebecca Lee.—*Original Poems and Songs*, by James Lemon.—*The Island Minstrel*, by H. Fitzherbert.—We have strung these volumes together, for no better reason than that we know not what else to do with them,—and that they have the common attributes of poetical exterior, and sounds, obtained, on the principle of the drum, from emptiness. Perhaps it is scarcely fair to class the first of them with the other two; but, to say that the lady's muse is a trifle better instructed than these its accidental companions, is praise not worth her having—and yet the best we can afford. Of the volumes second and third on the list, it is a waste of time even to write the titles.

Stow's Survey of London, edited by W. J. Thoms, Esq.—Although we would not willingly "swear by" Master Stow, we have, notwithstanding, a respect for our ancient antiquary; and are glad to welcome a reprint of his famous "Survey." Stow, indeed, deserves credit for what he did, for his diligence was great; and his care, in seeking for original documents, rebukes the indolence of the later historians of London, who are content to copy what has been already gleaned. In addition to this, the Survey contains much valuable information which we might seek for in vain elsewhere; and many notices of buildings, of which every vestige has been swept away. The present edition is reprinted from that "increased with divers rare notes of antiquity," published in 1603, and is illustrated by some curious and interesting notes by the editor, who has also prefixed a memoir of worthy Master Stow. The work is cheap, and neatly got up, and we can recommend it to the public.

Almanacks.—Our record is not yet perfect. *Punch* now offers a substantial *Pocket Book*, with all the customary attractions in the way of usefulness, and a small volume, in addition, of his own peculiar wares,—Mr. Van Voorst, the *Naturalist's Pocket Almanack*,—and Messrs. Howlett & Son tempt the ladies with the *Victoria Almanack*, printed in gold on a purple ground.

FOREIGN CORRESPONDENCE.

Leipsic, Dec. 13, 1842.

I am tempted to send you a few lines, to correct some erroneous impressions which several notices that have lately appeared in the *Athenæum* are apt to create among your numerous readers. First, as to the splendid Walhalla erected by the King of Bavaria, and which is to be a temple of honour for all Germans of merit. Do you know the fact that the King has rejected the statue of Luther, notwithstanding his undisputed greatness as the reformer, not only of the Church, but of the German language? The publication of Luther's works marks a new era in German literature. But Luther was the enemy of Rome, and therefore he is refused those honours which he and Melancthon so eminently deserve. I do not know whether many of your readers are aware of the very curious and peculiar style of King Ludwig's German poem, but it is very similar to what the Spaniards call "gorgorismo." The prospectus of the Walhalla, '*Die Walhallageniisse geschildert durch Kœnig Ludwig von Bayern*,' has called forth a review in the *Deutsche Jahrbücher*, which so closely imitates and so admirably ridicules the prospectus, that many thousand copies have been sold,—the latter is, of course, prohibited in Bavaria. The King's poetry, as you possibly know, has called forth a witty satire by Ottinger, in which it is stated that a riot, which the police strove in vain to suppress, was dispersed by the reading aloud of King Ludwig's poem; everybody ran away!

Other mistakes are, I see, current in England. Thus, with respect to the report on the greater liberty granted to the press in Prussia, your informant states, that "all writings of more than twenty *leaves*, are to be exempt from censorship." For "leaves" read *sheets*. And in order to show how the law is worked, I shall translate for you a paragraph which appeared in the official journal of the German book-trade (*Boersenblatt für den deutschen Buchhandel*), dated Leipsic, Dec. 2, 1842:—"Berlin, Nov. 26, 1842,—The police-office of this city has to-day prohibited the sale and advertising of 'Bruno Bauer und seine Gegner,' (B. Bauer and his antagonists,) by Edgar Bauer, published by Jonas, and all copies have been seized provisionally. This book, having received the imprimatur of the Berlin censor, we are taught by this case what is understood by 'conditional liberty of the press.'" A previous number of the same official journal complained of the almost daily visits of the Prussian police officers. This is the real state of the liberty of the press in Prussia. That of Saxony is a shade, but only a shade, better.

Of literary news there is not much; a new novel, 'Thomas Tyrnau,' by the authoress of 'Gadwic Castle,' has lately appeared, and the whole of the first edition was sold in a few days, notwithstanding its price of about twenty shillings sterling, which represents at least two guineas. Who would pay two guineas for a novel in England?

The sale of English works of light literature, never of any great importance, is annihilated in Germany by the reprints which are published by D. Tauchnitz, of this city. Thus, Dickens's 'American Notes' and Cooper's 'Jack o'Lantern' were republished here, about a fortnight after they had appeared in London, at eighteenpence each, very neatly and correctly printed! It is understood, however, that Mr. Forbes, who represents the British government at Dresden, is to propose a treaty for international copyright, and there is little doubt but he will succeed. Mr. Forbes ought certainly to do *something* for the many thousand pounds of salary which he has received in the course of the fifteen years during which he has held the sinecure place of British Minister to the Court of Saxony.

Hervegh, the author of 'Lieder eines Lebenden,' poems full of the fire of liberty, and which are prohibited in Prussia, lately visited Berlin, where he is to marry a rich Jewess, and was presented to the King by special command. He was introduced by his countryman, the celebrated Prof. Schoenbein, physician to His Majesty. "You have given me some severe pills," said the King, "but they are neither as bitter nor as brightly gilt as some which I have been obliged to swallow by order of your friend the Doctor there." The speeches of the King of Prussia have been printed, with a running commentary, but they were seized "provisionally" before they could be issued!

Dr. Mendelssohn-Bartholdy has been appointed to the post of Director-General of Sacred and Church Music. You know he is a Jew,—so are Neander and Benary, the two most popular Professors of Theology in the University of Berlin!

All the German *savants* have been much astonished to learn that Count Léon de Laborde has been elected a member of the French Academy; the superficiality of this young man has been pilloried by Salzman and Zanz in a manner which must certainly startle the Academicians.

When at Berlin lately, I visited the Exhibition of Pictures by Living Artists. Among about 500 "works of art," there were not more than a dozen of great merit. 'Huss before the Council of Constance,' by Lessing, of Dlisseldorf; a scene from the humorous poem 'Die Jobsiade,' representing the examination of a candidate for holy orders, by Hasencloever, of the same school; 'The Abdication of Charles V.' by Gallioit; and 'The Signing of the Compromise' (the beginning of the revolt of the Netherlands under Philip II.), by De Biefuc, both Belgian artists, are pictures which will immortalize their authors. By the bye, some of Lord Westmoreland's music has been performed with great success. You know he is your Minister at the court of Prussia.

THE HOPE OF THE RESURRECTION.

[Suggested by an extract from the Bechuana Mission, which appeared in the *Athenæum*, No. 777.]

THY voice hath filled our forest shades,
Child of the sunless shore,
For never heard the ancient glades
Such wondrous words before:
Though bards beneath our palms have poured
Their tales of joy or dread,
Yet thou alone the land hast cheered
With tidings of the dead.

The men of old who slept in death
Before the forests grew,
Whose glory faded from the earth
While yet the hills were new;
The warriors famed in battles o'er,
Of whom our fathers spake,
The wise, whose wisdom shines no more,
Stranger, will they awake?

The foes who fell in thousand fields
Beneath my conquering brand,
Whose bones have strewn the Caffer's hills,
The Bushman's lonely land,
The young who shared my path of fame,
But found an early urn,
And the roses of my youth's bright dream,
Stranger, will they return?

My mother's face was fair to see,
My father's glance was bright,
But long ago the grave from me
Hath hid that blessed light;
Yet sweeter was the sunshine shed
By my lost children's eyes,
That beam upon me from the dead,—
Stranger, will they arise?

Was it some green grave's early guest,
Who loved thee long and well,
That left the land of dreamless rest,
Such blessed truths to tell?
For ours have been the wise and brave,
Who feared not Death's abyss;
The strong in hope, the true in love,
But none that dreamt of this.

Yet, if the grave restore to life
Her ransomed spoils again,
And ever hide the hate and strife
That died with wayward men;
Thou hast, my spirit, missed the star
That guides our steps above,
Since only earth was given to War,
That better land, to Love.

FRANCES BROWN.

ART-UNIONS.

Mrs. Parkes is a woman after our own heart: not a word will she retract, for love or interest, if she believes that word to be true. Last week we published Mr. Moon's letter—this week we have her rejoinder, a Rowland for his Oliver.

Respecting the hint in Mr. Moon's letter, that Mrs. Parkes had offered her stock to Mr. Lloyd, for the use of the "National," she states, that it is "entirely false," and gives some reasons why it could not be true. We, however, only refer to this circumstance in justice to Mrs. Parkes, as the fact in no way affects the question at issue, or concerns the public. Other circumstances, however, are brought forward by Mrs. Parkes, which do materially interest the public. In her first letter, she observes,—

"Will the public read without suspicion the following announcement? I quote the advertisement of the National Art-Union:—'The pair (the *Lattice* and *Mask*) after Landseer's exquisite pictures, engraved by J. H. Robinson, *are partially known;* but the extreme delicacy and cost of the engraving demanded *a proportionate charge*, which excluded them from the hands of all but a very few. The application of the electrotype has justified their introduction into this plan.' I will not ask you how or *why* 'the extreme delicacy' of a print should 'exclude it from the hands of all but a few'? It seems, however, that you have a number of copies still on hand; but the important question is—How is the electrotype to be so applied as to justify the introduction of these works into the plan of the National Art-Union? If you have thrown off the usual number of prints from any one of the plates, in what state is it now?—in what state will it be when twenty electrotype copies, or twenty casts from the same original matrix, shall have been produced, and from each of these some six hundred impressions shall have been taken!"

On this subject Mrs. Parkes is now a little more communicative:—

"Mr. Moon has advertised the fact under his own name, that the *Lattice* of the National Art-Union for 1843 was published by him in 1838! under the title of the *Mantilla* (being a portrait of Mrs. Lister). I have carefully compared a *print* of the earlier with a *proof* of the later date, and what do I find? In the former, a lovely work, fresh from the hand of the artist, and in every touch I see the master; but in the latter much of the delicate handling has been worn away, leaving the stronger lines comparatively untouched, which gives the worn-out plate a raw effect (I speak as an artist), a harsh appearance that utterly destroys the tone—the great charm in a fine and highly finished engraving, and the express beauty of this particular plate. I have indeed seen an electrotype impression from a *new* plate, which gave to paper an absolute *fac-simile* of the original; but if *this* plate were electrotyped *in its present state*, I assert that, considering the quality of the copper used in that process, the fiftieth impression would show to those who have any knowledge of engraving a marked deterioration, even from this deteriorated plate. It is my firm opinion, founded on internal evidence, that many hundred impressions have been worked off from this plate since its change of title; a plate in use since 1838, from which the impressions sold originally at one, two, three, and four *guineas* each, while in its present state it is of no value as a work of art. This I vouch as one who knows what she is stating, and who states this much, because the general public cannot possess her means of comparison, nor her power (acquired by years of study and intimate acquaintance with the subject) to decide between the excellent and the indifferent. This is my deliberate opinion of the plate before it has been submitted to the electrotype; and when that process has been repeatedly applied, what must be the impression thence to be derived? Now, if I could be certain that the means of comparison between the *print* of 1838 and the *proof* of 1843 could be fairly brought before the eyes of those who could form a true judgment on the subject, I should consider my present task a piece of superfluous labour. I assert positively—1st, that this assumption in 1843 of the name of the *Lattice*, by the print which was published in 1838 as the *Mantilla*, is for the express purpose of deceiving the public, and inducing them to believe that this worn-out plate is a recent and 'partially known' engraving by one of our most eminent engravers, whereas the more delicate touches of that master-hand (whose fame would suffer from the uncontradicted imputation) are actually worn away; 2, that, pretending to be a portrait of Mrs. Lister, the equivocal expression of this altered countenance is an insult to the beautiful and amiable original, whom it belies and libels; 3, that this print of 1843 bearing *open* letters, the usual distinctive mark of a proof, is an imposition, highly discreditable to any party who may have incurred the responsibility of so characterizing it; and 4, that, pretending to be published in 1843, and to be dedicated by its *new* proprietors, under its *new* name, to Sir George Villiers, G.C.B., the patron of the original print, who in 1838 accepted its dedication under another name, at the hands of Mr. Moon, stamps the print with falsehood, which will shut the public ear against all the pretensions of the National Art-Union, as having in view the public advantage, the benefit of artists, and the cultivation of art. It is a great relief to me, that, feeling myself bound to let the public clearly understand these atrocious facts, I am spared from even the remotest suspicion of any *personal* imputation. The workers of this iniquity have not dared to face the public eye. The agents of the National are respectable men, beyond the suspicion of even an unconscious participation in such dishonourable doings; the secretaries are reputable tradesmen, apparently anxious to practise their callings in an honest way; *their* names are not appended to the plate. Its utterly unknown proprietors sign its dedication; but such is the extreme caution, and such the tact of these unknown proprietors, nameless directors, and nondescript managers, that there is not the shadow of a chance of my detecting them, or I would not hesitate to proclaim their names, and call upon their respectable, but evidently deceived agents, to throw them off and denounce them to the public indignation. With regard to the authorship of this fraud, it is remarkable that in the original print of the *Mantilla*, dated Jan. 1, 1838, on the right hand corner of the plate, I read, *Engraved by John H. Robinson, member of, &c.*, whereas in the proof of the *Lattice*, dated Jan. 1, 1843 (the *same* plate, let my reader recollect), I find the words *Engraved* FOR MR. F. G. MOON, *by J. H. Robinson, member of, &c.* Mr. Moon, in his advertisement of the 21st inst., shows that he has *sold* this with other plates to the 'proprietors' of the National Art-Union. Now I have his own word to prove that he is not one of these proprietors—he did not sell it to 'Himself and Co.;' so that these mysterious proprietors are still masking in Twelfth Night characters, or concealed in their *Mantillas* behind their *Lattices*. I dare them to come forth and tell the world their names. *They* are the abusers of the plate, the producers of the pretended proof before me. Mr. Moon proves that he knows the recent prints are valueless; for he advertises, and most wisely, that he has 'reserved the proofs and prints of Edwin Landseer's *Mantilla*' (the original of the *Lattice*), 'which, as early and choice impressions, will, under no circumstances, be reduced in price.' Can any words contain a stronger condemnation of these works of the National Art-Union, which falsely pretend to be 'in all respects as excellent as the originals'?"

So much for the great "National" lottery. A correspondent requests to know whether we have observed, that in the Polytechnic "Little-go" there is the same "extreme caution," *unknown proprietors, nameless directors, and nondescript managers!* To be sure we have. What then? So far as private interests are concerned, so far as these projects were designed "to draw custom to the shop," or put money in the purses of the projectors, we care little about them. It is because they are injurious to art, and, the "Little-go" especially, demoralizing so far as their influence can extend, that we object. Names, if respectable people could be found to lend their names as sanction to such schemes, would only extend the mischievous power of the projectors; but the "extreme caution," the "unknown," the "nameless," the "nondescript" character of the "*proprietors*," as Mr. Moon, in his simplicity, calls them, ought, we admit, to speak trumpet-tongued, by way of warning to the public; and it has done so, we presume, for Mrs. Parkes assures us, that "respectable parties," whose names have been advertised in conjunction with them, have already withdrawn.

THE MUSEUM OF ECONOMIC GEOLOGY.

IT is not generally known that this Museum is open to the public, and extremely well worth a visit. It is not designed for an attractive show, to amuse London sight-seers, but is admirably calculated to be of service to persons interested in mining operations, in various arts and manufactures, and especially to builders and architects. By such persons it cannot be too highly appreciated, as it will often afford them an opportunity, by a short visit, of acquiring much information, and receiving many useful hints. The room into which the visitor first enters, contains various specimens of stone used for building, and also some of the products of the earthy minerals now used in the arts. The several sorts of stone examined for the purpose of deciding on the most suitable for the New Houses of Parliament, are contained in the first case, where the spectator should not fail to notice the beautiful specimen of magnesian limestone, from Bolsover, approved by the Commissioners. The wisdom of their choice appears from the fact, that the material thus selected has stood the test of 800 years in Southwell Church, where, both in the exterior and the interior, it is uninjured by the corroding tooth of time.

The small blocks of stone in the cases in this room are mostly in cubes, and many of them very beautifully polished. Among them will be found granites, porphyries, sandstones, pudding-stones, oolites, alabasters, and a great variety of English marbles, some of them rivalling in beauty the expensive marbles of Italy. The specimens from Babbicombe are especially

Digitized by Google

beautiful, as are also the blocks of shelly limestone from Pembrokeshire. At the top of the room the cases contain various specimens of the products derived from earthy minerals, illustrations of the changes through which they pass, and of their application to the arts. Among these we may notice the beautiful porcelain, manufactured from the white clay derived from decomposed granite; the fire-brick and various sorts of tiles and crockery made of the Stourbridge clay; Keene's cement, which is a preparation of chalk and alum, and which, besides being a durable cement, has the whiteness and receives the polish of marble; and the plaster of Paris made of gypsum, of which there are some fine specimens; some of the numerous uses to which it is applied being illustrated by the various works of art lodged in the Museum, among which is one of the models designed for the New Houses of Parliament. The use now made of asphalte is shown by a detail of the processes through which it passes, in being applied, as it is successfully, to the formation of foot pavements.

The two rooms on the next floor are furnished with suites of specimens of the mineral contents of rocks, and of coal, both anthracite and bituminous, in all its varieties. Here the various metals may be seen in lodes, as they are brought fresh from the mines, in the amorphous and crystalline states, and all the stages through which they pass before being converted into manufactures. The different methods of manufacturing iron are illustrated, as is also the conversion of iron into steel; the various results of the hot and cold blast furnaces are shown, not only in the iron, but also in the fuel employed, and the various kinds of slag obtained from them.

By the time the visitor has reached the end of the room, he finds the material, which at first he saw in its primitive state, converted into swords, guns, and various articles of cutlery. One of the tables contains, in a morocco case, eleven small plates of steel, about a square inch in size; these plates are very interesting, being specimens of steel, exhibiting the various colours produced by tempering at different degrees of heat. These small plates show the various colours of the thermal spectrum, of which we have familiar examples in the effect produced by leaving a polished steel poker too long in the fire, and in the prismatic sort of arc often seen in the domestic stove.

The Model Room, which is reached by ascending another flight of stairs, is filled with objects of great interest to all who are engaged in geological studies or mining pursuits. Here, in half an hour, by the assistance of the models, and the instructions of the very obliging and intelligent officer to whom this department belongs, an accurate idea may be obtained of the appearance presented by the great mining county of Cornwall,—the veins in which the copper and tin are contained—the faults by which the workman is arrested in his progress—the way in which the mine is worked—the "whims" by which the ore is brought to the surface, and the machinery used for purifying and smelting it. Here is a model to show the manner in which the veins and faults occur, made under the direction of Sir H. De la Beche; a model of a steam whim, erected at East Whealcrofty Mine, designed by J. Sims, C.E., on a scale of an inch to a foot; a model of an apparatus by which the men may ascend to the surface, thus affording the assistance in many cases greatly needed, as appears from the fact that some of the mines are so deep, that it takes a man more than two hours to reach the top. There is a model of a Newcastle coal field, to show the mode of ventilation adopted, and by which it is seen how a stream of air is made to traverse the passages to the extent of twenty miles. The most beautiful model, if comparison be allowed, is that of Mr. Sopwith, illustrating the beds of coal in the Forest of Dean. It includes twenty-four square miles of country; it opens so as to exhibit several sections; it shows the various beds of coal; and the colouring indicates the extent to which the mines have been already worked. In this room there are specimens of the various tools used by the miner in Saxony and Cornwall, to which it is proposed to add those of other countries. In order, however, that the Museum may receive those numerous additions, which are desirable, the premises must be greatly enlarged, being already well filled; and it is to be hoped that an establishment so truly national will not be crippled for want of the space necessary to make it what it ought to be—a friendly rival to the continental schools of mines.

OUR WEEKLY GOSSIP.

Of home gossip, scarcely a word has reached us; indeed, if we were to record here what alone has occupied our thoughts during the week, we might possibly babble of index, and other matters not particularly enlivening. These, however, belong to the past, and our talk should be of the future: but in the way of literary intelligence, the only word of promise that has reached us is from the Messrs. Longmans—'The Last Year in China, to the Peace of Nanking,' by a Field Officer, actively employed in that country.

Our neighbours, on the other side the Channel, seem equally engrossed with the cordialities and festivities of the season. The dramatic event of the last few days has been the production, under its new title of '*La Main Droite et la Main Gauche*,' of M. Léon Gozlan's drama—the interdict of which, by authority, almost at the very hour of performance, about a year and a half ago, under its then title of '*Il était un Roi et une Reine*,' made so much noise, as our readers will remember. The offence of the piece, to which it owed at once its suppression and its notoriety, was its containing a mean and profligate attack upon the domestic habits and circumstances of our young Queen, and her newly-wedded consort; and the author, who seems to have thought himself very ill-used, by the determined interference of the higher powers, under a more generous inspiration than his own, has struggled hard to get a hearing for his dramatic squib. He has been compelled, however, to remodel it; and, so far as may be gathered from the accounts of the performance furnished by the Paris *feuilletons*, although the piece, read by the light of its author's original and known intentions, still exhibits the mischievous tendencies of its early construction and moral, yet the changes to which he has been driven have sufficiently removed it from all apt application to the royal pair, whom it sought to wound, and generalized the satire for those to whom the previous facts are unknown.

We record with regret the decease, in his seventy-fourth year, of that accomplished and urbane gentleman, Archdeacon Wrangham. The literary labours of his life were carried on, with little intermission, till its close. These were principally poetical: translations of the classics, in which an intimate knowledge of the original Latin or Greek was set forth by graceful powers of versification; or more sportive exercises, in which he rendered English verse into the modern or ancient languages with a felicity and ease scarcely inferior to that of "Father Prout," or the author of 'Il Trifoglio.' He was a man of extensive reading, and an upright and generous critic; and will be regretted by a large circle of literary friends, by whom he was beloved for the gentleness and consideration which he carried into all the relations of social intercourse.

The announcement in our last Table of Meetings, that the lecture at the Royal Academy on Thursday, would be on Sculpture, was an error; the more to be regretted, as, on that evening, was delivered the first of the series on Architecture, by Professor C. R. Cockerell. This subject just now seems to occupy so much of public attention, and our former casual notices of these lectures awakened at the time, so much interest, that we have obtained leave to attend the course, and shall furnish our readers with a report, which cannot fail to gratify them.

The Academy of Moral and Political Sciences has filled up the vacancy left by the death of Count A. de Laborde, by the election of M. Duchatel, the Minister of the Interior. The Academy of Fine Arts has elected M. Donizetti, now at Vienna, corresponding member, in the place of the late M. Mauduit; M. Kaulbach, painter, of Munich, to replace M. de Lasalle; and M. Jessi, engraver, of Florence, to fill the vacancy caused by the death of M. de Bray. The Academy of Inscriptions and Belles Lettres has filled the places become vacant during the past year in the list of corresponding members by the election of Messrs. Eugene Borée, now in Persia; Thomas Wright, of London; Wachsmuth, of Leipsic; Cavedoni, of Modena; and De Witte, of Antwerp: and at the close of the Anniversary Meeting of the Geographical Society, last week, there was a ballot for two members of the central committee to replace Admiral D'Urville and Dr. Edwards; when M. Thomassy obtained the first place by a large majority; and Messrs. Desjardins, Froberville, Cortambert, and Couteau, being equal for the second, the oldest candidate is to be nominated.

According to *Galignani* an account has been laid before the Paris Academy of the second journey of MM. D'Arnaud and Sabatier to the sources of the Nile, in 1841 and 1842, by the western branch, or White Nile. "The voyage on the Nile from Kartoum was to a distance of 500 leagues. The travellers attained the 4th deg. 42 min. of latitude, almost under the meridian of Cairo, showing the error of accounts as to the direction of the White Nile. They saw no mountains, although what are called the Mountains of the Moon are traced on all the maps of the 5th to the 7th degree of latitude. The bifurcations found by these gentlemen are formed by islands only, and there are immense marshes. The inhabitants are reported to be very numerous, of a pacific character, varying in race, language, and physiognomy. Some are of a bronze colour, with soft hair. In one of the tribes the men are armed with lances of more than 12 feet in length, the iron heads forming nearly a fourth of this measure. In another tribe the moon is their deity; if engaged in combat, they leave off the moment that the moon rises. Messrs. D'Arnaud and Sabatier, when in the dominions of the King of the Behrs, found there various articles of the merchandise of India. This chief, they say, has his palace on the water, and it can only be approached by swimming. His guards are two battalions of women, armed with spears and bucklers. His ministers never enter the interior of the palace of their king, except at the moment when they have reason to suppose that he is attacked with mortal illness, and it is then their duty to strangle him, to prevent a natural death."—We presume that the expression "Voyage on the Nile," is ascribable to the haste of the translator, and that we are merely to understand by it the journey up the Nile. The Western Nile or White River ceases to be navigable a little above Al Ais in the same parallel with Sennâr. The general character of this river,—divided into many channels through level marshes or over gravelly plains, was made known to us by the Turkish expedition of 1825, which explored the country to the extent of 15 days' journey above Al Ais: with respect to the water which is said to surround the dwelling of the King of the Behrs, it may be observed that the Galla in Abyssinia have some knowledge of a great sea or lake in the interior, which they say is so wide, that it takes a vulture three hours to fly over it. Of the Mountains of the Moon which seem to have absconded, we have much to say, but we shall reserve our observations on that and the other topics elucidated by MM. D'Arnaud and Sabatier, till a more ample account of the discoveries of those gentlemen shall be before us.

We are happy to hear, on the authority M. de Humboldt, that the preparatory labours for cutting a canal across the isthmus of Panama are advancing rapidly. The commission appointed by the government of New Grenada for the construction of a canal to unite the two oceans, has terminated its examination of the localities, and has arrived at a result as fortunate as it was unexpected. The chain of the Cordilleras does not extend, as was supposed, across the isthmus; on the contrary, a valley very favourable to the operation has been discovered. The natural position of the waters is also favourable. Three rivers, over which an easy control may be established, and which may be made partially navigable, will be connected with the canal. The excavations necessary will not extend to more than 12¼ miles in length. The fall may be regulated by four double locks, 138 feet in length; and the total length of the canal will be 49 miles, with a width of 135 feet at the surface, and 55 feet at the base; the depth will be 20 feet. The canal thus executed will be navigable by vessels of from 1000 to 1400 tons. According to the estimate of M. Morel, a French engineer, the total cost of this canal would be only 14 millions of francs, including the purchase of two steamers.

CAUBUL.—NOW OPEN at the ROYAL PANORAMA, Leicester-square, a comprehensive and interesting VIEW OF CAUBUL, including the Bala Hissar, the river Caubul, with a distant View of the Himalaya Mountains and the Pass of Khurd Cabul, where the British army was so treacherously destroyed. The whole illustrated by numerous groups of figures descriptive of the manners and costumes of the Afghans. The Views of the Battle of Waterloo, and of Jerusalem, will shortly be closed.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

Nov. 16.—Mr. Murchison, President, in the chair. Three papers were read.

1. 'On the Stucture of the Delta of the Ganges, exhibited by the Boring Operations in Fort William. A.D. 1836—40,' by Lieut. R. Baird Smith, B.E.—Since the year 1804, a number of boring operations have been conducted in the Gangetic Delta, with a view to supply the deficiency of good fresh water in the vicinity of Calcutta, but, from mechanical obstacles, without success. The geological results of the last of these experiments, commenced in April, 1836, and abandoned in 1840, after being carried on to the depth of 480 feet, are detailed by Lieut. Smith in this memoir. After penetrating to the depth of ten feet through the artificial surface soil, a bed of blue clay, close and adhesive in its texture, was entered. As the bore descended, the clay became darker in colour, till, in from 30 to 50 feet, large portions of peat, with decaying fragments of trees, were found. Succeeding these peat-charged beds, a stratum of calcareous clay, 10 feet in thickness, is found, and intermixed with it are portions of the concretionary limestone, commonly known in India as kankur. Underlaying the bed of calcareous clay in which the kankur first occurs, there is a thin bed of green siliceous clay, extending from 60 to 65 feet in depth. The clay then loses its colour, and continues to a depth of 75 feet, the lower portion of it furnishing nodules of kankur. At 75 feet, a bed of variegated sandy, or arenaceous clay commences, and continues to the depth of 120 feet, occasionally traversed by horizontal beds of kankur. Beneath this is a stratum of argillaceous marl, 5 feet in thickness; and succeeding it there is a bed only 3 feet in thickness, of loose friable sandstone, the particles of sand being held loosely together by a clayey cement. Argillaceous marl, 20 feet in thickness, follows the sandstone, terminating at the depth of 150 feet, when it passes into an arenaceous clay, intermixed with water-worn nodules of hydrated oxide of iron. Weathered mica slate is found attached to the clay of this bed, and throughout the entire range of strata penetrated, scales of mica have always been abundantly met with. At 175 feet, a coarse friable quartzose conglomerate occurs, composed of pebbles of different sizes, though none are very large, cemented together by clay. At 177 feet, this conglomerate becomes smaller grained; and at 183 feet 3 inches, it is found to pass into indurated ferruginous clay, which continues, with but little variation, to a depth of 208 feet. Here another layer of sandstone, soft in its upper portion, but becoming more indurated, and assuming the lamellar structure as if it passed through, occurs; the thickness being, however, no more than 3 feet. Ferruginous sand, with thin beds of calcareous and arenaceous clay, prevail from 208 feet to 380. Kankur, with minute water-worn fragments of quartz, felspar, granite, and other indications of *débris* from primary rocks, are met with in the lower parts of this sandy deposit, in which were also found three fragments of bones, of which one was considered by Mr. J. Prinsep to be the lower half of a humerus of some small quadruped, like a dog, and another the fragment of the carapace of a turtle. At 380 feet, there occurred a thin layer, only 2 feet in thickness, of blue calcareous clay, thickly studded with fragments of shells; and at 382 feet, this was succeeded by a layer of dark clay, composed almost entirely of decayed wood. From the lower portion of it several fragments of coal, of excellent quality, were brought up. Underneath this stratum, and in the gravelly bed which immediately succeeds it, there were found several other fragments of fossil bones. One was considered to be a caudal vertebra of a kind of lizard, and the rest were fragments of turtles. These were discovered at the depth of 423 feet, and were associated with large rolled pebbles of quartz, both white and amethystine, felspar, limestone, and indurated clay. The gravel, composed entirely of the *débris* of primary rocks, continued to the depth of 481 feet, where the operations ceased. Lieut. Smith remarks the correspondence of the succession of the strata in the Gangetic Delta, at a depth of from 350 to 480 feet, with that observed by Captain Cautley, at the base of the Himalaya. On geological grounds, he concludes, that had no interruption arrested the experiment, the object in view would not have been gained.

2. 'On Pipes, or Sandgalls, in Chalk,' by Mr. Joshua Trimmer, F.G.S.—The author maintains that the pipes in the chalk of the part of Kent examined, were formed by the action of the sea, on a low shore, and that they mark the boundaries of the ante-eocene sea, and were subsequently submerged and covered by the London clay. Mr. Trimmer considers the form and contents of the pipes to indicate the mechanical action of water; and having had the opportunity of observing the removal of the covering from the chalk near Faversham, remarked that they were but the termination of furrows from 6 to 24 inches deep in the shallowest parts exposed, but widening and deepening as they approached the pipes, till they were lost in them. His opinion was strengthened by observing certain blocks of siliceous sandstone marked with similar furrows and pipes, though of smaller dimensions, which could not have been formed by the action of acidulated water. On the sea shore, near Reculver, he saw similar blocks, presenting pipes in miniature. The waves charged with small pebbles and sand, wearing the surface with furrows, like those of the chalk, the softer parts of the stone then giving way, first hollows are formed, when the rotatory motion of the contents of the hollows, set in action by the influx and reflux of the waves, drills the pipe. Arguing from analogy, he holds that similar causes produced the pipes in chalk.

3. 'On some remarkable Concretions in the Tertiary Beds of the Isle of Man,' by Mr. H. E. Strickland, F.G.S.—The northern extremity of the Isle of Man consists of an arenaceous deposit, forming a district of about 50 square miles, the most extensive example of the marine newer pleiocene in the British Isles. In places, it attains a height of about 200 feet above the level of the sea. Organic remains are rather sparingly diffused in it, and Mr. Strickland enumerates 20 species, of which 5 are not existing inhabitants of the British Seas. Near Ramsay, the beds of this deposit occasionally exhibit a very remarkable concretionary structure. The sand has here been cemented into masses, which are extremely hard, and even sonorous when struck, though the sand in which they are imbedded is perfectly loose. The cementing ingredient, which the application of acid proves to be carbonate of lime, seems to have been influenced in its operations partly by the planes of stratification, and partly by the direction in which the sand has been originally drifted by currents. In the former case, the concretions are in the form of flat tabular masses, parallel to the stratification often mammillated on their surfaces, or perforated obliquely by tubular cavities. In the latter case, they assume a sub-cylindrical, or spear-shaped form, and occur parallel both to the stratification and to each other. A pebble is frequently attached to the larger end of the concretion, which springs from it as from a root, to the length of a foot or more, and gradually terminates in an obtuse flattened point. All these varieties are sometimes combined together into vast clusters of several tons weight, resembling masses of stalactite, the component portions being nearly parallel to each other. Mr. Strickland supposes that currents of water (or possibly of wind, operating during ebb tide), flowing in a certain direction, may have disposed the sand in ridges parallel to that direction, and the carbonate of lime may have afterwards been attracted into these ridges in preference to the intermediate portions. This view is confirmed by the fact, that these concretions have frequently a pebble attached to the larger end, as though it had protected a portion of sand from the current, and caused it to accumulate in a ridge on the lee side, a circumstance which may frequently be observed where sand is drifted by the wind or water.

ASTRONOMICAL SOCIETY.

Nov.—Dec.—The President, Lord Wrottesly, in the chair.

Lieut. H. C. Otter, R.N., W. F. Donkin, Esq., and John Lane, Esq., were elected Fellows.

Papers of great interest were read by Mr. F. Baily and the Astronomer Royal, 'On the total Solar Eclipse of July, as observed at Padua and Turin.' We had the gratification to publish (No. 769) in an extract from a letter, written by Mr. Baily, the first account, by an eye-witness, of this eclipse; and, subsequently, further interesting accounts in a letter from Vienna, and the Report of MM. Pinnaud and Boisgerard (No. 772). But so few authentic particulars exist of these rare phenomena, that we are sure it will gratify our readers, if we publish a full Report of the observations of these distinguished Astronomers:—

'Some Remarks on the Total Eclipse of the Sun, on July 8th, 1842.' By Francis Baily, Esq., Vice-President of this Society.

It is well known to many members of this Society that I proposed to proceed to the Continent, during the last summer, for the express purpose of observing the total eclipse of the Sun which was to take place on the morning of July 8th, civil reckoning. This object has been accomplished; and I flatter myself that an account of that rare phenomenon, by an eye-witness, may be acceptable to this meeting. A statement of the principal observations that I made, was communicated by me, to one of the Vice-Presidents of this Society, in a letter written at Milan within 48 hours after the eclipse, whilst the circumstances were still fresh in my memory; and they do not differ from those that I am now about to relate more in detail, and which I am desirous here to place on record.

A total eclipse of the sun, in any particular portion of the globe, is an event of very rare occurrence, since only four or five of these remarkable phenomena are recorded as having been seen in Europe during the last century: to which we may add another that was fortunately seen *at sea*, by Don Ulloa. But, the accounts of these several eclipses are by no means satisfactory, since they are discordant in many particulars; which probably has arisen not only from the sudden and unexpected appearances that occurred, but also from the loose description that has been given of them, either by the observers themselves, or by those who drew up the accounts, and perhaps did not fully comprehend the intention and meaning of the authors. The difficulty also is very much increased from the want of drawings to represent the exact appearances seen; which are always more readily understood by this method, than by any verbal description. During the present century another eclipse of this kind has taken place in the United States of America, which was observed by Mr. Ferrer; and a minute account of the same, together with a drawing of its appearance, has been published in the sixth volume of the Transactions of the American Philosophical Society. These are the only cases of interest that are on record since the invention of the telescope, within which period we must necessarily limit our attempt to acquire any useful information relative to this remarkable phenomenon. But, I must proceed with my narrative.

My original intention was to have taken up my station, for observing the eclipse, at Digne, in the south of France; and I had proceeded on my way thither till I arrived near Lyons, when I found that I had a few days to spare: and, as I had proposed to visit Venice before my return home, I altered my route, and resolved to proceed in an easterly direction, along the line of the moon's shadow, till the day before the eclipse, when I proposed to halt at the most convenient place that might offer. I therefore turned off towards Chambery, and crossing the Alps at Mount Cenis, passed through Turin, Asti, and Alessandria, and arrived at Pavia about noon on July 7th. As this place was directly on the central line of the moon's shadow, I resolved at once to make it my head quarters. I had intended to apply to the director of the university there, for the use of a convenient place where I might observe the eclipse: but I was agreeably anticipated in this respect, by a visit from one of the Professors, who having heard of my arrival and my object, immediately and obligingly came to offer me the use of any one of the apartments in the university that might be considered most adapted for my purpose. On accompanying him to the university, with this object, I selected one of the upper rooms of the building, which was admirably adapted for making the observations that I had in view. He then very kindly expressed his readiness

Digitized by Google

to furnish me with any instruments at the university, that I might require for my use. But, I had taken with me from London the same 3½-feet telescope by Dollond, that I had formerly used in the *annular* eclipse of May 15, 1836, as already described in the tenth volume of the *Memoirs* of this Society: and I therefore informed him that all I wanted was to be left *alone* during the whole time of the eclipse, being fully persuaded that nothing is so injurious to the making of accurate observations, as the intrusion of unnecessary company. Acting upon this hint, he immediately took the key from the outside of the door, and placed it in the inside, and told me that I might lock myself in: but there was no occasion for this precaution, for although I heard numerous footsteps pass the door, in their way to an adjoining apartment, which was also used as an observatory on this occasion, no one attempted to enter the room in which I was located. At four o'clock in the morning of the eventful day I went to the university, in order to prepare for the observation: and at that early hour I found many of the students and official persons walking about. At sunrise a thin stratum of clouds was seen in the east near the horizon, but the sun soon got above this obstruction, and the remainder of the day was beautifully clear and serene: not a cloud was to be seen in any part of the heavens, visible from my window, during the whole time of the eclipse. It was as fine a day as that which I had fortunately witnessed in Scotland, at the annular eclipse of 1836. I had a very good observation of the commencement, and the end of the eclipse; but I did not pay any great attention to these secondary objects, and, as my chronometer was not adjusted to correct mean time, these observations can be of no use, except as indicating the duration of the eclipse, which, according to my reckoning, was $1^h\ 56^m\ 39^s.6$ mean time. As the moon advanced towards her central conjunction with the sun, I watched very carefully, and with much anxiety, the approach of the border of the moon towards the still illuminated portion of the sun, which was now rapidly assuming a fine crescent shape, the precursor of total obscuration. I used a *red* coloured glass, in order to observe the phenomenon, notwithstanding the remarks and advice to the contrary by an American observer: and the power of the eye glass was about 40. When the total obscuration took place, the coloured glass was removed. I at first looked out very narrowly for the *black lines* which were seen in the annular eclipse of 1836; as they would probably precede the *string of beads*. These lines however did not make their appearance; or, at least, they were not seen by me. But, the *beads* were distinctly visible; and on their first appearance I had noted down, on paper, the time of my chronometer, and was in the act of counting the seconds *in order to* ascertain the time of their duration, when I was astounded by a tremendous burst of applause from the streets below, and at the *same moment* was electrified at the sight of one of the most brilliant and splendid phenomena that can well be imagined. For, at that instant, the dark body of the moon was *suddenly* surrounded with a *corona*, or kind of bright *glory*, similar in shape and relative magnitude to that which painters draw round the heads of saints, and which by the French is designated an *auréole*.

Pavia contains many thousand inhabitants, the major part of whom were at this early hour, walking about the streets and squares, or looking out of windows, in order to witness this long talked-of phenomenon: and when the total obscuration took place, which was *instantaneous*, there was an universal shout from every observer, which "made the welkin ring;" and, for the moment, withdrew my attention from the object with which I was immediately occupied. I had indeed anticipated the appearance of a luminous circle round the moon during the time of total obscurity: but I did not expect, from any of the accounts of preceding eclipses that I had read, to witness so magnificent an exhibition as that which took place. I had imagined (erroneously as it is seems) that the *corona*, as to its brilliant or luminous appearance, would not be greater than that faint crepuscular light which sometimes takes place on a summer's evening, and that it would encircle the moon like a *ring*. I was therefore somewhat surprised and astonished at the splendid scene which now so suddenly burst upon my view. It rivetted my attention so effectually that I quite lost sight of the string of *beads*, which however were not completely closed when this phenomenon first appeared. I apprehend that only a few seconds of time (perhaps 3 or 4) were wanting to complete the perfect obscuration of the sun: but I cannot speak on this point with much certainty. I had previously noted down some of the principal objects to which I was desirous of directing my attention during the time of total obscuration, and which seem to have given rise to much discussion on former occasions. These, as far as the *corona* is concerned, had reference principally to its colour, its lustre or paleness, its magnitude and extent, its state of motion or repose, and its encircling the sun or the moon as its centre: then, as to the moon, whether any holes were discernible, or any coruscations of light on the dark side: next, as to the amount of darkness in the atmosphere, the change of colour in surrounding objects, and some other points not requisite here to enumerate further. The time however for making accurate observations of this kind is always so short in total eclipses (in the present case being less than 2¼ minutes) that one individual can scarcely attend to all the objects that are requisite to be noticed; more especially if his attention is called away (as in this instance) by any new phenomenon which had not been previously observed, or even anticipated. It is therefore desirable, in any future occurrences of this nature, that a *division of labour* should be made between 2 or 3 observers at the same place: each attending solely to the part which he has selected for his particular object.

The breadth of the *corona*, measured from the circumference of the moon, appeared to me to be nearly equal to half the moon's diameter. It had the appearance of brilliant rays. The light was most dense (indeed, I may say quite dense) close to the border of the moon, and became gradually and uniformly more attenuate as its distance therefrom increased, assuming the form of diverging rays, in a rectilinear line, and at the extremity were more divided and of unequal length: so that in no part of the *corona* could I discover the regular and well defined shape of a *ring* at its *outer* margin. It appeared to me to have the sun for its centre, but I had no means of taking any accurate measures for determining this point. Its colour was quite white, not pearl colour, nor yellow, nor red; and the rays had a vivid and *flickering* appearance, somewhat like that which a gas-light illumination might be supposed to assume, if formed into a similar shape. I should think it not impossible to give a tolerable representation of this phenomenon by some artificial contrivance. I have seen something like it, in miniature, by the reflection of the sun's light from a piece of broken glass: and on a larger scale by viewing the sun through a grove of trees: but in both these cases it is necessary to obscure the central portion of the rays. The brilliancy of the *corona* was however quite as great as that which is produced by either of the methods here alluded to. I have annexed hereto a drawing of the *corona*, representing as nearly as I can preserve in my recollection, the appearance of its shape and extent, and the ramification of the rays, at the time of the middle of the total obscuration. I had no time or opportunity for ascertaining the deviation of the moon from the central position of the *corona*, at any other point of its progress.

Splendid and astonishing however as this remarkable phenomenon really was, and although it could not fail to call forth the admiration and applause of every beholder, yet I must confess that there was at the same time something in its singular and wonderful appearance that was appalling: and I can readily imagine that uncivilized nations may occasionally have become alarmed and terrified at such an object, more especially in times when the true cause of the occurrence may have been but faintly understood, and the phenomenon itself wholly unexpected. But the most remarkable circumstance attending this phenomenon (at least, that which most engaged my observation during the short interval of total obscuration, and drew my attention from other objects of interest) was the appearance of *three large protuberances* apparently emanating from the circumference of the moon, but evidently forming a portion of the *corona*. They had the appearance of mountains, of a prodigious elevation: their colour was red, tinged with lilac or purple; perhaps the colour of the peach blossom would more nearly represent it. They somewhat resembled the snowy tops of the Alpine mountains, when coloured by the rising or setting sun. They resembled the Alpine mountains also in another respect, inasmuch as their light was perfectly steady, and had none of that flickering or sparkling motion so visible in other parts of the *corona*. All the three projections were of the same roseate cast of colour, and *very distinct* from the brilliant vivid white light that formed the *corona*: but they differed from each other in magnitude. [Mr. Baily exhibited a drawing on which was represented the appearance of the shape, size, and position of these several protuberances.] The whole of these three protuberances were visible even to the last moment of total obscuration, at least, I never lost sight of them, when looking in that direction; and, when the first ray of light was admitted from the sun, they vanished with the *corona*, altogether, and day-light was *instantaneously* restored. My attention was so constantly taken up by these remarkable and unexpected appearances, that I omitted to watch for the re-appearance of the *beads*, and therefore cannot add my testimony to the re-occurrence of that phenomenon.

The darkness, during the time of total obscuration, was not so great as I had anticipated. I had caused a lighted candle to be prepared, in order to be ready in case of need; but I eventually extinguished it: as I found I could read very small print, and note the time by my chronometer, without its assistance. Prior to the commencement of the eclipse I had observed a great number of swallows flying about; but towards the middle of the eclipse they had all vanished, and did not make their appearance again till a few minutes after the first ray of light emanated from the sun, when they were as active, and soon became as numerous, as ever. During the time of total obscuration, I examined carefully with the telescope the body of the moon, but could not discern any bright spot that might be mistaken for a hole; nor could I discover any coruscations issuing from the dark side of the moon. These, however, were only momentary observations. I was told that several stars were seen, but I could not spare the time to look about for them myself: every moment was occupied with more important matter. Having thus given a detail of all the principal circumstances that occurred, and precisely in the manner in which they presented themselves to my view, as far as my recollection (committed to paper, immediately after the event) will assist me, I had intended to have subjoined to this communication an account of the several phenomena that had been noted on former occasions of this kind, and to have compared the various descriptions with each other, in order to see how far any differences that were observed, might be reconciled with present appearances. Or, in other words, to have presented a sort of historical view of the subject, somewhat similar to the plan which I adopted in my memoir relative to the annular eclipse in 1836. But, I fear that I may already have encroached too much on the time of the meeting: and I am moreover of opinion that a review of this kind can be taken with greater advantage at a more advanced period of time, when we may be in possession also of the several observations that have been made on the present eclipse, at different places on the Continent, and which might thus be introduced into the comparison. Should such a measure be thought desirable and useful to future observers, I may probably intrude again upon the time and attention of the Society.

(We shall give the Report of the Astronomer Royal next week.)

Microscopical Society.—*Dec.* 21.—Professor Lindley, President, in the chair.—A paper was read from the Rev. J. B. Reade, entitled 'Microscopic Chemistry, No. 1. On the existence of Ammonia in Gum, Sugar, and other non-azotized Bodies.' The author, after alluding to the great degree of importance which chemistry might derive from the use of the microscope, goes on to state, that a quantity of nitrogen, not exceeding the 1000 part of a grain, if existing as a constituent of ammonia, may be detected with certainty, by means of the microscope. The method of detecting the ammonia in sugar, was as follows—by burning the sugar in the spirit lamp until flame and aqueous vapour have ceased, and

Digitized by Google

receiving the gas during subsequent combustion upon a slip of glass, moistened with hydrochloric acid. In conclusion, the author stated, that he had detected ammonia in beer, gum, and suet, which had all been classified by Liebig as non-nitrogenized bodies. He thought that the reason why chemists had failed in detecting nitrogen in sugar, was because the quantity was much too small to be recognized by the usual process of ultimate analysis.—A second paper was by Mr. H. H. White, on a new species of Xanthidium, found in flint.—Mr. Hussul resumed his 'Observations on the production of Decay in Fruit, by means of Fungi.' The author, after stating, that in order to set aside any doubt which might exist of the power of fungi in producing decay in fruit, he had inoculated sound fruit whilst on the tree, and found that the decay was as rapid as in those specimens which had been previously removed from the tree. He contended that the mere bruising of fruit was not sufficient of itself to cause decay, but that the presence either of fungi or of the sporules of fungi, was necessary before the decay could take place.

MEETINGS FOR THE ENSUING WEEK.

MON. Geographical Society, ½ p. 8, P.M.
— Institute of British Architects, 8.—'On a new mode of constructing Flues and Chimneys,' by J. Moon.—'A Description of the Sir Harry Burrard Neale Testimonial,' communicated by G. Draper.—'A Description of a Preparation to render Stone, Brick, and other absorbent materials Impervious to Water,' by J. Sylvester.—Mr. R. W. Billings will offer some illustrations of a mode of striking Gothic Tracery.

FINE ARTS

Queen Victoria in Scotland, 1842.—We have here, by way of New Year's gift, a reminiscence of a Royal Progress; and a portly volume it is, liberally "pedigreed out" with lithographs executed by Messrs. Maclure & Macdonald, from drawings by Mr. Maclure, containing a full record of the presentations, pastimes, and processions of each day, with as small a proportion as could reasonably be expected of those effusions of loyalty, which have of late excited no little nausea in publications of a like character. But as, while turning over the pages, we have not been arrested by any passage of special brilliancy, we shall, for the present at least, confine ourselves to a specification of the illustrations. We are constrained to say, that the medallion profiles of Her Majesty and Prince Albert, executed by the analyptograph, which decorate the frontispiece, fail in their effect. There is an exaggeration in the parted lips of our Sovereign, which amounts to caricature. The lithographs are better, and include the Hall at Taymouth during the Ball—Mons Meg at Edinburgh Castle—The High Street of "Scott's own romantic town"—views of Dalkeith Palace, Dalmeny and Drummond Castles; and of Taymouth, with the torch-lit dance of the kilted men, some of whom are gone to edify with their steps and screams the public of the Parisian Carnival: "prospects" of Perth, Stirling, and Dunkeld, as they appeared during the memorable time, are also here, to delight the loyal, and, we should think, to ensure an extensive sale to the work they adorn. This day twelvemonth, such of us as are left to play the part of Master Laneham, and gossip of the royal "whereabouts," may have to examine companion pictures of Her Majesty in Dublin Castle, on the splendid new terrace at Powerscourt, &c. So let it be; these royal journeys can hardly pass, without yielding good to the people, as well as pleasure to their ruler: but, for this week at least, we must forbear any further speculations on so tempting a subject.

Shaw's Dresses and Decorations. Part 22 is one of the richest of the series. Among other interesting subjects, it contains a reduced fac-simile of a three-quarters length portrait of Queen Elizabeth, ascribed to Holbein, with which the visitors at Hampton Court must be familiar. It appears to have escaped Mr. Shaw's attention, that Horace Walpole threw several doubts on this picture, which a MS. in the British Museum furnishes the means of removing. "Over one of the doors" (at Kensington Palace) says Walpole, "is a picture ascribed to Holbein, and supposed to be Queen Elizabeth when princess, with a book in her hand, but *I question both the painter and the person represented.*" (Dallaway's edition of 'Walpole's Anecdotes,' vol. I. p. 148.) But Dallaway does not seem to participate in Walpole's doubts, for in a note, in the *same* vol. (p. 140), he describes the same picture among Holbein's works as "The Princess, afterwards Queen Elizabeth, when young in red, holding a book, formerly at Whitehall, now at Kensington." A manuscript in the Harleian Collection (No. 1419), being an inventory of the effects of Henry VIII. deposited in his various palaces, Whitehall, St. James's, Greenwich, Oatlands, and Hampton Court, &c., which was compiled immediately after his death, removes, we think, Walpole's doubts, at least, as respects the identification of the picture as a portrait of Queen Elizabeth. The following is the contemporary notice of it from the inventory. "A table (i. e. panel) with the picture of the Ladye Elizabeth her grace, with a boke in her hande, her gowne like crymeson clothe of golde with workes." This account perfectly agrees with the painting engraved by Mr. Shaw, and since the fact is established that it is a genuine portrait of the Queen, there would be no impossibility in Holbein's being the painter of it, putting aside internal evidence of the fact, which seems to us to tend altogether in that direction. At all events, when we reckon up the limners of that day, painters at the court of Henry VIII.—Jerome de Trevisi, Luca Penn, Corneliz—we shall not find one whose works entitled him to the credit of the authorship of this picture so strongly as Holbein.

MUSIC AND THE DRAMA

THEATRE ROYAL DRURY LANE.

On Monday will be performed Shakspeare's Tragedy of MACBETH.
Macbeth, Mr. Macready.
Tuesday, OTHELLO.
Wednesday, KING JOHN.
Thursday, the New Tragedy of the PATRICIAN'S DAUGHTER.
Friday, Dryden and Purcell's Opera of KING ARTHUR.
Saturday, an Opera. Every Evening the Pantomime.

NEW PUBLICATIONS.

Mendelssohn's Third Symphony, arranged as a Pianoforte Duett, by the Author, Op. 56.—There are as many modes of musical arrangement as of literary translation. In the days when orchestral science was in its infancy, and the ten fingers of performers on keyed instruments could, without any extraordinary stretch or fatigue, have represented the stringed quartett, as it was then employed alternately with a pair of oboes, flutes, or trumpets, nothing could be more meagre than the compressed score for the harpsichord or pianoforte. Little was attempted beyond a bald and literal version of the leading points of the composition, and a sketchy indication of the chords to be filled up by the thorough-bass player. In proportion as harmonies have become chromatic, and scores diversified, wonders have been expected from the pianist. Any one that examines Czerny's or Kalkbrenner's versions, for four hands, of Beethoven's symphonies, will find every bar of the stave crowded with notes to an excess defying the most practised player; who, indeed, may execute the notes, but cannot possibly give to each finger the power of representing the trombone, or bassoon, or clarionet, for which it is appointed deputy; the consequences being a heaviness of effect, satiating rather than satisfying to the ear.

So far we have been speaking of versions, in which the composition is literally set down, and the instrument left to adapt itself as best it may. Another manner of working, however, has been introduced by Liszt and others. They no longer profess to *arrange*—the word is *transcribe*. With an enlarged knowledge of the uses and the powers of the piano, they attempt to provide for these as well as for the main features of the orchestral compositions, by paraphrasing such passages as are opposed to the genius of their instrument; considering general picturesqueness of effect as of more consequence than that close and formal adherence to their originals deemed necessary by their predecessors. Our distinction will be understood by all who are familiar with M. Liszt's transcripts of the overture to 'Guillaume Tell,' or the 'Sinfonia Pastorale.' But while hearing these played by their transcriber, as much disappointment was felt as wonder. Even Liszt cannot metamorphose the tinkle of the pianoforte into the pompous searching tone of the brass band; even his, the most elastic of wrists, cannot represent the exquisite brilliancy of the four bow-hands of stringed quartett. In proportion as effects are imitated, the ear is tantalized, and we have never listened to one of these gigantic exhibitions of power and memory without being impatient till such good gifts were put to their legitimate employment in some work, equally solid, where the pianoforte should be employed to deliver ideas within the scope of its language, and not compelled to toil after that vast and many-voiced machine, the orchestra.

We have bestowed a few words on this subject, because we do not remember that it has been treated by any contemporaries, while we are constantly arrested by mistakes in publication, arising from the too limited knowledge of the elder, or the too extravagant ambitions of the younger school. Hence it gives us particular pleasure to advert to the Symphony under notice, as a fair and effective specimen of arrangement, the subject being unusually difficult. The pianist must not look in it for the attraction of such charming passages as are to be found in the four-handed sonatas of Hummel, Moscheles, and Onslow. On the other hand, in making acquaintance with one of the most important new works of modern times, he may be secure of not being needlessly tortured.

How much, however, the best modern orchestral composition must lose, when cribbed and cabined within the key-board of a piano, this Symphony is a proof more than usually emphatic to those who heard it at the Philharmonic Concerts last year. The opening *andante*, with its richly worked *crescendo*, as here arranged, will give the stranger but little idea of one of the most satisfactory admixtures of sound in the musician's memory. So, too, the second part of the *allegro*, than which Meyerbeer himself never scored anything in a more romantic fashion—whether we regard the sustained minims (p. 11) or the *pizzicato* (p. 15), or the stormy *tremolando* (pp. 21, 22)—cannot possibly be conceived in its full beauty, by the student who has no recollections to aid him. Yet more is this the case with the *scherzo*, in which the entry of one instrument after another gives such a piquancy to the quaint and entrancing gaiety of the melody. Why, let us ask, should not the imagination be assisted, by a specification in a pianoforte version of the varieties of "pipe and wire," originally employed? Such an aid, it is true, will do nothing for the mere mechanical player—but he, again, will soon throw by the work, as beyond his comprehension.

But if, to analyze this Symphony as a composition, we ought to have the full score before us, a remark or two on some characteristic points of detail cannot but be welcome. The composer's unchanging adherence to minor keys in the first and last movements affords a fair example of what may be done for variety and relief even in monochromatic musical painting. We must, also, again point to a certain northern wildness of colour pervading the whole composition—for if the first *allegro* did suggest this, (as to our fancy it does,) the second movement is so obviously a *strathspey*, as to transport the dullest listener among the kilts and the heather. This *scherzo*, indeed, is an admirable example of the manner in which a composer may avail himself of the characteristics of irregular national music, whose only character some have deemed to lie in its irregularity. In particular the last phrases on the 33rd, and the first on the 35th page, could only have been written by one thoroughly embued with the Scottish spirit; and yet the movement comes to as discreet and orderly a close, as if the above passage were not one of those quaint and vivacious *flings* from which many a musician would have abstained as barbarous, and which no hand short of a master's could have trained into form.

In passing from the *scherzo* to the *adagio*, we must question the discretion of Dr. Mendelssohn's favourite habit of linking the movements of a grand composition together by intermediate phrases—feeling that a moment's entire silence and pause of interest are grateful to the ear, when the work is so long drawn. The *adagio*, itself, though, in its present form, it be, perhaps, the most agreeable movement to play, will

Digitized by Google

be generally found intrinsically the least interesting part of the composition.—In the final *allegro*, we can only recommend the magnificent example of *crescendo* it contains (pp. 61, 63), having already strayed beyond bounds in making the above scattered observations. We shall be glad, if they call the attention of any student to the very interesting duett before us, since it must, for the thinker, exceed in interest most of the productions, whether single or double-handed, which the year 1843 will bring before him.

THE new management of COVENT GARDEN is active in ministering to the growing fondness for music on the part of the play-going community: 'Semiramide' has been again performed, Miss Rainforth taking the place of Miss Kemble as the Assyrian Queen, and rising with the occasion to a higher degree of energy and feeling as an actress than she had ever previously attained: to compare her performance with that of Miss Kemble would be unjust towards Miss Rainforth's very meritorious attempt to sustain the grandeur of a character for which she has not the physical requisites. It is a pleasanter duty to record the success of her vocal efforts, and the applause that greeted them and the whole performance. 'Gustavus' was revived, as the phrase runs, last night, the splendour of the ball scene being doubtless relied on as an attraction for the holiday visitors, who may not be aware of the claims that the music has to admiration. The next opera, in which Mrs. Alfred Shaw will appear, is 'La Donna del Lago:' a work by Benedict is also in rehearsal, in which she will bear a principal part.—A farce, called 'The Highwayman,' has been produced, to the delight of the audience, who relished its pantomimic absurdities and metamorphoses, though the humour of the jest escaped our observation.

To-night is fixed for the London *début* of Miss Sabilla Novello, at DRURY LANE, as *Ninetta*, in 'La Gazza Ladra;' another young lady making her first appearance on the stage in the part of *Pippo*.

The HAYMARKET closes on Saturday next, until Easter.

PRINCESS'S THEATRE.—This new theatre is better adapted for comic opera than any house in London; nor can there be two opinions concerning its splendour and comfort. We do not, however, entirely agree with our contemporaries as to its inaugural musical performances. 'La Sonnambula,' it is true, has been carefully prepared and put on the stage: but the version is that vulgar translation, defaced with buffoonery, which we had hoped would be superseded by the edition recently presented at Covent Garden. Then Signor Schira, the conductor, though proved to be a clever man, by the order in which he keeps the band, chorus, and principal singers, stands in need of some quickening spirit at his elbow. Our excellent *maestri*, Signor Costa and M. Benedict, may be both sometimes too mercurial in their anxiety after brilliancy; but the truth lies between their excess of vivacity and this sluggishness, which, like the slow utterance of stupid people, is peculiarly trying in music essentially so feeble and languid as Bellini's. To speak now of the *corps*: we made acquaintance with the *prima donna*, Madame Eugenie Garcia, some three years ago in Paris, when she was performing at the *Opéra Comique*, in a French version of Coppola's miserable 'Nina.' Since then her powers and accomplishments have undergone little change. She comes third on the list of pupils trained on the Garcia method: which is to extend the compass of the voice—securing the upper and lower at the expense of the middle tones—and to force audacities of execution in despite of natural incapacity and reluctance. Being less genially gifted than either Madame Malibran or Madame Vinrdot, there is more effort and far less finish in Madame Garcia's performance, with the same want of repose. How great was the consequent fatigue to the ear may be judged from the fact, that we actually rested with satisfaction upon the few phrases sung in the more *posé* manner of the good old Italian school by Madame Féron. As an actress, too, Madame Garcia is busy, rather than spirited;—harsh and angular where she wishes to be impassioned. Mr. Templeton's *Elvino* ("his original character," as the bills announce, by which the unlearned are led to understand that *he* bespoke the part from Bellini) is just what it ever was; a mixture of the shout of Braham and the *falsetto* of Rubini, with a nasal twang entirely unborrowed: nor is his acting changed. The *Count Rodolpho* of Mr. Weiss affords another proof of the short-sightedness of English ambition. The new baritone is very young; possesses a superb and musical voice, and not a bad stage face; but to his performance were wanting dancing master, fencing master, elocution master, *and* singing master! Why are we to be tantalized by seeing chance after chance of success drivelled away by managers and artists for want of a proper and humble conviction of the necessity of education? It seemed to us too, that the management might have provided a better *Lisa* without searching far. We remember, with pleasure, a Miss Ward, whose performance in a version of 'Cosi fan tutte,' at the St. James's Theatre, was so artistic and lady-like, that a place might be found for her in any operatic company, especially one gathered for a rationally sized stage like the one in Oxford Street. It is with no ill-will to the new establishment that we venture the above strictures; but the aspect and the attentiveness of the audience were a sign to us, that an Opera is to be established on the scale and in the situation here attempted; and for the sake of the pleasure of the public as well as our own, it is better early to point out defects, than to search for remedies too late.

MISCELLANEA

Paris Academy of Sciences.—December 26.—Various questions were discussed. One was the experiments of M. Flourens on the bones of animals. This gentleman, acting on the known fact, that if an animal be fed for a length of time upon certain food, a particular colour will be imparted to the bones, has made various experiments, with a view to ascertain the extent to which this absorption of colour can be carried, and how far it may serve to indicate the process of nature in the developement of the osseous structure. In examining the results obtained, microscopic observation is necessary. This is the point upon which M. Flourens has experienced some opposition; and after a long discussion no other conclusion has been come to than that M. Flourens has, by his researches, rendered an important service to science, although he may not be correct in all his inferences and conjectures.—A report was made by M. Regnault upon some experiments by M. Poiseuille, respecting the laws which influence the flow of water through very small tubes.—A communication from M. Morisset, on the virtues of the decoction of oak bark in various diseases for which it has not hitherto been used, was next read. This gentleman states that this is a valuable remedy in cases of encysted dropsy, in œdematous affections of the limbs, and for the obliteration of the herniary sac in young persons.—The next communication was from M. Vuillemain, of Epinal, on an aërolite, which fell, on the 5th ult., at half-past six in the morning in the environs of Langres, the sky being at the time unobscured by clouds, and the thermometer standing at 6 degrees centigrade below zero. At this moment the sky became suddenly illumined, as by a near flash of lightning. This light having ceased, it was succeeded two minutes afterwards by a noise resembling that of a loud clap of thunder. A rumbling noise, indicating the passage of the aërolite, followed, and continued for thirty seconds, in the direction of north to south, but it was impossible to say at what precise spot the aërolite touched the earth, as its light was, in the opinion of M. Vuillemain, extinguished as soon as it reached our atmosphere.

On the Numeral Figures. [From a Correspondent.]—The types from which numerals are printed were, from the invention of printing till about 1785, formed so as to give heads and tails to the figures, in the manner which is always used in handwriting. At the period just named, Dr. Hutton introduced in his logarithmic tables what was then a new form, in which the figures were all of one size, having no parts above or below the others. This system of Dr. Hutton's gradually became universal, much to the regret of all who had to consult mathematical tables, who were glad to use French tables, in preference to English, on account of the superiority of heads and tails. In the mean time, it was found that, with figures all of a size, a larger type was necessary, to secure sufficient legibility, and this type gave facilities to that formation of thick and thin lines which distingishes the larger numerals of the existing English press from those of all other ages and countries:

1234567890

It was generally admitted that both circumstances,—the sameness of size, and the swelling of the lines which compose the figures,—were unfavourable to legibility; but no steps were taken to restore the old type until lately, when some works were published in what is called the *French brevier*, being a type in which the heads and tails exist, and in which the thickness is as nearly as possible the same throughout. The Council of the Royal Astronomical Society, and the Superintendent of the Nautical Almanac, have recently come to the determination to restore the old form of the numerals in their respective publications, an example which is pretty sure to be followed in mathematical publications, and perhaps in others.

The Price of a Sensation.—The French papers mention, that "The Princess Jadimerowski, who died some time back in Russia, has left considerable legacies to two actors, one for having made her laugh, and the other weep. The following words are found in her will, in allusion to this matter:—'Having frequented the theatre for three years, and having felt there the only real emotions of my life, I think myself bound to recompense those persons who caused me so much gratification. I therefore bequeath to Karatiguin, who has so often made me shed such delicious tears, the sum of 50,000 roubles (about 200,000 fr.). I also bequeath to a young actor, whose name has slipped my memory, but whom it will be easy, I imagine, to discover in France, as being the person who used to play the *Gamin de Paris* at the Theatre-Michel, the sum of 30,000 roubles, for having so well amused me.' The French actor is Laferrière, of the Vaudeville. The testamentary executor, in announcing to him this intelligence, has stated that the heirs-at-law intend to contest the legacy; but that it is believed they will fail.

Aërial Travelling.—The following notice has appeared in *The London Gazette*. "Application is intended to be made in Parliament, in the next session, for leave to bring in a bill to authorize the assignment to, and purchase by, a company of certain letters patent, granted to William Samuel Henson, of New City-chambers, in the City of London, engineer, for certain improvements for locomotive apparatus, and machinery in conveying letters, goods, and passengers *through the air*, part of which improvements are applicable to locomotive and other machinery to be used on water or on land."

Daguerréotypes.—A patent has been granted to Mr. Beard for improvements in the means of taking likenesses. It consists in *colouring* the pictures, and the process is thus described in the *Mechanics' Magazine*. After a picture has been obtained, a tracing of it is made upon glass, and from this copy on glass as many other copies are taken in tracing-paper as there are different colours intended to be used. From the tracing appropriated to each colour those parts are cut out which are to be represented of that colour, so that, when superposed on the face of the picture, it covers all but those places where the colour is to be applied, (exactly in the same way as in stencilling.) The colours are applied in the state of an inpalpable powder, mixed with just as much gum arabic or isinglass as suffices, when the colours are breathed upon, or otherwise gently heated, to fix the colours.

Protection from Accident by deleterious Gas.—An invention is described in the French papers which will, it is said, give such timely notice of the presence of deleterious gas in mines, or other places, as will enable persons to take the necessary precautions to guard against explosions. An explosion from the admixture of carburetted hydrogen with atmospheric air can only take place when the former exists in a certain and known proportion. When the quantity has reached or exceeded this point, the contact of a light instantly causes an explosion. The instrument recently invented has a sort of tell-tale to show the existence of danger, is simple, ingenious, and effectual. Connected with a chemical solution is a kind of float, nicely graduated, and attached to a counterpoise. The solution is of such a nature that it undergoes a change when acted upon by the admixture of car-

Digitized by Google

buretted hydrogen, and when saturated to a certain point the float changes its position, and acting in its turn upon the counterpoise, a spring is let loose, and strikes upon a bell or drum, giving out a loud sound, and thus indicating the presence of danger. This ingenious test is not liable to derangement, and the whole apparatus is comprised within a small compass, and of little cost. The solution can be varied so as to be adapted to every kind of deleterious gas.

British Museum.—On Monday last, no less than 30,000 persons visited this National Establishment! The conduct of all was orderly, and there was not a single instance of drunkenness or indecorum.

St. Mary's Church, Nottingham.—The *Nottingham Journal* mentions that, owing to certain alarming indications of the insecurity of the noble and massive tower of St. Mary's Church, the churchwardens resolved to consult Mr. Cottingham, the architect. A survey convinced him that the tower was in imminent danger, and that unless prompt and active measures were taken, the whole church in a few days might become a ruin. Workmen were immediately employed to fix horizontal bearers of heavy timber from pier to pier, after the manner of a wall, in order to prevent further bulging; as the work proceeded, symptoms of decay, more alarming than those first noticed, were discovered; new fissures opened; and the greatest fears were entertained for the tower. The church may now be considered as secured from falling; but, as new piers must be erected, and many parts of the sacred edifice must be restored and strengthened, a period of many months must elapse before the congregation can again assemble there for devotional purposes.

Street-Sweeping Machine.—Whitworth's "Patent Cleansing Machine" has been in operation in Manchester for the last ten months, and is about to be introduced into the metropolis. Manchester, instead of being the dirtiest, is now, we believe, the cleanest of our large towns. The power of the machine is extraordinary, being equal to thirty men; and, in its operation, the numerous annoyances which are inseparable from the old mode are altogether avoided.—*Manchester Guardian.*

Highland Mary.—Some time ago a subscription was commenced for the purpose of erecting a monument to Highland Mary, over the spot where repose her ashes in the west churchyard, Greenock. Somewhere about 100*l.* was collected, and a monument, designed and executed by Mr. Mossman, has now been erected over the grave. The inscription on the monument, unless good taste prevent it, is to be the following bald conceit:—"Sacred to genius and love—to Burns and Highland Mary,"—it being considered too common-place and vulgar to inform the stranger that the monument is erected over the ashes of Mary Campbell.—*Scottish Guardian.*

Organic Remains.—A quantity of bones of the bear, hyena, hippopotamus, rhinoceros, ox-deer, and elephant, have been discovered in a quarry on Durdham Down, Bristol; and the peculiarity of the circumstance is, that they were found in a fissure only, which, as far as can be ascertained, extends a very considerable depth lower than the workmen have yet gone.

A Two-Humped Camel, a species much employed by the Chinese, and designated by them as the "camel with feet of the wind," has just been added to the collection in the Zoological Gardens.

TO CORRESPONDENTS.

WE did not Insert 'A Reader's' complaint, because we altogether differ from him. It is not intended that every person should have free admission to the Reading Room of the British Museum;—that Institution was not established, and is not maintained, at great cost, as a sort of cheap library for idlers to spell over Hume's History or Scott's Novels; but for students and scholars, who may find there works to be met with nowhere else, or so costly that it is beyond their means to purchase them. As to the rule regulating admission, it is sufficiently liberal and comprehensive; and we doubt very much whether any one likely to benefit by attending there,—certainly no one, as asserted, of "literary distinction,"—could find difficulty in complying with it. Should such a case occur—should there be some rare exception—we have no doubt that Sir Henry Ellis would suggest other means by which the applicant could satisfy him of his respectability, for this is all that is required; and it is right that it should be required and enforced.

—— —— G.N.E.—J. F. H.—An Old Subscriber—received.—J. G. is, of course, at liberty to act as he pleases. We say no more at present, because we have no wish to give needless pain.

Now ready, 3 vols. post 8vo.

LETTERS on SOUTH AMERICA; comprising Travels on the Banks of the Paraná and Rio de la Plata. By J. P. & W. P. ROBERTSON, Authors of 'Letters on Paraguay,' and 'Francia's Reign.' John Murray, Albemarle-street.

Published this day, fcap. 8vo. 3*s.* cloth,

LECTURES on the BRITISH and AMERICAN CONSTITUTIONS.—A Comparative View of the Constitutions of Great Britain and the United States of America. In Six Lectures. By P. F. AIKEN, Advocate.
London: Longman, Brown, & Co.; and Hamilton & Co. Bristol: Strong. Edinburgh: Blackwood. Dublin: A. Milliken.

Just published, in 2 vols. post 8vo. price 21*s.* with 20 Etchings on Steel, and numerous Woodcuts,

A VOYAGE ROUND the COASTS of SCOTLAND AND THE ISLES. By JAMES WILSON, F.R.S.E. M.W.S. &c. Author of the 'Treatise on Angling,' in 'The Rod and the Gun,' &c. &c.

4. History and Present Condition of the Barbary States. 2nd edition, 5*s.*
Oliver & Boyd, Edinburgh: Simpkin, Marshall & Co. London.

This day is published, in 8vo. price 12*s.* cloth lettered, (To be continued every alternate Month till completed),
THE SEVENTH VOLUME OF

THE ENTIRE WORKS of the MOST REV. JAMES USSHER, D.D., Lord Archbishop of Armagh, and Primate of all Ireland.
Edited by CHARLES RICHARD ELRINGTON, D.D., Regius Professor of Divinity in the University of Dublin.
This, the first complete Edition of Archbishop Ussher's Works, will contain, with Manuscript corrections and additions from the margins of his own copies, two volumes hitherto found only in Manuscript. The whole will be handsomely printed at the University Press, and will be comprised in about Eighteen Volumes. The Publication of the first Volume, containing the Life of Archbishop Ussher, an account of his Writings, with General Index, Title Pages, &c., will take place after the conclusion of the Works.
Dublin: Andrew Milliken, Bookseller to the University; William Curry, Jun. & Co.; Hodges & Smith, and Grant & Bolton, London: Whittaker & Co. Oxford: J. W. Parker. Cambridge: J. & J. J. Deighton.

APPROXIMATE RATIONALE of the COLD WATER CURE, as Practised by VINCENT PRIESSNITZ, at GRAEFENBERG, in SILESIA, with an account of the Cases successfully treated at PRESTBURY, near CHELTENHAM. By RICHARD BEAMISH, Esq. F.R.S.
John Weale, 59, High Holborn.

LONG ANNUITIES, & ANNUITIES TERMINABLE IN 1859.

THE FAMILY ENDOWMENT and LIFE ASSURANCE and ANNUITY SOCIETY, continue the above Annuities after their expiration, on payment of an annual Premium until 1859 inclusive.—Particulars may be had at the office, No. 13, Chatham-place, Blackfriars, London.
Capital 500,000*l.*
Trustees—William Butterworth Bayley, Esq. Henry Porcher, Esq. | Martin Tucker Smith, Esq.

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.
Tables of Rates may be had at the Sun Life Office, in Cornhill; at the Sun Fire Office in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

ARGUS LIFE ASSURANCE COMPANY, 29, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.
Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.
Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.
In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of 50,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.
The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.
Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

ASYLUM FOREIGN and DOMESTIC LIFE OFFICE, 70, Cornhill, and 5, Waterloo-place, London. Established in 1824.

THE WESTMINSTER SOCIETY, Established in 1792, for Insurance on Lives and Survivorships, and Granting Annuities, No. 429, Strand, and 21, Cornhill, London; and by their Agents in Edinburgh, Dublin, and other Places in Great Britain and Ireland. Established on a principle which conveys PERFECT SECURITY to the Insured, WITHOUT ANY RESPONSIBILITY arising from Partnership.

Trustees, Directors, Auditors, &c.

The Hon. George Charles Agar.	Henry Holland, M.D.
Col. Sir A. J. Dalrymple, Bart. M.P.	John Malcolm, Esq.
Sir Charles Sullivan, Bart.	George G. Mills, Esq.
Sir Henry Willoughby, Bart.	George Palmer, Esq.
General Sir Loftus W. Otway.	Edward Penrhyn, Esq.
Richard S. Cox, Esq.	Robert Spencer Robinson, Esq. Capt. R.N.
James Henry Deacon, Esq.	William Holme Sumner, Esq.
Charles Francis, Esq.	Richard Williams, Esq.
W. F. Chambers, M.D.	John Helps, Esq., *Secretary.*

All the objects of Life Assurance may be effectually accomplished at this Office, with every facility the parties can desire.

No admission fees are required, nor any charge made for policies, except the stamp duty.

Two offices recently established having united the name of "The Westminster," with other designations, the Public and Friends of the WESTMINSTER SOCIETY ESTABLISHED IN 1792," are requested to take notice, that the business of this Society is carried on at No. 429, STAND, and No. 21, CORNHILL, LONDON.

N.B. The business of the British Fire Office is carried on in the same houses.

BRITISH FIRE OFFICE, 429, Strand, and 21, Cornhill. *Directors, &c.*

The Hon. G. C. Agar.	George G. Mills, Esq.
Richard S. Cox, Esq.	George Palmer, Esq.
James Colquhoun, Esq.	C. H. C. Plowden, Esq.
James Henry Deacon, Esq.	Henry Webb, Esq.
Charles Francis, Esq.	Richard Williams, Esq.
Elijah Barwell Impey, Esq.	John Helps, Esq., *Secretary.*
John Malcolm, Esq.	

Established in 1720, *for Insurance against* Loss or Damage by Fire, on the most equitable terms, and on a principle which conveys PERFECT SECURITY WITHOUT ANY RESPONSIBILITY whatever to the Insured, *at reduced premiums.*

Persons effecting Insurances for seven years, by one payment, are entitled to an IMMEDIATE RETURN, equal to 15*l.* per cent. on both premium and duty, WHICH RETURN IS CERTAIN AND NOT DEPENDENT on any contingency. Policies will not be charged for sums of 500*l.* or upwards, nor to persons *removing Insurances from other Offices.*

This office has always paid for damage by Fire from Lightning. Receipts for the renewal of Insurances may be had at the principal Offices in the Strand and Cornhill, London, and of their Agents in the Country, who will receive proposals for new insurances.

Policies should be renewed *within fifteen days from* the day on which the *premiums* become due.

EAGLE LIFE ASSURANCE COMPANY, 3, Crescent, Bridge-street, Blackfriars, London. Established by Act of Parliament, 1807.

Directors—John Richards, Esq. *Chairman.*
Sir James M'Grigor, Bart. F.R.S., *Deputy Chairman.*

Actuary, Charles Ansell, Esq. F.R.S.
Solicitor—J. B. De Mole, Esq.
Surveyor—Thomas Hopper, Esq.
Assistant Surveyor—Thomas Lloyd, Esq.

FIRE DEPARTMENT.

RETURNS.—The Directors have the satisfaction of announcing to the Assured in this Office, that a return of premium at the rate of 20 per cent. for the five years up to Christmas last, will be payable at the head Office, or through the Company's Agents in Great Britain, on all Policies for 300*l.* and upwards, which were in force and had been so for one entire year at Christmas.

RENT.—This Office (independent of the Returns and the late reduction in the rates of premium), offers to persons effecting Assurances, the further advantage of an allowance for the loss of rent on buildings rendered untenantable by Fire.

RENEWALS.—Policies due on Christmas-day, should be renewed within fifteen days thereafter.

LIFE DEPARTMENT.

The attention of the Public has, in the advertisements and proposals of this Company of late years, been called to a Table of Additions applicable to and expectant on Policies of particular dates and ages; the Directors now beg to refer to a Statement (which may be obtained on application at the Office in Cheapside, or to any of the Agents in the Country) of Sums *actually paid*, showing the sums respectively assured and the Bonuses thereon.

Persons assured for the whole term of Life in *Great Britain* or *Ireland* respectively, will have an Addition made to their Policies every seventh year, or an equivalent Reduction will be made in the future payments of Premium, at the option of the Assured. The Fourth Septennial Valuation will be made up to Christmas 1846.—Assurances for Short periods may now be effected in this Office at considerably reduced rates of Premium.

The Company's Rates and Proposals may be had at the Office in London, or of any of the Agents in the Country, who are authorized to report on the appearance of Lives proposed for Assurance. HENRY DESBOROUGH, Secretary.

92, Cheapside, Jan. 1843.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy —such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London. Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors.

Jas. Stuart, Esq. *Chairman*; H. De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

BRITISH COLONIAL BANK AND LOAN COMPANY—Office, No. 50, MOORGATE-STREET.

Solicitor—George Cooper Turner, Esq.
Surveyor—Mortimer William Lewis, Esq.
General Manager—Oswald Bloxsome, Esq.

Extract from the Report of the Local Directors, dated Sydney, 9th June, 1842.

"The Local Directors of the 'British Colonial Bank and Loan Company,' in making this their First General Report, have much pleasure in congratulating the Board of Directors in London, on the manner in which they find the business of the Company has been hitherto transacted; and they with confidence assert, that the affairs of the Company are in a very satisfactory and profitable position.

"The Local Directors informing themselves generally of the nature of the Securities heretofore taken on behalf of the Company, express themselves satisfied of their sufficiency, and of the respectability of the parties with whom the Loans have been contracted; and having carefully examined the Accounts, find them to have been kept in a very distinct and creditable manner.

"The Local Directors find that investments have been made on behalf of the Company to the amount of 253,110*l.* The operations of the Company have, however, been much controlled in consequence of the difficulty which has attended the disposal of those shares of the Company, which were forwarded to England as remittances. The Local Directors feel much satisfaction in having it now in their power to state, that the excitement created thereby has in a great degree subsided, which is to be attributed to the judicious course which they are led to believe has been pursued by the Board in London,—a course which has restored confidence, to a certain extent, in this Colony, and satisfied parties connected with the Company, that the exercise of the discretionary power vested in the Board, will crown their operations with a result alike beneficial to the Company and the present holders of shares."

The Company issues Debentures to a limited amount on the security of the Capital Stock and effects of the Company, and the lands and hereditaments mortgaged to the Company. Interest will be payable on the Debentures half-yearly, at the rate of six per cent. per annum, and the principal monies lent will be repaid at the expiration of three or five years.

The holders of these Debentures will be liable to no responsibility, and will have security in real Estate of undoubted value.

The Debentures will be granted for any sums not less than 100*l.*, and at the expiration of the three or five years, the holders of them will be entitled to the option of taking Shares in the Company at par.

Further particulars may be obtained at the Office of the Company, 50, Moorgate-street; at the Commercial Bank of London, 3, Moorgate-street; or of the Solicitors to the Company, Messrs. Adlington, Gregory, Faulkner & Co. 1, Bedford-row.

ROBERT STYLES, General Manager.

50, Moorgate-street, 23rd December, 1842.

N.B. The dividends of six per cent. on the Colonial Shares paid in full, are paid at the Office of the Company every Thursday, provided the Certificates of such Shares be left on or before the preceding Tuesday.

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir JAMES RIVETT CARNAC, Bart., Rook Cliff, Lymington.

Vice-President—GEORGE FORBES, Esq. 9, Fitzroy-square.

With Twelve Directors.

Facilities are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale.

The insured for life participate septennially in the profits realised. A liberal commission is allowed to Solicitors and Agents. DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have been yet appointed.

FRAMES FOR ART-UNION PRINTS.—As every Subscriber to the "London Art-Union" will very shortly obtain possession of the Print issued by THE SOCIETY, and as to frame it in an elegant, and not costly, manner, will be a most desirable object to many of the possessors, Mr. BIELEFELD begs to announce that he has prepared a Frame expressly for the Print of the 'Saints' Day'—the presentation print of the London Art-Union. It is manufactured of Papier Maché, a lighter, more elegant, and more durable material than any hitherto used for this purpose.

Papier Maché Works, 15, Wellington-street North, Strand.

"PICTURE FRAMES."—We direct the especial attention of all persons interested in this subject to the frames for pictures manufactured by Mr. Bielefeld. They are of papier maché, and the advantages they possess over the ordinary composition frames are so strong and so numerous, that they must, inevitably, be brought into general use. They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. The gilding tells with very brilliant effect; and, no matter how elaborate the pattern may be, they have a cleanness and sharpness that we have seldom, or never, seen obtained in composition."—*Art-Union.*

MARSHALL & CO., 12, Curzon-street, continue to supply WRITING PAPERS, &c. at city prices, viz.:—Letter paper, 9*s.*, 10*s.* 6*d.*, 12*s.*, 15*s.*; ream note, 4*s.*, 6*s.*, 8*s.*; palace note paper, five quires, 1*s.* 6*d.*; sealing wax, 3*s.* per lb.; card plate engraved, 100 printed, 4*s.* Newspapers lent to read, 9*d.* per week; neat leather blotting cases, 1*s.* 6*d.*, or with lock, 3*s.*; fancy inkstands, and every kind of article suitable for presents, equally cheap; envelopes, with stamps on, 1*s.* per dozen; neat leather envelope cases, filled, 2*s.* 6*d.* Circulating Library; terms, 2*l.* 2*s.* per annum; 1*l.* 11*s.* 6*d.* half year; 18*s.* per quarter.—12, Curzon-street, corner of Queen-street. Orders by post punctually attended to. Goods sent any distance.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 132 years, 3, Birchin-lane. The finest description of Watches at the lowest prices, consistent with maintaining that character for superiority of workmanship which has distinguished their establishment during that period. The compensated duplex Watch, upon the principle of their Chronometers, to which government awarded the prizes three successive years, combines perfect accuracy with the utmost elegance, and is not surpassed by the pocket Chronometer. W. & Son have devoted considerable attention to the patent lever Watch, and considerably reduced the price, together with the small horizontal for ladies. They can offer a large selection of Second-hand Watches, at little above half the original cost. The utmost value allowed for old Watches in exchange. The most experienced workmen in the repairing department are employed on the premises for foreign and English manufacture.

Webster & Son, 3, Birchin-lane, Cornhill, London.

KEENE'S PATENT MARBLE CEMENT.—This cement, which exceeds every other in hardness, is intended for interior uses, where strength and despatch in execution are required. From the smoothness of its surface, it is an advantageous substitute for wood in its application to skirtings, architrave, mouldings, &c., as it resists the action of fire, and keeps back vermin.

The coarse qualities form a paving not distinguishable from stone in colour and hardness, but of one-third the price. The best white quality takes a brilliant polish, and the scagliola made from this cement has a peculiar richness of colouring. The imitations produced in it of Florentine and other Mosaics, encaustic tiles, &c., for ornamental paving, are unequalled in their effect and moderate cost.

Keene's Cement has been applied with success for the altars of Catholic and other churches both in England and Ireland; and to its use in the Royal palaces, and Government buildings, besides numerous public and private works, the patentees can refer with confidence.

Patentees and Sole Manufacturers, J. B. WHITE & SONS, MILLBANK-STREET, WESTMINSTER.

Agents for its sale are appointed in the principal cities of the United Kingdom.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, pollishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting properties*, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE—The Name and Address of the Proprietors, *A. ROWLAND & SON*, 20, *HATTON GARDEN, LONDON*, are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

CASTOR OIL.—H. TAYLOR, Chemist, 10, Pall Mall, London, has prepared Castor Oil in a concentrated form, enclosed in Capsules of Gelatine, by which the disagreeable taste of this medicine is entirely avoided. They will be found the most convenient manner of taking that safe aperient medicine. The Dose is from one to four capsules. In Boxes at 2*s.* 6*d.* each, and can be sent by post for 4*d.*

SIMCO'S CHYMICAL ESSENCE of LINSEED is an invaluable remedy for Coughs, Colds, Influenza, Hoarseness, Asthma, and Incipient Consumption, price 1*s.* 1½*d.* and 2*s.* 9*d.* per bottle. From time immemorial linseed has been proverbial for its virtues in the cure of coughs and colds, but previous to the discovery of the present Chymical Essence it was merely used in the form of tea, and its benefit comparatively limited. This essence contains all the medicinal properties of linseed in a highly concentrated form, combined with other medicinals and herbs, producing the most certain remedy for coughs yet discovered. Children's coughs, as well as recent ones in adults, will be removed by a few doses of Simco's Essence of Linseed, (frequently by the first); old standing chronic coughs may require perseverance, but they ultimately yield to its curative powers. Asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit, and others suffering from influenza have been speedily cured by this valuable medicine. Sold by all respectable Medicine Venders.

MR. MOON, HAVING RECEIVED HER MAJESTY'S COMMAND, HAS THE HONOR TO ANNOUNCE HIS INTENTION TO PUBLISH, EARLY THIS SEASON,

A PRINT

FROM MR. LESLIE'S CELEBRATED PICTURE

OF

THE QUEEN RECEIVING THE HOLY SACRAMENT

AT HER CORONATION.

This beautiful Work belongs to Her Majesty, and Mr. Moon has been honored by Her Majesty's gracious commands to have it engraved by Mr. Samuel Cousins, A.R.A., it being the only Picture of the Coronation painted expressly for the Royal Collection.

The Picture represents one of the most interesting moments in that sacred and splendid ceremony that could be selected. The Painter, who was present, was so much struck by the beautiful appearance of Her Majesty kneeling at the altar, and so impressed with the deep and sacred character of the moment, that he chose it for his subject, as that which would become the fittest record of the event, as it represented the young and innocent Queen, after having vowed by the sacred obligations of her oath, to govern well and wisely the great people over whom she had been placed by Providence to reign, kneeling, in humble reverence and deep devotion, to Him who had placed her at the head of a great nation; and thus ratifying by the most solemn rite of our holy religion, this her great compact with her people.

The Crown—the emblem of her station—and all her ornaments, are removed from her, except the Dalmatic robe, as she bends before that Infinite Power, which makes no future distinction between the prince and his people—but is equally the Father of all. It is a striking feature in this fine work of art, that it tends to excite deeply religious emotions—it represents the most sacred act of duty and devotion of one who kneels to acknowledge her allegiance where all bow in a common faith, and in a common hope of mercy; where she must obtain hers by as faithful a fulfilment of her duty, as that which is claimed from the lowest of her subjects.

Mr. Moon intends to make this one of the largest Prints ever executed; the Engraving will be nearly four feet long and two feet high. The perfect likenesses made by the Painter of the principal personages, and the beauty of character and expression which prevails, render this necessary to do it justice; and upon such a scale, and in Mr. Cousins' hands, such justice will be done. There are no crowds to fill the canvas: not a head seen but of those whose duty it was to attend Her Majesty, or members of her august family. The whole scene lies between the throne and the altar, and no gallery or its occupants are seen, to disturb the concentration of the interest upon that act of deep devotion. There are Thirty-eight Portraits introduced with a fidelity of representation never exceeded. All had their places in the picture sanctioned by the Queen, and all sat to Mr. Leslie at the gracious command of Her Majesty.

The price of the Proofs and Impressions will necessarily bear proportion to the great cost of the production of the Engraving, upon which no expense will be spared; *and by Mr. Moon's arrangement with Mr. Cousins, every impression will be delivered through him—a guarantee that they will not be unworthy to display his great talent, and support his distinguished reputation.* The price of the impressions from the Engraving of this work, which it is just to reiterate contains nearly Forty Portraits, will be, to Subscribers, Prints, with the Dedication, 12*l.* 12*s.*; Proofs, with the Royal Arms and Title, 15*l.* 15*s.*

20, Threadneedle Street, London,
January 6, 1843.

London: James Holmes, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by John Francis; and sold by all Booksellers and Newsvenders.—Agents: for Scotland, Messrs. Bell & Bradfute, Edinburgh:—for Ireland, J. Cumming, Dublin.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 794. LONDON, SATURDAY, JANUARY 14, 1843. PRICE FOURPENCE. (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

DEPARTMENT of ENGINEERING, ARTS, MANUFACTURES, and ARCHITECTURE.—This Department, under the superintendence of Professors Hall, Moseley, Daniell, Wheatstone, Hosking, Dyce, and Ansted, and Mr. Bradley, Mr. Cowper, Mr. Tennant, Mr. A. Moseley, and Mr. Castle, will be RE-OPENED on TUESDAY, the 17th of January. Rooms are provided in the College for a limited number of students; and some of the Professors and Gentlemen connected with the College receive Students into their houses. Further information may be obtained at the Secretary's Office.
King's College, London, J. LONSDALE, Principal.
December, 1842.

UNIVERSITY COLLEGE, London.
JUNIOR SCHOOL.
Mr. W. HASELWOOD, Private Tutor and Assistant Master, receives a limited number of Pupils, from the School, at Forty-five Guineas per annum. The House adjoins the playground of the University, to which (with permission of the Council) a communication has been opened for the Pupils' recreation. Mr. Haselwood undertakes the tuition of the Pupils under his care in the subjects connected with their College reading, and in those branches of education that have an immediate reference to their future prospects in life. Each Pupil has a separate bed; and, the number being limited, a term's notice is required prior to removal. Further particulars may be obtained on application at Mr. Haselwood's residence, No. 20, Upper Gower-street.

GRAMMAR, COMPOSITION, ELOCUTION.—Mr. LEOPOLD SMART, pupil of his father, Mr. B. H. Smart, and practically familiar with his modes of tuition, gives LESSONS IN SCHOOLS AND FAMILIES on reduced terms. Cards at Hookham's Library, Old Bond-street. Address, 55, Connaught-terrace, Hyde-park.

A LADY, *many years* accustomed to private tuition, wishes for an ENGAGEMENT AS GOVERNESS in a *Family*. In addition to the various branches of a solid education, she is fully competent to instruct in Music, French, Drawing, (and Dancing if required). References of the highest respectability will be given. Address, post paid, E. Q., Journal Office, Leicester.

THE Principal of an Establishment by the Sea, at a rural and favourite Watering Place on the Sussex coast, well known for its salubrious air, is desirous of COMPLETING HIS LIMITED NUMBER OF PUPILS with a few YOUNG GENTLEMEN, whose health or studies may require more than ordinary attention. The course of instruction comprises all the usual branches of a liberal education, and the improvement, comfort, and happiness of the young gentlemen are objects promoted by the most assiduous care. Fifty Pounds per annum include every charge. A Prospectus, with references, will be forwarded on application, by letter, to A. B., Post Office, Eastbourne.

EDUCATIONAL ESTABLISHMENT, TWICKENHAM.—The scholastic labours will be RESUMED on the 26th instant. The object of this Establishment is to give that Education which embraces the formation of character along with a *real* as well as a verbal intellectual instruction. It is conducted, as far as possible, on the plan of a family. The Principal, Mr. Raymond de Véricour, resided two years, at the same time as Professor and on a Mission, in Mr. de Fellenberg's Institution at Hofwyl, and he endeavours to blend a moral education and general culture with the classical instruction usually given; thus forming a careful and systematic course of training, physical, moral, and intellectual, according to the advanced views of the present day.—References of the first order.

BRUCE CASTLE SCHOOL, TOTTENHAM.—BRUCE CASTLE is rather more than five miles from London, and is about a quarter of a mile west of the high road to Hertford. It stands in a park containing nearly twenty acres of land, and the surrounding country is open and salubrious. A description of Bruce Castle will be found in the 'Beauties of England and Wales,' and in Lysons' 'Environs of London.'

In addition to the Conductor, there are six resident Teachers, one of whom is a native of France. The course of study is such as to enable a young man, immediately on leaving school, to enter on one of the Universities, to engage in commerce or agriculture, or to adopt the military or naval profession. Much general knowledge is communicated by means of a course of private reading, in which the pupils are induced to engage. Lectures, too, are delivered on various branches of Natural Philosophy. In his plans of government and instruction the Conductor addresses himself, as far as possible, to the religious principles, reasoning powers, and good feelings of his pupils. The grounds of the school regulations, and of the formulæ employed in the studies of the pupils, are explained; and at all times the pupils are encouraged to apply for information respecting everything which is not perfectly clear to their minds. Acting on the principle referred to, and others connected with it, the Conductor has succeeded in rendering the acquisition of knowledge to a certain degree, what, with unlimited means, and under perfect arrangements, it would be entirely, namely, a source of continued pleasure to the scholar. In developing the same principles, also, he has been enabled to dispense, to a very great extent, with artificial rewards and punishments, and to associate the boys themselves in the business of school government. Corporal punishment he entirely discards, and, with rare exceptions, he has found that, by treating a boy as a reasonable being, possessed of good natural feeling, it is quite practicable to induce upright conduct, a gentlemanly demeanour, a desire to oblige, an anxiety to avoid the infliction of pain, either moral or physical. To the early formation of habits of industry, punctuality, and obedience, the cultivation of a love of knowledge, the elevation of the moral feelings, and the developement of the mental and physical powers, the Conductor directs his most strenuous efforts; being convinced by long experience, that, beside the direct benefits conferred upon his pupils, it is by such means alone that he can hope to lay a sure foundation for solid acquisition. A concise view of the plans in use is given in a small pamphlet, entitled 'Sketch of the System of Education at Bruce Castle, Tottenham.' (Charles Knight, London, 1837.)

Information respecting the charges, and other matters of detail, may be obtained by application at Bruce Castle.

There is also a Preparatory School for boys between the age of four and nine, the pupils of which are under female superintendence, the plans of instruction being, with some modification, those generally adopted in infant schools.

The Vacation will terminate with Wednesday, January 25.

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

CITY of LONDON SCHOOL, Milk-street, Cheapside, established by Act of Parliament, and under the superintendence of the Corporation of London.—Head Master, the Rev. G. F. W. MORTIMER, D.D. of Queen's College, Oxford.—This SCHOOL will be RE-OPENED after the Christmas Vacation on TUESDAY, the 17th of January instant. Persons desirous of entering their sons as pupils may obtain Prospectuses of the School, containing also particulars of the foundation scholarships and exhibitions attached to it, together with form of application for admission, at the Secretary's Office, between the hours of ten and four.

THOS. BREWER, Sec.

QUEEN ELIZABETH'S FREE GRAMMAR SCHOOL, BARNET, HERTS.

Mr. COX begs to announce his removal from the Academy, Hadley Green, and his appointment to the Free Grammar School, Barnet, so long ably conducted by the late Rev. Wm. Marr.

Mr. C. receives a limited number of young gentlemen to be instructed in every useful branch of education.

TERMS:

The Classics, English and French Composition, Mathematics, Arithmetic, the Use of the Globes, Book-keeping, History, Natural Philosophy, &c., 25 Guineas per annum.

Drawing, Dancing, Music, &c. on the usual terms. With devoted attention to the health, comfort, and morals of the pupils; the plan pursued (patient explanation), leads to the love of study, combining the advantages of the old and new systems.

Mr. Cox has accommodation for one or two parlour boarders of a more advanced age. Referees, Mr. Edginton, 37, Piccadilly; Mr. S. Smith, 208, Regent-street; Mr. John Stevens, 6, Clement's Inn; Mr. Austin, 187, Oxford-street; Mr. Beale, 131, New Bond-street.

EDUCATION on plans founded on the practice of PESTALOZZI, FELLENBERG, and other celebrated Educators.

The attention of parents is respectfully called to a school for Young Gentlemen, in which the views of the above celebrated men are combined with the extensive personal experience of the advertiser to effect a liberal and improved education.

The Course of Instruction includes:—

The English, French, German, Latin, and Greek Languages.

Arithmetic, Algebra, Geometry, Mensuration, Trigonometry, &c.

Natural History, Experimental Philosophy, and Chemistry.

Ancient and Modern History, Geography, and Astronomy.

Writing, Drawing, Singing, Gymnastics, &c.

The TERMS, for a complete course of instruction in English, with Board, &c., are Twenty-four Guineas per annum. The French, German, Latin, and Greek Languages, each 3 Guineas extra. To render the instruction more effective, a select Library is provided, and an extensive collection of Philosophical Apparatus, with Cabinets of Minerals and Shells, a Laboratory and apparatus for chemical investigations, Bath, Workshop, Gymnastic Apparatus, &c. &c.

Prospectuses may be had of Messrs. Jones & Co. 30, Lower Holborn, or by addressing to S. P., Hofwyl House, Stamford-hill, Middlesex.

MEDICAL EDUCATION.—A Surgeon, residing near the Borough Hospitals, and holding a Public Appointment, has a VACANCY for an ARTICLED PUPIL, who will have every assistance and opportunity to enable him to obtain a perfect knowledge of his profession. Inquire of the Librarian, Guy's Hospital.

EXETER HALL.—Under the sanction of the Committee of Council on Education.

WRITING ON THE METHOD OF MULHAUSER, under the direction of MR. M'LEOD.

Several Classes for instruction on the above methods are about to be opened THIS WEEK. Persons desirous of admission must apply at Exeter Hall any Evening (except Saturday) between the hours of 5 and 9, where every information respecting the Classes may be obtained.

COMMERCIAL and GENERAL LIFE ASSURANCE, ANNUITY, FAMILY ENDOWMENT, and LOAN ASSOCIATION, 112, Cheapside, London.

NOTICE is hereby given that the HALF YEARLY DIVIDENDS on the Capital Stock of this Company, due on the 25th of December last, will be payable here on and after the 25th instant, between the hours of 10 and 4, Mondays and Thursdays excepted. By order of the Board.

FREDERIC LAWRANCE,
Jan. 2, 1843. Resident Secretary.

TO PUBLISHERS.

A COPPER and STEEL-PLATE PRINTER, perfect in his business, and moderate in his charges, having one of his Presses standing idle, endeavours, through the medium of the *Athenæum*, to set it in motion, as he carries on the business of Bookselling as well as Decorative Printing. The settling of accounts by cash would not be required where standard literature might be selected on equitable terms. A pre-paid line, to E. D., No. 1, George's-buildings, Hoxton-square, will be promptly attended to.

This day is published, GRATIS,

TO ADVERTISERS.
THE LONDON and EDINBURGH MONTHLY JOURNAL of MEDICAL SCIENCE is an admirable medium for advertising MEDICAL and SCIENTIFIC PUBLICATIONS, WORKS in GENERAL LITERATURE, MEDICAL PRACTICES, CHEMICAL PRODUCTS, PHARMACEUTICAL PREPARATIONS, and the PROSPECTUSES of LIFE INSURANCE SOCIETIES. This Journal has, since its commencement in January, 1840, enjoyed a very large, and steadily increasing circulation in every part of Great Britain; and has now numerous subscribers in the colonies. It is taken in not only by private individuals, but by most of the Medical Societies and Reading Clubs in the United Kingdom, as well as by many of the General News Rooms in the large towns. Advertisements, therefore, inserted in this Journal, cannot fail to be perused by many thousand readers, a large proportion of whom must be of a select class.
Advertisements (which ought to be sent in by the 15th of the month) are received by John Churchill, Princes-street, Soho, London; Maclachlan, Stewart & Co. Edinburgh; and by the Printers, Messrs. Balfour & Jack, Niddry-street, Edinburgh.

NAVIGATION AND NAUTICAL ASTRONOMY.
The Fourth Edition, Corrected, in a large vol. 8vo. price 10s. 6d. boards, or 12s. bound,
A TREATISE on NAVIGATION and NAUTICAL ASTRONOMY, adapted to the Purposes of Elementary Instruction; with an Extensive Series of Examples for Exercise, and all the Tables requisite for Nautical Computations; with Rules and Examples adapted to the 'Nautical Almanac' in its New and Improved Form.
By EDWARD RIDDLE, F.R.A.S.,
Master of the Nautical School, Greenwich Hospital.
London: Robert Baldwin, 47, Paternoster-row.
Also, extracted from the above work, price only 2s. 6d.,
Tables of the Logarithms of Numbers, and of Sines, Tangents, and Secants, to Six Places of Decimals.

FRENCH GRAMMAR FOR PRIVATE TUITION.
In 8vo. price 12s. in cloth, the Eighth Edition of
A GUIDE to the FRENCH LANGUAGE, especially devised for Persons who wish to Study the Elements of that Language without the assistance of a Teacher.
By J. J. P. LE BRETHON.
London: Robert Baldwin, 47, Paternoster-row.
A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the elements of the French language practically, as surely as if a professed teacher were sitting by his side; and, with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed. Price 8s.

The Fourth Edition, in 12mo. price 5s. bound,
A PRACTICAL SYSTEM of ALGEBRA, designed for the Use of Schools and Private Tuition.
By PETER NICHOLSON and J. ROWBOTHAM.
*** In this edition the authors have not only introduced some important original matter, particularly on proportion, imaginary quantities, binomial theorem, series, &c., but have also endeavoured to illustrate many parts of the work by such alterations as will make it still more acceptable to the public.
London: Robert Baldwin, 47, Paternoster-row.
Also, price 8s. bound,
A Key to the above work, containing the Solutions of more than 900 Problems, by the use of which, and the Algebra, a person may acquire a knowledge of this valuable Science without the assistance of a Master.

In a very large pocket volume, printed in pearl type, price 7s. bound in cloth; or 7s. 6d. in roan,
A NEW SPANISH and ENGLISH DICTIONARY, in Two Parts: 1. Spanish and English; 2. English and Spanish. The first comprehends all the Spanish Words and their proper Accents, and every noun with its gender. The second, with the addition of many new Words, contains all the various meanings of English Verbs, in Alphabetical order, all expressed by their correspondent Spanish in a simple and definite sense. By F. C. MEADOWS, M.A., Author of the New French Pronouncing Dictionary, also the New Italian and English Dictionary, Grammars, &c.
London: printed for Thomas Tegg, 73, Cheapside; and may be had of all other Booksellers.

In 1 very large 8vo. vol. containing upwards of 1,250 closely-printed pages, cloth lettered, 25s.
THE PRINCIPLES and PRACTICE of MEDICINE. By JOHN ELLIOTSON, M.D. Cantab. F.R.S. Edited by NATHANIEL ROGERS, M.D. and ALEXANDER COOPER LEE, Esq. 2nd edit. greatly enlarged and improved.
"The best work for the study of diseases is Elliotson's 'Principles and Practice of Medicine,' by Rogers and Lee."—*Lancet.*
"We strenuously recommend the work to all who feel interested in the advancement of practical medicine."—*Medical Gaz.*
"We cannot entertain a doubt that this work, employing as it does the mature experience of an able and accomplished physician, will be welcomed by all classes of the profession."—*Dublin Journal of Medical Science.*
"Such a work ought to be in the hands of every practitioner who desires to fulfil the grand purpose of his vocation, the diminution of the thousand ills that flesh is heir to."—*Dublin Medical Press.*
"We think it unnecessary to recommend it, because it will recommend itself, and command success by its own intrinsic merits."—*Medico-Chirurgical Review.*
London: Joseph Butler, 4, St. Thomas's-street, Southwark.

FOR SCHOOLS.
AN OUTLINE of the HISTORY of ANCIENT and MODERN ROME, in Question and Answer. By Mrs. DE HAVILAND. 18mo. 3s. 6d.
England and its People; or, a Familiar History of the Country and the Social and Domestic Manners of its Inhabitants. With numerous Illustrations, 18mo. 5s.
"One of the best histories for the young we have seen."—*Athenæum.*
A Guide to the Study of the Pentateuch, designed, by a Series of Questions, to point out the Treasures of Wisdom and Knowledge contained in the Mosaic Economy. Intended for Colleges, the higher Classes in Schools, and Students in Divinity. By J. Thompson, M.A. 12mo. 4s. 6d.
"The author has accomplished his object in a most masterly style."—*Christian Remembrancer.*
Houlston & Stoneman, 65, Paternoster-row, London.

The following Works, by Mr. B. H. SMART, form a complete Library of Reference and Instruction for the English Student.
THE PRACTICE of ELOCUTION. 4th edition, much augmented. 12mo. 5s. cloth. Longmans.
Shakspearian Readings: an Historical Shakspeare for the Family Circle: Companion Volume to the foregoing. 12mo. 6s. cloth. Rivingtons.
Pronouncing Dictionary. 8vo. 15s. The same epitomized, 7s. 6d.
Accidence and Principles of English Grammar. 12mo. 4s. cloth. The Accidence separately, 1s.
The Theory of Elocution, with Practical Aids for Reading the Liturgy. 8vo. 7s. boards.
By the same Author, in 1 vol. 8vo. 12s. cloth,
Beginnings of a New School of Metaphysics; comprising Three Essays—Outline of Sematology, published in 1831; Sequel to Sematology, 1837; Appendix, 1839.
The first Essay investigates the true relation between thought and language, in order to establish just methods of teaching and applying Grammar, Logic, and Rhetoric. The second examines doctrines or systems framed in ignorance of the moulding operations of language on thought. The third indicates a way out of the intricacies of fruitless Metaphysics, that the two previous Essays may, with less impediment, establish the beginnings of a better system.—Each Essay may be had separately. OUTLINE, 7s.; SEQUEL, 5s.; APPENDIX, 1s.

EXERCISE AND SPELLING BOOKS.
Whittaker & Co. Ave Maria-lane.

SUPERIOR SCHOOL BOOKS.

BUTTER'S GRADATIONS in READING and SPELLING, upon an entirely new and original Plan: by which Dissyllables are rendered as easy as Monosyllables: with numerous entertaining and instructive Reading Lessons in Prose and Verse, Spelling Tables of three and four Syllables, and others leading to a knowledge of Grammar and Derivation. 25th edition, 1s. 6d. bound.

2. Butter's Gradual Primer, by which Young Children may more easily learn Words of Two Syllables than they have heretofore learned Words of One Syllable. 17th edition, with Engravings, price 6d.

3. Butter's Etymological Spelling Book and Expositor. 62nd edition, 1s. 6d. bound.

Simpkin, Marshall & Co., Whittaker & Co., Longman & Co., London: Oliver & Boyd, Edinburgh.

In one closely-printed volume, 568 pages, price 10s. 6d.

A POPULAR HISTORY of BRITISH INDIA, CHINA, and the Insular Possessions of England in the Eastern Seas.

By W. COOKE TAYLOR, L.L.D.

"It is precisely such a summary as was wanted by the general reader. Such a volume, in particular, has long been wanted in our schools, where little is taught of India more than may be learnt as a geographical exercise; and yet the stirring and romantic interest of the theme, leaving out of view its importance, should recommend it to the teacher as likely to prove a welcome and animating addition to the usual course of historical instruction."—*John Bull*, Nov. 18.

J. Madden & Co. 8, Leadenhall-street.

HONE'S EVERY DAY BOOK, TABLE BOOK, and YEAR BOOK.

Just published, New Editions of Mr. Hone's Every Day Book, Table Book, and Year Book. Each Volume of these valuable works being complete of itself, may be purchased separately during the Christmas Holidays, at the low price of 8s., originally published at 14s.

It is frequently a subject of deep consideration amongst parents how they can best entertain and instruct their children during the Christmas Vacation. The Publisher begs to recommend Mr. Hone's 'Every Day Book,' as a Work calculated to charm and entertain all ages, and to convey information and instruction to the young in that delightful manner which transforms a task into an amusement, and renders the book a most acceptable holiday present.

London: printed for Thomas Tegg, 73, Cheapside; and sold by all other Booksellers.

Now ready, 2nd edition, post 8vo. cloth, 6s.

THE NURSERY RHYMES of ENGLAND, obtained principally from Oral Tradition. Collected and Edited by JAMES ORCHARD HALLIWELL, Esq.

"Not only all mothers, aunts, nurses (for nurses can even read now), are obliged to Mr. Halliwell for this careful and elegant collection of this most popular portion of our national poetry, but that grave and gray-headed scholars may find in them traces of manners long passed away, and sentiments that may awake a pleasing train of meditations. They are arranged into fifteen classes and accompanied with notes, that, without enlarging, are illustrative and interesting, and are a proof that scholarship and taste can deck the humblest subject it touches."—*Monthly Magazine*, January.

ENGLISH SURNAMES: a Series of Essays on Family Nomenclature, Historical, Etymological, and Humorous. By MARK ANTONY LOWER, Esq. Post 8vo. pp. 280, with 20 Woodcuts, cloth, 6s.; large paper, 10s. 6d.

"A most amusing volume, mingling wit and pleasantry with antiquarian research and historical interest."—*Weekly Chron.*

PROSPECTUS AND EXPLANATION OF

THE NEW AND IMPROVED CHURCH AND CHAMBER ORGAN,

MANUFACTURED BY H. C. LINCOLN,

Organ Builder to Her Majesty the Queen,

AND TO THEIR LATE MAJESTIES GEORGE THE FOURTH AND WILLIAM THE FOURTH;

AND BUILDER OF THE ORGANS IN

HER MAJESTY'S CHAPEL ROYAL, BRIGHTON.
HER MAJESTY'S PALACE, THE PAVILION, BRIGHTON.
HER MAJESTY'S CHAPEL, DEVONPORT.

AND UPON THE NEW PLAN OF

THE MENDELSSOHN ORGAN, MANCHESTER.
THE CROSBY HALL ORGAN, BISHOPSGATE STREET.
THE ST. THOMAS ORGAN, THE ROLLS, CHANCERY LANE.
THE CATHEDRAL ORGAN, ST. DAVID'S.

London, January, 1843.

ORGAN MANUFACTORY, 196, HIGH HOLBORN.

MR. LINCOLN has the honour to solicit the consideration of the Nobility, Clergy, and the Professors and Amateurs of Church Vocal and Instrumental Music, to the peculiarities and advantages of the great and numerous improvements he has recently adopted in the construction and arrangement of the Church and Chamber Organ. These alterations have been made with a view of affording an increased efficacy to the Organ, in rendering its support to a large Congregation, and in the performance of Church Instrumental Music. The effect gained is such, as to combine the breadth and variety which distinguish the Continental Organ, with the universally recognised sweet and silvery tones produced by the English mode of voicing and finishing the pipes.

The advantages gained by the adoption of the new mode of construction, are unquestionable,—

1st. The Organ has a more weighty and solemn character of tone, which is gained by the introduction of the new Stops, called the Bourdon, Tenoroon, and Quint.

2nd. It has a more brilliant and silvery character, from the new mode of arranging the Sesquialteras, Mixtures, and by the use of a new Stop, called the Doublette.

3rd. It has a more soft and varied character, from the circumstance, that instead of the Instrument only possessing one Flute, it has three, four, or even six, all of which combine with the new Stops in producing an entirely new quality of tone to the Organ, and which is admirably adapted to the purposes of Psalmody. These flutes are called the Claribel-Flute, the Oboe-Flute, the Wald-Flute, the Suabe-Flute, the Piccolo, and the Flageolet.

4th. It has more breadth and body of tone, from the adoption of a new method of manufacturing the Reed Stops. These are made to speak, so as to combine the weight of a Diapason with the fullest tone which it is possible to give to a Reed Pipe. The new Reed Stops are called the Posaune, the Trombone, the Cornopean, the Soft Horn, the Corno-Flute, the Clarionet, the Trumpet, the Clarion, the Oboe, and the Octave Clarion.

5th. A distant, subdued, and piano effect, combined with brilliancy sufficiently prominent to keep up the voices, is gained by the Tenoroon Dulciana, a new Reedy-toned Dulciana, and the Echo Dulciana Cornet, a Stop of five ranks of Pipes, which has been copied from one in the celebrated Organ of Cologne Cathedral.

6th. More Pipes are obtained to each Key than has yet been attained, and at a less expense: and it must be evident, the greater number of Pipes of differing qualities of tone that can be brought to bear upon each Key, the greater must be the musical resources of the instrument.

7th. The Sound-boards are made to contain nearly double the work of the ordinary sound-boards, and the wind chests nearly double the quantity of wind.

8th. No money is thrown away upon useless mechanism, but the greatest attention is paid to create music in every possible variety and combination.

9th. Although the compass of the Keys is apparently contracted to CC, in effect the Organ extends to CCC, as every Key on the Manual has it with its Unisons, the Octave below; thus, in fact, the instrument has the same compass as the Organ in St. Paul's Cathedral, without the disadvantages attending the old compass.

MR. LINCOLN begs to refer to the following Organs, as examples of the new manner of combining great power and variety at a small expense.

The New Organ in the Church of St. Thomas, the Rolls, Chancery Lane;

The New Organ in the Ancient and beautiful Room of Crosby Hall, Bishopsgate Street Within;

The New Organ now constructing for the New Church Withington, Manchester;

The New Grand Organ now erecting for the Cathedral Church of St. David.

MR. LINCOLN has the honour to submit the following LETTERS as TESTIMONIALS of the Character of his style of Organ Building:—

Testimonials.

From Dr. J. CLARKE WHITFIELD, *Professor of Music to the University, Cambridge.*

Understanding that it is in contemplation to erect an Organ upon a large scale for the New Church at Camberwell, I beg permission to introduce to your notice Mr. Lincoln, as a man of strict probity, and of the first celebrity as an Organ Builder. I have employed Mr. Lincoln at Trinity and St. John's Colleges, during my residence at Cambridge, and therefore can vouch for the superiority and durability of his work, as well as for his moderate charges. It is my opinion that the Diapasons of Mr. Lincoln possess more of the sweetness of the celebrated "Father Schmidt" than those of any other Organ Builder of the present day.

From Mr. ATTWOOD, *Organist of St. Paul's Cathedral, and Composer to the King.*

I have the pleasure to inform you that I think the Organ an instrument possessing a fine quality of tone, great power, and very complete in all its parts.

Testimonial from Mr. GAUNTLETT, *Organist of Christ Church, Newgate Street, London, and of St. Olave's, Southwark.*

Mr. Henry C. Lincoln has erected two Organs on my new plan, and has two others now in progress. I have much pleasure in recording my opinion of his merits. In the contracts which he has executed under my superintendence, I have ever found him, although exceedingly moderate in his price, yet very desirous to give his employers every advantage. The internal mechanism and the outward decoration of his work have been finished in the best style, and without reference to his own interest. The metal and manufacture of his pipes have been of high excellence; and every portion of his instrument, whether that part which meets the eye, or that which is withheld from public view, has been completed with the same uniform attention to its durability and due effect. I believe whatever may be the scale of his charges, his manner of work is invariable, and that always in the best style.

(Signed) HENRY JOHN GAUNTLETT.

MR. LINCOLN has the honour to announce

A New and improved CHURCH BARREL ORGAN;

ALSO,

The CONCERT ORGAN, for the SALOON or DRAWING ROOM;

AND

The APOLLONICON, or SELF-ACTING ORGAN,

For the mechanical Performance of Symphonies, Overtures, Choruses, &c.

MR. LINCOLN continues to Manufacture

The OLD ENGLISH UNISON and GG CHURCH ORGAN,

To which he gives some new Characteristics by means of his newly-invented Flute, Reed, and Diapason Stops.
He also reconstructs the Old Instruments upon the New Plan.

REVIEWS

History of the Manners and Customs of Ancient Greece. By J. A. St. John. 3 vols. Bentley.
Attica and Athens. Translated from the German of Müller, and others, by J. I. Lockhart.

WHAT an inexhaustible theme is this! What a testimony to the transcendent fascinations of Grecian story is the daily accession to our libraries of essays and treatises, by the scholars of all nations, upon the manners, the politics, the arts, the wars, the institutions, the religion, the character of the small population of a mountain tract, in territorial extent little more than one-half of England; and how much is this testimony strengthened by the unflagging interest with which we accompany the steps of every traveller, antiquarian, or topographer, who undertakes to be our guide through that enchanted and enchanting land! Greece is the most extraordinary conundrum that Time has yet propounded to the world. A marble chip from a column of the Parthenon is worth more than the great pyramid of Egypt to him who brings to the study of antiquity but one spark of the imaginative fervor of the Hellenic temperament. Everything about old Greece is exciting, dazzling, kindling, and astonishing, unrivalled as she will probably never cease to be in every art that sheds softness or lustre over human life. The very name of Greek is a comprehensive synonyme for the spirit of eloquence and poetry, the power of music, and all that is beauteous or sublime in the works of the sculptor or the architect. How gladly we turn from the rugged chronicles of the bleak northern nations to revel amongst the glowing traditions and breathing monuments, (whether graven with the chisel or more durably recorded by the pen) of the sunny and classic South. The enthusiasm with which we ransack the remains of Greece is akin to patriotic pride. The scholar, of what Bacon calls "a delicious and airy spirit," feels as if Greece were the land of his nativity; as if he were, or as if he ought to be, the fellow-citizen of Pericles and the school-fellow of Anaxagoras.

The author of the elaborate work before us has felt the deep influence of his immortal subject; and to this more than to his erudition, he owes the success of his labours: for he has certainly produced a masterly picture of the Hellenic family, not in their political relations, but in the still more attractive aspect of their social history and domestic life. Justly does he observe—

"Indeed, the great sources of a nation's happiness and power must always lie about the domestic hearth. There or nowhere are sown, and for many years cherished by culture, all those virtues which bloom afterwards in public, and form the best ornaments of the commonwealth. Men are everywhere exactly what their mothers make them. If these are slaves, narrow-minded, ignorant, unhappy, those in their turn will be so also. The domestic example, small and obscure though it be, will impress its image on the state; since that which individually is base and little, can never by congregating with neighbouring littleness become great, or lead to those heroic efforts, those noble self-sacrifices, which elevate human nature to a sphere, in which it appears to touch upon and partake something of the divine. By minutely studying, as far as practicable, those small obscure sanctuaries of Greek civilization—the private dwellings of Attica—I hoped to discover the secret of that moral alchemy by which were formed

> Those dead but sceptered sovereigns who still rule
> Our spirits from their urns.

In these haunts, little familiar to our imagination, lay concealed the germs of law, good government, philosophy, the arts, and whatever else has tended to soften and render beautiful the human clay."

In the chapter on the Greek character, after enumerating the various circumstances, political and geographical, commonly supposed to explain its intellectual greatness, Mr. St. John lays the proper stress upon the physical organization of the people, and describes its most prominent features:—

"It were in fact as easy to tell why one star differs from another star in glory, as why one nation or one man rises in intellect above his fellows. But we are supplied with a link in the chain which connects the above effects with their cause, by the physical organisation of the Greeks, who possessed the most perfect forms in which humanity ever appeared. Their frame exhibiting all the beauty of which the human body is susceptible, uniting strength with lightness, dignity and elegance with activity, the utmost robustness of health with extreme delicacy of contour, the muscles developed by exercise, and developed over the whole structure alike, suggested the idea of power and indefatigable energy; the stature, generally above the middle size, the free and unembarrassed gait, the features full of beauty, the expression replete with intellect, and the eye flashing with a conciousness of independence:—all these united conferred upon the form of the Greek an elevation, a grandeur, a majesty which we still contemplate with admiration in their sculpture, and denominate the ideal. Above all things, the form of the Grecian head was most exquisite, with its smooth, expansive, almost perpendicular forehead and majestic outline, describing a perfect oval. Generally the complexion was of a clear olive, the hair and eyes black, the temperament inclined to melancholy, though numerous instances occurred of sanguine fair persons with light eyes and chesnut or auburn hair, which the youth wore, as now, in a profusion of ringlets falling to the shoulders."

Such an organization may well be called a "glorious" one; and no doubt was, in some degree, an effect of the air and soil—"the influence of the clime"—which still continues to "shed its Ionian elegance" over the inhabitants of the same magic region. On the atmosphere of Greece, it is remarked—

"Certain at any rate it is, that the atmosphere of Greece is clearer, purer, more buoyant and elastic, than that of any other country in our hemisphere. At night, particularly, there is a transparency in the air, which appears to impart additional lustre and magnitude to the stars and moon. Its mountain tops, the intervening space being, as it were, removed, seem to mingle with the constellations which cluster in brightness on the edge of the horizon."

One cause of this singular atmospheric purity and lustre is stated to be the prevalence of the north-wind; another, the geological character of the country:—

"Another cause, which greatly tends to promote the purity of the air, is the lightness, friability, and dryness of the soil, which, distributed for the most part in thin layers over ledges of rocks, permits no stagnation of moisture, but enables the rain that falls to trickle through, collect in rills and brooks, and find its way rapidly to the sea. The plains and irregular valleys, which form an exception to this rule, are not numerous enough, or of sufficient magnitude to effect the general proposition. There appear, moreover, to be many peculiar properties and virtues in the soil itself, causing all fruits transplanted thither to attain to speedy ripeness and superior flavour, while odoriferous plants and flowers, as the jasmine, the wild thyme, and the rose, exhale sweeter and more delicious fragrance. This is more particularly the case in Attica, which accordingly produced in antiquity, where due care was bestowed on gardening and agriculture, the finest fruits and sweetest honey in the world."

Mr. St. John's remarks upon points of this nature are entitled to particular attention, inasmuch as they are the results of the personal observation of the traveller, an invaluable assistant to the deductions of the student. He writes from his acquaintance with the Greece and the Greeks of the present day, as well as from the memorials of antiquity; and it is gratifying to receive the following favourable account of the modern people from so competent a witness:—

"I have seldom become acquainted with a Greek,—and I have known many,—who has not improved upon acquaintance, won my esteem, and in most cases, my affection, and impressed me with the firm belief that there is no nation in the varied population of Europe, which, if ruled with wisdom and justice, would exhibit loftier or more exalted qualities. In these views I am happy to be borne out by the testimony of Monsieur Frederic Thiersch, whose facilities for studying the modern Greek have been far more ample than mine, and whose opinions are marked by the cautious acuteness of the statesman, with the depth and originality of the philosopher."

No two works on the same subject can differ from each other more than Mr. St. John's from the treatise of Müller, which we have coupled with it, because, to a certain extent, the labours of the two writers are concurrent. Müller's is a close and learned antiquarian disquisition, founded upon the perambulations of Pausanias, and the accounts of various travellers, ancient and modern—not at all upon personal inspection. It is, however, a perfect model of this species of investigation; nor do we find any of its topographical conclusions are impugned by the ocular observer. The accurate scholar will not find the dissertation of the learned German dry, although other readers would probably pass that judgment upon it, and turn with pleasure to the florid, copious, and often discursive pages of Mr. St. John. The enthusiasm of Müller shows itself, not in fervent periods and bursts of sentiment, but in the prodigious toil of his researches. He states, in the simplest language, the facts which he demonstrates, and avoids expatiation with almost geometrical severity.

We confess a preference for the warmer style. It is not easy to excite the imagination by the mere statement of topographical facts, although he that broods upon the descriptions of Pausanias or Müller, and collects into one field of view the multitude of magnificent objects catalogued by such writers, will no doubt arrive at a gorgeous conception of the miracles of ancient architectural scenery. The writer, however, who frames an ideal panorama out of the remains and records of Grecian splendour, anticipates the reader's fancy and aids his power of combination. Take the following passage as an instance. Mr. St. John imagines a superb view in Athens, formed by the grouping of authentic details, and presents them directly to our gaze.

"On entering through the gates of the Propylæa a scene of unparalleled grandeur and beauty burst upon the eye. No trace of human dwellings anywhere appeared, but on all sides temples of more or less elevation, of Pentelic marble, beautiful in design and exquisitely delicate in execution, sparkled like piles of alabaster in the sun. On the left stood the Erectheion or fane of Athena Polias; to the right that matchless edifice known as the Hecatompedon of old, but to later ages as the Parthenon. Other buildings, all holy to the eye of an Athenian, lay grouped around these master structures, and in the open spaces between, in whatever direction the spectators might look, appeared statues, some remarkable for their dimensions, others for their beauty, and all for the legendary sanctity which surrounded them. No city of the ancient or modern world ever rivalled Athens in the riches of art. Our best filled museums, though teeming with her spoils, are poor collections of fragments compared with that assemblage of gods and heroes which peopled the Acropolis, the genuine Olympos of the arts, where all the divinities of the pagan heaven appeared grouped in immortal youth and beauty round the Thunderer and his virgin daughter."

But it will be more useful, and not less entertaining, to select our extracts from the chapters relating to educational and moral subjects. There is a curious chapter on the Greek nursery, from which we take a short passage.

"All the world over the singing of the nurse has been proverbial. Music breathes its sweetest notes around our cradles. The voice of woman soothes our

Digitized by Google

infancy and our age, and in Greece, where every class of the community had its song, the nurse naturally vindicated one to herself. This sweetest of all melodies—

Redolent of joy and youth

was technically denominated Katabaukalesis, of which scraps and fragments only, like those of the village song which lingered in the memory of Rousseau, have come down to us. The first verse of a Roman nursery air, which still, Pignorius tells us, was sung in his time by the mothers of Italy, ran thus:—

Lalla, Lalla; dorme aut lacte.
(Lalla, Lalla; sleep or suck.)

The Sicilian poet whose pictures of the ancient world are still so fresh and fragrant, has bequeathed to us a Katabaukalesis of extreme beauty and brevity which I have here paraphrastically translated:—

Sleep ye, that in my breast have lain,
The slumber sweet and light,
And wake, my glorious twins, again
To glad your mother's sight.
O happy, happy be your dreams,
And blest your waking be,
When morning's gold and ruddy beams
Restore your smiles to me.

The philosopher Chrysippos considered it of importance to regulate the songs of nurses, and Quintilian, with a quaint but pardonable enthusiasm, would have the boy who is designed to be an orator placed under the care of a nurse of polished language and superior mind. He observes, too, that children suckled and brought up by dumb nurses, will remain themselves dumb, which would necessarily happen had they no other person with whom to converse. When the infant was extremely wakeful, the soothing influence of the song was heightened by the aid of little timbrels and rattles hung with bells."

Mr. St. John notices several curious remains of antiquity in our modern nurseries. The word "baby" is Syriac. "Tatta," "pappa," "mamma," were the first lispings of the Hellenic infant—the first sounds uttered by Pericles and Demosthenes.

How characteristic of a delicious sunny climate is the following usage:—

"It was the practice among the children of Greece, when the sun happened to be obscured by a cloud to exclaim, Ἔξελθ' ὦ φιλ' ἥλιε!—'Come forth, beloved sun!' Strattis makes allusion to this custom in a fragment of his Phœnissæ:—

Then the god listened to the shouting boys,
When they exclaimed, 'Come forth, beloved sun!

It is fortunate that our English boys have no such passion for sunshine; otherwise, as Phœbos Apollo hides his face for months together in this blessed climate, we should be in a worse plight than Dionysos among the frogs of Acheron, when his passion for Euripides led him to pay a visit to Persephone. In some parts of the country, however, the children have a rude distich which they frequently bawl in chorus, when in summer-time their sports are interrupted by a long-continued shower:—

Rain, rain, go to Spain;
Fair weather, come again."

The chapter on toys and pastimes, recals the learned infancy of young Scribblerus. The following account of the schools for the poorer classes, reminds us of those ancient Irish seminaries described by Campion, the traces of which still linger under the hedges and in the mud-built sheds of that island; how different from the porticos of the Attic temples!

"It has sometimes been imagined that in Greece separate edifices were not erected as with us expressly for school-houses, but that both the didaskalos and the philosopher taught their pupils in fields, gardens, or shady groves. But this was not the common practice, though many schoolmasters appear to have had no other place wherein to assemble their pupils than the portico of a temple, or some sheltered corner in the street, where in spite of the din of business and the throng of passengers the worship of learning was publicly performed. Here, too, the music-masters frequently gave their lessons, whether in singing or on the lyre, which practice explains the anecdote of the musician, who, hearing the crowd applaud one of his scholars, gave him a box on the ear, observing, "Had you played well these blockheads would not have praised you." A custom very similar prevails in the East, where, in recesses open to the street, we often see the turbaned schoolmaster with a crowd of little Moslems about him, tracing letters on their large wooden tablets or engaged in recitations of the Koran."

All Greek children were not geniuses born. Here is a curious case of puerile dulness and the mode of correcting it.

"The earliest task to be performed at school was to gain a knowledge of the Greek characters, large and small, to spell next, next to read. Herodes the Sophist experienced much vexation from the stupidity exhibited in achieving this enterprise by his son Atticus, whose memory was so sluggish that he could not even recollect the Christ-cross-row. To overcome this extraordinary dulness, he educated along with him twenty-four little slaves of his own age, upon whom he bestowed the names of the letters, so that young Atticus might be compelled to learn his alphabet as he played with his companions, now calling out for Omicron now for Psi."

Music may be said to have been the basis of Greek education. The term Μουσίκη occasionally comprehended everything connected with the expansion of the mind; but music, including poetry, held the chief place in the system of juvenile instruction. It would appear that rhyme was not resorted to in Greece merely as a help to the memory of childhood, as it is employed by us moderns to teach the days of the month and the elements of arithmetic. The Greek boy was early introduced to the poets of his country, and first of all to the authors of lyrical and dithyrambic pieces, the most poetical of all. Arithmetic held the next place to music—a strange combination of the coldest and driest with the most passionate and imaginative of human studies; but essential to a correct understanding of the poetical utilitarianism of the Hellenic character. The Athenians, in particular, united the habits of men of business with the faculties and tastes for the apprehension and enjoyment of "the ideal." Alcibiades was a brilliant example of this paradoxical combination.

But the consequence beginning to be attached to music in modern elementary instruction, directs our attention particularly to the passages that illustrate its importance amongst the ancient Greeks. The advocates of "music for the million" will read with peculiar interest the following account of the objects with which the Greeks exalted music above the rank of a mere pleasurable pursuit or elegant accomplishment.

"The importance of music, in the education of the Greeks, is generally understood. It was employed to effect several purposes. First, to soothe and mollify the fierceness of the national character, and prepare the way for the lessons of the poets, which, delivered amid the sounding of melodious strings, when the soul was rapt and elevated by harmony, by the excitement of numbers, by the magic of the sweetest associations, took a firm hold upon the mind, and generally retained it during life. Secondly, it enabled the citizens gracefully to perform their part in the amusements of social life, every person being in his turn called upon at entertainments to sing or play upon the lyre. Thirdly, it was necessary to enable them to join in the sacred choruses, rendered frequent by the piety of the state, and for the due performance in old age of many offices of religion, the sacerdotal character belonging more or less to all the citizens of Athens. Fourthly, as much of the learning of a Greek was martial and designed to fit him for defending his country, he required some knowledge of music, that on the field of battle his voice might harmoniously mingle with those of his countrymen, in chaunting those stirring, impetuous, and terrible melodies, called pæans, which preceded the first shock of fight."

Thus music formed the Grecian character, whether we consider the literature, the refinement, the hilarity, the religious enthusiasm, or the martial energy, that were its chief component elements. We have here the explanation of the beautiful fables of Orpheus and Amphion. Amphion, no doubt, warbled his ballads to the ears of the masons who built the Theban walls; and probably the wild beasts that flocked round the tuneful husband of Eurydice, were the rude aborigines of the land, reduced by music to civilization and concord.

The Passions oft, to hear her shell,
Thronged around her magic cell.

Several interesting anecdotes are related in connexion with the subject of music. The reproof of a great flute-player on observing one of his pupils trying to produce loud sounds, contains a wisdom capable of other and more important applications: "Boy, that is not always good which is great; but that is great which is good." The anecdote is related by Athenæus.

If Greece has beyond any other country of antiquity commanded the admiration of the world, Athens has engrossed the lion's share of the tribute. The "eye of Greece," she is styled by Milton; by others, the "Greece of Greece." Sparta, amongst other states, is almost lost in the blaze of her more intellectual and polished rival. Yet Sparta is an interesting study; the Spartans set their laws to music, and sacrificed to "the Nine" before they went to battle! The accounts of ancient writers vary considerably as to their intellectual capacities and acquirements. It is certain that they produced no great poets, yet they had their native bards, who composed their war-songs; and theirs was—

The Dorian mood
Of flutes and soft recorders, such as raised
To height of noblest temper heroes old,
Arming to battle, and instead of rage,
Deliberate valour breathed.

Sparta "opened an asylum for those antique teachers of mankind, the poets, proscribed by Plato (an Athenian), and were in this respect so superior in taste to that philosopher, that they instituted public recitations of Homer." Mr. St. John remarks the susceptibility of impressions by music as amongst the common attributes of both the Doric and Ionic race.

"Into the character of the Greeks, generally, there entered an element but faintly discernible in the moral composition of modern nations; I mean a most exquisite and exalted sensibility, which rendered them to the last degree susceptible, and liable to be swayed irresistibly for good or for evil by poetry and music. And this characteristic distinguished in some degree the Doric as well as the Ionic race. They could be excited, past belief, by the agency of sound. Music, therefore, with us at least a mere source of enjoyment, among them was invested with a moral character, and employed in education as a powerful means of harmonising, purifying, ennobling the principles and the affections of the heart. For this reason the government, which in Greece was in reality a Committee of Public Safety, watched over the music no less sedulously than over the morals of the people, which it powerfully influenced."

Mr. St. John's work contains interesting materials for a second notice, should we have leisure to return to the subject. For the present, we have confined ourselves to the first volume.

The Life of Sir A. Cooper, Bart. By Bransby Blake Cooper, Esq. 2 vols.

[Concluding Notice.]

The life of Sir A. Cooper, interesting as it might have been to his professional contemporaries, and in every point of view instructive to the rising generation of medical students, could not, as we have said, offer much attraction to the general reader. Like all persons who dedicate their lives to a profession, Sir Astley was thereby closely circumscribed within a sphere which can only touch society in one or two points. "'Twere little boot" to inform our readers that the subject of this memoir came of a respectable Norfolk family; that he possessed the ordinary schoolboy opportunities for a learned education, which temperament and disposition alike prevented him from making the most of; or that family

Digitized by Google

connexion turned his attention to surgery, and that in the anatomy school be found an exercise so exactly suited to his taste and curiosity, as to awaken the dormant activity of his mind, and rouse an ambition which could not content itself with a second place. That he succeeded in realizing, to the utmost, this dream of his ambition, and that, both as a teacher and a practitioner, he attained to a fame that was European, the public already know. All this has been told, and extended, by collateral anecdote, over two volumes, without affording more than an occasional glimpse at the true sources of such eminence of the intellectual qualities necessary to make a great physiologist and surgeon, or of the steps by which the inquirer was led forward, in the pursuit of science, to truths of so sweeping and influential an import, as to place their possessor above the heads of ordinary competitors.

To penetrate to the core of such information, it would be necessary to follow the subject, step by step, through the whole course of his art, and to study him in his daily labours in the dissecting-room, the theatre, and the hospital. But such a course would be as unintelligible as it would be distasteful to the non-professional reader. Yet, after all, the general public is not wholly untouched by the result of such an investigation. At the present moment, more especially, when the subject of medical education engages public attention, there might have been much useful information derived from a philosophic analysis of Astley Cooper's character and professional career.

The great question now at issue before the tribunal of public opinion, turns on the respective merits of a union or a separation of the several branches of the healing art in the business of education. That medicine and surgery form together one unbroken whole; that both rest upon common principles; that the surgeon, to fulfil adequately his functions, must have a large acquaintance with medical science; and that the physician will be much assisted in his practice by knowledge derived from the experience of the surgeon, are self-evident truths. There can, therefore, be little room for a doubt as to the expediency of laying a common foundation, at least, for the education of both branches.

On the other hand, there is something in the nature of the investigations—in the objects to be considered, and in the intellectual attributes called into activity—in the practice of surgery, so different from those demanded by the practice of physic, that if it does not find the respective professors different men, it will rarely fail, in the end, to leave them so. This also must have its weight in legislating for institutions. In as far as the two branches are not the same, surgery is a continued appeal to the senses. The objects to be examined are under the eye, the phenomena are laid open to direct observation as they arise; and (independently of a decided turn which is given to the whole faculties, towards the acquirement of great manual dexterity,) there is in surgical pursuits an obvious tendency to the cultivation of the sensitive, at the expense of the cognitive powers. Medicine, on the contrary, is less occupied with facts than with inferences. It has been called a conjectural art; and, without converting the phrase into an epigram, we must admit that it implies a constant exercise of the subtler reasoning powers, and a different mode of considering appearances, than that usually adopted in surgery.

If we are not much mistaken, this influence might have been traced in the case of Sir Astley Cooper. He seems to have possessed, in a high degree, those mental qualities which lead to surgical eminence; and the possession of these may have kept in abeyance the higher powers of abstract speculation, or large intuitive views of the moral world,—of government, philosophy, or, in one word, of the science of society.

Compared with the man who is versant in such generalities, the great surgeon, then, may appear intellectually inferior, or may be rendered so, by the opposite course of his pursuits. How far such may have actually been Sir Astley's case, and how far, being so, it depended on original mind, or acquired habit, would be an inquiry that, for general purposes, would well have repaid the perusal of a larger work than that now under examination.

In as far, however, as the critic is concerned, it is, at present, difficult to determine in what degree the professional eminence of Sir Astley was really purchased by circumscription as to other matters; or whether the apparent deficiency conveyed in the volumes before us should be mainly attributed to the author's want of power to display his subject. The fact, however, is certain, that there are very few traces to be found in Mr. B. Cooper's pages of what is usually called a master-mind.

One criterion indeed is offered, in abstracts taken from the note-books of Sir Astley, in which, besides the professional facts recorded, he seems to have habitually set down his remarks on the characters of his more celebrated patients: these, however, are of less value than might have been expected. Certes, the opportunities afforded by extensive practice for coming at the secrets of humanity are great; but exclusively of the high obligation of respecting secresy as to certain facts obtained through such a channel, Sir Astley seems to have been prevented by want of time from "improving" such occasions, so as to render them available to those who come after him. His notes, indeed, seem to have been intended most frequently rather for pegs for hanging up the facts and inferences in his own mind, to be filled up at some future time that never came, or simply to preserve them alive for his own satisfaction. But whatever be the cause, the effect defective is, that the anecdotes thus preserved have less interest, either as curious records, or as proofs of extensive powers of observation and reflection (on non-professional matters) than could have been expected. Such, however, as they are, we are desirous of affording some specimens of them, as a medium for bringing our readers to a closer acquaintance with the man. Our first extract concerns Lord Liverpool:

"Lord Liverpool was an excellent domestic character,—a fond husband, a good master, and an excellent moral character. George the Fourth did not like him as a man, because he felt a fear of him, from his firmness, for he would never yield any important point to the King, nor suffer him to interfere in his particular province. The King used to say, as soon as he went out of the room, 'What an awkward creature that is!' and then he mimicked all his peculiarities, so as to produce a laugh against Lord Liverpool."

This little trait of George the Fourth was not confined to his treatment of Lord L.; he was acutely susceptible of ridicule, especially as concerns conventional matters; and he was not without malice in making others participate in his own feelings, even where propriety would have suggested an opposite course. But to continue:—

"My next attendance upon Lord Liverpool was on the following account. He sent for me in the morning about two years before his death, and said; 'I have a curious loss of vision. When I am reading, I lose a word,—then see one,—then again lose one, so that in a line, I do not see more than half of it.' I said, 'Sir, what are you going to do to-day?' and he replied, 'I am going to have a council.' 'You must not go to it,' I said. 'I know Lord Bathurst and the Duke of Wellington, and I will tell them your exact state.' I went to the council at once, and spoke to both those gentlemen, and they said, 'He must not come here for the world. We have observed that he has become extremely irritable of late,—we will do without him.' * * By medicine, great care, and by absence from business he got better, and we recommended him to go to Bath. He derived great benefit from the visit, but Lord Liverpool told me Canning plagued him very much with his interference, for he wished to get all the influence in the council, and to govern Lord Liverpool. * * A short time after his return to London, while at breakfast, he received a letter from Canning, and was soon afterwards found upon the floor of his chamber,—apoplectic."

How far Sir Astley's opinions of Lord Liverpool were governed by the relationship of patient and attendant, our readers must judge for themselves. But thus it is that he again speaks of him:—

"Lord Liverpool was an amiable, and truly honest man; a man of business, but not a man of the world. He would not flatter or cringe, even to his Monarch, but confident in honest designs, and anxious for the welfare of his country, he always carried his point. He was a high Tory,—he feared God,—he honoured his king,—and he upheld the laws of his country fearlessly and firmly. He had no sinister designs; he understood the business of Government, from having served an apprenticeship to it; and not being an intriguer himself, he did not suspect it in others. * * Lord Liverpool was taciturn, and little conversation passed between us; but one morning he said to me, 'Pegge, the Professor of Anatomy, is dead, and I have many applications—who ought to succeed him?' and I said, 'Kidd, my Lord.' On that very evening Kidd was appointed at Oxford. Upon my professional visits, when my name was announced, before I could well enter the room, he had bared his leg to show me its inflamed veins: I then looked at them, prescribed, and said, 'Good morning, my Lord,' and left the room. Such meetings happened very often, for I did not attempt to gossip with a man who, like Atlas, had the world upon his shoulders. One morning he said, 'I am going to bring in a bill upon the regulation of prisons,—have you anything to suggest professionally?' 'Why, my Lord, I have received a letter, which you shall read.' It was a letter from a surgeon, who had seen a broken fore-arm badly treated at a government prison; and he said to the *doctor* of the establishment, 'Both bones are distorted.' The reply was, 'Both bones? why there is only one bone in that part of the arm.' Indignant at this ignorance, he wrote to me, and I requested his Lordship to have a clause introduced into the bill, that no one should be allowed to act as a surgeon to a prison, who was not a member of the Royal College of Surgeons. To this he consented, and it was done, and, I believe, has ever since been adhered to."

Concerning Sir Astley's attendance on the King, we have the following record:—

"The King sent to Sir Everard Home, myself, and Brodie, to go to Windsor to see a tumour on the summit of his head, which annoyed him from its appearance, and was growing larger. When we saw it, it was tender, painful, and somewhat inflamed; and we thought it best to delay the operation. The King was much disappointed, but yielded to our advice. In the spring of the succeeding year, 1821, Sir Benjamin Bloomfield came for me to go to Brighton to see the King, and I went down with Bloomfield. The King came into my room at one o'clock in the morning, and said, 'I am now ready to have it done. I wish you now to remove this thing from my head.' I said, 'Sire—not for the world now—your life is too important to have so serious a thing done in a corner. Lady C—— S—— died of erysipelas after such an operation, and what would the world say if this were to be fatal? * * He hastily said, 'This is the second time I have been disappointed.' 'Yes, Sire, I am sorry for it, but I should not choose to do it, unless Sir E. Home, Mr. Cline, and Mr. Brodie, were present. * * He said, 'Well, I respect Cline, and I dare say he respects me, *although we do not set our horses together in politics.*' I replied, 'Perhaps not, your Majesty, but the best policy, I think, will be to have him.' The King came to town soon afterwards, and I went to the levée, and he said, 'How do you do, Cooper?—well, next Tuesday.'"

Then we have an instance of that absurd at-

Digitized by Google

tention to supposed etiquettes, which sometimes does very little honour to the profession, and of the King's proper mode of dealing with it, which it were well universally to imitate:—

"I called upon Lord Liverpool, and requested him to persuade the King to let HOME do the operation, as that was the usual etiquette, he being Sergeant Surgeon. Lord Liverpool said that it was very difficult to interfere respecting the choice of a medical man. I was very averse from doing it; I had always been successful, and I saw that the operation, if it were followed by erysipelas, would destroy all my happiness, and blast my reputation. On the next day Home wrote to me that he should do the operation on Wednesday, and I requested that Cline might be present, to which Home consented. On the Wednesday we all met, Halford, Tierney, Home, Cline, Brodie, and myself. Mr. Cline said, 'Who is to do the operation?' I said, 'Sir Everard.' Soon afterwards, Sir Henry Halford was called out of the room, and almost immediately returning, said to me, —'You are to do the operation!'"

A few pages back we are told of a court physician resenting a breach of etiquette in the surgeon, who bled an apoplectic patient before his arrival, though, by so doing, he probably saved the patient's life. Certain usages, it must be admitted, may be necessary to maintain a good understanding among practitioners; but it would be well to remember that the patient's safety should ever be the principal consideration.

"The King bore the operation well, requested that there might be no hurry, and when it was finished, said, 'What do you call the tumour?' I said, 'A *steatome*, Sire.' 'Then,' said he, 'I hope it will *stay at home*, and not annoy me any more.' The King went on well until Saturday: when he came into us, he said, 'I have not slept all night, and I am d—d bad this morning; my head is sore all over.' I immediately thought erysipelas was coming on, and that we should lose him. I called in the middle of the day at Carlton Palace, and again in the evening, and he was much the same. The next morning when I went, the King was on the sofa,—his great toe was red with gout,—and his head had lost its soreness, and all its unpleasant feelings. From this time the wound healed in the most favourable manner. In a fortnight afterwards he said, 'Lord Liverpool has promised to make you a Baronet, but I will not suffer it, I shall do it myself.' I thanked him and said, 'Since your Majesty is so kind, let me say, if it be not entailed upon my nephew Astley, whom I have adopted and educated, it will lose much of its value.' He immediately said, 'It shall be made out as you wish.' He afterwards, in six months, sent me a beautiful epergne, for which he gave the plan himself, and which cost him five hundred guineas, and we continued the best friends."

Among Sir A. C.'s amusements was farming, which, like other gentlemen farmers, he carried on not much to his profit. One attempt, however, was more felicitous,—it relates to a mode of feeding off his herbage when lean stock was too dear to be profitable:—

"When he next went to Gadesbridge, after resolving on his method of proceeding, he desired Michel his old coachman, to drive him down in the curricle, a task which he had latterly permitted an under servant to perform. Sir Astley's object in this arrangement was to acquaint Michel with his new plan, and to consult with him upon the best means of putting it into execution. During the journey, he asked him if there were not many horses sold at Smithfield, and upon being answered in the affirmative, he inquired of him what kind of horses they were. Michel informed him, that they were almost all cripples, some fit for little else than for the knacker, others bought for the chance of their becoming sound, a third class purchased by such people as did not care for permanent lameness if they would but draw. My uncle then let Michel into his scheme, and desired him from that time, until further orders, to go every market morning into Smithfield, and purchase all the young horses exposed for sale which he thought might possibly be convertible into carriage or saddle-horses, should they recover from their defects. He was never to give more than seven pounds for each, but five pounds was to be the average price. Michel did as he was desired, and the horses purchased were taken down in a string of three or four at a time. In this manner, I have known thirty or forty horses collected at Gadesbridge, and thus Sir Astley procured stock to eat off his superfluous herbage. In the winter these horses were put into the straw-yard, and his waste straw thus converted into manure, thereby saving many hundred pounds in the purchase of this necessary commodity for farming. I believe, however, the greatest source of pleasure derived by my uncle from this new plan, was the occupation it afforded him, by treating these horses as patients, and curing them of their various complaints. On a stated morning every week, the blacksmith came up from the village, and the horses were in successive order caught, haltered, and brought to my uncle for inspection. He then examined into the causes of the particular defect of each animal, and generally ascertained that there was disease of the foot. The blacksmith took off the shoe, pared out the hoof, and then Sir Astley made a careful examination of the part. Having discovered the cause of the lameness, he proceeded to perform whatever seemed to him necessary for the cure. I used sometimes to dispute with him in which leg a horse was lame, but I believe we were often both right; for there were few of his horses when they came to him which had not their fore legs equally faulty. Some of them which were past cure, he would submit to experiments connected with the professional investigations which might at the time be occupying his attention, and transfusion, tying arteries, experiments on the nerves, were not uncommon sequels to these morning exploits. Such was not the fate of a very large proportion of these animals; for as they were all young, many being only three, and none more than five years old, the improvement produced in a short time by good feeding, rest, and medical attendance, such as few horses before or since have enjoyed, appeared truly wonderful. Horses which were at first with difficulty driven to pasture because of their halt, were now with as much difficulty restrained from running away. Even one fortnight at Gadesbridge would frequently produce such an alteration in some of them, that it required no unskilful eye in the former owner himself to recognise the animal which he had sold but a few weeks before. I have myself paid fifty guineas for one of these animals, and made a good bargain, too; and I have known my uncle's carriage for years drawn by a pair of horses which together only cost him twelve pounds ten shillings."

Once more to return to Sir A. Cooper's own notes. He thus records the sum of his impressions concerning George the Fourth:—

"The abilities of George the Fourth were of the first order. He would have made the first physician or surgeon of his time, the first lawyer, the first speaker in the House of Commons or Lords, though perhaps not the best divine. As a king he was prosperous, for he had the good sense to be led by good ministers, although, however, he did not like them all.—The King was indolent, and therefore disposed to yield, to avoid trouble; nervous, and therefore anxious to throw every onus from his own shoulders. He was the most perfect gentleman in his manners and address—possessing the finest person, with the most dignified and gracious condescension, yet excessively proud; familiar himself, but shocked at it in others; violent in his temper, yet naturally kind in his disposition. I have seen him spurn —— from him, yet, in ten minutes, say that he liked nobody so much about him, and that no one but he should do anything for him.—George the Fourth had an extraordinary memory,—he recollected all that he had read or seen,—and had the faculty of quickly comprehending everything. If he saw a steam-engine, he would describe not only its principles of action, but enter minutely into its construction.—He could recount anecdotes of everybody, and could quote the beauties of almost all the works, in prose or verse, in English literature. He also prided himself on his knowledge of Latin, being, in fact, an excellent classic, and frequently quoted Horace. He was a good historian, being fully conversant with the history, not only of his own country, but of all Europe. I once said, 'Sire, are you familiar with the fate of Henrietta Maria, after the death of Charles the First? It is to be found, I believe, in Pennant.' 'Oh,' he said, 'read De Grammont; there you will find all about her, together with the history of those times, well described and minutely given.'—Dates, also, in history, he could well recollect, and it was dangerous to differ with him concerning them, as he was sure to be right.—The connexions and families of the nobility he was quite familiar with.—He spoke German and French as well as his own language, and knew a little of others. With respect to Greek, his father, he said, would not let him go on with it, and so accounted for his deficiency in that language.—He spoke remarkably well, but did not write so well, because he would not give himself the trouble, and therefore always sought assistance from others. His life had been, since the age of sixteen, conversational, from which time he had given very little attention to writing or composition.—He told me, that from the time he was sixteen, he knew everything, bad and good, and that he had entered into every amusement that a gentleman could engage in.—George the Fourth thought Lady Melbourne the most delightful person he had ever known, and used to describe her person, her appearance, her manners, her temper, her gracefulness, as divine.—He said his sister Mary was, however, the most of an angel he ever knew, and asked me if I had ever seen her. I said that I had had the honour of attending her, and had seen her at Lord Verulam's. 'Well,' said he, 'is she not delightful?' &c.—George the Fourth's judgment was good as regarded others, and as respected his country. If I had wanted to decide upon what I ought to do, nobody would have given me better advice; but he very likely would have practised just the contrary himself, for with respect to himself he was too often guided by prejudice. * * His hatred of being observed made him dislike to show himself, and instead of regarding the hissing of a mob as the hissing of geese, he always feared it. * * The King would sometimes be coarse in his conversation and anecdotes, but again nobody could be more refined and polished when he chose.—Every story of a character about town, every humorous anecdote he was perfectly acquainted with, and was constantly seeking means of adding to his stock, and then took the greatest pleasure in relating them to others. He was himself witty, but the points of his conversation consisted principally in anecdote, and the relation of jokes.—He often awoke early, and read from five or six o'clock in the morning, until nine or ten, and thus he became acquainted with all the new books, which he read, of every description—novels, pamphlets, voyages, travels, plays—and he liked to talk of them.'"

We shall not pause to examine how far these judgments are tinged by courtiership, or to note the *quantum mutatus* of the writer from the political pupil of Cline; but we cannot but remark on the little coherence between these large statements of acquirements attributed to the King, with the illustrative proofs, and with the anecdotes of his habits. That George the Fourth sometimes indulged in light reading, is, we believe, true; but both he and his brothers were never remarkable for addiction to reading. The King was an endless gossip, and, with a retentive memory, picked up odds and ends of all sorts of knowledge; but that it was either extensive, coherent, or of an obviously useful character, may be more than doubted. What follows is not so complimentary:—

"He usually received me at from ten to eleven o'clock, in his bed.—He chatted with me for half an hour or an hour, and was generally very agreeable, although now and then irritable. He was not strictly attentive to facts, but embellished all his stories, to render them more amusing, so that it would not answer always to repeat his sayings of others.—When ill, the King would never allow that it was caused by his own imprudence. One morning his tongue was white, and he was much heated. 'By G—,' said he 'it is very extraordinary that I should be thus heated, for I lived very abstemiously, and went to bed in good time. I must have some *beaume de vie*, sir.' Then we went out of the room, W—— said, 'You must not professionally act upon what his Majesty said; he was drinking Maraschino at two o'clock this morning.'—He was a *good* judge of the medicine which would best suit him.—[This is a

Digitized by Google

strong admission for a medical authority.]—He bore enormous doses of opiates—one hundred drops of laudanuam, for instance. In bleeding, also, I have known from twenty to twenty-five ounces taken from him several times.—[Probably on that very account.]—The king was irregular in his times for eating and drinking. 'Bring me cold chicken,' he would say at eleven, before he rose. 'Yes, Sire.' 'Bring it, and give me a goblet of soda-water.' Soon after, he ate again, and at dinner largely; but he did not, in general, drink much at dinner, unless tempted by the society of men he liked.—He suffered much from rheumatism and gout, but the colchicum relieved him.—One morning, when he had rheumatism in his hip, and there was a doubt about the propriety of giving colchicum, he said, 'Gentlemen, I have borne your half measures long enough to please you—now I will please myself, and take colchicum,' which he did, and was soon relieved," &c.

A few supplementary anecdotes are given on the authority of some noblemen: we will quote one or two to close the picture:—

"I then talked with Lord —— of George the Fourth: he agreed he was a clever creature. I told him that when the Duke of Wellington was ill, George the Fourth shed tears, and said, 'If I were to lose him, I should lose the honestest man I have about me.' I related that the King asked if the Duke could go out that day, and that Knighton said, 'I ordered him not.' The King said, smiling, 'You *ordered* him not! Could not you have thought of a better word?' 'No, Sire,' said Knighton; 'I ordered him not. If a man does not attend to his friend and physician, he had better have neither.' As we went out of the room, I said, 'You are a pretty fellow!' and he said, 'Oh! that was intended for him.'—'Yes,' said Lord ——, 'he was a great friend to George the Fourth, for he brought his pecuniary affairs into an excellent state; the King had ten thousand pounds about him when he died, although he had been in debt.'—'The King was a very clever man,' said Lord ——, 'he saw everything at an instant: and what an excellent mimic he was.'—'True,' I replied.—'Lord —— said that George the Fourth and the Duke of York, although generally lavish, were fond of having money in their bureau, which they did not like to expend, and related the following anecdote in illustration. Mrs. Fitzherbert told the King, that one of his horses was likely to win at Newmarket, but the stakes were not paid. George Lee came and told him the same thing. 'Yes,' said the King, 'I told Lake to pay them.' 'But,' replied Lee, 'he has no money.' 'Do you pay them, then, my dear fellow. Oh! yes, you pay them.' He could not pay them either, and half an hour only remained; when he was told that his horse could not run, as the stakes were not paid. 'Yes; but I have told Lake to pay them, and I told Lee to pay them.' 'But they have no money, your Majesty.' And then very unwillingly he went to his drawer to take out the sum. The Duke of York was just the same: they would, either of them, draw a cheque upon their bankers, but would not part with their money."

What follows the above extract, respecting the King's knowledge of anatomy, must be taken with a pound, at least, of salt. It is mere twaddle. We must take leave of these volumes as we began, by expressing a doubt whether they do justice to their theme; or rather, whether they will not leave an impression of Sir Astley Cooper less favourable than that which previously had prevailed.

Timon; a Play. Now first printed for the Shakesperian Society.

Shakespeare. Edited by J. P. Collier. Vols. IV., V., VI.

Knight's Shakspere. Vols. IV., V., VI.

THE play of 'Timon,' now edited by the Rev. A. Dyce, has long been known to exist. It was noticed by Steevens as a MS. play in the possession of Mr. Strutt, the engraver, and Malone had either seen it or been informed of its contents. We agree with Steevens, that "the piece is a wretched one;" but when he adds, "although it appears to be the work of an academick," we are disposed to consider this circumstance as a mode of accounting for its wretchedness. Mr. Dyce "entertains considerable doubts of Shakspeare's having been acquainted with this drama;" at any rate, it is certain, that he was under no poetical obligations to it, for a more despicable production we have not seen. The only question is, whether it was from this source he took the idea of the banquet-scene, the character of the faithful steward, and the circumstance of Timon's being possessed of large sums of gold which he had dug up in the forest to which he retired. Malone affirms, that he could not have had the last particular from Lucian, because, in Shakspeare's time, there was no translation of that dialogue of the Greek satirist which relates to the subject. This is a mode of reasoning commonly used by the editors of Shakspeare, but in the force of which we cannot agree. Is it *certain* that there was no English version of Lucian at the period? And supposing that such was the fact, had Shakspeare no other means of being acquainted with Lucian's misanthrope? Are we to presume that he was not so much as acquainted with a Greek scholar, and had never been present where the works of Lucian were the subject of conversation? Mr. Collier thinks it not unlikely, that there was some version of Lucian then current, with which we are now unacquainted.

We shall give Mr. Collier's observations upon the connexion between Shakspeare's 'Timon,' and that now first printed from the MS. in Mr. Dyce's possession:—

"Although it will not bear a moment's comparison with Shakespeare's 'Timon of Athens,' similar incidents and persons are contained in both. Thus, Timon is, in the commencement, rich, bountiful, and devoured by flatterers; he becomes poor, and is at once deserted by all but his faithful steward; but before he abandons Athens in disgust, he invites his parasites to a last banquet, where he gives them stones painted to resemble artichokes, which he flings at them as he drives them out of his hall. Shakespeare represents Timon as regaling his guests with warm water; but it is very remarkable, that at the end of his mock banquet scene, after the hero has quitted the stage, leaving certain lords behind him, upon whom he had thrown the warm water, the following dialogue occurs:—

First Lord. Let's make no stay.
Second Lord. Lord Timon's mad.
Third Lord. I feel't upon my bones.
Fourth Lord. One day he gives us diamonds, next day *stones.*

Shakspeare's Timon had cast no "stones" at his guests, and the above extract reads exactly as if it had formed part of some play in which stones (as in the 'Timon' edited by the Rev. A. Dyce) had been employed instead of warm water. Unless stones had been thrown, there could, as Steevens observes, be no propriety in the mention of them by the fourth lord; and although Shakespeare may not have seen the academic play to which we have alluded, a fragment may, by accident, have found its way into his 'Timon of Athens,' which belonged to some other drama, where the banquet scene was differently conducted. It is just possible that our great dramatist, at some subsequent date, altered his original draught, and by oversight left in the rhyming couplet with which the third act concludes."

We would not build much upon the "stones" mentioned by the fourth lord, because the "giving of stones" is a proverbial form of expression for unkind treatment. As the Timon of Lucian, however, pelts his ungrateful followers with the same missiles, the allusion to "stones" may tend to confirm the opinion, that Shakspeare was more indebted to the Greek source than to any other, an opinion held by Mr. Skottowe, and strongly reinforced by Mr. Knight, although the latter does not think that our dramatist went direct to Lucian, but worked upon the basis of some former play on this subject.

Mr. Knight had not seen the old play now first printed; and it certainly does not confirm his theory. But there may easily have been more dramatic 'Timons' than one, in that age so fertile in stage-writers.

One thing, however, is certain, that Shakspeare's conception of the misanthrope is in perfect harmony with all that history has told us of the Athenian character. No other state in Greece could have produced his 'Timon.' The magnificence, the prodigality, the love of pleasure, the gust for the fine arts, the enthusiastic temperament, the fickleness of humour, are all distinctive qualities of the Timon of *Athens.* His is essentially Athenian extravagance, Athenian generosity, Athenian passion, and Athenian inconsistency. The elegance that refines his dissipation—the high bearing that ennobles his bounty—the elevated strain of his address—the abrupt transitions of his mind—are all most characteristically Attic. Shakspeare had certainly mastered the idiosyncracy of the Athenian character, before he sat down to write this play. It is vain to tell us that he was unacquainted with Greek, though it may be true that he knew not the form of a Greek letter. Whether it was from North's Plutarch, from some lost translation of Lucian, or from both fountains, or from converse with Greek scholars, or from conversation and books together, aided by his own poetic intuition, we find, in his portrait of Timon, a more luminous conception of an Athenian of high degree than was probably ever formed by the most learned grammarian that ever spent the night over a disputed accent in the Frogs of Aristophanes.

We have three volumes of Mr. Collier's edition at present before us, but there is little for us to observe, except that the work goes smoothly on, with undiminished accuracy, though we continue to think that the quartos have not, upon the whole, contributed much to the effect of the work.

In the introduction to 'Troilus and Cressida,' Mr. Collier observes, that "it is not easy to point out any direct or indirect obligation on the part of Shakespeare to Chapman's translation of Homer, of which the earliest portion came out in 1598." With this we cannot agree, for two resemblances were lately noticed in this journal, in an article upon the character Thersites; one was, the expression "Greekish girls, not Greeks," which occurs in Chapman's spirited version of that speech of the deformed coward, of which Pope remarks, that "had Nestor spoken it, the army had sailed for Greece." The other is the passage in the third scene of the first act, where Ulysses illustrates the morality of political subordination by that fine astronomical allusion,—

The heavens themselves, the planets, and this centre,
Observe degree, priority, and place,
Office and custom, in all line of order,
And therefore is the glorious planet, Sol,
In noble eminence enthroned and sphered
Amidst the other, &c.

the germ of which is discernible in Chapman, where Ulysses, replying to the speech of Thersites, above alluded to, thus addresses him,—

—— "then do not take into that mouth of thine,
The names of kings, much less revile the dignities that *shine*
In their supreme states."

The point is, however, of very slight importance.

Many readers may never have seen the curious publisher's address, prefixed to some copies of the edition of this play, published in 1609. We therefore quote it. It contains one very pretty idea, which we have printed in italics:—

"*A never writer to an ever reader. News.*

"Eternal reader, you have here a new play, never staled with the stage, never clapper-clawed with the palms of the vulgar, and yet passing full of the palm comical; for it is a birth of your brain, that never undertook anything comical vainly; and were but the vain names of comedies changed for the titles of commodities, or of plays for pleas, you should see all those grand censors, that now style them such vani-

Digitized by Google

ties, flock to them for the main grace of their gravities; especially this author's comedies, that are so framed to the life, that they serve for the most common commentaries of all the actions of our lives, showing such a dexterity and power of wit, that the most displeased with plays are pleased with his comedies. And all such dull and heavy-witted worldlings as were never capable of the wit of a comedy, coming, by report of them, to his representations, have found that wit there that they never found in themselves, and have parted better-witted than they came; feeling an edge of wit set upon them more than ever they dreamed they had brain to grind it on. *So much and such savoured salt of wit is in his comedies, that they seem (for their height of pleasure) to be born in that sea that brought forth Venus.* Amongst all there is none more witty than this; and had I time I would comment upon it, though I know it needs not (for so much as will make you think your testern well bestowed), but for so much worth as even poor I know to be stuffed in it. It deserves such a labour, as well as the best comedy in Terence, or Plautus: and believe this, that when he is gone, and his comedies out of sale, you will scramble for them, and set up a new English inquisition. Take this for a warning, and at the peril of your pleasure's loss and judgments, refuse not, nor like this the less for not being sullied with the smoky breath of the multitudes; but thank fortune for the scape it hath made amongst you, since, by the grand possessors' wills, I believe, you should have prayed for them, rather than been prayed. And so I leave all such to be prayed for (for the states of their wits' healths) that will not praise it.—*Vale.*"

The History and Antiquities of Charnwood Forest. By T. R. Potter. Hamilton & Adams.

THIS handsome volume, very appropriately clothed in "forest green," claims our notice, since it introduces to the reader one of the most interesting, and, notwithstanding the inclosures of modern times, one of the most picturesque of our ancient forests. It has, however, until now, been strangely overlooked; for while, as the author remarks, "Sherwood, Needwood, Selwood, Inglewood, have each had their historian or their poet, this forest has been passed over with as little notice as if it were a blemish rather than a beauty on the face of the county." Charnwood, although now presenting different features from what it did many ages since, when, to quote the old Leicestershire tradition, "a squirrel might be hunted six miles without touching the ground, and a traveller might journey from Beaumanor to Bardon on a clear summer's day without once seeing the sun," still abounds in picturesque views; and although trees are scanty, many specimens of the oak to be found there are, according to the testimony of the late Sir George Beaumont, unmatched for beauty.

The forest of Charnwood claims an antiquity higher than authentic history will carry us. It comprises a district ten miles in length, and six in breadth, and Mr. Potter very plausibly considers it to have formed a part of the immense Forest of Arden, which, at the arrival of the Romans, extended from the Avon to the Trent. That it was frequented by the Britons, and that the peaks of its picturesque hills were the resort of the Druids, is proved by many Celtic remains. Cromlechs and barrows are of frequent occurrence, and in one part of the forest a curiously formed seat, excavated in the solid rock, and with a kind of rude canopy, may be seen, from whence, probably, the arch Druid addressed the surrounding multitude. There are traces, also, of Roman power: a road, which, if originally of British construction, was unquestionably used by their conquerors; the remains of a Roman camp, too, and many Roman coins have been dug up at different times in various parts of the forest. A curious remain, perhaps of the Roman period, was within a few years standing on Beacon Hill. This was "an erection of rude and ancient masonry, about six feet in height, of a round form, and having in its centre a cavity about a yard deep and a yard in diameter, the sides of which were very thickly covered with burnt pitch. This had evidently been used for the 'beacon fire,' and on digging round, many fragments of mortar and dark red brick were found, which lead to the inference that it was Roman workmanship."

Of the state of Charnwood Forest during the Saxon period, we have no information. The ancestors of some of the ancient families were doubtless located there, previous to the Norman conquest, as the genuine Saxon names, Pochin, Alsop, Herrick, prove. Harold, too, held the adjoining manor of Barrow upon Soar. At the conquest, the forest became the property of the Crown; we have, however, no record of our Norman sovereigns having hunted there; but tradition declares, that the "king of the forest," bold Robin Hood, often chased the red deer through its green alleys; and some of the splendid oaks that yet remain probably overshadowed bold Robin and his men.

In the reign of Henry III. this forest, together with the other royal inclosures, was "disafforested," that is, exempted from the severer penalties of forest law; but peculiar privileges were still allowed within the forest boundary; and although it was no longer loss of "life or limb" to slay the king's deer, they and their dwelling-place were still guarded by royal enactments. "Thus saith the law," declares Manwood, its great expositor, "it is allowed to our sovereign lord the king, in respect to his continual care and labour for the preservation of the whole realm, among other privileges, this prerogative, to have his places of recreation and pastime wheresoever he will appoint; for as it is the will and pleasure of his Grace to reserve the wild beasts and the game to himself, for his only delight and pleasure, so he may also, at his will and pleasure, make a forest for them to abide in." The royal forest was, indeed, an *imperium in imperio*, governed by its own officers, and by its own peculiar laws.

During the middle ages, the vicinity of Charnwood was the dwelling-place of many a bold baron. The powerful Earls of Leicester had parks here, and the strong castles of Groby and Mountsorrel rose close beside; but the greatest interest connected with Charnwood is princely Bradgate, the residence, probably the birth-place, of Lady Jane Grey. The following short account of it may be interesting to the reader, whether he has visited the ruins or not.

"The present Park is bounded by a wall of nearly seven miles in length, and is also subdivided into several walled lawns, some of which are of very ancient inclosure. The whole surface is of a very varied character, in which wildness greatly predominates. The little glen on the south-western side, called the Rocky Valley, is extremely romantic. The mansion, of which the ruins still form an object of such interest, is deserving of particular notice. Of this Leland makes the following remarks:—'From Leicester to Brodegate, by ground well woodded, 3 miles. At Brodegate is a faire Parke and a logge, lately builded there by the Lorde Thomas Gray, Marquise of Dorsete, father to Henry, that is now Marquise.' Hence it may be concluded that the Marquise.' Hence it may be concluded that the mansion was erected about the year 1530. The former Marquis, however, began some buildings here in 1501. This house, according to the same authority (Leland), was chiefly erected out of the materials of the Manor House of the Earls of Warwick, at Sutton Coldfield; for he says, 'After that the Earldom of Warwicke was attainted and came to the Kinge, the toune of Sutton, standinge in a barren soyle, fell daily to decay, and the market was cleane forsaken. Wingston, by authoritie of his office, sould the tymbre of the Mannour place, and had part of it himselfe. The hall selfe was after sett up at Brodegate, the Marquise of Dorsett's house at Leicester, and there yet stondeth.' It was inhabited by the family and their successors until the early part of the last century, when it was destroyed by fire, and left in the state in which it now stands. Throsby, in his 'History of Leicestershire,' mentions that James the First was entertained here for some days; but there are no certain accounts respecting his visit. Nichols, who published a description of the progresses of this King, in mentioning the various palaces and houses of the nobles where he sojourned, takes no notice of Bradgate; and it is therefore most probable that he never visited it. It is certain, however, that King William was entertained here for some days: the account states that he rode from Leicester through the open fields by Anstey, which was also then uninclosed. The following account of the destruction of the house is taken from Throsby's Leicestershire:—'It is said of the wife of the Earl of Suffolk [Stamford], who last inhabited Bradgate Hall, that she set it on fire, at the instigation of her sister, who then lived in London. The story is thus told:—Some time after the Earl had married, he brought his lady to his seat at Bradgate; her sister wrote to her, desiring to know how she liked her habitation, and the country she was in: the Countess of Suffolk [Stamford] wrote for answer, that the house was tolerable, that the country was a forest, and the inhabitants all brutes.' The sister, in consequence, by letter, desired her to set fire to the house, and run away by the light of it: the former part of the request, it is said, she immediately put in practice, and thus this celebrated and interesting mansion was consigned to the flames.'"

We need hardly tell our readers that the latter part of this account is apocryphal. Nichols mentions that the fire began in the north-west tower, over which there was a reservoir, an unlikely place for an incendiary fire to have been kindled, and the countess and her infant daughter narrowly escaped with their lives. The ruins of Bradgate, however, possess a charm which probably was denied to the ancient building; the scenery in the park, too, partakes of forest wildness; and we know of no spot where the lover of past times and the "merrie greenwood," could so lose himself in dreams of the past as in the shadow of its splendid oaks.

Critical Essays, &c. By Francis Bowen. Boston. London, Wiley & Putnam.

THIS volume contains a series of critical papers, first published in the *North American Review* and other transatlantic periodicals, and forming, when collected, a bird's-eye view of the present state of speculative philosophy in its most disputed points. These papers display learning and no ordinary depth and subtlety of thought; and they set forth with singular clearness the obscure opinions of Kant and his more recent Gallo-German followers, opinions more vaunted than examined, more examined than understood. The first article especially pleased us. It is an able and energetic defence of Locke against his modern impugners; and, coming from America, is welcome, as a gratifying earnest of the progress which intellectual inquiry is making in the United States; and as a part payment made by the republic, of that debt of gratitude, which all of English blood owe to the great master and apostle of common sense.

To those amongst us who have been seduced by their continental guides back to the "high *à priori* road," there are views opened by Mr. Bowen, that may prove useful, if not acceptable, by their novelty, perspicacity, and important consequences. But there are also some opinions hazarded with a hardihood of assertion, which to us seems wholly unsupported by solid argument. It would not be difficult, we believe, to point out how it has happened that a writer who sees so clearly the causes of others' failures, has himself fallen into errors which lie much nearer the surface. But the number of students at home, either able or willing to enter into such

Digitized by Google

discussions, is too small to warrant our obtruding the subject upon our readers. We have often regretted this peculiarity of the English mind, forming as it does so marked a characteristic of the passing times. But, though in many particulars a neglect of the moral sciences is productive of the worst consequences, we must honestly confess that there is some gain in an abstinence from transcendental inquiries, which Mr. Bowen has ably proved must lead astray. It is possible also that the coarse common sense of our countrymen may have some share in causing them to shrink from investigations which the brightest intellects have failed to grapple with successfully: but we must refrain.

Military Operations at Cabul. With a Journal of Imprisonment in Affghanistan. By Lieut. Vincent Eyre, Bengal Artillery.

[Concluding Notice.]

We now resume our narrative of disasters and disgrace. On the death of the Envoy the enemy exacted still harder conditions, which were of necessity submitted to, and four officers, with their wives and families, were given as hostages for the fulfilment of the treaty on our part. Affairs being thus arranged, on the 6th of January the army, consisting of about 4,500 fighting men, and 12,000 camp followers, besides women and children! commenced their melancholy retreat, through a country of unparalleled difficulty, covered with snow and alive with people wild with hatred and fanaticism:—

"The order of march, in which the troops started, was, however, soon lost, and the camp followers with the public and private baggage, once out of cantonments, could not be prevented from mixing themselves up with the troops, to the utter confusion of the whole column. The main body, with its long train of laden camels, continued to pour out of the gate until the evening, by which time thousands of Affghans, the majority of whom were fanatical Ghazees, thronged the whole area of cantonments, rending the air with their exulting cries, and committing every kind of atrocity. The rear-guard, being unable to restrain them, was obliged to provide for its own safety by taking up a position outside, on the plain, where a great quantity of the baggage had been brought to a stand-still at the canal (within 150 yards of the gate), whose slippery sides afforded no safe footing for the beasts of burden. The bridge across the river, being by this time impracticable, occasioned additional delay. The Affghans, who had hitherto been too busily engaged in the work of plunder and destruction to take much notice of the troops, now began to line the ramparts, and annoy them with a mischievous fire of juzails, under which many fell; and it became necessary, for the preservation of those who remained, to spike and abandon two of the horse artillery guns. Night had now closed around; but the Ghazees, having fired the residency and almost every other building in the cantonment, the conflagration illuminated the surrounding country for several miles, presenting a spectacle of fearful sublimity. * * Before the rear-guard commenced its march, Lieut. Hardyman, of the 5th light cavalry, with fifty rank and file, were stretched lifeless on the snow. Much baggage was abandoned at starting, and much was plundered on the road. Scores of worn-out sepoys and camp followers lined the way, having sat down in despair to perish in the snow. It was 2 A.M. ere the rear-guard reached camp at Bygram, a distance of only five miles. Here all was confusion. The tents had been pitched without the slightest regard to regularity, those of different regiments being huddled together in one intricate mass, mixed up with baggage, camp-followers, camels, and horses, in a way which beggars description. The flimsy canvas of the soldiers' tents, was but a poor protection from the cold, which towards morning became more and more intense; and thousands of poor wretched creatures were obliged to lie down on the bare snow, without either shelter, fire, or food. Several died during the night. * * *January 7th.*—At 8 A.M. the force moved off in the reverse order of yesterday—if that could be called *order*, which consisted of a mingled mob of soldiers, camp-followers, and baggage-cattle, preserving not even the faintest semblance of that regularity and discipline, on which depended our only chance of escape from the dangers which threatened us. Even at this early stage of the retreat scarcely one-half of the sepoys were fit for duty; hundreds had, from sheer inability to keep their ranks, joined the non-combatants, and thus increased the confusion. At starting, large clods of hardened snow adhered so firmly to the hoofs of our horses, that a chisel and hammer would have been requisite to dislodge them. The very air we breathed froze in its passage out of the mouth and nostrils, forming a coating of small icicles, on our moustaches and beards. The advance proceeded onward without molestation, though numerous small bodies of Affghan horse and foot were observed hanging about our flanks and moving in a parallel direction with ourselves. These were at first supposed to form a part of our escort, but the mistake was soon discovered by their attacking the rear-guard, commanded by Brigadier Anquetil, consisting of H.M.'s 44th, Lieut. Green's mountain train guns, and a squadron of irregular horse. Much baggage fell into the enemy's hands, who, though in some degree kept in check by the guns, exhibited a bold front, and maintained a harassing fire on our troops, whose movements were terribly crippled by the disorderly multitude that thronged the road in front."

In this way, fighting for almost every inch of ground, the army was two whole days reaching the entrance of the Khoord Cabul Pass, only ten miles from Cabul:—

"Here, again, the confusion soon became indescribable. Suffice it to say, that an immense multitude of from 14,000 to 16,000 men, with several hundred cavalry horses and baggage cattle, were closely jammed together in one monstrous, unmanageable jumbling mass. Night again closed over us, with its attendant train of horrors,—starvation, cold, exhaustion, death. *January 8th.*—At an early hour the treacherous Affghans again commenced to molest us with their fire, and several hundreds having assembled in hostile array to the south of the camp, the troops were drawn up in expectation of an attack. * * Capt. Skinner again went to communicate with Mahomed Akber Khan, who demanded that Major Pottinger and Capts. Lawrence and Mackenzie should immediately be made over to him, which was accordingly done, and hostilities again ceased; the Sirdar promising to send forward some influential men to clear the pass from the Giljyes, who occupied it, and were lying in wait for our approach. Once more the living mass of men and animals was in motion. At the entrance of the pass an attempt was made to separate the troops from the non-combatants, which was but partially successful, and created considerable delay. The rapid effects of two nights' exposure to the frost, in disorganizing the force, can hardly be conceived. It had so nipped the hands and feet of even the strongest men, as to completely prostrate their powers and incapacitate them for service; even the cavalry, who suffered less than the rest, were obliged to be lifted on their horses. In fact, only a few hundred serviceable fighting men remained. The idea of threading the stupendous pass before us, in the face of an armed tribe of blood-thirsty barbarians with such a dense irregular multitude, was frightful, and the spectacle then presented by that waving sea of animated beings, the majority of whom a few fleeting hours would transform into a line of lifeless carcasses, to guide the future traveller on his way, can never be forgotten by those who witnessed it. We had so often been deceived by Affghan professions, that little or no confidence was placed in the present truce; and we commenced our passage through the dreaded pass in no very sanguine temper of mind. This truly formidable defile is about five miles from end to end, and is shut in on either hand by a line of lofty hills, between whose precipitous sides the sun at this season could dart but a momentary ray. Down the centre dashed a mountain torrent, whose impetuous course the frost in vain attempted to arrest, though it succeeded in lining the edges with thick layers of ice, over which the snow lay consolidated in slippery masses, affording no very easy footing for our jaded animals. This stream we had to cross and recross about eight-and-twenty times. As we proceeded onwards, the defile gradually narrowed, and the Giljyes were observed hastening to crown the heights in considerable force. A hot fire was opened on the advance, with whom were several ladies, who, seeing their only chance was to keep themselves in rapid motion, galloped forward at the head of all, running the gauntlet of the enemy's bullets, which whizzed in hundreds about their ears, until they were fairly out of the pass. Providentially the whole escaped, with the exception of Lady Sale, who received a slight wound in the arm. It ought, however, to be mentioned, that several of Mahomed Akber's chief adherents, who had preceded the advance, exerted themselves strenuously to keep down the fire; but nothing could restrain the Giljyes, who seemed fully determined that nobody should interfere to disappoint them of their prey. Onward moved the crowd into the thickest of the fire, and fearful was the slaughter that ensued. An universal panic speedily prevailed, and thousands, seeking refuge in flight, hurried forward to the front, abandoning baggage, arms, ammunition, women and children, regardless for the moment of everything but their own lives. The rear-guard, consisting of H.M.'s 44th and 54th N.I., suffered severely; and at last, finding that delay was only destruction, they followed the general example, and made the best of their way to the front. Another horse-artillery gun was abandoned, and the whole of its artillerymen slain. Capt. Anderson's eldest girl, and Capt. Boyd's youngest boy, fell into the hands of the Affghans. It is supposed that 3000 souls perished in the pass."

On entering the Cabul pass they had ascended to a still colder climate, and it snowed all night. Only four tents had been saved. One belonged to the General, two were given up to the ladies, and one to the sick and wounded:—

"*January 9th.*—Another morning dawned, awakening thousands to increased misery; and many a wretched survivor cast looks of envy at his comrades, who lay stretched beside him in the quiet sleep of death. Daylight was a signal for the renewal of that confusion, which attended every movement of the force. The General had intended us to march at 10 A.M., but a large portion of the troops, with nearly all the camp followers, moved off without orders at 8 A.M., and had advanced about a mile from the camp, when they were recalled by the General, in consequence of a communication from Mahomed Akber Khan, who promised to use every endeavour to furnish us with supplies; but strongly recommended us to halt until he could make some proper arrangements for escorting us down safely. There can be no doubt that the general feeling in camp was adverse to a halt, there being scarcely even a native soldier who did not plainly perceive that our only chance of escape consisted in moving on as fast as possible. This additional delay, therefore, and prolongation of their sufferings in the snow, of which one more march would have carried them clear, made a very unfavourable impression on the minds of the native soldiery, who now for the first time began very generally to entertain the idea of deserting. * * Towards noon Capt. Skinner arrived in camp with a proposition from Mahomed Akber Khan, that all the widowed ladies and married families, whose destitute situation in camp rendered them objects of universal pity and sympathy, should at once be made over to his protection, to preserve them from further hardships and dangers; in this case he promised to escort them down safely, keeping them one day's march in rear of the army. The General, though not himself disposed to place much confidence in Mahomed Akber's friendly professions, was strongly recommended by Capt. Skinner to trust him on the present occasion, as he felt assured that such a mark of confidence would be attended with happy results to the whole force. Anxious, at all events, to save the ladies and children from further suffering, the General gave his consent to the arrangement, and told Capt. Skinner to prepare all the married officers and ladies to depart immediately with a party of Affghan horse who were in waiting to receive them. * * Up to this time scarcely one of the ladies had tasted a meal since leaving Cabul. Some had infants a few days old at the breast, and were unable to stand without assistance. Others were so far advanced in pregnancy, that, under ordinary circumstances, a walk across a

Digitized by Google

drawing-room would have been an exertion; yet these helpless women, with their young families, had already been obliged to rough it on the backs of camels, and on the tops of the baggage yaboos: those who had a horse to ride, or were capable of sitting on one, were considered fortunate indeed. Most had been without shelter since quitting the cantonment—their servants had nearly all deserted or been killed—and, with the exception of Lady Macnaghten and Mrs. Trevor, they had lost all their baggage, having nothing in the world left but the clothes on their backs; *those*, in the case of some of the invalids, consisted of *night-dresses*, in which they had started from Cabul in their litters. Under such circumstances a few more hours would probably have seen some of them stiffening corses. The offer of Mahomed Akber was consequently their only chance of preservation."

The promises of Mahomed Akber to provide food and fuel were still unfulfilled; another night of suffering consigned its hundreds to the grave; the Shah's cavalry began to desert, the Affghans to collect round the doomed sufferers, and fears were entertained that it was intended to attack the encampment:—

"*January 10th.*—At break of day all was again confusion, the troops and camp-followers crowding promiscuously to the front, so soon as the orders for a march were given, every one dreading, above all things, to be left in the rear. The European soldiers were now almost the only efficient men left, the Hindoostanees having all suffered more or less from the effects of frost in their hands and feet; few were able even to hold a musket, much less to pull a trigger; in fact, the prolonged delay in the snow had paralyzed the mental and bodily powers of the strongest men, rendering them incapable of any useful exertion. Hope seemed to have died in every breast. The wildness of terror was exhibited in every countenance. The advanced guard (consisting of H.M.'s 44th foot, the sole remaining horse-artillery gun, and about fifty troopers of the 5th cavalry) having managed, with much difficulty, to push their way to the front, proceeded a couple of miles without molestation, as far as a narrow gorge between the precipitous spurs of two hills, through which flowed a small stream. Towards this point numbers of Affghan foot had been observed hurrying, with the evident intention of opposing the passage of the troops, and were now found to occupy the height on the right in considerable force. No sooner did the advance approach within shot, than the enemy, securely perched on their post of vantage, commenced the attack, pouring a destructive fire upon the crowded column, as it slowly drew nigh to the fatal spot. Fresh numbers fell at every volley, and the gorge was soon choked with the dead and dying: the unfortunate sepoys, seeing no means of escape, and driven to utter desperation, cast away their arms and accoutrements, which only clogged their movements without contributing to their defence, and along with the camp-followers fled for their lives. The Affghans now rushed down upon their helpless and unresisting victims sword in hand, and a general massacre took place. The last small remnant of the Native Infantry regiments were here scattered and destroyed; and the public treasure, with all the remaining baggage, fell into the hands of the enemy. Meanwhile, the advance, after pushing through the Tungee with great loss, had reached Kubbur-i-Jubbar, about five miles ahead, without more opposition. Here they halted to enable the rear to join, but from the few stragglers who from time to time came up, the astounding truth was brought to light, that, of all who had that morning marched from Khoord-Cabul, they were almost the sole survivors, nearly the whole of the main and rear columns having been cut off and destroyed. About 50 horse artillerymen, with one twelve-pounder howitzer, 70 files H.M.'s 44th, and 150 cavalry troopers, now composed the whole Cabul force; but, notwithstanding the slaughter and dispersion that had taken place, the camp-followers still formed a considerable body. The approach of a party of Affghan horse induced the General to draw up his little force in line, preparatory to an expected attack; but on its being ascertained to be Mohamed Akber Khan and his followers, Capt. Skinner was despatched to remonstrate with him on the attack on our troops, after a treaty had been entered into, and their safety guaranteed. In reply, he expressed his regret at what had occurred, but said that, notwithstanding all his endeavours, he found it impossible to restrain the Giljyes, who were in such a state of excitement as to be beyond the control even of their own chiefs. * * About five more miles led down the steep descents of the Huft Kotul, into a narrow defile, or confined bed of a mountain stream. A ghastly sight here met the eye, the ground being strewn with the bodies of a number of camp-followers, with whom were several wounded officers and soldiers, who having gone on ahead of the column, were attacked on reaching the foot of the hill, and massacred. * * In their passage down the defile, a destructive fire was maintained on the troops from the heights on either side, and fresh numbers of dead and wounded lined the course of the stream. Brigadier Shelton commanded the rear with a few Europeans, and but for his persevering energy and unflinching fortitude in repelling the assailants, it is probable the whole would have been there sacrificed. The diminished remnant reached the encamping ground in the Tezeen valley at about 4 P.M., having lost since starting from Cabul, inclusive of camp-followers, about 12,000 men; no less than 15 officers were killed and wounded in this day's disastrous march."

It was now determined to make a last desperate effort, and try, by a forced march in the night, to reach Jugdulluk, a distance of only twenty-two miles; but at eight in the morning they were still ten miles distant, and from that point the march was one continued conflict. Here a message was received from Akber, who required that the General should attend at a conference, and Brigadier Shelton and others be delivered up as further hostages. The General consented, and made over the temporary command to Brigadier Anquetil. He was, of course not allowed to return. The handful of troops waited for him, in the most anxious state of suspense, until seven the next morning, and then resolved to advance. They soon found that strong barriers had been put up across the defile:—

"Here a terrible fire was poured in from all quarters, and a massacre even worse than that of Tunga Tarcekee commenced, the Affghans rushing in furiously upon the pent-up crowd of troops and followers, and committing wholesale slaughter. A miserably small remnant managed to clear the barriers. Twelve officers, amongst whom was Brigadier Anquetil, were killed. Upwards of forty others succeeded in pushing through, about twelve of whom, being pretty well mounted, rode on ahead of the rest with the few remaining cavalry, intending to make the best of their way to Jellalabad. Small straggling parties of the Europeans marched on under different officers: the country became more open, and they suffered little molestation for several miles, most of the Giljyes being too busily engaged in the plundering of the dead to pursue the living. * * *January 13th.*—The morning dawned as they approached Gundamuk, revealing to the enemy, who had by this time increased considerably in their front and rear, the insignificance of their numerical strength. To avoid the vigorous assaults that were now made by their confident foe, they were compelled to leave the road, and take up a defensive position on a height to the left of it, where they made a resolute stand, determined to sell their lives at the dearest possible price. At this time they could only muster about twenty muskets. Some Affghan horsemen, approaching from the direction of Gundamuk, were now beckoned to, and an attempt was made by Lieut. Hay to enter upon some pacific arrangement. Hostilities were for a few minutes suspended, and, at the invitation of a chief, Major Griffiths, the senior officer, accompanied by Mr. Blewitt to act as interpreter, descended the hill to a conference. Several Affghans now ascended the height, and assumed a friendly tone towards the little party there stationed; but the calm was of short duration, for the soldiers getting provoked at several attempts being made to snatch away their arms, resumed a hostile attitude, and drove the intruders fiercely down. The die was now cast, and their fate sealed; for the enemy taking up their post on an opposite hill, marked off man after man, officer after officer, with unerring aim. Parties of Affghans rushed up at intervals to complete the work of extermination, but were as often driven back by the still dauntless handful of invincibles. At length, nearly all being wounded more or less, a final onset of the enemy, sword in hand, terminated the unequal struggle, and completed the dismal tragedy. Major Griffiths and Mr. Blewitt had been previously led off to a neighbouring fort, and were thus saved. Of those whom they left behind, Captain Souter alone, with three or four privates, was spared, and carried off captive, having received a severe wound in the shoulder; he had tied round his waist before leaving Jugdulluk the colours of his regiment, which were thus miraculously preserved. It only remains to relate the fate of those few officers and men, who rode on ahead of the rest after passing the barriers. Six of the twelve officers, Capts. Bellew, Collier, Hopkins, Lieut. Bird, Drs. Harper and Brydon, reached Futtehabad in safety, the other six having dropped gradually off by the way and been destroyed. Deceived by the friendly professions of some peasants near the above-named town, who brought them bread to eat, they unwisely delayed a few moments to satisfy the cravings of hunger; the inhabitants meanwhile armed themselves, and suddenly sallying forth, cut down Capt. Bellew and Lieut. Bird; Capts. Collyer and Hopkins, and Drs. Harpur and Brydon, rode off, and were pursued; the three former were overtaken and slain within four miles of Jellalabad; Dr. Brydon by a miracle escaped, and was the only officer of the whole Cabul force, who reached that garrison in safety."

There is but little in the 'Rough Notes,' written during imprisonment. Mahomed Akber behaved, throughout, courteously to the prisoners, and their privations and sufferings seem to have been, in a great degree, the unavoidable consequence of their position and the state of the country. They were for some months confined in one of the mountain forts, but on the defeat of Akber by the gallant Sale they were marched off to Cabul. One incident of their imprisonment is, however, strange, and startling enough to be worth extracting. In June, the prisoners were joined by a small party of European soldiers, who had been confined at another place:

"They all agreed in stating that they had been ill-treated and starved ever since our departure, which they mainly attributed to the evil influence of their own countrywoman, Mrs. Wade, [the wife of a sergeant,] who had disgraced her country and religion by turning Mohammedan, and, having forsaken her husband, had become the concubine of an Affghan in Mahomed Shah Khan's service, and had taken every occasion to excite prejudice and hostility against the English captives, who were plundered of the little money and the few clothes they possessed, and exposed to continual insult and savage threats. She actually was so base as to betray her own husband, in whose boot two pieces of gold had been sewn up with her own hands, of which he was deprived at her suggestion. On their arrival at Cabul, she had gone off to Mahomed Shah Khan's fort, taking with her a little orphan child named Staker, of which she had charge."

Here ends the sad eventful history. On the approach of Pollock's forces, the prisoners were again ordered off towards Toorkistan, and directions given, as we are informed, "to butcher all the sick, and those for whom there was no conveyance." Fortunately discontent, the natural consequence of fear and defeat, prevailed among the guard, and by promise of a large reward, the commander was gained over, and the prisoners joined their victorious countrymen on the 20th of September.

OUR LIBRARY TABLE.

Adam Brown, the Merchant, by the Author of 'Brambletye House,' 3 vols.—We have often wondered that Mr. Horace Smith, possessing original veins of fancy, and speculation, and pleasantry, as he has proved in his fugitive essays, should never show a sign of individuality when he undertakes novel-writing. When Scott was delighting the world with his historical fictions, Mr. Smith "toiled after him in

Digitized by Google

vain" with buckler and bandalier, and the "I'faith"s and "Go to"s of our ancient stage dialogue. When 'Valerius' and 'Salathiel' made a momentary diversion in favour of ancient Rome and Jerusalem, our author, too, must be classical and scriptural, in his 'Zillah.' Then came Sir E. Lytton Bulwer, with a new compound of terrible crimes, violent passions, and modern manners: and then came that Bermondsey travestie of Macbeth, 'Jane Lomax.' Now that the Wellers, and Nicklebys, and Pecksniffs of the Dutch school of fiction rule the hour, our indefatigable imitator will be jocose, and minute, and pathetic, as well as the best of them;—and, accordingly, we have 'Adam Brown.' The breath of life, however, is absent from the personages of this tale, as it was from the heroes of the cavalier romances, or the lady of the classical "mystery" to which we have adverted. The merchant is made up from many benevolent eccentrics in other novels; but, in spite of the elaborate pains lavished on him by our author, has as little flesh and blood as the mechanical Olympia of Hoffmann's crazy but enchaining legend. This is the case, too, with his housekeeper, a Mrs. Malaprop of the kitchen. There is more of nature in one line of Hood's Martha Penny, than in the whole three volumes of Mrs. Glossop's sayings and doings. What can be more outrageously improbable, again, than such a dialogue as that between Capt. Molloy, the Bobadil, and Crab, the plain speaker of the tale? on the one side gross lies, on the other as gross insult. Nor are the young Latimers nearer reality. Allan's musical talent grows up like the bean-stalk in the faëry tale, and the whole episode of his acquaintance with Isola Guardia, the *prima donna*, is about as like life in Hong Kong, as life in the Quadrant, where the scene is laid. This said Isola has been pronounced, by injudicious friends in the newspapers, to be an attempt to novelize Malibran. But the failure is flagrant. There is no consistency in the character; and this our author must have felt, ere, giving the matter up as a lost case, he makes the lady serve, as in the third volume, for mouthpiece to his own particular opinions regarding Art and Society. In short, we have been rarely more plagued than by the cleverness and utter want of probability of this book.

Memoirs of the Queens of France, by Mrs. Bush, 2 vols.—This work has all the appearance of being written "as per order." It is a compilation from very ordinary sources, jejune in its style, and dry in its details; this, however, may be pardoned, as it must have been a repulsive task for a lady to search through the records of scandal and profligacy, from whence alone a correct view of courtly society under the *ancien régime* of France could be obtained. It would be a mere waste of time to enter into criticism on the historical statements of a work which is obviously designed for the circulating libraries only; indeed, the brief accounts of the French Queens given by good old Mezeray are so much superior to Mrs. Bush's that we cannot avoid wishing that she had limited herself to mere translation.

The Modern History and Condition of Egypt, by W. H. Yates, M.D. 2 vols.—These ponderous volumes contain little that has not been repeatedly laid before the public in a great variety of forms. It is to be regretted that the writer did not apply himself more diligently to condensation, and the arrangement of the vast mass of materials accumulated; for the most persevering reader could never get through the present heavy volumes.

The two Dangerous Diseases of England, Consumption and Apoplexy, by Rowland East.—This is an attempt to popularize a knowledge of the two diseases in question, so as to bring the patient acquainted with his position and its remedies. Our readers are already possessed of our opinion, that the public is not yet prepared for the reception of accurate views of the treatment of disease. We can only add, for the present, that we do not think the work before us at all calculated to remedy the evil.

A Treatise on Irritation of the Spinal Nerves as the Source of Nervousness, Indigestion, &c., by J. Evans Risdore.—We do not exactly know whether this book is levelled at the practitioner or the public, but we shall treat it on the former hypothesis; being satisfied that to our lay readers it will prove of little use. Accordingly, as is our wont in the like cases, we merely announce that the treatise exists.

The Protestant Mission to China, &c., by the Rev. W. Moseley.—Dr. Moseley details in this pamphlet the difficulties attending the establishment of a Protestant mission in China, and claims for himself the merit of having originated the Bible Society.

Guide to the County of Wicklow, by James Fraser.—Mr. Fraser has the merit of being brief, accurate and trustworthy; he indulges in few digressions or reflections, both of which were long the opprobrium of Irish guide-books; indeed he almost carries his severity too far, for he passes through Roundwood without recording any reminiscences of the immortal Judy, whose quaint sayings have been recorded by Scott, and many other writers.

On Copyright of Designs, by G. Brace.—A practical commentary on the late Act for extending copyright in designs, and contains some useful hints.

Geography Generalized, by Robert Sullivan, A.M.—This is a good school-book, and is particularly entitled to commendation, as more bad books have been written on geography than on any other subject; and the very worst are those designed for the use of schools. Mr. Sullivan treats geography as a science, which, like all sciences, must be taught on the principles of classification and comparison. The basis of his classification is what may be termed the mathematics of geography, and he therefore begins with explaining, in clear and simple language, the form, magnitude, and motions of the earth. As these cannot be comprehended without some knowledge of the physical sciences, he explains the nature of attraction, gravitation, &c., taking care to compare their laws with facts within the reach of ordinary observation. The divisions of the earth's surface are described in their physical aspect, and not according to the accidents of political distribution; in this Mr. Sullivan has followed Woodbridge, whose treatise on geography has been wisely adopted as a text-book in the schools and colleges of America. The chapter on rivers might be improved if it were more closely connected with that on mountains and declivities; it would, indeed, be desirable to have maps of the hemispheres, with nothing but the natural aspect delineated, for the heap of names with which a map is too often crowded, destroys a great portion of its utility to junior students. Connected with the physical aspect of the earth's superficies, we should gladly see an account of the geographical distribution of plants and animals. At present these subjects are usually discussed apart; with the exception of Miss Zornlin's little treatise on Physical Geography, we know of no work in which the connexion between climate, elevation, and life, is treated in a manner intelligible to junior students. The chapter on the distribution of the races of men is too brief to be useful. Supposing that it was desirable to discuss this very perplexing subject in a book designed for the young, which we greatly doubt, some physiological test should have been given, by which the student might be able to comprehend what is the amount of structural difference sufficient to establish a variety of species. We think that pupils should not be initiated into controversy; oportet discentem credere, is a wise maxim: the object of a teacher is to make scholars, and not precocious disputants. Mr. Sullivan's exercises and questions for examination are excellent; they are constructed on the right principle of compelling the master to teach; they give trouble to the teacher, but they save a great waste of time and labour to the pupil.

ROYAL ACADEMY.

Professor Cockerell's Lectures on Architecture.

THE Professor began by quoting the regulation of the Royal Academy as to the Lectures on Architecture—"That the Professor shall read annually six public lectures, calculated to form the taste of the students, to instruct them in the laws and principles of composition, to point out to them the beauties and faults of celebrated productions, to fit them for an unprejudiced study of books on the art, and for a critical examination of structures." It is understood that these lectures were to be given by a Professor in the full practice of his profession, according to the dictum of Vitruvius, "that it is the union of the practice with the theory, that makes the sound architect"; and although he felt that it was precisely this circumstance that gave all the value in the eyes of the students to these lectures, yet it was obvious that in the midst of the distractions and bustle of professional practice, the Professor laboured under great disadvantages. It was much to be desired that the means at the disposal of the Royal Academy could enable it to extend these lectures according to the model of the French Academy, which, on Architecture alone, had established five classes, each having a separate professor,—namely, 1. Theory; 2. History; 3. Mathematics; 4. Stereotomy and Construction (in which important class two *Repetiteurs* were appointed); 5. Perspective. Such liberal instruction secured the honour of the profession, and protected

Digitized by Google

the public against empirical practice; and gave the French architects, in particular, that advantage in foreign countries, which the unassisted genius, perseverance, and enterprise of our own countrymen found it difficult to contend with. Aware of this mortifying inferiority in our public education, the students would exert themselves so much the more in their private studies to supply the deficiency, and would learn from this well digested system the course they should pursue. This Academy had, indeed, been founded by an illustrious prince (George III.), and great were the obligations of the arts and the public to his memory; but the means by which it existed were of its own creation, and those means were barely sufficient to fulfil its engagement, to support gratuitously the only school of art which this country possessed.

It is an axiom with the civilized nations of the Continent, that the Fine Arts are eminently calculated to increase human happiness and exalt human character, and greatly contribute to the reputation as well as the real interest of a country, especially of a manufacturing country.

But the austere government of England makes the Fine Arts no part of its glory, its policy, or of its expense. And were it not for the sympathy and patronage of the public, even this limited Institution could not exist; nor would the country escape the reproach of the Celestials of "outer barbarism." The Fine Arts have, indeed, the countenance of the supreme head, and of "the powers that be"—the Ministers of the day, who cannot, as gentlemen, renounce the attribute of taste; but they have uniformly shown by their public conduct that they do not consider its support amongst the people a political duty.

It is now more than a hundred years that Thomson, the best informed upon the Arts of all our poets, indignantly remonstrated on our national inferiority and neglect of this branch of intellectual culture, and complained with grief in his Ode to Liberty—

> That finer arts (save what the Muse has sung,
> In daring flight above all modern wing,)
> Neglected droop their head.

Foreigners have attributed this disregard of the rulers of an ingenious and a great people to various causes—to physical insensibility, to the sordid nature of our commercial habits, or the adverse propensity of the Protestant religion,—to which objections the history of the ancient dynasties of this country (never inferior in the fine arts), the abundant enthusiasm of individual artists of our own times, and the public sympathy, are direct contradictions. Finally, they have fixed the reproach on the government, by pointing at the Schools of Design established by parliament; for they say, truly, that so soon as the inferiority of our design in manufactures drove us from the foreign markets, we took the alarm, and immediately formed schools of design, *à l'instar* of those on the continent; not from a generous love of art, but, confessedly, from the well-grounded fear of loss in trade. The members of this Academy hailed the measure with joy, as the harbinger of a better sense of what is due to our intellectual position in Europe, and they have willingly given their gratuitous attention to its conduct. But the instruction of youth must be accompanied with the higher prospect of employment and honour in national works; and we are happy in the reflection that the decoration of the parliamentary palace at Westminster, and the interest taken by an illustrious personage in that great object, hold out to us the hopes of equality at least in these noble studies with the improving countries of the continent, and the opening of a new career for genius and industry.

But an erroneous and mischievous scepticism as to the utility of Academies of fine art altogether, has long been fashionable, which has not, however, been applied to others, for no one has ever yet despaired because a Newton or a Locke are not annually produced from Cambridge and Oxford; but of these it has been plausibly said, that no Michael Angelos, Raphaels, or Palladios have been produced by them since their foundation in the 17th century; it is forgotten, however, that the patronage and immense employment which elicited the talents of those masters, have also been wanting; and that without the field for their developement, and all the expensive machinery by which they can be brought to bear, Academies can do little more than preserve and transmit the rudiments of art.

Fleets and armies are necessary for war, and without these the greatest captain of his day might have been nothing more than an eminent professor at Sandhurst.

Academies were established as depositories of learning and practice in the fine arts, and the means of their preservation and transmission through the vicissitudes of the times. The enlightened and commercial Colbert had seen how in Greece and ancient Rome, and in modern Rome, under his own countryman, the Constable Bourbon, a public calamity might disperse and ruin them for half a century, without some fixed and corporate body and abode. He never dreamt that, in the absence of the fostering patronage and employment of government, the Academy could do more than fulfil these negative objects. The Royal Academy had done much more than this—it had sustained the credit of the country in fine art, and had reared talents which were now part and parcel of English history. Through good and evil report it had nourished the flame; and it was consolatory to find that they had transmitted it to better times, through long and adverse circumstances; for now they had the happiness to see two Professors in the Universities of London, the British Institute of Architects, large public patronage in Art-Unions, &c., and a growing interest in the Universities of Oxford and Cambridge towards fine art generally.

But Architecture, as a science dignified by an intimate connexion with the exact sciences, and by her acquaintance with those eternal laws of mathematics and of physics which are obeyed throughout the universe, was, in this Academy, regarded only as a fine art, and these lectures were designed to illustrate Architecture in that capacity alone. Dealing with the phenomena of beauty and ideality in the form and aspect of her contrivances, she becomes an essential member of the fine arts, the more essential since her conclusions are more undefined and remote than any other branches of the fine arts, save Poetry and Music, with whom her nearer relationship than with Painting and Sculpture, is sustained by many. But in all that respects the beauty of forms and their combinations, she must never forget her obligations to her sisters Painting and Sculpture, by whose aid alone she becomes the Ars Regina, and keeps in view her prototype Nature, ever equally solicitous of beauty and of use. And the moment she declines their counsels her proportions become anomalous, and she descends to the mere building art.

In Egypt, where Painting and Sculpture were in comparatively small esteem, and again in the middle ages, proportions were wholly capricious, and subject to no order or regularity; nor have any been ever attributed to them even by the greatest admirers of Egyptian or Gothic architecture. On the contrary, the Greeks, aided by the union of the three arts, soon established that analogy with the organized productions of nature, which fixed the proportions of Architecture in so determinate a form as not to be safely departed from, and which, whether in the days of Phidias, or Raphael and Michael Angelo, or any other renowned period of art, has been approved and adopted as just and incontrovertible.

The fulfilment of the duty of the Professor under a limited number of lectures had been a subject of some anxiety and difficulty. The history of the art was the only safe foundation of the study, and had, therefore, formed his first course. "Architecture," says Sir C. Wren, "is founded on the experience of all ages, promoted by the vast treasures of all the great monarchs, and the skill of the greatest artists and geometricians, every one emulating each other. And experiments in this kind being greatly expenceful and errors incorrigible, is the reason that architecture is now rather the study of antiquity than fancy." With respect to the duration and progress of this art, it might be said that a hundred years were but as a day; being made for ages, it could not, therefore, be subjected to the vicissitudes of fashion; and the slowness of its progress and invention ought to inspire us with respect for antiquity and the authority of example, and to repress that presumption which too often assumes to dispense with them.

In fact, at every epoch in which the art had raised itself to its highest conceptions, we find, not only artists, but theoricians, archæologists, and historians, occupied in describing its progress and inventions, illustrating its monuments, and seeking out its antiquities. There are many histories of Architecture more or less complete; Canina's work promises to supply the history of ancient architecture which Winkelmann had left very insufficient. D'Agincourt's 'Histoire de l'Art par ses Monumens' was an admirable work; it treated of the art, from its decline to its revival and restoration. Durand's 'Parallel des Edifices anciens et modernes,' on the same scale, is highly illustrative of the history of Architecture.

The second course (that of last year) had treated, chiefly, the literature of the art; following out the Academic instruction quoted above, namely, "to fit the students for an unprejudiced study of books in the art." It had been well said by a learned prelate, "that we do not live in an ignorant age, but certainly not in a learned one;" and it was painful to see those authors who had been canonized by ages, either attacked and discredited, as Vitruvius, or held to be antiquated and obsolete, as the old Italian and French authors, and, above all, the admirable Alberti, the Bacon of the art, and others of the greatest interest. The obvious consequence was, that new lights, fashionable conceits, and heretical opinions, were conducting us into the large ocean of error. As well might the lawyer or the divine dispense with books as the architect. In the very dawn of literature the architect was required to be learned. In the Memorabilia of Xenophon, Socrates inquires, "But what employment do you intend to excel in, O Euthedemus, that you collect so many books? is it architecture? for this art, too, you will find no little knowledge necessary."

A familiar example of the great utility of these researches had been given in the quotation from Philibert de l'Orme (lib. ii. c. xi.), of the specification for concrete, written in the latter part of the sixteenth century, and corresponding precisely with the recent so-called discovery of this method of securing foundations. During the last century our architects had discontinued the ancient practice, having adopted the most fallacious fashion of wood-sleepers, to the ruin of many fine buildings. It was, then, the ignorance of this invaluable and most instructive and amusing author, Philibert de l'Orme, which had led to so fatal an error.

With reference to Vitruvius, the commentators, in forty-one editions, since his discovery in 1416, were shown to have made but slow progress, and to have done the author but little justice; and ever since the uncandid Schneider had published his edition in 1807, ten important discoveries, illustrating the correctness of his theories, had been made by modern travellers and architects.

In the present course the Professor purposed the consideration of the more difficult, but no less important, injunction of the Academic regulation, "that these lectures should be calculated to form the taste of the students, to instruct them in the laws and principles of composition, and fit them for a critical examination of structures."

Those laws and principles which are technical, were often treated, and were more obvious; but those which constituted Architecture a fine Art, were more subtle, but not less vital, to those who aspired to the higher attainments of the art, namely, the sublime and beautiful. Such inquiries had employed the most learned and ingenious minds in all ages; and although theories are proverbially dangerous things, and must be treated with great caution, yet, recommended as they are by the authority of great names, they ought to be known and discussed; effects attributable to right reason and right feeling are essentially subjects of discussion, and the old proverb should be reversed, and "De gustibus disputandum est" should apply to all those preferences which depend on reason, and not on sexual or fanciful arbitrament; and though the inquiries into the æsthetical of art, which have occupied the last century particularly, fall short of the results we should desire and expect, and that after all genius alone can rightly solve these questions, which elude common sense, yet we may cultivate and improve our critical powers, learn to think more accurately, and correct that colloquial laxity of speech which refers all impressions to some cant phrase of undefined signification, as *fine* and *beautiful*, *tasteless*, &c. &c.

Such investigations afford the only means by which

Digitized by Google

the principles of this or any other art can be ascertained, and the artist can be enabled to determine whether the beauty he creates is temporary or permanent, whether adapted to the accidental prejudices of his age or to the uniform constitution of the human mind; and whatever the science of criticism can afford for the improvement or correction of taste must altogether depend upon the previous knowledge of the nature and laws of this faculty.

In the following lectures the Professor proposes to review the examples cited in his former courses with reference to these important principles.

OUR WEEKLY GOSSIP.

Letters from Egypt mention that Dr. Lepsius and his party were still encamped at the Pyramids, all well, on the 15th ult. The English, just now, muster strong in the neighbourhood, and amongst the latest arrivals was Mr. R. Monckton Milnes. In one letter, obligingly shown to us, the writer observes—"It requires time to enter into and enjoy this scene. At first I was absolutely shocked with the size of the Pyramids: their great effect is to make everything round them look small, but they themselves never look large; and till I thought of Lincoln's Inn-fields, and St. Paul's, and St. Peter's, and of their actual measurement, my imagination could not comprehend their vastness. Yet, after being accustomed to the Desert, one sees that nothing but simple form and gigantic size could produce any effect at all upon the mind. Besides the three Great Pyramids, the form is repeated in many smaller ones; and in some views one mountain seems to rise above another, and the effect is very grand indeed; and the mouldering rock on which they rest, the mounds of sand, the vast masses of stone-work, of temples and tombs thrown down by violence—give to the whole scene a grandeur, which, with the silence of the Desert, it is impossible to describe."

A private letter from Rome, announces the recent discovery of several new tombs below Perugia of great interest to the Etruscan antiquarians. "I visited them *en passant*," says the writer; "there are several very well-executed groups in *travertino* which had been gilded—one old cinerary was in *tufo*. They expect very shortly to discover a subterraneous temple: upon what grounds I know not."

We have also received a short letter from our German correspondent, dated

Leipsic, January 4th, 1843.

In my last letter I mentioned that the King of Prussia had expressed his desire that George Hervegh, the poet, should be introduced to him during his late visit to Berlin, but neither myself nor any one else could foresee the consequences of that audience. The poet visited Koenigsberg, the most liberal city in the kingdom of Prussia, where he was received with much enthusiasm, and from whence he addressed a letter to the King on the state of the press in his dominions, in which he observed, "'Let us be honest enemies,' were the words which your Majesty addressed to me, when I had the honour of conversing with you, and as such I consider it my duty to inform you of the little attention paid to your wishes of granting greater liberty to the press. Your ministers have prohibited the sale of my poems—have suspended a much respected teacher in consequence of his editing a newspaper in this city, which told the truth—and have seized even prints which had no letter-press, and which were published under the guarantee of your express order. Yet of my poems I am going to publish a fifth edition; Dr. Witte has obtained by voluntary subscription an annual sum exceeding the government salary; and the prohibited caricatures are in the hands of every one! thus are their objects defeated, and you are made answerable for their misdeeds." This letter appeared in the *Allgemeine Zeitung*, and thirty thousand copies were sold in a few days. Shortly after its appearance, the sale, purchase, and *transit through Prussia* of this newspaper was prohibited, and the poet, who happened to be on a visit to a friend at Stettin, was ordered to leave the country within four and twenty hours. I state these facts, which in relation to the history of the press are well worthy of being noticed in the *Athenæum*, and which will contribute towards a knowledge of the liberal feelings which prevail in a country which has taken the lead, it is said, in the march of intellect in Germany. [A Berlin letter, Dec. 30, in the *Journal de Frankfort*, says: "The Poet Hervegh arrived here yesterday by the railroad from Stettin. He was immediately arrested by the police, and compelled to depart by the first railway train for Dessau."]

The only bright point in the last return of the Revenue, was the account of the Post-Office. To ourselves and other consistent advocates of the penny postage, the indications not only of the last quarter's return, but of those for the last year and a half, have been especially cheering and satisfactory; proving that the anticipations which had been formed of the ultimate financial success of the measure are in progress of fulfilment at no distant day. For the last six quarters the increase has been progressive each quarter. The amount and comparison of this progression is shown in the following columnar arrangement, which exhibits the returns for each quarter since the commencement of the penny postage, and the totals of each year, ending on the day indicated on the same line as that of the sum.

Quarters ending	Quarter's Revenue.	Year's Revenue.
April 5, 1840	120,000	
July 5 —	100,000	
Oct. 10 —	123,000	
Jan. 5, 1841	98,000	441,000
April 5 —	93,000	414,000
July 5 —	119,000	433,000
Oct. 10 —	116,000	426,000
Jan. 5, 1842	127,000	455,000
April 5 —	142,000	504,000
July 5 —	154,000	539,000
Oct. 10 —	168,000	591,000
Jan. 5, 1843	141,000	605,000

Comparing the years ended Jan. 5, 1841 and 1842, the increase is just at the rate of 3 per cent. per annum on the latter. By a comparison of the years ended Jan. 5, 1842 and 1843, the annual rate of increase is 33 per cent.! If we may be allowed, in the absence of any positive data, to speculate on the sources of this increase, we should attribute it, not to any increased revenue from foreign letters—because, considering the recent frequent reductions in the rate of foreign postages, we doubt if the receipt of foreign postage was as much in the past as in the preceding year—but partly to the increased habit of home letter writing, and chiefly to the increased use of the Post as a Parcel Post—a source of revenue and public convenience which is still open to great improvement.

A correspondent informs us, that a Library of reference and circulation is in the course of formation by the clerks in the Bank of England. It is to be hoped the Directors of that establishment will give it their sanction, and lend their aid to promote so excellent a project.

The many persons who are interested in Geology, the most popular science of the day, will be glad to hear that Mr. Lyell is about to deliver a course of eight lectures on the subject, at the Marylebone Institution, in which he will introduce, among the illustrations, the observations made during his late visit to Canada and the United States.

It is expected that the works at the Temple Church will not be completed before March, in consequence of the delay in supplying the encaustic tiles. The position of the Crusaders is at last settled, and their effigies rest in two divisions, of four in the Round, and one in each aisle. Consequently a clear passage is left from the west door to the altar; and we have reason to think that our remonstrance (No. 790) was not without its effect. The notion of a Mosaic pavement has been given up, and strait courses of encaustic tiles laid through "the round." Authority for this mode of placing is furnished in the Chapter House of Westminster Abbey; and we are bound to admit, with all our predilection for a Mosaic, that the present effect of the tiles is very good, and that the space displays them better than any other part of the two churches.

An *opera buffa* is now a novelty: it would, indeed, require some ingenuity to revive that class of dramatic entertainment, in which humour counted for so much, and character for so little; but the 'Don Pasquale' of Donnizetti, just produced at Paris, has been received as a welcome novelty, thanks to the drollery of Lablache, Grisi, and Tamburini; thanks also to the beautiful voice of Mario, all of which are skilfully employed in it. The story seems to be a modified version of that popular ballet, 'Le Tarentule.' But we shall be in better condition to discuss it after Easter, as, of course, it will be one of the novelties of our coming season.—Our neighbours are a strange people. One of the solemnities of the past week has been the farewell of Monrose, the actor, who, if we are to trust M. Janin's *feuilleton*, was brought out from the celebrated Dr. Blanche's *Maison de Santé*, where he has been long, alas! a patient, and *patched up* for one evening, to enable him to play the part of *Figaro*, for his benefit.

The *Globe* mentions that the Imperial Academy of St. Petersburg has nominated Mrs. Robertson, the portrait painter, to the dignity of the membership of their body, and accompanied the intimation of their having conferred this very rare honour with a highly complimentary letter. This lady a short time since returned from St. Petersburg, where she had been invited by the Emperor to paint the portraits of the Imperial family.

The New Year has already been marked by three deaths in the artistic world—Mr. T. C. Hofland, the landscape painter, who died at Leamington, on the 3rd inst., in the sixty-sixth year of age—Mr. Vaughan, the tenor, and Mr. Bellamy, the bass singer. All these gentlemen belonged to a past dynasty of the arts: but Mr. Vaughan may be pointed to as a model, in respect of judgment. He knew the limits of his own powers, and never attempted anything he was unable to execute with the most perfect finish. We have no tenor left who can sing the smoother songs of Handel so satisfactorily.

The kind and praiseworthy solicitude of the Sovereign and the Government, in throwing open, or rendering more easy of public access, the buildings and works of art under their control, was not likely to remain without its good fruits in stimulating a similar disposition in those who had the opportunity of exercising it. We now learn, with satisfaction, that Mr. Vernon, who possesses one of the finest collections of modern English paintings, contemplates an arrangement, somewhat similar to those adopted at the Dulwich and Soane Museums, for opening it to the public at large during the ensuing season. Among the pictures in Mr. Vernon's possession, which we can recall to mind, are Wilkie's 'Newsman' and 'Guerilla Sleeping'; Leslie's 'Uncle Toby and Widow Wadman'; Mulready's 'School,' and his last picture, 'The Ford'; two fine landscapes by Callcott, and two very favourable specimens of Turner; 'The Dog in Office,' if our memory is right, of Landseer; Horsley's 'Pedlar'; Webster's 'Football'; several specimens of Jones and Etty, and, we believe, Maclise's 'Hamlet' has lately been added. It cannot be doubted that others will follow so good an example. We trust it may have the effect of inducing the Marquis of Westminster again to open the Grosvenor Gallery, which he found it necessary to close on account of the misconduct of the visitors, not, we are happy to say, the public at large, but only that portion of it which had sufficient aristocratic influence to obtain tickets of admission.

We have just heard of a curious and interesting practical application of a recent scientific discovery, which will somewhat startle our readers—the Chinese treaty was copied by the Photographic process of Mr. Fox Talbot, and the copy, so made, for the sake of securing *perfect* accuracy, is now deposited amongst the State Papers.

We must be excused if we persevere, until the nuisance is abated, in directing public attention to the gambling madness which is fast spreading its blighting influence over the country. Mrs. Parkes has, perhaps, said enough to open the eyes of all respecting the great 'National Art-Union,' by which twenty-five thousand guineas was to be levied on the public; and the mere Prospectus of the 'Royal Polytechnic,' which we referred to some time since (No. 786), was conclusive enough as to that minor affair. But we now read in the papers of what are called 'Derby Sweeps' (would not 'Horse-Unions' be a more respectable name?), the subscriptions to which vary from 5*s.* up to 20*l.*, and the first prize in one of them is 2,400*l.*! Now, can such open violations of law be tolerated? It is more than thirty years ago, that a Report of a Committee of the House of Commons "frightened the isle from her propriety," by such a disclosure of vice and misery consequent on lotteries, that Government was at length forced, by the moral sense of the country, to give up the revenue which, for nearly two centuries, had been derived

Digitized by Google

from this polluted source; and it was declared by statute, that "all lotteries" were "public nuisances," and all persons were prohibited from continuing or reviving them, under any form whatever. Yet here we have the 'Derby Sweeps,' and the National Sweeps, and the Polytechnic Sweeps, and fifty other like "public nuisances," proclaiming themselves by advertisement. But those who have read the Report alluded to, will remember that the worst consequences did not arise from the government lotteries. The price of a ticket, or even of an eighth, or a sixteenth, to a certain extent limited the mischief; it was the 'Little-goes,' as they were called, the shilling, and half-crown, and crown gambles, got up by individuals, that brought ruin into families, and corrupted even the serving-men and women and apprentices. Is this abomination to be revived? We had lately to comment on a lottery at the 'Royal' Polytechnic—a 'Royal' Institution, be it observed—of *one hundred thousand tickets*, at *one shilling each!* and now, following so worthy an example, twelfth-cakes are disposed of by lottery! We have seen a dozen advertisements to this effect, but one will serve as an example:—

Twelfth-cakes Distribution.—All Prizes.—T. Yeates, Confectioner,—— intends distributing 150*l.* worth of rich twelfth-cakes, in 1,500 shares, at 2*s.* each, commencing at nine o'clock in the morning of Friday next, Jan. 6th.—List of prizes (no blanks):—Two at five guineas, five at two guineas, fifteen at one guinea, fifty at half a guinea, eighty at five shillings, and 1,348 at one shilling. To prevent disappointment an early application for shares is requested.

Here then we have the 'Little-goes,' as of old, carrying their demoralizing influences into our nurseries and kitchens; and we cannot send our children to an Exhibition, or to buy a penny bun, but they are to be tempted to join in 'a little gamble.' Is there any such minister as a Home Secretary? any such officers as magistrates? If there be, and they resolve, as in duty bound, to put down these "public nuisances," we trust they will not begin with the pastry-cooks or publicans.

Since the above was written, circumstances require from us a few more words on the subject of Art-Unions:—The *Irish* and the *Edinburgh* are, as we have heretofore acknowledged, among the best of the class. With them, the selection of prizes is intrusted to a Committee, and therefore the money expended tends to raise the standard of art, not to lower it. A Committee, too, is less likely to be imposed on by the traders in art, who often purchase a dozen pictures before they are sent to the Exhibition, and take their chance of getting fifty or a hundred per cent. profit from the public. Yet even a Committee cannot escape, as the following fact will prove:—At a meeting of the Royal Irish Art-Union, held on the 6th inst., the Committee of Selection presented the following statement, with reference to the drawing of 'Minerva and the Muses,' which was purchased from Signor Ratti, at the last Exhibition:—"A strong suspicion having arisen in the minds of the Committee as to the originality of the work, Signor Ratti was communicated with on the subject, and informed that our rules precluded the purchase unless a work was the *bond fide* production and property of the artist in whose name it was entered for exhibition. Although Signor Ratti asserted in the strongest manner that it was his own production, the Committee had so strong a misgiving as to reduce the amount awarded from 50*l.* to 25*l.*, and continued their inquiries on the subject. They had been lately enabled to forward to Signor Ratti the name of the real painter, which was Consoni, the name of the purchaser of the work for which this was a preparatory drawing, the price paid for the same, with the names of three gentlemen who were ready to depose to these facts. Signor Ratti replied by acknowledging that the picture was by Consoni, and tried to palliate the assumption of his name, by saying that Consoni was a friend, that he acted so with a view to his interest, and had sent him the money all but five pounds retained for frame and carriage of the picture. The Committee thought it was due to themselves to show that they had spared no exertions to rectify the error into which they had been led, and hoped that steps would be taken to prevent such an occurrence in future. It was unanimously resolved the name of Auguste Ratti be erased from the list of artists whose works were purchased by this society, and that of Nicolo Consoni be inserted in its place; and that a note, explanatory of the change, be added thereto."

CAUBUL.—NOW OPEN at the ROYAL PANORAMA, Leicester-square, a comprehensive and interesting VIEW OF CAUBUL, including the Bala Hissar, the river Caubul, with a distant View of the Himalaya Mountains and the Pass of Khurd Cabul, where the British army was so treacherously destroyed. The whole illustrated by numerous groups of figures descriptive of the manners and costumes of the Afghans. The Views of the Battle of Waterloo, and of Jerusalem, will shortly be closed.

THE CHINESE COLLECTION, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious saloon, 225 feet in length, and embracing upwards of fifty figures as large as life, all fac-similes, in their native costumes, from the highest mandarin to the blind mendicant; also many thousand specimens, illustrating the appearance, manners, and customs of more than three hundred million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2*s.* 6*d.*; Children under Twelve, 1*s.*

THE THAMES TUNNEL

OPEN to Visitors daily, (Sunday excepted,) from 9 A.M. until 5 P.M., and is brilliantly lighted with Gas. The Entrance for a short time longer is only on the Middlesex side of the River, close to the Tunnel Pier, at Wapping, the Rotherhithe Entrance being closed, in order to finish the new Staircase. Admittance, 1*s.* each.

By order of the Board of Directors,
Company's Office, J. CHARLIER,
2, Walbrook Buildings, City, Clerk of the Company.
January 1845.

N.B. Steam Boats to Wapping, from Hungerford, Adelphi, Temple-Bar, Blackfriars Bridge, Old Shades, Old Swan, Adelaide Piers, London Bridge, at every hour.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

Nov. 30.—Mr. Murchison, President, in the chair.—Three papers were read:—

1. 'On the Bala Limestone,' by Mr. D. Sharpe, F.G.S.—Notwithstanding the agreement of several of our best geologists, who had published their opinions on the age of the Bala limestone, and had placed it in the upper Cambrian system, Mr. Sharpe was induced to doubt the accuracy of this classification, by observing that every one admitted that the Bala fossils agreed, as far as they had been examined, with those of the lower Silurian beds, and that the attempts to draw a clear line of separation between the lower Silurian and upper Cambrian had failed. But his attention was particularly drawn to Mr. Bowman's observations on Denbighshire, laid before the British Association in 1840 and 1841, which Mr. Sharpe regards as the first indication of the true structure of this part of North Wales. Mr. Bowman classes as upper and lower Silurian, many beds before mapped as upper Cambrian; showing that the previous classification of the rocks of North Wales could not be relied on. He points out that, up to the moment of his taking up the subject, none of the writers upon it had expressed a doubt of the existence of a great thickness of fossiliferous beds below the Caradoc sandstone and Llandeilo flags, although it had at last been admitted that these supposed beds could not be distinguished by their fossils from the lower Silurian: and he states that the object of his communication is, to show the error of this view as relates to the Bala rocks, which he proposes to prove to be equivalents of the lower Silurian beds described by Mr. Murchison, and not part of an older series; and he infers, from analogy, that the same will be found to be the case in other parts of North Wales which he has not visited, where he conjectures that all the rocks containing shells of lower Silurian species, will also prove equivalents of the lower Silurian beds of Siluria. Instead of continuing the Silurian system downwards, through a vast thickness of slate rocks, Mr. Sharpe proposes to strike out one of its original members, regarding the *Caradoc sandstone* and *Llandeilo flag* as the same formation, which has received different names, according to its mineral character. He observes, in confirmation of this view, that both formations are never found equally developed in the same district, and that the fossils found throughout are too nearly the same to warrant the separation of the lower beds under a separate name. Still Mr. Sharpe believes that there are in Wales, as well as in Westmoreland and Cumberland, vast accumulations of slaty rocks below the Silurian system, in which no fossils have been found, and which must retain the name of Cambrian rocks. Mr. Sharpe did not map the district in detail, but he traced two sections to show the position of the Bala beds with regard to the Berwyns, as he considered the question to turn upon the accuracy or error of the statement of Mr. Murchison, "that the Bala limestone dips under the chief mass of the Berwyns." The first section begins westward at the igneous chain of Arenig Mawr, crosses the town of Bala, and ends eastward at the Calettwr, where a dark slate, the upper bed of the Bala series, abuts unconformably against the clay-slate of Moel Halog, which is referred to the Cambrian system. This section places the Bala beds in a detached trough, and shows that they do not dip under the Berwyns; but their succession is not well shown, owing to the disturbed state of the surface. The other section is in two parts, from the head of the Lake of Bala up the Twrch to Bwlch y Groes, and across the Dyfi by Dinas Mwddy and Mallwyd. On the west it begins at the northern prolongation of the igneous chain of Arran Mowddy, and continues eastward through a conformable succession of beds up to the upper Silurians. Each section shows the whole of the Bala series, the upper bed of blue slate, which, on the Calettwr, rests unconformably against the Cambrian clay-slate, being the same which is overlaid conformably beyond Mallwyd by an upper Silurian series of soft blue or liver-coloured shales, alternating with hard grey grits without cleavage or fossils, dipping E.S.E., which Mr. Sharpe identifies with the No. 2 of Mr. Bowman's lower division of the upper Silurian, the probable equivalents of the Wenlock shale. Mr. Sharpe then describes the Bala series of rocks, beginning with the uppermost beds:—1. Dark blue slate, worked at Craig Calettwr for good roofing slate and flags. The lower beds pass into a soft argillaceous slate of no value. The whole is not less than 300 or 400 feet in thickness. 2. Upper Bala limestone, a dark blue bed, 10 feet thick, accompanied by calcareous slates and soft brown slates, with many fossils. 3. Rotten argillaceous schist and indurated shale, 400 feet thick, with few fossils. 4. Bala limestone, like No. 2, 30 or 40 feet thick, with calcareous slates and grits, full of organic remains. 5. Grey slaty grits, with a bed 30 or 40 feet thick of impure grey limestone, containing trilobites and other fossils in the lower part, the whole exceeding 500 feet in thickness. 6. Rotten grey clay slate, supposed to be 500 feet thick. 7. Dark blue slate of poor quality, the lowest bed of the series. As the Bala beds are quite unconnected with the Cambrian rocks of the Berwyns, and are only overlaid by upper Silurian deposits; as most of their organic remains are known lower Silurian species, and as the total thickness of the whole series is about the same as has been assigned by Mr. Murchison to the lower Silurian, Mr. Sharpe concludes that they are the exact equivalent of the lower Silurian formation, and do not carry the series down below the beds described by Mr. Murchison. Mr. Sharpe considers it as easy to prove their identity with the Caradoc sandstone as with the Llandeilo flags, and again endeavours to show that they must be regarded as the same formation under different names. This classification replaces the dark blue limestones of Bala and Coniston on the same parallel from which they were separated when Prof. Sedgwick adopted Mr. Marshall's views of the Silurian age of the Coniston limestone, but left the Bala limestone in its erroneous position as part of the Upper Cambrian. The igneous rocks of Arenig and Arran Mowddy are described by Mr. Sharpe as varying compounds of felspar and quartz, and he maintains that they must have been upheaved after the epoch of the lower Ludlow shale.

2. 'Notice of the Discovery of the Remains of Insects in the Lias of Gloucestershire, with some remarks on the Lower Members of this Formation,' by the Rev. P. B. Brodie, F.G.S.—The lower beds of the lias in which these organic remains occur are extensively developed in the neighbourhood of Gloucester and Cheltenham, and occupy the greater part of the vale. In the upper part of the lower beds one example only occurred of a fossil insect, being the elytron of a coleopterous insect of the family Buprestidæ, apparently a species of Ancylocheira of Escholtz. With this exception, the numerous fossil insects obtained by Mr. Brodie were found in the bottom part of the lower beds, near the base of the lias, which are seen at several points in the neighbourhood of Gloucester. At Wainlode's Cliff, in a grey and blue limestone, termed by Mr. Brodie *insect limestone*, 26 feet 2 in. above the bone bed, and 6 feet 2 in. above a hard yellow limestone, containing shells like Cyclas, plants, and Cypris, are found clytra belong to several genera of Coleoptera, a few wings not unlike the genus Tipula, and abdomens of insects apparently of the gnat tribe, associated with shells of the genera Ostrea,

Digitized by Google

Unio, and Modiola. To the south-west of Coombe Hill the same limestone contains similar remains in greater abundance, among which are some beetles in a tolerable state of preservation, and in one the eyes are distinctly visible. A few imperfect but large wings of dragon-flies also occur. With these are numerous small plants, some resembling mosses, but very different from those in the yellow Cypris limestone, a few seed-vessels and leaves of ferns, claws of crabs, and remains of crustacea resembling the genus Eryon from the Solenhofen slate. Near Gloucester, and in the cliff at Westbury, the same limestones and insects, but scarcer, are found. If the Cypris found in these beds be of freshwater origin, it forms a new and highly interesting feature in the history of this deposit. At any rate, the occurrence of the remains of such delicate creatures as insects, many of which are in a beautiful state of preservation, and could not, therefore, have been long subject to the action of the waves, or have been carried far out into the water, gives a greater probability to the supposition that this part of the lias may have been formed in an estuary which received the streams of some neighbouring land—perhaps numerous scattered islands—and which brought down the remains of insects, Cypris, and plants above referred to. The shells usually found in the insect limestone are Modiola and Ostrea, both of which frequently inhabit estuaries, and are capable of living in brackish water, as well as in the open sea. Mr. Brodie has discovered the wing of an insect in the upper lias at Dumbleton, near Tewkesbury, proving the existence of insects during the deposition of the upper portion of this formation, and Mr. Strickland has found elytra and wings in the lower division at Evesham, twenty miles from Wainlode.

3. '*On certain* Impressions on the surface of the *Lias Bone Bed, in* Gloucestershire,' by Mr. H. E. Strickland, F.G.S.—These impressions have been noticed at only one locality, Wainlode Cliff, on the Severn, where they occur in the uppermost surface of the band of micaceous sandstone, there representing the "bone bed." The deposit appears to have consisted of a fine-grained muddy sand, capable of receiving the most minute impressions, whilst the pure black clay, which forms the superincumbent stratum, has preserved the ancient surface in the most unaltered condition. The markings are of four kinds—1st. lengthened and nearly straight grooves, about one-tenth of an inch in width, and several inches long, very shallow, and with a rounded bottom, apparently caused by some object striking the surface of the sand with considerable impetus. They may have been caused by fish swimming with velocity in a straight direction, and occasionally touching the bottom with the under part of their bodies.—2nd. Small irregular pits, averaging a quarter of an inch wide, and one-eighth of an inch deep; possibly caused by mud-feeding fishes, probing and turning up the surface in quest of food.—3rd. Narrow deep grooves, about one-twelfth of an inch in width, the side forming an angle at the bottom, irregularly curved, and making abrupt turns: possibly caused by the movements of an acephalous mollusc, the *Pullastra (?) arenicola* of Strickland.—4th. A tortuous track, consisting of a slightly rounded ridge, about one-tenth of an inch wide, with a fine linear groove on each side: in all probability caused by the crawling of some of the smaller annelidæ. A comparison of the above tracks with those made by living crustacea, and mollusca of the genus Littorina, afforded only negative evidence. They were accompanied by impressions of a fucoid body.

ASTRONOMICAL SOCIETY.

'Observations of the Total Solar Eclipse of 1842, July 7 (July 8, civil reckoning).' By G. B. Airy, Esq., Astronomer Royal.

In the past summer I made a journey to Turin, principally for the purpose of observing the solar eclipse at a place where it would be total. My intention was rather to observe the nature and succession of the general phenomena of a physical character, than to make any precise observations of absolute time or absolute measure, or to attempt to deduce corrections of the elements of the moon's motion. I carried with me a small telescope, by Simms, mounted on a short tripod stand, of 1.9 inches clear aperture, and about 14 inches focal length. For the use of this I am indebted to the kindness of Mr. Simms. I had carefully tried it on the sun's disc, and had satisfied myself that it was abundantly competent for the observation of those phenomena of eclipses which have excited so much interest: it is, indeed, a very good telescope of its size. I had also a duplex pocket-watch.

Having crossed the Alps by the pass of the Little St. Bernard, I had the good fortune, at Cormayeur, to meet Professor Forbes. We made arrangements at once for journeying together to Turin, and for observing the eclipse in concert. We reached Turin late in the evening of July 5. The next day was spent in the examination of the instruments and localities of the Observatory of Turin, under the auspices of M. Plana, and in the inspection of the hill and church of the Superga. M. Plana was extremely anxious that we should observe the eclipse at the Observatory, where every facility depending on an ample supply of instruments and an accurate determination of time could be afforded us. I had, however, long before fixed on the Superga as a station from which I should desire to see, if possible, the grand phenomena of a total eclipse, as exhibited on a large tract of country. It may be proper here to mention, that the Superga is the highest point of an insulated cluster of hills, perhaps 800 feet above the Po, and five miles from Turin. It is completely surrounded by the plain of Piedmont, and commands a most remarkable view: on the east, over the plain of Lombardy; on the north-east, of Monte Rosa, and the neighbouring high Alps; on the north, of the mountains of the Val d'Aosta (Mont Blanc itself is hidden by them); on the west of Monte Viso and the Dauphiny Alps; and on the south and south-east, of the Maritime Alps and the Apennines; with the plain extending from the foot of the hill to the bases of these mountains in every direction. As the eclipse was to be total for the Superga itself, and for the western and southern mountains, and partial for the northern mountains, I had thought it possible that I might see in great perfection the different phenomena in the different parts of the view. The sequel will show that in this respect I was disappointed, but that (by chance) a most important advantage was gained by my adherence to this plan. Finally, it was arranged that Professor Forbes should make his observations at the Observatory, and that I should go to the Superga. On the 7th, the observations to be made were fully discussed, and the series of observations intrusted to each person were drawn out in the form of written instructions. The observations bearing upon physical optics were principally consigned to Professor Forbes; those of astronomical character to myself. The unfortunate circumstances of weather, however, rendered the former impossible, and in some degree abridged the latter. The morning of the 8th, at one or two o'clock (civil reckoning), was very dark and louring: scarcely a star was visible. I proceeded, however, with a companion to the Superga, and reached it at a short time before five o'clock. Every facility for viewing the eclipse from any part of the church or convent of the Superga that I might select was offered me by the fathers of that establishment; and, had my object been simply to view the country during the eclipse, I should undoubtedly have stationed myself in the upper gallery of the dome of the Superga. But the platform in front of the portico offered far greater facilities for the placing of my telescope, and more of general convenience; and, by moving a few steps, I could at any time command the whole plain. I therefore adopted the platform as my station. I think it due to the courtesy of the Italians to remark that, though many persons were present, I did not receive the smallest interruption of any kind from any one. The sun was clear, and I saw the beginning of the eclipse very well.

The power which I used throughout the eclipse was about 27 (as I have since found by the well-known method of comparing a distant object seen in the telescope with a near one seen without it). This power was found very convenient.

As the eclipse advanced (the sun continuing unclouded), I observed a circumstance which I have remarked in every solar eclipse that I have seen. It is that the limb of the moon is very much more sharply defined than the limb of the sun. This is clearly owing to the difference of intensity of light on different parts of the sun's disc, the intensity near the centre of the disc being much greater than that near the limb, and the degradation very near the limb, though rapid, being gradual. I speak of this as a fact of which I have not the smallest doubt; having long ago observed it in my daily practice as an observer with the transit instrument and the circle; and having also frequently remarked it as an experimenter, when I have thrown the image of a portion of the sun's disc upon a small screen, in which case I have always been able to determine whether the limb was approaching to the edge of the fully illuminated screen, simply by the change of the intensity of illumination. And I allude especially to this fact at present, first, because in contemplating the probable phenomena of the eclipse it had been a particular subject of conversation between Professor Forbes and myself; secondly, because it may perhaps assist to explain a very strange observation which I shall shortly have to mention. I had carried with me a wax-taper in a lantern, which I lighted about the time of the commencement of the eclipse. Whenever I looked round over the country, I also looked at the flame of the taper. I cannot, however, say that I remarked any peculiarity in the colour either of terrestrial objects or of the candle flame. The flame, as the eclipse advanced, appeared much brighter (and must have been visible to a great distance at the totality), and its colour seemed somewhat redder: but I believe that this change takes place in just the same degree when the general light is diminished from any other cause. The surrounding objects did not receive the greenish hue which I have remarked in other eclipses of nine or ten digits; I know not whether this was due to the cloudiness of the day, or to the continued correction of my eye by reference to the light of the candle.

I saw no spots whatever on the sun's disc.

About six minutes before the totality I specially recorded the remark, that there was a slight undulation on the limbs, but that the cusps were perfectly sharp. I cite this particular observation because I find it noticed in pencil at the time; but I am quite certain that the cusps were seen perfectly sharp at every other time. The general aspect of objects was now very gloomy. As the totality approached, the gloom increased very rapidly. About two minutes (or perhaps more) before the totality, my companion exclaimed that it was darker towards the Val d'Aosta. I immediately looked in that direction, and am satisfied that it was not darker there. The country, however, looked blacker on that side, partly I think, because it is more encumbered with wood, and partly (perhaps) because the mountains are nearer than on the south side, and therefore have less of the whitish atmospheric tinge. At this time, and to the totality, the appearances were very awful. The gloom increased every moment; the candle seemed to blaze with unnatural brilliancy; a large cloud over our heads, whose appearance I had not particularly remarked, but which, I think, was of cumulo-stratus character, became converted into a black nimbus, blacker, if possible, than pitch, and seemed to be descending rapidly; its aspect became horribly menacing, and I could almost imagine that it appeared animated. Of all the appearances of the eclipse, there is none which has dwelt more powerfully upon my imagination than the sight of that terrible cloud. The sun was a very little clouded; his narrow crescent form could be seen with the naked eye when the eyelids were partially closed; there was, however, a dark cloud immediately above him, and fainter clouds about him. Immediately before applying my eye to the telescope to view the completion of the obscuration, I imagined that the light which the sun cast upon the ground was of a reddish colour. But the light was so very faint that I cannot at all vouch for this observation.

I have now to mention a very strange observation. I was viewing the sun most carefully with the dark glass upon the eye-piece, while the small illuminated ring was closing rapidly; my watch was lying on the parapet on which the short telescope stand was placed, and I was counting its beats, with the intention of observing the time which might elapse between the appearance of Mr. Baily's beads and the total obscurity. I saw the moon's limb advance to the sun's, and cover it completely. I withdrew my eye for a moment from the eye-piece, when I heard my companion remark that the sun was nearly gone. I said

Digitized by Google

firmly, "It is out." On being assured that it was not, I again applied my eye to the telescope, and to my infinite surprise I again saw the narrow ring of the sun's disc, not quite so bright as before. I again saw the moon's limb advance to the sun's limb, and cover it. In other words, I saw the totality completed twice. With regard to the *fact*, I can only say that I was at the time most fully alive to every thing which occurred, and that I was specially prepared for an observation which I expected to be one of the most important in the whole eclipse; and I have not the smallest doubt that the thing occurred, under the circumstances in which it was viewed with my telescope, precisely as I have stated. The *explanation* I cannot offer with great confidence, but I conceive that it may be the following. I have already remarked, that the light of the sun's disc, very near to its limb, is considerably less than in those parts of the disc which are a little farther from the limb. This being assumed, it is evident that the interference of a cloud, which was sufficiently dense to hide the faintest part of the disc (at the limb), but not sufficiently dense to hide the brighter parts, would sensibly diminish the sun's diameter. Now I was assured by my companion, that there was a cloud upon the sun at the time when I first saw its extinction; and this cloud, though not sufficient to conceal the edge of the sun's disc from the naked eye, might be sufficient to conceal it as viewed in a telescope, in which the specific brightness of any surface is much less than to the naked eye, and which also was armed with a dark glass. But if this explanation is valid, it may apply to many other phenomena. I have frequently seen the sun's limb deeply notched, and I have conceived that this was due to irregularity of refraction: it may have been due to irregularity in the transparency of the atmosphere. Mr. Baily's beads may themselves have depended on this circumstance. I now return to my narrative.

I saw nothing whatever of beads, or other irregularity, in either of the extinctions of the sun's limb. The cusps were perfectly well defined till they met. I quitted the telescope and looked round the horizon. The outlines of the mountains could with great difficulty be seen; but everything, though not black, appeared horribly gloomy. My companion believed that there was a dark green tinge on every object. I did not remark it. I endeavoured to ascertain whether the darkness could be seen sensibly to travel over the great plain, but could not satisfy myself that it was so; the whole seemed to me to become dark at once. Professors Plana and Forbes, however, on the Turin observatory, (from which the mountains to the north and west are visible, but not the plain,) were confident that they saw the darkness travel gradually. It is possible that from my elevated position I saw the country too much in detail to observe this; it is possible, also, that my eye was applied to the telescope at the critical time. The illumination was so small, that I could with difficulty read the divisions on the watch-plate, which was within eight inches of my eye; I did not try a printed book. The clouds were much less distinct than before, but as far as they could be seen they appeared terribly threatening. But the appearance of the moon can never be forgotten. It was like a black patch fixed in the sky, surrounded by a ring of faint light, whose breadth I estimated at $\frac{1}{8}$ of the moon's diameter (or probably four minutes). The colour of this ring was nearly white, inclining (as I thought) to peach-colour, but its illuminating power was very small. It was brightest at the lower part and to the left; this brightness travelled a little to the right. (It will be remarked, that a point to the left of the lowest point was the part last covered by the moon.) The clouds, however, were so near to the moon on all sides, and a dense cloud was so nearly in contact with it at the top, that it seems exceedingly probable that some of these appearances might depend upon them. I gazed earnestly at this remarkable ring, and I could not divest myself of the idea that it was produced by the sun's light shining past the moon's body through a portion of our own atmosphere. I wish it to be understood clearly that I do not offer this as an explanation of the ring (indeed, considering the number of miles by which the moon's limb overpassed the line drawn from the place of observation to the sun's limb, I cannot now consider such an explanation feasible): I wish merely to convey the impression which was given to me at the time of viewing the phenomenon. Indeed, I remarked at the time, that the appearance was almost exactly similar to that produced by a brilliant street-lamp, when its direct rays are just prevented from reaching the eye by a post, or by the corner of a building. I think it possible that there might be a very slight radial appearance in the light of the ring, but I do not recollect it with certainty, and I am perfectly certain that it was not sufficiently marked to interfere sensibly with the general appearance of annular structure. The moon appeared to be extremely near; her distance might have been estimated at a few hundred yards. The whole appearance of things was very unnatural and frightening. No stars were seen from the Superga, the sky being covered with clouds: but I found, from the reports of MM. Plana and Forbes, as well as from the conversation of many persons whom I met in general society, that many stars were seen at Turin, and at other places in the neighbourhood. I may take this opportunity of stating that I heard of distinct instances in which horses exhibited signs of very great terror when the totality came on.

I took off the dark glasses and carefully examined the moon with the telescope. Her disc was distinctly visible as having independent light, and I think that if it had been stronger, I might have seen the large tracts of different brightness on her disc. I could not, however, see the smallest inequality of light, of the nature either of broad dark tract, or dark spot, or bright spot. I looked carefully, for a long time (in proportion to the whole duration of darkness), and am confident that there was nothing of this kind to be seen. While thus looking at the moon I saw, to my great surprise, some small red flames at the apparent bottom of the disc (the top as seen with the naked eye). The number of flames, as I have them impressed on my memory and as I find them drawn on a small pencil sketch made a few minutes after their appearance, was three; their form was nearly that of sawteeth in the position proper for a circular saw turned round in the same direction in which the hands of a watch turn: their height was certainly not greater than one-fourth of the breadth of the ring, or probably a minute: the distance between the first and third was perhaps forty degrees or more on the moon's limb: their colour was a full lake red, and their brilliancy greater than that of any other part of the ring. On my calling attention to these, my companion saw them with the naked eye. It will be remarked that the part of the limb in which the red flames appeared was immediately in contact with the dark cloud of which I have spoken; and we attributed them to some irregularity in the density of the cloud's edge.

While engaged in watching the reappearance of the sun, I lost the opportunity of observing how the ring and the flames disappeared. Every luminous appearance, however, and every trace of the remainder of the moon's limb, vanished as soon as the smallest portion of the sun was uncovered. No beads or irregularity of any kind could be observed. The general illumination of the earth and sky was restored with very great rapidity. The clouds soon began to cover the sun, and in a short time it was invisible. In less than half an hour, a few drops of rain fell. My companion, who had better opportunities than I had of observing the formation of the ring, &c., has given me the following account:

"A bright line seemed to form round the right side of the moon before the disappearance, but not quite round, so that the ring was not complete: but, at the moment of the total disappearance, the ends seemed suddenly to join and form the complete ring, brightest on the left side, and as if beams of light came out. It continued brightest below, and at one time disappeared on the upper side, but a heavy black cloud was touching it there. Shortly before the reappearance, the brightness increased on the upper side; and immediately before the reappearance there were little beams of flame-colour starting out. There was no defined edge to the ring: it changed sensibly, being brightest first on the left side where the sun had gone in, then below, and then on the right side; the light coming out at each place successively like little beams from the moon's edge. There was no remarkable change in the colour of the light till the little flame-coloured beams shot out for a few seconds before the reappearance. The general appearance of the country during the totality was very frightful; but every object, all the distant hills, &c. &c. were distinctly visible; it was like looking at objects through a very dark greenish glass. The sky in every part except that in which the sun was, was covered with thick clouds. The sun also was covered by the clouds very soon after his reappearance."

The numerous persons who watched the eclipse from the Superga appeared to notice with great interest the progress of its phases to the totality; and when the sun was actually hidden there burst forth from them, first a low murmur and then loud sounds of applause. Immediately after the restoration of the sun, the whole crowd dispersed, and nobody seemed to regard with the smallest interest the phases of decrease of the eclipse.

The meteorological circumstances of the atmosphere were evidently much affected by the concealment of the sun. The air after the totality appeared transparent (as it usually does when the ground is cold); and there rested upon or near to the flanks of the mountains a series of stratified or cumulo-stratified cloud, at an elevation of less than 2000 feet; with a lower surface very sharply defined and (as far as I could judge) most truly horizontal through the whole extent to which I could see them; and with a less regular upper surface: the depth of these clouds could not be more than 200 or 300 feet. They had not the smallest resemblance to the ill-defined fog-clouds which hang about the mountains at all elevations in rainy weather; nor to any other clouds that I have seen during the day in these countries: I think that I have seen clouds in the evening which resemble them more nearly than any others. After the termination of the eclipse, the day became very hot, and the aspect of the country became very similar to that which it usually presents at this season of the year.

It was not till some hours after my return to Turin that I found that MM. Plana and Forbes had not seen the moon at all during the totality. The region in which the sun and moon ought to have been seen was covered with an opaque cloud: I have little doubt that it was the same cloud which I from the Superga saw just above the moon (the azimuths of Turin and the moon being almost exactly opposed), and to which I was inclined to attribute some of the peculiar phenomena of the eclipse.

I fear that I have greatly trespassed upon the time of the Royal Astronomical Society; and I can offer only this apology, that in describing a phenomenon of such strange character, of which so few authentic accounts exist, there appears to be no possible way of including all those points which are really of scientific interest, except by narrating every thing which was seen, and leaving to others the power of selecting from the mass those circumstances which may possess some real value.

INSTITUTION OF CIVIL ENGINEERS.—*Jan.* 10.—The President in the chair.—The first meeting of the season was commenced by a discussion on a paper by Mr. R. Davison, describing the sinking of the deep well at Messrs. Truman & Co.'s Brewery. In the opinion of some of the members the difficulties which had occurred in the sinking of the cast iron cylinders, arose from the attempts to force down too great a length at a time. It was usually found that lengths of thirty feet each, were liable to be impeded by the lateral pressure of the surrounding earth. The pumping also of the water from the well, whereby a large quantity of sand had been raised, had caused the cavity to take place behind the cylinders, and the face of the steining of the well. It was essential during the progress of a well through sandy stratum, to preserve such a depth of water in it as should, by its pressure, keep back the sand; for if the equilibrium was destroyed, the sand ran in and filled up the bottom, leaving a cavity behind the cylinders; and in some cases this had endangered the surrounding building, by causing the earth to give way for some distance round the well. It is more advantageous to carry the cylinders down to the chalk, and to excavate a full sized well in that stratum, where side drifts may be cut, so as to gain a copious supply of water, and secure, at the same time, a reservoir in the chalk; as was done by Mr. Braithwaite at Messrs. Reid & Co.'s well in Liquorpond Street Brewery. The author explained that in order to guard against destroying the equilibrium between the water and sand, he had given instruc-

Digitized by Google

tions that the water should not be drawn below a certain point in the well: unfortunately this had not been attended to, and the influx of sand had ensued. The action and use of the "miser" or "auger" for excavating the earth, in well-sinking, without pumping was described. It appeared that this useful instrument was first introduced by the late Mr. Vulliamy, of Pall Mall, in sinking some deep wells, which were intrusted to his direction.

A paper was read 'On the Co-efficient of Labouring Force in overshot Water Wheels,' by Mr. R. Mallet.—The communication was so voluminous and so interspersed with mathematical formulæ, that it was necessarily read in abstract. It gave a brief historical account of the theory of water-wheels according to the experiments of Borda and Smeaton. The opinion of the latter engineer as to the relative proportion of the diameter of the wheel to the height of the fall, quoted Dr. Robison's doubts whether any advantage was gained by the large diameter of the wheel—with a view of settling which question, the experiments were undertaken. It then detailed the method employed for determining the question, as also that of the advantage or disadvantage of adapting to the water-wheel a circular channel or conduit, extending from the level of the axis to the lowest point, and so constructed that it should retain the water in the buckets longer than if the wheel worked in a free race, while by means of screws it might be withdrawn from the periphery of the wheel during frost, or in case of repairs being needed. From the result of the investigation, it appeared, that the author considered Dr. Robison's views on the subject should receive a limitation, and that a positive advantage arose from the use of the circular channel, varying with the conditions of the wheel and fall from 3 to 11 per cent. of the total power. These, and all the other results of the experiments, were given in an extensive series of tables.

In the discussion upon this paper, the opinion appeared to be that the modern practice of making water-wheels very wide, so that the buckets were only about one-third full, was, with the good form of buckets now generally adopted, preferable to the use of the circular conduits recommended by the author, to the accuracy and usefulness of whose experiments full merit was accorded.

FINE ARTS

A Series of Monumental Brasses, extending from the Reign of Edward I. to that of Elizabeth. Drawn and Engraved by I. G. and L. A. B. Waller. London, Pickering.

Illustrations of Monumental Brasses. Nos. 1 to 5. Printed for the Cambridge Camden Society. Cambridge, Stevenson.

THESE "shining effigies of brass"—these "chronicles of birth, office, alliance, and promotion"—are among the most authentic memorials of costume of all kinds, military, civil, ecclesiastical, and are not without their use in historical investigation, and as specimens of ancient art. The characteristic features of the ancient sepulchral monuments preserve, chronologically, a pretty close analogy with those of Ecclesiastical Architecture, to which, indeed, they may be regarded as handmaidens. The brass effigies of the seventeenth century—and it is to this class of monuments we are more especially applying our remarks—differ as much in purity and simplicity of religious feeling and expression from those of the thirteenth and fourteenth centuries, as the architectural lines of Cardinal Wolsey differ from those of William of Wykeham.

Beginning with the earliest specimen of brass effigies at present supposed to exist in this country—that of Sir John Dabernoun in Stoke Dabernon Church, Surrey, A.D. 1277, (see 'Waller's Monumental Brasses')—and continuing a survey over a period of a century and a half, we find, with scarcely an exception worth noticing, the attitude of all these effigies,—the man of war and of peace, priest and layman, earl and franklein, with hands uplifted in attitude of prayer—to be symbolical of pious aspirations after futurity. The exceptions are usually of the higher clergy, who are represented in the attitudes of speaking. Legends accompanying the brasses are rare before A.D. 1350; after this period they become more frequent, but all breathe the same pious spirit. The most laconic, which state the name of the departed and date of his decease, conclude with an entreaty for mercy:—"Cujus anime propicietur Deus."—"Pries Dieux pur charite qe de lour almes aie mercie." Where the brass effigy is more elaborate, all the ornamental accessories have consistently the same devotional expression. At a somewhat later period, attitudes of prayer were altered to other positions, sentimental though less devotional in character. Thus in the effigies of Peter Halle and his lady in Herne Church (Kent), A.D. 1420 ('Waller's M. B.'), the hands of the couple are joined, as if to say that even death did not sever their affection. Gradually self-glorification became the object of the effigy. Thus the founders of churches perpetuated their acts of benevolence, and were represented, not with their hands praying, but as holding a model of the church which they had built. Not much to condemn in this, though the spirit of recording the act is somewhat boastful. A thousand times more pure in feeling are the effigies of Brian Roucliffe and his Lady, who uphold an outline of the church of Cowthorpe, Yorkshire, A.D. 1494 ('Waller's M. B.'), than that of Handel and his array of musical instruments, and the announcement that "He knows that his Redeemer liveth," which probably was meant to apply to his own composition; or than the figure of Garrick in theatrical attitude; or even than the best of Chantrey's statues. At a later period we find the attitude of prayer abandoned for more worldly considerations than church-building—to exhibit the deceased's heraldry, &c., as in the brass of Sir Peter Legh and Lady in Wenwick Church (Lancashire), A.D. 1527 ('Waller's M. B.'). At the beginning of the sixteenth century, legends on brasses became very frequent, and scarcely any are without them. The poor man, whose worldly means did not enable him to purchase masses, trusted to the prayers inscribed on his brass, and to those which visitors at his grave might in compassion say for him. Here are some specimens:—"O fili Dei, miserere mei"—"O mater Dei, memento mei"—"Of your charite pray for the sowles of"—"On whose sowle and all Christian sowles Jesu have mercy"—"Jesu mercy, Lady helpe."—But we must not dwell longer on the religious aspect of these monumental records, having some other features to notice.

The study of these brasses is rendered most facile by the readiness with which copies of them may be taken. We have previously pointed out how easily impressions may be taken by means of the composition called "heelball" (See *Athen.* No. 777); and here we may observe, that, though we inserted the letter of a correspondent, recommending another process No. 779), we still prefer the heelball. Our correspondent sent a specimen of his rubbing with heelball, and one of his own process; and certainly the examples proved his case. But, having tested his specimen with an average good rubbing by means of heelball, no doubt remains on our mind of the great superiority of the latter in respect of the clearness, sharpness, depth of colour, and cleanliness of the impression, whilst it has besides all the advantages of facility, of use, portability, and even fragrance.

A collection of a few rubbings of good and characteristic brasses might be very useful in education, and in reading English history they would convey to a young person's mind a very accurate idea of the costumes and ranks of society in each era,—of the crusader, "in woven maile all armed warily"—of the priest, in his embroidered garments, "a worke of rich entayle and curious mould woven with antickes and wyld imagery"—of the knight "in his cognisaunte all for the nones"—of the frankelein, "an anelace and gipciere, all of silk, hung at his girdle."

The study of these brasses, and indeed of all art of the Middle Ages, should form part of the course of instruction at the government School of Design. Independently of their value for costume, they are surprisingly rich in suggestions for ornament, applicable to a variety of purposes. A systematic collection of rubbings of all existing brasses would be a national work creditable to the government which undertook it, and one which might be executed at a most insignificant cost compared with its utility. The print room of the British Museum already has a beginning. No one who calls himself an historian, genealogist (how important they proved in the Camoys peerage case!), antiquary, topographer, herald, or artist can, or at least ought to, be unconscious of their valuable and important application. It may not be out of place to show where they are to be found in greatest abundance, and Mr. Hartshorne affords us the information very concisely. "It has been supposed that these monuments were introduced into Great Britain by the Flemings, that they came chiefly from Ghent, and are therefore mostly found in those countries, where they traded for wool. This very reasonable conjecture will explain why we meet with them in greater abundance on the coasts that lie nearest to their continent. In Norfolk, Suffolk, Essex, and Kent, they exist in a greater proportion than in other counties. The influence of this taste extended itself very widely through Leicester and Northamptonshire. In the latter county we have still remaining 136 examples; the number of those originally existing cannot be computed at less than four times this number. As we travel westward, monuments become more rare. There are but few in Warwickshire (some of the finest specimens are at Warwick, in St. Mary's Church), Worcestershire, and Gloucestershire, scarcely one in Shropshire, except at Llanwrst, none in North Wales." As works of art, the earliest brasses are much the finest in character and expression, though rude and stiff in drawing. The art of engraving brasses had begun to degenerate before the Reformation, and before Henry VIII. set the example of plundering them; and here let us observe, that much as the Puritans did in pillage, they were far out-Heroded by their reforming predecessors. Very soon after the suppression of the lesser monasteries, in the thirty-third year of Henry the Eighth, a statute was passed to prevent the exportation of brass, latten, and bell metal. We may trace this degeneracy in the general design as well as in the execution, and a good specimen is afforded in the brass of Andrew Evyngar, in All Hallows, Barking, London, A.D. 1535 ('Waller's M.B.'), where the sculptor has attempted an effect rather of tapestry, by the introduction of several figures. On this point it is well observed in the 'Illustrations of Monumental Brasses,' published by the Cambridge Camden Society, "Brasses, in the few instances in which their use was retained, instead of the costliness and beauty of earlier examples, displayed a diminution in size, and a coarseness of workmanship, by no means consistent with the notion that the improvement and advancement of every art and science followed the dispersion of the so-called darkness of the Middle Ages." In the later examples, too, the engraver travelled quite beyond the province of his art, by the insertion of shadows, attempting the effects of bas-reliefs, and realizing a mongrel, that was neither a raised sculpture nor a flat surface engraving. How great will be the reader's surprise to learn, that the Cambridge Camden Society, so rigid about the preservation of antiquity, have fallen, on this point of shading brasses, into some gross heresy; and, not satisfied with backsliding in theory, are actually carrying it into practice most mischievously!

"We have not scrupled," say the Society, "to give greater prominence to the effigies themselves in our engravings than their originals would *strictly* allow." (This from a Society preaching the propriety of rigid restoration!) "Viewed as works of art alone, monumental brasses demand our admiration, more for the fidelity of their representation, and for the victory achieved in them over a most stubborn and untoward material, than for any intrinsic beauty of design or execution. (!) Doubtless, the comparative worthlessness of modern attempts at imitation of this class of sepulchral memorials, raises our admiration of those skilful artists who could give, even in the harsh brass, many proofs of graceful taste and delicacy of workmanship. Still the greatest admirer of

Digitized by Google

their works cannot but confess, that with an unyielding sheet of metal as the material, and a graver's tool as the only instrument, it would be impossible for any one to give more than *an outline* (though, we allow, a most true and faithful outline) of the subject represented."

For the moment, we pass over what the Society "have not scrupled to do," and merely express a dissent from their next paragraph, to ask whether the Society do not see that "it being impossible to give more than an outline in brass," no more should, therefore, be attempted. And no more *was attempted* in the best period of the art. Will it be believed, that what was attempted and failed in the debased period of this class of monuments, this Society have not only done, but, what is much worse, essayed to justify? Professing to re-engrave several monumental brasses because previous engravings of them were "inaccurate," the Society have actually taken upon themselves to *insert shadows* on brasses which are entirely destitute of them in their original state. We must allow them to justify this in their own words:—

"In a work, then, such as ours, which professes *chiefly to illustrate the costumes of past times*, it seems natural, if not necessary, to give, by shading or other means, those embellishments to our portraits which we may be sure their artists would have secured to them if they could. Adhering closely to the transmuted outline, and merely adding the graces of light and shade, (?) we seem, so far from doing injustice to our pattern, to be carrying out with our superior advantages the wishes of the original designers.(!) For it is most observable, that the very earliest brasses shew an attempt at shading, (?) though necessarily of a most coarse character; consisting, indeed, merely of crossed lines. But we have thus the best authority for shading as a principle, and may feel assured that the effigies we present are more vivid representations of their artist's ideal than the nature of his materials ever allowed him to pourtray.(!) So far incompatible, indeed, was shading found to be with brass as a material, that the later specimens, which are generally elaborately shaded (such, for example, as those in Llanwrst Church), are so deficient in energy and life, as to be no less insipid to the ordinary observer than worthless to the man of taste."

It might have been inferred as reasonably certain, that if "elaborate shading" deprived the original brass of "energy and life," the same results would follow from shading a copy. The shaded brasses of this Society prove the fact clearly enough. But whatever the result, the process must be condemned, because its effect, whether good or bad, is to destroy the identity of the thing copied. Not a single brass shaded by the copyist is a faithful and trustworthy representative of the original. Why is the Society's work called "Illustrations of Monumental Brasses," when it is no such thing, but samples of costume *adapted* from ancient brasses, and even then not done over well? The simple truth is, that this publication is quite unworthy of any Society. It seems to have been designed and executed without any consistent plan. Every number is different. In the first, the brasses are lithographed in *outline*; in the second, they are more coarsely drawn and tinted; in the third and fourth, they are shaded; in the fifth, outline is restored. This shifting and changing might be excusable, if the publication of brasses had been undertaken for the first time; but the Society have no such excuse, and, in many places, admit an acquaintance with the works of Stothard and Cotman and others on the subject. Moreover, why, in a work on brasses, are things introduced which are not brasses, and have nothing to do with brasses? Thus, in No. 4, there are four plates of brasses, and four of other things; a window, sedilia, sanctum sanctorum, and a monument. Had this work been the production of an individual, it might have been left alone; but issued, as it is, by an influential body, it becomes a duty to point out its errors, which, as respects the liberties taken with the representation of brasses, seem to us most mischievous in an artistic point of view. To the respective ranks of this body we say, "He! doctores sine doctrinâ; He! magistri artium, sine artibus. He! baccalaurei baculo quam lauro digniores!" We observe that a re-issue of these brasses is announced. Our advice is that the Society should entirely forget what they have done, and begin afresh, by taking as their model the publication of Messrs. Waller. This work is as commendable as that of the Camden Society is censurable. The engravings are accurate transcripts of their originals, reduced generally on a scale of about three inches to a foot, and executed with the best taste and feeling. They are etchings tinted by the hand, and the heraldic enamellings are carefully picked out with the proper colours. The work leaves nothing to be desired, and is very moderate in price.

Before we conclude, we have still a few words to add on one or two points.

Antiquaries are divided in opinion whether it was intended to perpetuate family likenesses by means of these brasses. It seems to us, that when the artist, in representing a priest or a warrior, engraved the first in canonical garments, and the second in a coat of mail, and not in any fanciful abstraction of his own; and when, in representing a member of the family of Septvans, he employed the appropriate heraldic cognizances of the "seven ans"; that going thus far and thus obviously in the way of identification, he would naturally do his best to identify the individual in respect of his own features. When we observe the extreme variety and individuality of countenance which prevail, we can have no doubts whatever that likeness was as much preserved as possible. The Camden Society take the same view, and for the following reasons; and we are glad to be reconciled with them on some points in this subject.

"1. The very strongly marked features which occur in many effigies. An instance may be particularized in the present work, that of Archbishop Harsnett. If such a face were met with in a gallery of portraits, every one would at once pronounce it a likeness.—2. Very frequently effigies are found of two or three generations in the same family, and the family likeness is remarkable. Now this, considering that the artists must have been different, is, in itself, a great presumption that the likenesses are real; but it is rendered still greater by the fact, that if a stranger become connected by marriage with the family, and his effigy exist, the character of the face will invariably be found entirely different from the preceding ones.*—3. We may ask, is it likely that the family of the deceased would have allowed so plain a face to be represented, as is frequently seen, were it not their desire to preserve the likeness? And why should artists, evidently capable of the highest efforts, deviate in the proportion of their figures so far from the *beau idéal* of the human form, except for the same reason?"

When we spoke of the earliest existing brass as dated 1277, we implied that earlier were supposed once to have existed. The effigy of Simon de Beauchamp, who completed the foundation of Newenham Church, and died in A.D. 1208, is said to have had the best claims to rank as the most ancient, but this brass no longer exists. What an unexplained mystery it is, that here in the beginning of the thirteenth century we were engraving on metal, and two centuries and a half elapsed before we learnt to take impressions from engravings for book purposes!

* A remarkable example of this occurs in Hatley Cockyne Church, Bedfordshire.

MUSIC AND THE DRAMA

THEATRE ROYAL DRURY LANE.

On Monday will be performed Shakspeare's Tragedy of MACBETH. *Macbeth*, Mr. Macready; *Banquo*, Mr. Anderson; *Macduff*, Mr. Phelps; *Lady Macbeth*, Mrs. Warner; *Hecate*, Mr. H. Phillips: *Singing Witches*, Mr. Allen, &c.

Tuesday, Sir E. L. Bulwer's Play of THE LADY OF LYONS. *Beausant*, Mr. Elton; *Glavis*, Mr. Keeley; *Damas*, Mr. Phelps; *Claude Melnotte*, Mr. Macready; *Madame Deschappelles*, Mrs. C. Jones; *Pauline*, Miss Helen Faucit.

Wednesday, KING JOHN.

Thursday, for the last time, KING ARTHUR. With the ETON BOY. The Pantomime every Evening.

CLASSICAL CHAMBER CONCERTS.—Mr. W. S. Bennett is wisely turning his talent as a pianist to account, by giving the public an opportunity of hearing some of the masterpieces of classical music. He began, on Monday evening, with Mendelssohn's Sonata for pianoforte and violoncello, which, with the assistance of Mr. Lucas, was performed in the true spirit intended by the author. Mr. Bennett has, indeed, much of his model's solidity of touch and untiring animation of execution. These were again displayed in four numbers, from a 'Suite des Pièces,' composed by the performer,—of which we have a word to say. They are cleverly written, and, though difficult, were admirably executed; yet a monotony of effect pervaded them, arising from their being all more or less constructed on the same pattern of florid accompaniment to a boldly-marked *cantabile*. This system, if adopted, will reduce all pianoforte writing within narrow limits,—invention, under such circumstances, confining itself to mere form of accompaniment; since any melody, no matter how old, will acquire a certain importance from this manner of treatment, till the trick is exhausted. At all events, when performing four short pieces without pause, Mr. Bennett would have done well to have selected one in which the ear might have reposed from the ceaseless whirl and undercurrent of scales and *arpeggi*. The other instrumental performances were a selection of preludes and fugues by Scarlatti, Handel, Bach, and Mendelssohn; one of Beethoven's trios for stringed instruments, which we are glad to find coming into request; and Beethoven's impassioned Pianoforte Sonata in D minor (Op. 31). It did little credit to the earnestness of the patrons of native talent—sometimes so noisy in profession!—that so few had gathered together to enjoy the good playing and good music offered to them on this occasion.

DRURY LANE.—The revival and encouragement of English opera was one of the many worthy aims announced by the present lessee of Drury Lane, on commencing his labours. In pursuance of this design, his first measure was to adapt Handel's 'Acis and Galatea,' (neither an opera nor English) to the scenery of Mr. Stanfield;—his second to dislocate Purcell's music and Dryden's drama of 'King Arthur' by the interpolation of new instrumental effects and unmeaning pageantry;—his third, however, is the *coup de grace*—a version of Rossini's 'La Gazza Ladra:' and *what* a version! But of this presently. We do not censure any management for adopting the course best calculated to fill its treasury in hard times like these; but we must say that performances so strange had better have been preceded by promises less high-sounding. Acquiescent in the false hopes they awakened, if not seduced by them, a large portion of the press and the musical profession were encouraged to vituperate as unpatriotic all who questioned the wisdom of the announcement. Not an opera, for instance, was translated for Miss Kemble which did not provoke an outcry against that lady as a traitress to the cause of her country's Art. Yet on what desperate courses, in bringing forward a new singer, has the theatre been driven, which was professedly conducted on principles superior to mere financial expediency!—the production of an Italian opera, miserably mutilated. We knew from the first that "to this favour it must come at last"—that there exists *no* English musical drama, (not forgetting those of Bishop, Balfe, or Barnett) in which it would be advisable to introduce a singer of the high pretensions now demanded by the increased intelligence of the times; and that, till our operatic dramatists conceive characters and understand musical effects, and our composers attempt nationality in place of a lifeless imitation, we *must*, out of poverty, not will, be driven to the German, or the French, or the Italian repertories. Let our brethren of the press consider this, nor vociferate for what does not exist; lest such a raising of voices, by keeping alive false appreciation and impossible hopes, raise barriers in the way they desire to smooth. There is no progress without self-knowledge.

'La Gazza Ladra,' as presented at Drury Lane on Saturday evening, has been mutilated with a degree of audacity and shortsightedness, the like of which we have only of late met in the transpositions of 'Acis' and the new instrumentation of 'Ye twice ten hundred deities.' The first chorus is cut away, to the extinction of the musical entry of *Pippo;* the *stretto* of *Ninetta's* duett with her father, defrauded of a good half; the *terzetto,* 'O nume benefico,' is *snipped* to pieces with remorseless industry, some four bars of the opening being removed; subsequently *Ninetta's* great *solo,* 'Benche sola,' essential as an answer to Il Podestà's rude approaches, is left out; and, lastly, a portion of the *agitato.* The *largo* is omitted from the first *finale;* the middle movement dispensed with from the duett between *Ninetta* and *Pippo*—this last containing a necessary part of the

Digitized by Google

action; the trial scene is done away with altogether; the funeral march is played without chorus or the *coda*, which affords one of the finest opportunities for the heroine contained in the opera; the prayer replaced by *Desdemona's* prayer from 'Otello;'—and, for the lovely, and piquant, and popular *finale*, in which every singer is most felicitously displayed in turn, we have a vulgar *bravura solo* from the 'Roberto Devereux' of Donnizetti, though the principal singer (to whom so much of her necessary duty had been spared) was too worn out to execute it with the brilliancy which alone can make such shallow and hackneyed music pass current. Every one of these omissions and alterations is an outrage against musical discretion and dramatic propriety.

Having fulfilled a disagreeable but necessary duty let us now speak of the two singers who made their first appearance on this occasion. The *soprano*, Miss Sabilla Novello, has a musical voice, though its compass is not extensive: we were reminded by the large style of some of her phrases, and the general cast of her embellishments, that she has studied under that Archimage of masters, Pasta's counsellor, the Chevalier Micheroux. But she has still one half of her art to learn, as regards execution and, yet more, articulation. Her speaking voice was scarcely audible—probably from want of practice—since, when heard, *its* tones were agreeable, and *told*; but the words were not to be distinguished. Though little embarrassed, she gave few indications of dramatic intentions; and, in fact, as almost every passage calling for the actress had been scrupulously removed from the part, it is fair to conclude that she was put forward on vocal rather than histrionic claims. The *contralto*, Miss — (the playbills forbid us to add her name) displayed far better aptitudes for the stage, as far as easy movements and a *naïve* utterance go. Vocally, her part was reduced to a portion of the great prison duett: which was expressively executed. Her voice is deep, rich, and tuneful, with the exception of a note or two, which ought, we think, to have been steadied ere she came before the public; for such studies are made with difficulty when the wear and tear of a career is once begun. Of her execution she gave us no opportunity of forming an opinion. She appeared to take the house by surprise, and was enthusiastically applauded.

We can only add a line or two, to say that Mr. Stretton, as the Justice, and Mr. Phillips, as the Deserter, were in wrong parts, pathos being the *forte* of the former, and brilliancy impossible to the latter; and that Mr. Morris Barnett, out of the trumpery part of the Jew Pedlar, contrived to create a character, which by its vividness, neatness of execution, and humour, is prominent in our recollections.

COVENT GARDEN.—The masquerade of 'Gustavus the Third' has been revived. To call the work, as it is presented, an opera, would be to misuse language, to the insult of MM. Scribe and Auber. The lessee may plead that at *L'Academie Royale*, all that is now performed of 'Gustave Trois,' is the final pageant, by way of a short piece of spectacle to help out a shabby evening. But all such measures and makeshifts are bad, and, we rejoice to add, increasingly dissatisfactory to the play-going public of England.

MISCELLANEA

Paris Academy of Sciences.—Jan. 2.—M. Elie de Beaumont laid before the Academy a specimen of quartz rock containing diamonds. This was wanting in geological collections; for hitherto the diamond had not been found in its natural bed, but detached from it, and in alluvial soils.—A letter, addressed to M. Arago, was received from M. Melloni, announcing the intended and speedy erection of an observatory on the spot called the Hermitage, on Mount Vesuvius, and also informing him that the King of Naples has given orders for the making of an artesian well in the large court-yard of his palace.—M. Martin laid before the Academy a percussion musket, so contrived as to supply the percussion-caps by its own mechanism, and thus be a considerable saving of time to the soldier.—M. Bravais made a communication relative to barometrical and thermometrical changes in high latitudes in the absence of the sun. The results of the experiments made by M. Bravais show that with a very feeble variation of the thermometer that of the barometer is considerable.

London Hospitals.—A writer in the *British Magazine* comments, with just indignation, on the accounts which are from time to time published in the magazines, professing to be records of Hospital Experiences, or Hospital Recollections. Here, for example, is a passage from a paper called, 'Walking the Hospitals,' in a late number of *Blackwood:* and we think the reader will agree with us, that, if true, public hospitals ought to be put down as public nuisances; and instead of being, as we have heretofore thought them, an honour to the nation, they are a disgrace to it, and to civilization itself:—"In the passages, or in the lobbies, as you progress towards the wards, if you keep your ears open, you may hear not a few extraordinary dialogues. A group, consisting of one or two of the dressers, a knot of sisters, a surgery man, and some of the pupils, is collected at the stair-head, and at intervals you catch unconnected portions of their mingled professional conversation. 'So Sally Dawes is dead this morning. Cuss the old cat! God be good to her, Betsy. What a world of trouble that wretch gived me in Mary's ward! Never knowed when to have done calling for drink, night nor day!' 'Simon, have you got my blisters and poultices on your tray?' 'Here's Goody Simpson's darter says as how she knows her mother's dead, an' a hollerin' like mad in the hairy. May she go up, sir?' ''Gainst the rules. Guvn'rs wont hear of it; tell her to call again to-morrow.' 'Hilloa, you, there, come up and carry down the stiff 'uns.' 'How many, sir?' 'Let me see: Irish hodman, in Job's ward—' 'Beg your pardon, sir, but he's not *quite* dead yet.' 'Not dead! you rascal, do you suppose I'd have given you an order to take him down if he wasn't dead.' 'Beg your pardon, sir, but he swears he won't die till God pleases.' 'Won't he? We shall see whether or not. There's Sally Dawes, *she's* dead as a red herring, I'll warrant her.' 'Mr. Mugg, if the house-surgeon hears you neglected to leech the erysipelas leg in No. 9, you'll hear of it.' 'Dear me, sir, what shall I do?' 'Clap on the suckers, and when they bite, take them off again. Say they're yesterday's bites.' 'That will be a *bite*. He! he! he!' 'Staggers! I'll bet you two to five, in grog, Slashem's lithotomy case capsizes the pail.' 'Say on the table, and I'll take you. Do you see anything verdant?' 'Oho!' 'Two to one against the woman in the puerperal ward.—What's her name? Come, I'll back Death against the Doctor for any sum you like to name.' 'Kitty Foley, if you please, sir, has made up her mind not to submit to the operation.' 'What! after I have had the trouble of arranging the instruments; there's gratitude for you! Tell her she must be operated on; the bill has been up this week; tell her she'll die if she doesn't.' 'She says, if you please sir, she only wants to be let die in peace.' 'What! and the whole class to be disappointed! Impossible! Tell her she can't be allowed to die in peace; it's against the rules of the hospital.'" It is impossible to doubt that such a dialogue, which, however, we are told may be overheard commonly in the passages and lobbies of our hospitals, is a pure invention, by some disciple of the Jack Sheppard school, but it is not therefore the less necessary to call attention to it; and we agree with the writer in the *British Magazine*, that "there must be somewhere, something that ought to be amended, or something which ought to be contradicted."

A new Varnish.—The Hampshire paper mentions that, at the suggestion of Mr. Thomas Grant, of the Royal Clarence Victualling Yard, a new varnish, manufactured of naphtha, is in future to be substituted for the paint now applied to the outside of the iron water tanks for her Majesty's ships, the cost of which is only one-fourth that of paint. The varnish has been well tested, and proved to be perfectly efficacious, and is applicable to all sorts of wood and metal.

Donkey Sedans.—Something like the old horse-litter of our ancestors has been revived in Egypt, as an improved means of crossing the Desert. These donkey sedans are described as similar in form to the common sedan chair, but much lighter. They have light ash poles, and are to be carried by two Arabian donkeys, one harnessed in front and the other behind.

TO CORRESPONDENTS.—There is "no principle disclosed" in Mr. Crane's letter; the publication, therefore, would not establish a claim to priority of invention.

This day, in 8vo. price 3s.

JOHN OF HAPSBURG. A Tragedy.
By RICHARD LEWIS, Esq.
John Murray, Albemarle-street.

Now ready, with a Plan of the Cantonments, post 8vo. 9s. 6d.

JOURNAL of LIEUTENANT EYRE, one of the PRISONERS in AFFGHANISTAN, with a Narrative of the RETREAT and DESTRUCTION of the BRITISH ARMY, in January, 1842.
John Murray, Albemarle-street.

Now ready, with Map and Engravings, 2 vols. 8vo. 38s.

ASIA MINOR, PONTUS, and ARMENIA; being Researches in those Countries; with some Account of the Antiquities and Geology.
By W. J. HAMILTON, Esq. M.P.
Secretary to the Geological Society.
John Murray, Albemarle-street.

Now ready, with a Map, 2 vols. post 8vo. 21s.

EXCURSIONS IN NEWFOUNDLAND. With an Account of the Cod Fishery—Fog Banks—Adventures of a Sealing Expedition, &c., and a Geological Survey of the Island.
By J. B. JUKES, Esq.
Late Geological Surveyor of Newfoundland.
John Murray, Albemarle-street.

RAILWAY IMPROVEMENT.
Just published, in 1 vol. 8vo. with 28 Plates, price 10s. 6d. in cloth boards, a new Work, entitled

ENSAMPLES of RAILWAY MAKING; which, although not of English Practice, are submitted, with Practical Illustrations, to the Civil Engineer and to the British and Irish Public, by John Weale, 59, High Holborn.

Just published, in 8vo. price 5s.

THE PROSE, OR YOUNGER EDDA; commonly ascribed to SNORRI STURLUSON. Translated from the Old Norse.
By GEORGE WEBB DASENT, B.A. Oxon.
William Pickering, Publisher, Piccadilly.

Now ready, illustrated with 200 Woodcuts, 6s. cloth,

BLOXAM'S PRINCIPLES of GOTHIC ECCLESIASTICAL ARCHITECTURE. 5th edition, much improved.
Tilt & Bogue, Fleet-street.

On the 2nd was published, in 3 vols. price 1l. 11s. 6d.

THE LAST BALL.
By GEORGE SOANE, Esq. B.A.
Author of 'The Life of the Duke of Wellington,' 'Frolics of Puck,' 'Innkeeper's Daughter,' &c. &c.

MR. HOLDEN'S EXPOSITION OF THE BIBLE.
In 1 large volume, 12mo. price 12s. 6d.

THE CHRISTIAN EXPOSITOR; or, a Practical Guide to the Study of the OLD TESTAMENT: intended for the Use of General Readers.
By the Rev. GEORGE HOLDEN, M.A.
Though many Expositions of the Bible, of great and deserved celebrity, exist in our language, a Commentary *sufficiently short* to be read by those who have not leisure to consult learned works, yet *sufficiently comprehensive* to serve as a guide to the study of the Sacred Scriptures, appears to be still wanting. To supply this deficiency is the design of the present work, in which it has been the aim and study of the Author to embrace, in a condensed form, such information as will enable the general reader to ascertain the real meaning of the Inspired Writers.
Rivingtons, St. Paul's Churchyard, and Waterloo-place:
Of whom may be had, by the same Author,
The Christian Expositor of the New Testament, 2nd edition, revised and improved. 12mo. 12s.

YEARSLEY ON DISEASES OF THE THROAT.
Just published, royal 8vo. price 7s. 6d. coloured Plates.
A TREATISE on the ENLARGED TONSIL and ELONGATED UVULA, in connexion with Defects of Voice, Speech, and Hearing, Respiration, Deglutition, Nasal Obstruction, Throat-Cough, and the Imperfect Development of Health and Strength in Youth. By JAMES YEARSLEY, Surgeon to the Sackville-street Ear Institution; Author of 'Contributions to Aural Surgery,' &c.
"We are indeed to notice the work on account of the novel and important views it developes. Mr. Yearsley has ably pointed out the intimate connexion which exists between certain morbid conditions of the throat and ear and several imperfections of the voice and speech. His great experience on these subjects entitles all he says to much attention and consideration."—*Times.*
Churchill, Princes-street, Soho.

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.
By WILLIAM DESBOROUGH COOLEY.
"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated.... The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ...The book is characterized throughout by acuteness and sound judgment." *Royal Geogr. Society's Journ.* Vol. XII.—"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal." *Friend of Africa.*—"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*
London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

From the British Magazine.
"This is an elegant and well-executed little book, on a most interesting subject."
From the Birmingham Herald.
"A valuable and indispensable accession to the library of every biblical student."
From the Rev. Thomas Hartwell Horne's Introduction to the Critical Study of the Scriptures.
"Nearly three hundred texts of Scripture are more or less explained in this elegantly executed volume, and in a manner equally curious and interesting."
London: Tilt & Bogue, Fleet-street.

NEW CLASSICAL DICTIONARY.
Just published, Part 1, price 4s. of
A DICTIONARY of GREEK and ROMAN BIOGRAPHY and MYTHOLOGY. By VARIOUS CONTRIBUTORS. Edited by WILLIAM SMITH, Ph. D., Editor of the 'Dictionary of Greek and Roman Antiquities.' Illustrated by numerous Engravings on Wood. The Work will be continued in Quarterly Parts, and will form One Octavo Volume.
Lately published,
A DICTIONARY of GREEK and ROMAN ANTIQUITIES. By various Contributors. Edited by Dr. W. Smith. 1 vol. 8vo. Illustrated by 500 Engravings on Wood. 1l. 16s. cloth lettered.
"We do not pretend to have examined this Dictionary throughout; but the articles which we have consulted appear to us admirably done: they are terse in style, and pregnant, yet not cumbrously so, with accurate knowledge; the best and *latest* authorities are constantly cited.... It was a work much wanted, will be invaluable to the young student, and, as a book of reference (it is a single, handsome double-columned 8vo.), will be most acceptable on the library-table of every scholar."—*Quarterly Review*, June, 1842.
*** A Prospectus, with the List of Contributors to each Work, may be had on application to the Publishers, or through any Bookseller.
Printed for Taylor & Walton, 28, Upper Gower-street.

Surgeon—James M. Arnott, Esq. 2, New Burlington-street.

Solicitor—Thomas Burgoyne, Esq. 160, Oxford-street.

A Dividend of the Profits of this Society was declared on the 1st January, 1842, by which an addition, amounting on the average to 45 *per cent.* on the Premiums received, was made to all Policies entitled to share therein.

Four-fifths, or 80 *per cent.* of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate therein.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

PELICAN LIFE ASSURANCE OFFICES,

70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

EAGLE LIFE ASSURANCE COMPANY,

3, Crescent, Bridge-street, Blackfriars, London.

Established by Act of Parliament, 1807.

Directors—John Richards, Esq. *Chairman.*

Sir James M'Grigor, Bart. F.R.S., *Deputy Chairman.*

The Rt. Hon. Sir G. Ouseley, Bart. F.R.S.	Charles T. Holcombe, Esq.
	W. Anderson Peacock, Esq.
Sir A. Denman Croft, Bart.	Peter Skipper, Esq.
Lieut.-Gen. Sir John Wilson, K.C.B.	John Spurgin, M.D.
	Henry Tufnell, Esq. M.P.
Chas. B. Baldwin, Esq. M.P.	William Wybrow, Esq.

DISTINCT TABLES FOR MALE AND FEMALE LIFE.

The Directors have caused new Tables to be calculated, in which the relative values of the Lives of the two Sexes are at all ages distinguished; in consequence of this improvement the younger Male Lives are insured at premiums below the ordinary rates; the Female Lives lower than any other office.

Annual Premiums required for the Assurance of 100*l.* to be received on the death of a

Age.	MALE. Seven years.	MALE. Whole life.	FEMALE. Seven years.	FEMALE. Whole life.
20	£1 6 3	£1 2 6	£1 5 0	£1 15 1
30	1 12 2	2 9 10	1 8 9	2 3 2
40	1 17 4	3 4 4	1 13 9	2 15 0
50	2 12 3	4 13 4	1 17 3	3 15 0
60	4 7 11	6 18 2	3 7 0	5 14 7

Prospectus exhibiting this remarkable distinction at every age, may be obtained at the Office of the Company.

Four-fifths of the profits are divided among the assured for the whole term of life, whether residing abroad or at home.

By order. HENRY P. SMITH, Actuary.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy —such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

FREEMASONS' and GENERAL LIFE ASSURANCE, LOAN, ANNUITY, and REVERSIONARY INTEREST COMPANY, No. 11, Waterloo-place, Pall Mall, London.

H. S. Illingworth, Esq. Arlington-street.

Legal Advisers.

Sir Frederick Pollock, M.P. | William Hayes, Esq.

This Office unites the benefit of a Mutual Association with the security of a Proprietary Company, and offers to the Assured amongst others the following advantages:—

1. Credit until death, with privilege of payment at any time previously, for one-half of the premiums for the first five years, upon Assurances for the whole of life, a plan peculiarly advantageous for securing loans.

2. In loan transactions, the lender secured against the risk of the borrower going out of Europe.

3. Sums assured to become payable AT GIVEN AGES, OR DEATH, if previous.

4. Policies indefeasible; fraud alone, not error, vitiating them, and in case the Renewal Premium remains unpaid, the Assurance may be revived at any time within SIX MONTHS, upon satisfactory proof of health, and payment of a trifling fine.

5. Officers in the Army and Navy, and persons residing abroad, or proceeding to any part of the world, may be assured upon equitable terms.

6. Immediate, Survivorship, and Deferred Annuities granted; and Endowments for Children and every other mode of provision for families arranged.

All the rates will be found to have been computed as low as is consistent with security. JOSEPH BERRIDGE, Secretary.

ECONOMIC LIFE ASSURANCE SOCIETY,

No. 34, Bridge-street, Blackfriars, London; established 1823. Empowered by Act of Parliament, 3 William IV.

Directors—The Right Hon. Thomas Frankland Lewis, *Chairman.*

Solicitor—Henry Young, Esq., 12, Essex-street, Strand.

Actuary—James John Downes, Esq. F.R.A.S.

Secretary—Campbell James Downer, Esq.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits, as follow:—

ANNUAL PREMIUM PER CENT.

Age 15	20	25	30	35	40	45	50
£1 10 8	1 14 7	1 19 0	2 4 3	2 10 11	2 19 9	3 11 9	4 8 0

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

By order of the Board of Directors,

CAMPBELL JAMES DOWNER, Sec.

UNIVERSAL LIFE ASSURANCE SOCIETY, LONDON, CALCUTTA, MADRAS, and BOMBAY.

Directors—Sir Henry Willock, K.L.S. *Chairman.*

John Stewart, Esq. M.P. *Deputy Chairman.*

Colonel Sir Richard Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
	Francis Macnaghten, Esq.
John Bagshaw, Esq.	Charles Otway Mayne, Esq.
Augustus Bosanquet, Esq.	Robert Saunders, Esq.
Charles Dashwood Bruce, Esq.	James Duncan Thomson, Esq.
Ellis Watkin Cunliffe, Esq.	Capt. Samuel Thornton, R.N.
Raikes Currie, Esq. M.P.	

The Directors of the Universal Life Assurance Society invite attention of Assurers to the returns afforded to Policy holders by their office, as detailed in the statement below, and having every reason to expect that the returns in future years will be equally favourable, the Directors recommend an early application to secure so important a benefit.

The following Table will show the operation of the Reductions made by the Society:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduction.	Annual Premium payable in 1840-41-42.
20	May 1834	£1,000	£19 6 8	£11 12 0	£7 14 8
30	—	1,000	24 8 4	14 13 0	9 15 4
40	—	1,000	31 10 0	18 18 0	12 12 0
50	—	1,000	42 15 0	25 13 0	17 2 0
60	—	1,000	66 11 8	39 19 0	26 12 8

	John Wilson, Esq.
Thomas Harrison, Esq.	William Wilson, Esq.

Auditors—J. H. Forbes, Esq., G. Hankey, Esq., O. Ommanney, Esq.

Physicians {Dr. James Johnson, 8, Suffolk-place, Pall Mall East. {Dr. C. F. Forbes, F.L.S. K.H., 23, Argyle-street.

Surgeon—Samuel Solly, Esq. F.R.S., 1, St. Helen's-place.

Standing Counsel—Charles Ellis, Esq.

Solicitors—Messrs. Hale, Boys, and Austen.

Bankers—Bank of England.

Actuary—J. M. Rainbow, Esq.

The advantages of this Office, among others, are:—

1. A participation septennially in two-thirds of the Profits, which may be applied either in reduction of the Premium, or to augment the sum assured.

The following Bonuses have been assigned to all Policies, of at least three years' standing, effected for the whole duration of Life:—

FIRST DIVISION, IN 1832.

From 18*s.* to 2*l.* 12*s.* per cent. per annum on the sums assured, varying with the age, being equivalent, on the average, to 26½ per cent. on the premiums paid.

SECOND DIVISION, IN 1839.

From upwards of 1*l.* to upwards of 2*l.* per cent. per annum on the sums assured, or, on the average, 33 per cent. on the premiums paid for the preceding seven years.

2. Premiums may be paid in a limited number of annual sums, instead of by annual payments for the whole of life; the policy continuing to participate in profits after the payment of such premiums has ceased.

3. The Assurance or Premium Fund is not subject to any charge for interest to proprietors.

4. Parties (including Officers of the Army, Navy, East India Company, and Merchant Service,) may be assured to reside in or proceed to all parts of the World, at premiums calculated on real data.

5. Claims to be paid within three months.

6. The assured may dispose of their policies to the Company.

7. No charge but for policy stamps.

The Prospectus, Tables of Rates, &c. to be had at the Office in London, or of the Company's Agents.

T. G. CONYERS, Secretary.

REALLY ADVANTAGEOUS.—W. ELSE,

Jeweller, &c., 34 and 35, Burlington Arcade, (Burlington-gardens' end), gratefully avails himself of this opportunity to return his acknowledgments to his numerous and distinguished connexion, not only for the flattering support accorded to him for so many years, but for the patronage daily bestowed on him in consequence of his recent announcement. W. E. now begs to inform the Public that the lease of the back part of his premises being about to expire, he must still continue to lessen his Stock, and that, consequently, for a short time to come he will continue to offer it at very reduced prices. It consists of splendid Jewellery, Watches, Clocks, Dressing Cases, Card Cases, Silver and Plated Goods, &c. W. Else will be compelled permanently to relinquish the sale of certain articles, which will consequently be disposed of considerably under their original cost.

FRAMES FOR ART-UNION PRINTS.—As

every Subscriber to the "London Art-Union" will very shortly obtain possession of the Print issued by THE SOCIETY, and as to frame it in an elegant, and not costly, manner, will be a most desirable object to many of the possessors, Mr. BIELEFELD begs to announce that he has prepared a Frame expressly for the Print of the 'Saints' Day'—the presentation print of the London Art-Union. It is manufactured of Papier Maché, a lighter, more elegant, and more durable material than any hitherto used for this purpose.

Papier Maché Works, 15, Wellington-street North, Strand.

"PICTURE FRAMES.—We direct the especial attention of all persons interested in this subject to the frames for pictures manufactured by Mr. Bielefeld. They are of papier maché, and the advantages they possess over the ordinary composition frames are so strong and so numerous, that they must, inevitably, be brought into general use. They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. The gilding tells with very brilliant effect; and, no matter how elaborate the pattern may be, they have a clearness and sharpness that we have seldom, or never, seen obtained in composition."—*Art-Union.*

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 133 years, 3, Birchin-lane. The finest description of Watches at the lowest prices, consistent with maintaining that character for superiority of workmanship which has distinguished their establishment during that period. The compensated duplex Watch, upon the principle of their Chronometers, to which government awarded the prizes three successive years, combines perfect accuracy with the utmost elegance, and is not surpassed by the pocket Chronometer. W. & Son have devoted considerable attention to the patent lever Watch, and considerably reduced the price, together with the small horizontal for ladies. They can offer a large selection of Second-hand Watches, at little above half the original cost. The utmost value allowed for old Watches in exchange. The most experienced workmen in the repairing department are employed on the premises for foreign and English manufacture.

Webster & Son, 3, Birchin-lane, Cornhill, London.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S——. Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

CASTOR OIL.—H. TAYLOR, Chemist, 10, Pall Mall, London, has prepared Castor Oil in a concentrated form, enclosed in Capsules of Gelatine, by which the disagreeable taste of this medicine is entirely avoided. They will be found the most pleasant method of taking that safe aperient medicine. The Dose is from one to four capsules. In Boxes at 2*s.* 6*d.* each, and can be sent by post for 4*d.*

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most efficacious remedy ever discovered for the relief of persons suffering from Influenza; the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as recent ones in adults, will be removed by a few doses frequently by the first), and asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Vendors, in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each.

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustache, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.

CAUTION.—Ask for "ROWLAND'S MACASSAR OIL," and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as "MACASSAR OIL" by Perfumers of apparent respectability.

Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

THE LATE GEORGE BUTLER.

WILLIAM JACKSON, formerly with the late Mr. A. John Mariner, and now successor to the late Mr. George Butler, 93, Cheapside, corner of King-street, London, established 1616.—GEORGE BUTLER'S FLUID EXTRACT of SARSAPARILLA, now prepared solely by his successor, William Jackson, is the Compound Decoction of Sarsaparilla of the London Pharmacopœia, concentrated to such a degree that a dessert spoonful diluted with a quarter of a pint of water is precisely the same as the compound decoction ordered by the Royal College of Physicians. Purchasers are earnestly requested to test by dilution the relative strength of this preparation with others sold under a similar name, and he feels assured that the superiority of the preparation made by him and his predecessor, its purity, and the great care bestowed in the process of evaporation, will always ensure the decided approbation and preference which it has received of the medical profession. W. Jackson is unwilling to refer to the invidious observations annexed to an advertisement (for obvious reasons) of a similar preparation by "an individual in the same street," but he is anxious to maintain the credit of the above preparation, and to state that his concern has always been known as a Medical and Dispensing Establishment, and that "Torlington's Balsam," "Stoughton's Elixir," and other nostrums of a like character, have never been sold at his establishment with his name attached thereto as the proprietor of them. He declines taking any further notice of the malignant remarks alluded to. W. Jackson begs to repeat the caution that there exists no connexion between his establishment and any other of the name of "Butler." Please, therefore, to observe that the labels have upon them, in full, the address, 93, Cheapside, corner of King-street, London, Established 1616.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 795. LONDON, SATURDAY, JANUARY 21, 1843. PRICE FOURPENCE. (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY COLLEGE, London.—The PROFESSORSHIP of NATURAL PHILOSOPHY and ASTRONOMY in this College will become VACANT at the end of the present Session (30th June, 1843), in consequence of the resignation of Professor Potter, who has accepted the Professorship of Mathematics at King's College, Toronto.—Candidates for the Appointment are requested to send in applications and testimonials to the Council on or before the 16th May next.

CHAS. C. ATKINSON,
14th Jan. 1843. Secretary to the Council.

GEOLOGICAL MINERALOGY.—Mr. J. TENNANT, F.G.S., will commence the Second Part of his LECTURES on MINERALOGY, with a view to facilitate the study of GEOLOGY, and of the Application of Mineral Substances in the ARTS, on WEDNESDAY NEXT, at Nine o'clock, A.M. The Lectures will be continued on each succeeding Wednesday. J. LONSDALE, Principal.
King's College, London, Jan. 20, 1843.

TO LANGUAGE TEACHERS.

WANTED, a TEACHER, or TEACHERS, of FRENCH and GERMAN, for TWO YOUNG LADIES, within five miles of Hyde Park Corner. A Lady who can teach both languages would be preferred.—Address to S., at No. 5, Maiden-lane, Covent-garden, stating terms per lesson twice a week.

EDUCATION.—Mrs. POTTS would RECEIVE a few YOUNG PEOPLE to EDUCATE with her own Daughters, at Vanbrugh Castle, on the summit of Maze Hill, opposite the Eastern Gate of Greenwich Park. An absorbent soil renders the grounds fit for exercise at all seasons. The most approved modes of imparting accomplishments, and appropriate and agreeable exercises, render the body symmetrical and vigorous, and enable the mind to receive and retain instruction.

THE Principal of an Establishment by the Sea, at a rural and favourite Watering Place on the Sussex coast, well known for its salubrious air, is desirous of COMPLETING HIS LIMITED NUMBER OF PUPILS with a few YOUNG GENTLEMEN, whose health or studies may require more than ordinary attention. The course of instruction comprises all the usual branches of a liberal education, and the improvement, comfort, and happiness of the young gentlemen are objects promoted by the most assiduous care. Fifty Pounds per annum include every charge. A Prospectus, with references, will be forwarded on application, by letter, to A. B., Post Office, Eastbourne.

EDUCATION.—Dr. GEORGE J. BOMPAS and Mr. EDWARD KELLER beg to inform Parents and others, that they have lately OPENED A SCHOOL NEAR BRISTOL, the business of which will recommence on the 20th of January. It is their wish to keep constantly in view the moral and religious improvement, and the bodily health of their scholars, as well as their intellectual culture, and their instruction in all those branches of knowledge, which are necessary or important to a liberal education. Reference may be made to Dr. Tweedie, 28, Montagu-place, Bedford-square, Professor Sharpey, M.D. University College, and Mr. Serjt. Bompas, Serjeants'-inn, London; R. Winter, Esq. Hove, near Brighton; and Comte Verhuell, 25, Rue Madame, Paris.—Prospectuses, additional references, and other particulars, may be obtained on application to Messrs. Bompas & Keller, Fishponds, near Bristol.

EDUCATION IN IRELAND.—ROYAL SCHOOL of DUNGANNON.—This institution, eminently distinguished amongst the first-class schools of Ireland, presents peculiar advantages: presided over for many years, with uninterrupted success, by the present Head Master, a gentleman distinguished amongst the first science, classical, and divinity scholars of Trinity College; the inferior masters, all either scholars or prize-men of the University; the pupils of the first respectability; the College remarkable for the elegance and airiness of its buildings, the salubrity of its situation, and the beauty of its grounds. Four hundred pounds per annum allocated from its funds for the establishment of Royal or Queen's scholarships, ten of which, viz. five of 50l. per annum, and five of 30l. per annum, are enjoyed exclusively by its pupils, when students of the University; daily Scriptural instruction by the Head Master; lectures on natural philosophy, in addition to a more than usually extended science, classical, and English course; instruction given to those pupils who may require it, by well-qualified masters, in French, Drawing, and Music, and the advantages of a valuable library, a gymnasium, a drill master, and a superintendent who never leaves the pupils during their hours of recreation.

The excellence of the system of education pursued at DUNGANNON COLLEGE is proved by the eminent success of its pupils in the University of Dublin, and in the military colleges of England. For many years the average number of distinctions, which they have obtained in Trinity College, has been thirty. In the year which has just terminated they have obtained two Queen's scholarships of 50l. per ann., two ditto of 30l. per ann., two University exhibitions of 10l. per ann., two gold medals, senior science moderatorship, senior classical moderatorship, twelve classical honours, three science honours, Vice-Chancellor's prize for Greek verse, Hebrew premium, third, seventh, and eighth places at entrance, from above one hundred candidates.

The two most distinguished scholars, in classics and science, of the class which has just answered for its degree, were pupils of DUNGANNON SCHOOL. The one, Mr. Fausett, obtained, during his collegiate career, second place at entrance, from 136 candidates, eight first rank classical honours, seven Vice-Chancellor's prizes for Greek verse, first University scholarship, senior classical moderatorship, classical gold medal, Hebrew premium, divinity premium, Queen's scholarship of 50l. per annum, and University exhibition of 10l. per annum. The other, Mr. Hancock, obtained fifth place at entrance, from 136 candidates, ten first rank science honours, two classical honours, senior science moderatorship, science gold medal, Hebrew premium, and Queen's scholarship of 50l. per annum.

First place has also been obtained by pupils of Dungannon School at entrance into Woolwich.

Terms, 5 guineas entrance, and 46 guineas per annum.

Dungannon is situated in the best part of the North of Ireland, 38 miles from Belfast, 24 of which may be travelled by railroad.

Communications to be addressed to the Rev. JOHN R. DARLEY, COLLEGE, DUNGANNON, IRELAND.
Dungannon College, Jan. 5, 1843.

PRIVATE PUPIL.—A CLERGYMAN, for some years Tutor to a Nobleman, and subsequently receiving Six Pupils into his house, a moderate distance from London, would be glad to fill a VACANCY with a GENTLEMAN'S SON, whose education or health may require more than common care.—Letters addressed to the Rev. J. C. C., Post-office, Hampton Court, Middlesex, will be forwarded to him.

BOARDING HOUSE IN GERMANY, conducted by MADAME HARTKNOCK, at LEIPSIC, Reichels Garten, No. 773. Ladies only are received, and every facility is afforded them of acquiring the German language, and of procuring Masters in all the other branches of instruction. Terms for board, lodging, and washing, 20l. per annum. Leipsic is within a few hours' journey of Berlin and Dresden, and only four days' journey from London, the whole of which may be performed by steam.—References in London, Alex. Black, Esq. 8, Wellington-street North; L. Coleman, Esq. 34, Broad-street Buildings; and Herrn Roeckel, 9, London-street, Fitzroy-square.

CLAPHAM PARK ACADEMY.—In this highly salubrious, open, delightful, and select locality, not surpassed by any in the environs of London, Mr. LONG has the advantage of premises recently erected for him, in the most excellent manner, on his own plan, and consequently possessing accommodations of no ordinary character, conducive alike to good order, health, and cheerfulness. In this Establishment a Liberal Education, conducted with equal care and efficiency in ALL its departments, is combined with an ever-watchful moral influence and oversight, careful religious culture, the most liberal arrangements, and maternal attention, while the intellect, the dispositions, and the deportment of the Pupils are equally objects of an unceasing attention, guided by the results of a thoughtful experience of many years. In confirmation of the above recommendations, Mr. Long is happy in the assurance of the grateful and affectionate recollections of numerous pupils, and his reference will be cheerfully responded to by Ministers and Gentlemen of the highest respectability, whose names Mr. Long will be happy to furnish, with additional particulars.—The terms range from 40 to 60 guineas.

ROYAL HIBERNIAN ACADEMY.—ANNUAL EXHIBITION.
Notice is given to Exhibitors, that the SEVENTEENTH ANNUAL EXHIBITION of Painting, Sculpture, and Architecture, of the Royal Hibernian Academy, will open on MONDAY the 1st of May next; and that all works intended for exhibition must be sent to the Academy house on or before Saturday the 20th April.

By order,
GEORGE PETRIE, R.H.A., Secretary.
Academy-house, Lower Abbey-street.
6th January 1843.

A MADEIRA HOUSE.—For the BENEFIT of PERSONS in DELICATE HEALTH, or who are labouring under protracted or variable disorders of the internal organs or of the joints. Under the superintendence of a Gentleman, who has had peculiar opportunities of observing the advantages of a warm climate, a complete establishment has been formed, in which an uniformly high temperature, together with airiness, and the indispensable comforts of an invalid, has been carefully considered. Application for particulars must be by letter, addressed to Mr. R. Nuth.

One or two Domestics in declining health, and of superior character, may find an advantageous engagement.
36, Bedford-square.

PRIZE ESSAY—TWENTY GUINEAS.

THE above Sum having been offered by the CENTRAL COMMITTEE of ASSISTANT DRAPERS for the best ESSAY on the subject of LATE CLOSING, as advertised in the *Times*, *Morning Chronicle*, *Record*, and *Patriot*, of the 5th, and the *Athenæum*, *Spectator*, *Sunday Times*, and *Argus*, of the 7th, Competitors are informed that the period allowed for writing is extended from the 6th of February to the 1st of March, 1843.

Committee Room, By order,
Crown and Anchor Tavern, (Signed)
Jan. 17, 1843. C. MAYHEW, Hon. Sec.

A CATALOGUE of 10,000 VOLUMES of BOOKS, New and Secondhand, in Divinity and Miscellaneous Literature, at very low prices, on sale by J. M. BURTON, Ipswich, may be had of Simpkin, Marshall & Co. London, price 6d. Books sent free of expense to London, and thence, per cheapest conveyance, to any part of the kingdom.

COMPLETE FRENCH SCHOOL, BY MONS. LE PAGE.

PART 1.—L'ÉCHO de PARIS; being a Selection of Phrases a person would hear daily if living in France. With a Vocabulary of the Words and Idioms. 5th edition, with numerous Woodcuts, price 4s. neatly bound.

By M. LE PAGE, Professor of French in London.
Also, lately published, by the same Author,

Part 2.—Gift of Fluency in French Conversation. A set of Exercises for the Learner of the French Language, calculated to enable him, by means of practice, to express himself fluently on the ordinary topics of life. 2nd edition, with Notes, 3s. 6d.

Part 3.—The Last Step to French; or the Principles of French Grammar displayed in a series of Short Lessons, each of which is followed by Questions and Exercises, with the Versification. 3s. 6d.

French School Complete, the Three Parts bound in 1 vol. price 10s.

Also, The French Master for the Nursery; or, First Lessons in French, for the Use of Junior Pupils. By M. Le Page. 3s. 6d. neatly bound.

"M. Le Page is the best idiomatic instructor we know of. His dialogues on the sound of French letters and the parts of speech, are of first-rate excellence."—*Court Magazine*.

"M. Le Page's tabulation of the verbs is as complete as it is good; his Syntax is lucid and scholar-like, and his Exercises are well graduated, and likely to exercise the student's mind with his memory."—*Gentleman's Magazine*.

"To schools and private teachers these volumes must be invaluable."—*Monthly Review*.

London: Effingham Wilson, 18, Bishopsgate Within.

Sales by Auction.

SOUTHGATE'S LITERARY AUCTION ROOMS.
By HENRY SOUTHGATE & CO. at their Rooms, 22, Fleet-street, THIS DAY, at 1.

A VALUABLE COLLECTION of ARCHITECTURAL WORKS and ILLUSTRATED BOOKS; also a variety of Standard Literature.

On WEDNESDAY, January 25, and three following days, at 1,

A VALUABLE COLLECTION of ENGRAVINGS, comprising upwards of 3,500 Portraits and Views alluding to the County of Norfolk, many of which are excessively rare, together with some very fine Portraits by Vertue; Holbein's Heads, choice impressions; Interesting Portraits of Thomas Moore, Lord Nelson, Duke of Wellington, Lord Byron, Napoleon, &c.; also some others to illustrate Granger, and for general illustration of Celebrated Mechanics, Clergy, Philosophers, Naval, Military, and other Characters; an immense number relating to the Topography of Great Britain, many very curious; Views by Hollar, Buck, Byrne, Stothard, Cotman, &c.; a great variety to illustrate Pennant's London; Prints of Foreign Topography from Piranesi, Canaletti, &c.; Fine Prints of the English and Foreign Schools; with a quantity of Etchings by the Old Masters, and some scarce early Wood Engravings.

May be viewed, and Catalogues had.

SALE OF AN IMPORTANT AND GENUINE COLLECTION OF PICTURES, DRAWINGS, ENGRAVINGS, &c.
MANCHESTER.

MESSRS. T. WINSTANLEY and SONS, of Liverpool, have the honour to announce, that they have received directions from the Executors of the late BENJAMIN HICK, ESQ. OF BOLTON,

to SELL by AUCTION, at the EXCHANGE GALLERY, DUCIE-PLACE, MANCHESTER, on Tuesday, the 21st Feb. and Three following Days, at Half-past Ten o'clock each day, the valuable, well-known, and much-admired COLLECTION of the late Proprietor; comprising capital PAINTINGS by celebrated Masters of the Italian, Flemish, Dutch, and British Schools; a tasteful Selection of Modern DRAWINGS in Water-colours; select Proofs of celebrated ENGRAVINGS, after Sir David Wilkie and other Painters, collected during a period of thirty years from the most favourable public and private opportunities, with acknowledged taste and judgment, and at a very liberal expense.

The productions of the Foreign Schools of Painting consist of a 'Holy Family,' by Rafaelle; a duplicate of the principal Group of the 'Virgin and Child,' with the Magdalen,' from his celebrated picture called 'St. Jerome,' and undoubtedly from the hand of that great master Correggio; a magnificent 'Head of Christ,' painted with powerful expression by the masterly pencil of Annibale Caracci; a Portrait of the 'Painter's Daughter,' by Carlo Dolce; a brilliant 'View of Dresden,' by Canaletti; with fine Specimens of the high talents of Parmegiano, Sasso Ferrato, Paul Veronese, Carlo Marratti, Murillo, and Gaspar Poussin; a most capital and highly-finished 'Interior, with Figures,' by Egbert Hemskirk the younger, truly valuable for its extraordinary quality and the purity of its preservation; select Specimens of the Works of Wouverrmans, Paul Potter, David Teniers, Brawer, Gerrard Dow, Ostade, Backhuysen, Platzer, Vernet, Van Stry, and other Masters.

The Selection of Modern Art, which shows the liberality and good taste with which Mr. Hick patronized the British School, comprises the original finished Sketch of 'John Knox administering the Sacrament at Caldar House,' by the late Sir David Wilkie, purchased at the sale of his Pictures in London; four genuine Landscapes, by Richard Wilson; two Ditto by Loutherbourg; two Pictures by George Morland: a beautiful Landscape, sunset effect, by Sir A. W. Callcott; 'The Letter from Sea,' by Knight; with other pleasing and interesting Subjects, by Howard, Eastlake, Lee, Tenant, John Wilson, Stephanoff, Shayer, Poole, Carmichael, Zeitter, Bradley, Barker, the Nasmyths, the late Benjamin West, P.R.A., Westall, &c., &c.; the 'Rivers of Bliss,' and 'Pandæmonium,' by John Martin; the 'Return of a Greek Armament,' by Linton; and a Selection from the Works of the late Henry Liverseege, several of which were painted for Mr. Hick: amongst them will be found the 'Inquiry,' 'Captain Macheath,' 'The Black Dwarf' 'The Benediction,' 'Lucy Ashton,' and others.

The WATER-COLOUR DRAWINGS comprise the original Sketch of the 'Presentation of the Keys of Edinburgh to George the Fourth at Holyrood,' by Sir D. Wilkie, with other judiciously selected Specimens of David Roberts, Danby, Stanfield, Stothard, Westall, Cattermole, Prout, Cox, Cooper, Austin, Holland, J. M. Wright, Liverseege, Richardson, Vickers, Stephanoff, Nash, Copley Fielding, and other eminent Artists of the justly admired English Water-colour School.

Amongst the Engravings is a complete set of the well-known and celebrated subjects after Sir David Wilkie, some of them in states of great rarity, and the whole in excellent condition; numerous specimens of the able talent of Doo, Robinson, and other English and Foreign Engravers.

The whole may be viewed three days previous to the Sale. Catalogues may be had at Mr. Grundy's, Exchange-street, Manchester; of Messrs Winstanley, Paternoster-row, London; at the office of the 'Midland Counties' Herald,' Birmingham; at the place of Sale; and of Messrs. T. Winstanley & Sons, Church-street, Liverpool.

To prevent intrusion, no person will be admitted to the view or Sale without a Catalogue, which will be charged one shilling each.

RÉUNIONS DANSANTES.—The ROYAL CHOREMUSICON, a very novel and pleasing piece of musical mechanism, possessing all the effect of a complete quadrille band. Its convenient size, and the sweetness and brilliancy of its tone, renders it extremely well adapted for the ball-room. Engagements received at C. OLLIVIER'S Musical Instrument Warehouse, 41, New Bond-street, where it may be heard daily between the hours of two and four o'clock.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, where all business relating to the Securing and Disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, Drawings of Inventions, is expeditiously and economically effected.
Also REGISTRATIONS under the New Consolidated Copyright of Designs Act, 5 & 6 Vict. cap. 100.
A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn-fields.

THE SAINT ANN'S SOCIETY.
Under the Patronage of THE QUEEN,

The Queen Dowager.	The Prince Albert.
The King of Hanover.	The King of the Belgians.
The Duchess of Gloucester.	The Duchess of Kent.
The Duke of Sussex.	The Duke of Cambridge.

THIS SOCIETY (by Voluntary Contributions) Maintains, Clothes, and Educates the CHILDREN OF THOSE, ONCE IN PROSPERITY, Orphans, or not, from all parts of the World.
The HALF-YEARLY ELECTION will take place on the 9th of February next.
Subscriptions and Donations gratefully received by
EDWARD F. LEEKS, Secretary.
2, Charlotte-row, Mansion House, Jan. 1843.
Annual Subscription, 1l. 1s.; Life ditto, 10l. 10s.

SHIPWRECKED FISHERMEN and MARINERS' BENEVOLENT SOCIETY.
Annual Subscriptions..... 2s. 6d.
Donations..... Ad libitum.
The very heavy and numerous cases of distress produced by the late severe weather, and which cases are requiring relief from this Society, render it necessary that the Board of Management should remind the contributors and friends to the charity throughout the kingdom, that the period for renewing their annual subscriptions has now arrived, and that an early payment of the same will be very advantageous to the Institution.
The Board avail themselves of this opportunity to solicit the attention of those who have not hitherto patronized this Society to the very important results which it has been able to accomplish in the space of three years (as detailed below), and to the very small sum (half-a-crown) which is asked as the regular subscription; whilst, of course, larger amounts will be gratefully acknowledged.
Donations, &c. thankfully received by Messrs. Williams, Deacon & Co., the Bankers of the Society; by the 498 Hon. Agents and Secretaries; and at the Office of the Central Society, 26, Bucklersbury. EDWARD WEST, Secretary.
London, Jan. 16, 1843.
Total Number of Persons relieved from the 8th of May, 1839, to the 31st of March, 1843.

Widows	279
Children	1,034
Aged Parents	160
Shipwrecked Persons	2,627
Families of Fishermen left destitute from Storms	408
	4,508

N.B. The Board meet on every Friday, at Twelve o'clock, to consider cases for relief, and for other business.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s. d.		s. d.
Table Spoons and Forks, per doz.	16 6	Mustard Spoon	0 6
Dessert ditto, ditto	12 6	Tea Spoons, per dozen	5 6
Fish Knives	5 6	Gravy Spoons	3 6
Soup Ladles	6 6	Salt ditto	0 6
Sauce Ladles	1 6	Sugar Tongs	1 0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.
C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.
TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35s.; a best Gothic border 30-inch Japan tray, 12s.; a dozen ivory table knives, 11s.; dessert ditto, 9s.; a pair of carvers, 4s. 6d. A. Palmer's Candle Lamp, bronze or lacquered, 9s.; a solar ditto, to burn common oil without smoke or smell, 25s.; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1s. each; best ivory-handle razors, 3s. 6d. per pair.
41 and 42, Barbican, and at 16, Norton Folgate.

NAVIGATION AND NAUTICAL ASTRONOMY.
The Fourth Edition, Corrected, in a large vol. 8vo. price 10s. 6d. boards, or 12s. bound,
A TREATISE on NAVIGATION and NAUTICAL ASTRONOMY, adapted to the Purposes of Elementary Instruction; with an Extensive Series of Examples for Exercise, and all the Tables requisite for Nautical Computations; with Rules and Examples adapted to the 'Nautical Almanac' in its New and Improved Form.
By EDWARD RIDDLE, F.R.A.S.,
Master of the Nautical School, Greenwich Hospital.
London: Robert Baldwin, 47, Paternoster-row.
Also, extracted from the above work, price only 2s. 6d.,
Tables of the Logarithms of Numbers, and of Sines, Tangents, and Secants, to Six Places of Decimals.

FRENCH GRAMMAR FOR PRIVATE TUITION.
In 8vo. price 12s. in cloth, the Eighth Edition of
A GUIDE to the FRENCH LANGUAGE, (especially devised for Persons who wish to Study the Elements of that Language without the assistance of a Teacher.
By J. J. P. LE BRETHON.
London: Robert Baldwin, 47, Paternoster-row.
A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the elements of the French language practically, as surely as if a professed teacher were sitting by his side; and, with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed. Price 8s.

The Fourth Edition, in 12mo. price 5s. bound,
A PRACTICAL SYSTEM of ALGEBRA, designed for the Use of Schools and Private Tuition.
By PETER NICHOLSON and J. ROWBOTHAM.
*** In this edition the authors have not only introduced some important original matter, particularly on proportion, imaginary quantities, binomial theorem, series, &c., but have also endeavoured to illustrate many parts of the work by such alterations as will make it still more acceptable to the public.
London: Robert Baldwin, 47, Paternoster-row.
Also, price 8s. bound,
A Key to the above work, containing the Solutions of more than 900 Problems, by the use of which, and the Algebra, a person may acquire a knowledge of this valuable Science without the assistance of a Master.

CLASSICAL WORKS
By the Rev. THOMAS KERCHEVER ARNOLD, M.A.
Rector of Lyndon, and late Fellow of Trinity College, Cambridge.
I.
A PRACTICAL INTRODUCTION to GREEK ACCIDENCE. With Easy Exercises and Vocabulary. 2nd edition. 5s. 6d.
II.
A Practical Introduction to Greek Prose Composition. 4th edition. 5s. 6d. This Work, which is nearly on Ollendorff's Plan, consists of a Greek Syntax founded on Buttman's, and easy Sentences to be translated into Greek, after given Examples, and with given Words.
III.
A Practical Introduction to Latin Prose Composition. 5th edition. 6s. 6d. This Work, like the foregoing, is founded on the principles of imitation and frequent repetition. It is at once a Syntax, a Vocabulary, and an Exercise Book; and considerable attention has been paid to the subject of Synonymes. This and the preceding Work are now used at all, or nearly all, the public Schools. A SECOND PART *is just ready*.
IV.
Henry's First Latin Book. 3rd edition (with additional Construing Lessons). 3s. The object of this Work (which is founded on the principles of imitation and frequent repetition) is to enable the pupil to do exercises from the first day of his beginning his Accidence. It is recommended by the Oxford Diocesan Board of Education, as a useful work for Middle or Commercial Schools; and adopted at the National Society's Training College at Chelsea.
V.
A Second Latin Book and Practical Grammar. Intended as a Sequel to Henry's First Latin Book. In 12mo. Price 4s.
VI.
A First Verse Book. Intended as an Easy Introduction to the Latin Hexameter and Pentameter. In 12mo. Price 2s.
VII.
A Practical Introduction to Latin Verse Composition. *Contents*:—1. 'Ideas' for Hexameter and Elegiac Verses. 2. Alcaics. 3. Sapphics. 4. The other Horatian Metres. 5. Appendix of Poetical Phraseology, and Hints on Versification. In 8vo. Price 5s. 6d.
VIII.
Eclogæ Ovidianæ; with English Notes, &c. 5th edition. Price 2s. 6d. This Work is from the Fifth Part of the 'Latsinisches Elementarbuch' of Professors Jacobs and Döring, which has an immense circulation on the Continent and in America.
IX.
Materials for Translating into Latin. From the German of Grotefend, with Notes and Excursuses. In 8vo. Price 7s. 6d.
X.
The Eton Syntax (in English and Latin), with additional Rules, and Copious Examples from Bröder and others. 2nd edition. 3s. 6d.
XI.
Historiæ Antiquæ Epitome, from Cornelius Nepos, Justin, &c. With English Notes, Rules for Construing, Questions, Geographical Lists, &c. 2nd edition. Price 4s.
XII.
Doederlein's Hand-Book of Latin Synonymes. Translated by the Rev. H. H. Arnold, B.A. Price 7s. 6d.
XIII.
Eclogæ Horatianæ. (*Nearly ready.*)
XIV.
An English Grammar for Classical Schools; being a Practical Introduction to English Prose Composition. 2nd edition. 4s. 6d. This Work is much enlarged, with the addition of a Syntax and a Course of Exercises.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

CROSSLEY'S COMPREHENSIVE CLASS BOOK, containing Lessons in History, Physics, Natural History, Geography, and Miscellanies; with Notes and Questions, and copious Appendices, Chronological, Geographical, Scientific, and Etymological. 324 pp. 12mo. bound. 3s. 6d.
Hamilton & Co.; and Simpkin & Marshall.

DAILY LESSON BOOKS, Nos. 1, 2, 3, and 4.—These books are adopted in the Schools of the British and Foreign School Society, and are at once the cheapest, most comprehensive, and best teaching books extant.
Hamilton & Co.; and Simpkin & Marshall.

Adapted for Schools, Private Teachers, and Students.
COOLEY'S ELEMENTS of EUCLID, with explanatory Appendix and Exercises. 4s. 6d. bd.
"The best edition of the Elements which has yet appeared." *Athenæum*.—"This neat edition of Euclid's Elements is a great improvement on Simson's and Playfair's." *Scholastic Journal*.—"The editor has done all that could be done to make Euclid easy to beginners." *Cambridge Chronicle*.
COOLEY'S GEOMETRICAL PROPOSITIONS: a Key to the Exercises appended to the Elements. 3s. 6d. bd.
COOLEY'S FIGURES of EUCLID, with Enunciations, 1s. 6d.
London: Whittaker & Co.: sold by all Booksellers.

"We venture to prophesy that the 'Cook's Oracle' will be considered as the English Institute of Cookery."—*Edinburgh Review*.
II. Dalgairns' Cookery. A new edition. 6s.
This Volume contains a Complete System of Practical Cookery, carefully adapted to the purposes of every-day life.
Robert Cadell, Edinburgh; Houlston & Stoneman, London.

In one closely-printed volume, 508 pages, price 10s. 6d.
A POPULAR HISTORY of BRITISH INDIA, CHINA, and the Insular Possessions of England in the Eastern Seas.
By W. COOKE TAYLOR, LL.D.
"It is precisely such a summary as was wanted by the general reader. Such a volume, in particular, has long been wanted in our schools, where little is taught of India more than may be learnt as a geographical exercise; and yet the stirring and romantic interest of the theme, leaving out of view its importance, should recommend it to the teacher as likely to prove a welcome and animating addition to the usual course of historical instruction."—*John Bull*, Nov. 18.
J. Madden & Co. 8, Leadenhall-street.

These elegant editions may be had in various bindings.

SECOND EDITION, MUCH ENLARGED AND IMPROVED,

HINCKS' GREEK-ENGLISH SCHOOL LEXICON:

Containing all the Words that occur in the Books used in most Schools and Collegiate Courses.

By the Rev. THOMAS D. HINCKS, L.L.D. M.R.I.A.
Late Master of the Classical School in the Royal Belfast Institution.

Royal 12mo. price 10*s*. 6*d*. bound.

"It has been a great object to render this edition more extensively useful by considerable additions, without materially altering the size or price. This could only be effected by the use of various contractions and the introduction of fewer quotations; but nothing has been omitted which was necessary for explanation. By this means several works have been included, especially the works of the great historians, Herodotus and Thucydides; the Odyssey of Homer; Anacreon; the Olympics of Pindar; some Idylls of Theocritus; the Nubes of Aristophanes; the Septuagint; and some others, as will be seen by the index. These, in addition to the works included in the former edition, will include illustrations of the language at different periods and in different dialects."

NEW SCHOOL BOOKS

And Improved Editions of established Elementary Works,

PRINTED FOR

LONGMAN, BROWN, GREEN and LONGMANS.

1.

A SECOND LATIN VERSE BOOK,

or "Full Sense" for Hexameters and Elegiac Verses; with Notes, Tables, and Index. Originally drawn up by the late C. RAPIER, B.A., formerly Head Master of the Grammar School, Morpeth. Re-edited, with considerable Additions, by T. K. ARNOLD, M.A., Rector of Lyndon, and formerly Fellow of Trinity Coll. Cambridge.—*Just ready.*

2.

ENGLISH; or, the Art of Composition

explained in a Series of Instructions and Examples. By G. F. GRAHAM. Fcap. 8vo. 7*s.* cloth.

"Calculated to render that which to youth is generally made a frightful drudgery, an interesting study and a pleasing recreation."—*Atlas.*

3.

A COMPLETE LATIN-ENGLISH

and ENGLISH-LATIN DICTIONARY, compiled from the best Sources. By the Rev. J. E. RIDDLE, M.A. 2nd edition, corrected and enlarged, 1*l.* 11*s.* 6*d.* cloth.

Abridged for Schools, 12*s.* bound.

The English-Latin and Latin-English portions of each of the above, may be had separately.

A Diamond Pocket Latin Dictionary is just ready.

4.

The GREEK TESTAMENT; with

copious English Notes. By the Rev. S. T. BLOOMFIELD, D.D. F.S.A. 4th edition, revised. 2 vols. 8vo. with Map, 40*s.* cloth.

School Edition, 12mo. 10*s.* 6*d.* cloth.

Lexicon to the New Testament, fcap. 8vo. 9*s.* cl.

5.

An ATLAS of MODERN GEOGRA-

PHY; consisting of 23 coloured Maps, with Index of nearly Ten Thousand Places. By SAMUEL BUTLER, D.D., late Lord Bishop of Lichfield, and formerly Head Master of Shrewsbury School. Edited by the Author's Son. New edition, re-engraved, with Corrections from the Government Surveys, and the most recent sources of information, 8vo. 12*s.* half-bound.

By the same Author,

A SKETCH of MODERN and

ANTIENT GEOGRAPHY, for the Use of Schools. A new edition, revised by his Son. 8vo. 9*s.* boards; 10*s.* 6*d.* bound.

6.

A LEXICON of the GREEK LAN-

GUAGE, for the Use of Colleges and Schools; containing, 1. A Greek-English Lexicon, combining the advantages of an Alphabetical and Derivative arrangement—2. An English-Greek Lexicon, more copious than any that has ever yet appeared. To which is prefixed, a Concise Grammar of the Greek Language. By the Rev. J. A. Giles, L.L.D., late Fellow of C. C. Coll. Oxon. 2nd edition, with Corrections. 8vo. 21*s.* cloth.

7.

A GRAMMAR of GENERAL GEO-

GRAPHY, for the Use of Schools and Young Persons, with Maps and Engravings. By the Rev. J. GOLDSMITH, revised and corrected by HUGH MURRAY, Esq., Author of "The Encyclopædia of Geography," &c. New edition, enlarged and improved, royal 18mo. 3*s.* 6*d.* bound.

In this edition, besides the addition of all new information, Countries which have risen in importance, as the British Colonies in America and Australia, the United States, China, Prussia, and various others, have been treated at greater length.

8.

A NEW TREATISE on the USE of

the GLOBES; or, a Philosophical View of the Earth and Heavens; comprehending an Account of the Figure, Magnitude, and Motion of the Earth; with the natural Changes of its Surface, caused by Floods, Earthquakes, &c., together with the Principles of Meteorology and Astronomy; with the Theory of Tides, &c. Preceded by an extensive Selection of Astronomical and other Definitions, &c. &c. By THOMAS KEITH. New edition, considerably improved by J. ROWBOTHAM, F.R.A.S. 12mo. with 7 Plates, 6*s.* 6*d.* bound.

9.

MANGNALL'S QUESTIONS. New

and *only* Genuine Edition, 12mo. 4*s* 6*d.* bound.

In the present edition all the information has been carefully corrected, and brought down to the latest period. The History has been continued to the reign of Her present Majesty. The Biography has been completed by adding the Names of the most distinguished Persons deceased since the first publication—as Byron, Scott, Mackintosh, Park, Watt, Arkwright, Lawrence, Wilkie, Laplace, Lagrange, Necker, Goethe, Schiller, Werner, Beethoven, &c. The Elements of Astronomy, and the Questions on Common Subjects, have also received some important Corrections and Additions.

10.

QUESTIONS on the HISTORY of

EUROPE: a Sequel to Mangnall's Historical Questions. By JULIA CORNER. New edition, 12mo. 5*s.* bound.

Contents.

France,	Portugal,	Poland,	The Apostolic See,
Spain,	Germany,	Italy,	and the Popes.

REVIEWS

The Age of Great Cities. By Robert Vaughan, D.D. Jackson & Walford.

One benefit is certainly derived from advanced civilization, that no sooner is a new fallacy put forward than it calls forth champions ready and willing to do battle in the cause of truth; and the appearance of the thoughtful and suggestive volume before us is a striking instance of the fact.

Among the most absurd (and, but for its absurdity, the most mischievous) impositions which have recently been practised on public credulity, stand out prominently certain attempts to turn aside the march of civilization, to denounce manufacturing industry as dangerous to national prosperity, and as fatal to morals and religion, and to advocate a return to agricultural life and industry as the best means for relieving distress and bringing back Astræa to the earth. The proposition, it is true, is so absurd in theory, and so impossible in practice, that there is little ground for apprehending its direct application. The most sanguine cannot expect to see Belgrave Square converted into a "deserted village," or the streets of Manchester once again surrendered to the plough. It was with no such view indeed that the doctrine was broached: and its advocates can only be accused of placing it in the front of their political battle, as a feint to disguise their main attack, to confuse the popular intellect, to mystify the plain, and to perplex the simple. For this limited purpose the instrument was not inadequate to its end; and there are intellects, in plenty, that stand in much need of the sort of information which Dr. Vaughan has addressed to public consideration.

The volume opens with a brief reference to the still pending conflict between civilization and feudalism, as being at the bottom of the whole dispute, and in reference to the author's own undertaking. On this latter subject we may observe, that the arguments of Dr. Vaughan's opponents, bating a certain amount of misrepresentation of matters of fact, turns on the old sophism of an inference from abuse; and as far as its partizans are themselves of the legislative class, it is an advantage taken by them of their own ignorance or neglect, in not having built up a municipal, moral, and legal code, to meet the necessities of large cities as they arose. Considered, therefore, as a mere political question, the folly is soon disposed of. But if we proceed by ever so small a step beyond the abstractions of the subject, to enter upon the various details involved in the condition of a great city, or in the complex we call *civilization*, we shall discover a host of subordinate questions touching closely on the dearest interests of society, and from their present unsettled state, contributing largely to perplex men's judgments. But we will let Dr. Vaughan speak for himself:—

"Were the error in relation to the social influence of great cities, to which reference has been made, an error confined in its influence to the science of politics, I should readily have left it to be dealt with in such manner as may have appeared meet to the sagacity of politicians. But it extends—and the men who broach it mean that it should extend—far beyond the circle of mere politics. It bears immediately upon everything belonging to our most important interests as a people. If left to its natural course it would be fatal, not only to all secular freedom, but especially to those purer morals, and to that higher order of intelligence, which the abettors of such opinions expect us to regard as matters taken under their peculiar patronage. Its true tendency must be to bring back the rudeness of a feudal age. Its natural effect must be, not only to place all religious liberty under a rigorous proscription, but to supersede religion itself, by substituting the priestly arts of a debasing superstition in its place. In not a few cases, the men who belong thus to the retrocession class, rather than to the progress class in public affairs, are men who mean all this, and in other cases, what the men do not mean, would be certainly realized by their system, if once permitted to manifest itself by its fruits."

Thus considered, even though we might believe, that the scope of the evil may be somewhat overstated, we must yet admit, that the subject is of more than momentary importance; and we cannot but foresee that the discussion will prove such in detail, whatever may be thought of the cogency of the principal argument.

Reduced to its most general terms, the proposition which Dr. Vaughan defends is no more than the self-evident aphorism, that man is a gregarious animal, dependent for the developement of his moral faculties, as for his most ordinary pleasures, on association: or in one word, that civilization is, in fact, as in etymology, a derivative from *civis*. In a less abstract form, the proposition may be thus summed up: "great cities, in all ages and in all lands, have been centres of vast experiments in the history of society," and it is principally through their agency that every important step has been made in the progress of civilization. Without great cities, indeed, no civilization could have existed; they are at once the causes and the evidence of progress; so that the fullest developement of municipal polity, and the greatest diffusion of large aggregates of a citizen population, may be justly considered as constituting the perfection of social existence.

These propositions are in seeming contradiction to the notion so prevalent in antiquity, that tillage was the great proximate cause of civilization,—that Ceres was at once the goddess of harvests and of laws. Certain it is, that the necessities of the cultivator of the soil, long before the existence of extensive cities, must have given rise to some close associations for the protection of property, and called into existence a somewhat complex code for the maintenance of the rights to which property gave birth. Hence it is probable, that the first citizens were universally the foremost among the practical agriculturists, such as we see them in the earlier times of Athens and in Rome. Between the citizen and the countryman, then, there is no necessary relationship of superiority and inferiority. In the earlier stages of society, the tiller of the soil was probably in the van of civilization, as tillage itself was a decided advance on pastoral life. The efforts required of the early cultivator, the forethought to prepare for the various contingencies by which his property might be affected, as well as to find markets for its disposal, must have far transcended all that is demanded of intellect and of labour, in the routine farming of modern times. It is not, then, sufficient to refer all the difference we in these days discover between the enlightened citizen and the uneducated farmer of another's land, to their respective circumstances of calling. No doubt that much of the disadvantages, under which the modern agriculturist labours, is attributable to all that remains of his servile condition, and his subjection to a landlord class.

But though the accumulation of agricultural produce must have preceded the existence of cities, and therefore the first citizens must have probably been farmers, it is not the less true, that the mere fact of civic association, of coming into closer contact, first established many moral, social, and physical relationships, which could not but have given a strong impulse to mind, and have ultimately produced a permanent difference in the respective characters of citizen and farmer. Wants more varied and complicated, labours requiring greater skill, more refined distinctions concerning rights and duties, longer-sighted calculations for obtaining political results, and, above all, a more rapid movement and circulation of ideas, supplied to the citizen both the causes and the means of a political, artistic, and philosophical superiority. On this account, not only must we attribute all the blessings of modern liberty, and of the higher civilization which already subsists amongst us, to the existence of great cities, but we must also assign no small portion of the actual civilization of the rural population to the reflex action of these causes. To the great cities, the country population is indebted for its law, its religion, its education, and its literature; and if these be so inferior in kind and degree, to an assignable and an attainable condition, within every man's conception and desire, it is only by means of a still greater developement of civic life, and an improvement in the public opinion of great cities, that such an amelioration can be expected.

In a review of the principal cities of antiquity, Dr. Vaughan regards them as having been constructed for safety, for commerce, or for both. He views them as having formed the nuclei of the several great empires which have borne their name. But in every instance in which such cities achieved a permanent existence, he infers, that commerce arose and intermingled its influence, even when not the primary principle of action:—

"The cities of antiquity, when sufficient time had passed to allow of their assuming some distinctive character, may be said to have been of three classes—the military, the commercial, and those in which these different elements are almost equally observable. Sparta and Rome have their place at the head of the military cities of antiquity. Tyre and Carthage bear a similar relation to the history of commerce. Even in these cities, the one object is not presented wholly separate from the other, but it acquires sufficient prominence to constitute character. In much the greater number, however, the arts of war and peace were more equally prosecuted. It was thus in the cities of Greece generally, and in all those opulent settlements which owed their existence to the enterprise of Greek colonists. Even Thebes and Memphis, and Babylon and Nineveh, were not more the centres of a vast military dominion, than the far-famed marts of ancient commerce. The great military roads, which, after the fall of the Babylonian empire, stretched in various directions over the whole space between the Persian Gulf and the Egean sea, and between the country of the Nile and the sources of the Oxus and the Jaxartes, were all lines of communication between merchants, as much as between soldiers. Indeed, in those times, the machinery of commerce seemed to carry with it much more of the power to perpetuate itself, than any dominion set up by the sword. Empires rose and fell in those ages with surprising rapidity. But while the wide frame-work of despotism was always liable to be thus broken in upon, and the guidance of it to be suddenly transferred to the hands of new masters, the companies of peaceful merchants continued to pace their way from one caravansera to another, and appear not to experience any great interruption even in the midst of such momentous changes. The last conqueror, whether the barbarian 'shepherd king' from the pastoral steppes of Central Asia, or the civilized Mede from a more favoured territory, was in general sagacious enough to perceive that the wealth and power of empire must be derived mainly from the ingenuity and enterprise allied with commerce; and that no folly could, accordingly, be greater than that, which should leave the productive skill and extended traffic of their dominions without protection and encouragement."

We cannot follow our author through his notices of the part which great cities have individually taken throughout the successive history of antiquity, in developing intelligence, and promoting the arts and the virtues of civilization. We must hasten forward; and the more so, because this part of the volume is more acceptable, as a

Digitized by Google

condensed and intelligible review of the whole subject, than for any specific novelty its author has discovered and displayed.

In the third chapter, the growing tendency which modern society exhibits to congregate in larger masses, is referred to the extinction of domestic slavery, the increased influence of females, the reformation in religion, and the discovery of printing. Each of these circumstances, both as cause and as effect, must have powerfully contributed to enlarge the social and moral grasp of intellect; and the commercial activity of the Middle Ages, with its glorious municipal institutions, is justly entitled to credit, as affording both a *primum mobile*, and a fitting element for calling these things into being. In touching on the Reformation, the author, as a divine, is on his own peculiar ground; and there is, we think, great temporary aptness, as well as truth, in what he says on the spirit of the Reformation:—

"But if Christianity has done much to foster the spirit which declares that every man should be a freeman, and that woman should be his companion, and not his slave; it has done much more, since the era of the Reformation, to strengthen all previous impulses of that nature, by calling upon men, without respect of persons, to become, in the main, their own teachers with regard to all matters of religious opinion and religious duty. * * It taught a people, who seemed to have nothing to do in religion, except to be observant of its forms, to feel as though they had everything to do in it, if their observance of forms was to be found of the slightest value. Men who had been taught to lean entirely on the priesthood of others, were admonished, that as they hoped to be saved, it would behove them to become their own priests. In this manner, it set forth a new doctrine in respect to human right and human duty, based on new views in regard to human capability. It raised man from a condition of mere passiveness in the hands of the accredited ministers of religion, and required him to act with the intelligence and seriousness proper to a being conscious of his personal accountableness to God. * * It was no mean thing that men should learn to regard themselves as competent to pursue the course which had been thus marked out for them in respect to religion, inasmuch as it would prepare them to look with a new intelligence on many other matters, which, in common with religion, had been long accounted as subjects greatly above their comprehension. If men, for example, were to conduct themselves after this manner with regard to religion, was it not reasonable that they should learn to conduct themselves in the same manner with regard to the questions of civil government? If the church could err—and err so fatally, might not the state also err, and no less fatally, and could it be improper that the right to judge concerning the more sacred should be extended to the less? Religion and government are the great questions of society, and the principle which conveys a right to take cognizance of these, conveys a right to take cognizance of everything else. It is the fact that the principle of the Reformation carried with it these seeds of general improvement, that has given to it so much importance in the view of all minds interested in the progress of man and society. It was a call to wakefulness on one great subject, and a call made with so much success, that it could not fail to induce a habit of wakefulness in respect to many other subjects."

These, it seems to us, are the characteristic merits of the Reformation, its claims to admiration and respect. The dispute was not properly a dispute about texts, a dispute concerning the rejection of this ceremony, or a repudiation of that tradition; it was a stand made in favour of religion against priestcraft, of the free service of God against the passive-obedience slavery of man, —of the spirit and essence of revelation against he quibbles and quiddities of a degenerated philosophy—or to sum up all, of civilization against barbarity and degradation. Such a view of the Reformation will alone do it justice; and by thus regarding it, can mankind best be secured against the subtle snares which on every side beset a less philosophic and comprehensive aspect of its differences with the old church.

We do not think that Dr. Vaughan has at all overstated this part of his case; he has, on the contrary, somewhat overlooked the influence which great cities exercise on the first spread of Christianity, and in rescuing its followers from persecution. He has not even felt sufficiently the bearings of commerce on the rise and progress of the reforming spirit; having with respect to it, fallen somewhat into the common error of mistaking cause for effect:—

"The effect of this new spirit upon commerce, and upon the kind of civilization which has its centre in great cities, has been very conspicuous. Just before the commencement of the Reformation, the commercial power of Europe was in the hands of the Portuguese. During the progress of that struggle, Spain became the seat of commercial ascendancy. But no sooner do we see Protestantism acquire stability and power in Europe, than we see the civic industry, the manufacturing skill, the commercial enterprise, the colonial greatness, and the naval power of Europe go over, almost entirely, to the side of the professors of the new faith, and with that class of religionists have these things continued, in the main, to our own time. It was the liberating power of Protestantism which enabled the United Provinces to assert their independence in the face of the most deadly hostility on the part of Spain and her allies; and which enabled the same people to place an effectual check on the ambition of Louis XIV., even while the half of Europe was at his bidding. * * Portugal, Spain, and Italy, have continued their adhesion to the old faith, and to this day they are the victims of the old decrepitude. Nations upon the threshold of those countries have been making every sort of progress, with unprecedented rapidity, during the last three centuries, and during that period those kingdoms have not been merely stationary, but in most respects retrograding. * * We do not hesitate, therefore, to allege, that the weakness of the social system in Europe is on the side of Catholicism, and that its strength is on the side of Protestantism."

Now all this is only partially true, either in fact or in theory. The spirit of the Romish Church during the Middle Ages, was simply aggrandizement of the Church and of Churchmen; and it lent itself to liberty or to tyranny, indifferently, as best served its own momentary purpose: to tyranny the most frequently, only as that most commonly amalgamated with its selfish designs. At the time of the Reformation, churchcraft was closely allied to statecraft; and the two combined were hostile to every social movement,—that of commerce among the rest. But where did the Reformation find the lever with which it worked? in the active and inquisitive mind of commercial communities. It was, indeed, State, rather than Church mismanagement, which warred against Portuguese and Spanish commerce; and if that proved itself the strongest, it was because commerce was already in chains. But in Italy, and in the Hans towns, where civil tyranny was cowed, commerce throve unmolested by Popery; and when the moment of religious deliverance arrived, it was in such great *foci* of commercial activity, that Protestantism found its readiest disciples, and its principal barriers against the invasions of civil and of religious persecution.

In our notice of Dr. Taylor's work on the manufacturing districts (*Athen.* No. 773), we referred to some striking instances of the strong and direct influence of great aggregates of men and of manufacturing industry on the developement of agriculture itself. But besides this market encouragement, the utility of the great town in diffusing knowledge is (as we have stated) not less important. Dr. Vaughan, *more suo*, puts these truths in a more didactic form:—

"The great agency in calling forth man's capabilities, whether for good or for evil, is that of his fellows. The picturesque, accordingly, may be with the country, but the intellectual, speaking generally, must be with the town. Agriculture may possess its science, and the farmer, as well as the landowner, may not be devoid of intelligence; but in such connexions, the science and intelligence, in common with the nourishment of the soil, must be derived, in the main, from the studies prosecuted in cities, and from the wealth realized in the traffic of cities. If pasturage is followed by tillage, and if tillage is made to partake of the nature of a study and a science, these signs of improvement are peculiar to lands in which cities make their appearance, and they become progressive only as cities become opulent and powerful. In this sense we might venture to change the language of our poet a little, and say, 'Man makes the country, where art makes the town!'—and in so saying we should make a much nearer approach toward the truth."

In a few short paragraphs on the influence of great cities on physical science, the author touches on one of De Tocqueville's notions respecting the democratic influence:—

"It may be that the United States will be appealed to, as affording striking evidence of the low mechanical routine to which all science is reduced, in proportion as the elements of society become more and more democratic. It should be a sufficient answer to such persons, to remind them that the republican institutions of Athens, so far from being incompatible with a high state of civic refinement, have contributed to render that city the model of all cities in respect to such cultivation. In the history of the United States, the useful has hitherto very naturally taken a marked precedence of the ornamental, partly from the youth of the States themselves, and partly from the fact that England is, in this respect, only as another province to North America, everything new in British discovery being at the service of the Anglo-American people so soon as it becomes known among ourselves. Down to this time, it has been enough that the people of the United States should apply the stores of knowledge placed continually at their disposal. Of America, we may say, her age of invention is to come. But come it will, though her danger, in common with all states in which the commercial spirit becomes predominant, will continue to be on the side of looking to science too much in its relation to mechanism and profit, and too little in relation to its less obvious and wider results. The great check upon this tendency will be found in the general intelligence of her people; in the necessary increase of wealth with certain classes among them; and in the national pride, which will always be much affected by the consciousness of this deficiency so long as it exists."

In allusion to the "tyrant majorities" of the American states, Dr. Vaughan makes some shrewd observations:—

"It is not to be denied that among ourselves much of this evil exists. Every one knows that our great landholders make no secret, for the most part, of coercing their tenants in favour of their particular opinions. Our monied aristocracy, also, has its penalties in this shape, which it inflicts on the classes dependent upon it. By these means, in a great measure, our people are broken up into parties, and the man committed to one side has to lay his account with much social hostility from the other. Our laws do not punish independence in politics or in religion, but society does. We have not a tyrannical majority, but we have in the place of it, tyrannical classes, and tyrannical parties. In a multitude of instances we see that talent fails to be appreciated, character ceases to be safe, social standing is lost, wealth, employment, subsistence—all are hazarded when men dare to commit themselves to a decided course in regard to some of our great public questions. In both countries, it is from these indirect modes of oppression, more than from any positive law, that freedom of opinion is invaded."

The summing up, too, is worth quoting:—

"But it must not be forgotten, that with all the faults of an ill-regulated citizenship, men would possess few opinions worth contending about, and still less freedom of opinion, were there no cities. Political science, taking in the great moral questions belonging to good government, finds its birthplace in cities, and in its birthplace only will it be found to make hopeful advances towards maturity. Its aim should be to discountenance tyranny in every form—

Digitized by Google

the tyranny of opinion, no less than the tyranny of law, or of the sword. It aims at the good of all, and it should learn how to respect the opinions of all. It is not perfect, but it is a great good—incalculably great when compared with the ignorance, the barbarism, and the misery that would come into its place if it ceased to exist. We see its faults, but all faults are comparative, and in thus setting forth the defects and vices often attendant on some of the best forms of citizenship, we do not make choice of subjection to the much greater social evils which must belong to the condition of the people who do not build cities. Our aim is not to commend barbarism, but to improve civilization, and to that end we would deal with it faithfully."

The sophism in this, and all similar arguments, lies in contrasting the maximum of evil attributable to one condition, with the *beau ideal* of its opposite, or at least with an assumed state of society, in some stage of that opposite's influence. In assigning the evil, the argument sinks the concomitant good; and in its contrast, it makes a like imperfect statement the other way. In praising despotism, men instance the long peace of Augustus, or the reigns of the Trajans, and carefully keep out of sight the Neros or the Heliogabali; just so in railing against tyrant majorities, they sink all notice of Star Chambers and Inquisitions.

But it is time to pause. If our quotations have not produced a desire to read the book, their extension will equally fail to do so. In Dr. Vaughan's survey of his subject, there are few of the influences of great cities on which he has not shed some light. With respect to education we find him (as might be expected) more favourable to popular, than to governmental, institutions; and we think him so far right, that the best guarantee for diffused education is a strong desire among the people for information: here, as elsewhere, the aid-thyself principle is immediately applicable. His remarks on the Prussian system, though somewhat one-sided, are worth more than a passing attention, in the present state of public opinion, which sets rather violently in favour of the short cuts, and the *sic jubeo* appliances, of arbitrary sovereignty, in search of improvement.

A Voyage round the Coasts of Scotland and the Isles. By James Wilson. 2 vols. Edinburgh, Black.

After the interesting details which Mr. Norman has furnished us of the ruins of Central America and Mr. Borrow's exciting rambles among the bellotas of Gallicia, a home tour like the one before us acquires a charm from contrast, in addition to its value as a pleasant description of picturesque scenes lying close to our own thresholds. It is true that Sir Walter Scott's Light-House Diary, incorporated in Mr. Lockhart's Life, led the reader over much the same ground; but that was written nearly thirty years ago; and even in districts where change moves as slowly as in the Isles of Scotland, so long a period cannot pass, without bringing changes worthy of notice. Old sea-marks totter and fall, and new beacons are raised in dangerous waters—the receding ocean leaves plains of barren sands to try the patience of the agriculturist, and sweeps away, in other places, the labours of many lives. Fish and fowl capriciously desert their old haunts or are captured by new devices; plantations are tried, and struggle into a sickly existence, far more interesting to the possessor, than the robust strength of lowland oak or elm—and, most momentous of all, books find their way into cabins, heretofore only enlightened by tradition or the simple ministry of the peasant-priest. While we look with admiration at the wider sweep of Discovery, at the greater operations of progress—these humble and homely matters should not be forgotten, even though they are to be studied in districts less romantic than those visited by Mr. Wilson.

This gentleman is an observant traveller—with kindly sympathies, but somewhat afflicted with a taste for fine writing. There is as little possibility of escaping superlatives and good stories in his pages as in those of Miss Sinclair. He begins by telling us how, in company with the Secretary of "the Honourable the Commissioners of the Board of Fisheries," he set sail from Greenock on the 17th of June, 1841, in the *Princess Royal*, a government cutter of 103 tons, built for the Fishery Service.

To touch at every point touched by this vessel—to anchor in every bay, is beyond our power; but we shall glean here and there as tempted. The following reminiscence of the manner in which crabs are caught, far north, may impart to that respectable ornament of the supper-table new savour and interest:—

"We soon perceived two men in a small craft, who seemed quite unconscious that

> The flaming chariot of the world's great eye

was now almost upon them. Their little boat hung motionless on the then waveless mirror of the Bay, in about ten feet depth of water; and after for a minute or thereby holding their faces close upon the surface, they seemed suddenly to pull a long pole out of the water, with something adhering to its extremity. We soon found that they were taking advantage of the glassy stillness of the water, to overlook the early walk of crabs. They no sooner saw these crusty crustaceans on the subaqueous sand, than they poked them behind with their long staves—the crabs turned round to revenge the indignity, and, like Russian gens-d'armes, seized upon the unsuspecting poles. These latter were slightly shaken by the fishermen, as if in pain or terror; the angry creatures clung all the closer, and were then rapidly hoisted into the boat. The moral we drew at the time, and have since maintained, was, that neither crab nor Christian should ever lose his temper."

While passing a summer night in the bay of Campbelltown, Mr. Wilson was treated to "a musical *concerto*" (!) of yet greater curiosity than the frog-performances which enchant American travellers,—the tumbling in the bay of porpoises which have of late much addicted themselves to that spot, and "the monotonous *craik-craik* of the landrail" on shore. Culhorn, Castle Kennedy and the Wigtonshire Wells, are agreeably described in our author's ornate style—and the Mill of Cantyre, with an episodical glimpse of the Giant's Causeway. After the "wild barbarity" of the Emerald Isle,—the "far spreading rosaries, and other intermingled garden-grounds"—not forgetting the collections of aquatic fowl, and the pair of very lively otters, at Islay House, appeared, to our voyager more than usually engaging. Seriously, however, the domain is a welcome example of the good effects of planting and landscape gardening in so northern a latitude:—

"Islay may indeed be regarded as the richest and most productive island of the Hebrides; and notwithstanding all that has been done for it in recent years, its capabilities of improvement are still very far from being exhausted. We believe that the moral and industrial habits of the people are also much ameliorated since the erection of legalized distilleries, and the consequent cessation of the illicit trade in whiskey. Whatever may be the general effect of ardent spirits (and they are often sufficiently obvious), there can be no doubt that payment of duties, amounting to a yearly revenue of upwards of 30,000*l.* to Government, must be useful in its way."

Colonsay, too, is not without its Tempe, in Killouran, the seat of the Laird (M'Neill), at which Mr. Wilson was hospitably feasted on Highland mutton, and the evening was wound up with vigorous reels. But in preference to Mr. Wilson's pompous praise of Sir Thomas Dick Lauder's saltatorial prowess, we will land him for a moment on Tiree—that the reader may inspect the preparations making for a northern lighthouse:—

"Tiree is extremely low and flat throughout the greater portion of its extent, although there is some land a few hundred feet in height in its southern division. On gaining an open bay, we took boat, and passing behind a rocky promontory, landed on a pier composed very solidly of huge blocks of gneiss. Close in shore, we came unexpectedly on various important buildings connected with the construction of the Skerry-vore light—large substantial barracks, smiths' shops, extensive working sheds, and a handsome local light-house. We also found numerous East-country masons hard at work—brawny, strong limbed Aberdonians, to whose pick and chisel even the resistant granite yields by slow degrees. A resident surgeon had likewise been established here for behoof of the workmen. The granite blocks are quarried in Mull, and wrought in Tiree. In fact, a kind of rehearsal (and the island affords plenty of green-room) of the building takes place here, each course of stones being finished off and numbered, and then carried by lighters and a steam-tug to the rock, where they are speedily fitted in to their respective dove-tailed places."

Of course the basaltic wonders of Staffa were not visited without an outburst of enthusiasm. So, too, the traces of early Christianity at Iona, call up reflections and recollections by the score. Then we have castles—Dunstaffnage, Duart, Ardtornish, Tyrim, the last only inhabited by "a little vixen" of a Kestril, "with large, deep, delightful eyes," which "we captured." But we will not stop till we reach Canna, a spot concerning which we southrons know little:—

"Canna, though small in itself, may be regarded as a central point among our Hebrides. It is exactly half way between the Mull of O'e, the most southern part of Islay, and the Butt of Lewis, the most northern portion of the western isles; and it is also nearly equidistant from South Uist upon its western, and the coast of Inverness-shire on its eastern side. Our friends could therefore behold a vast tract of Skye and the Outer Hebrides, of Mull and the Mainland, with Coll, Tiree, and countless other islands. * * The proprietor of Canna keeps eighty milk cows, and so must be rather well off both for cream and butter. He has also, of course, other stock in the way of cattle, besides 300 sheep, and never houses his beasts, with the exception of cows about to calve. He was formerly tenant of the island, but being successful in farming and other things (Canna lies a long way from the Custom House), he was enabled to make the purchase for himself. The want of a regular mode of conveyance must be of disadvantage, but we understand that dealers make their way here from all quarters of the country notwithstanding. About fifty years ago a fat cow sold for 2*l.*, and now he obtains 7*l.* for two-year-old stots and heifers. When a calf dies, the people are in use to take off its skin and lay it loosely on another calf, and so the cow allows the latter to suck her, and herself to be milked which she would not otherwise do but for this device—which, however, is probably known to the pastoral experience of other districts. Mr. M'Neill has a couple of large farms on the other side of the island, which are let. The population, by the recent census, we understand to have been 260. The Canna-nites are a peculiar people (for these parts) in their religious persuasion, being all Roman Catholics, except the laird's and one other family. Both parties, however, are upon an equality in this respect, that there is a church—for neither. But once a month the minister from Eig, and the priest from that island, come over in separate boats (we could scarcely expect rivals to row in the same) on Saturday evening, to officiate on the ensuing day—the former in the 'Muckle Hoose,' as the laird's is called, and the other in some smaller, or, at least, less favoured dwelling. * * At a short distance from the landing-place are the remains of an old chapel, and a stone cross carved with the figure of a man on horseback. The people of Canna fish a good deal with the long line, and both catch and cure ling."

The scenery of Straithard's Cave, of Loch Scavaig, and Loch Corruisken, is sublime enough to subdue our author's magniloquence. It was of the Cullen Mountains, overlooking the las named sheet of water, that Sir Walter Scott said

Digitized by Google

—"Borrowdale or even Glencoe is a jest to them:"—

"The sides of these mountains, from the almost constant atmospheric moisture, are dark and damp, but there are thousands of small silvery streaks of waterfalls coursing downwards, which occasionally catch the gleaming lights, and throw a partial cheerfulness over the prevailing sadness of the scene. We were now far in advance of our party, and could enjoy the solemn stillness undisturbed by man or beast. * * Only once we heard the resounding voice of some far avalanche of rocks and stones, sent rolling down the great breast of the opposing mountain. We could see no movement on any of the sun-lit portions, and the sound was probably reverberated from some misty ravine, where a huge boulder stone, or crumbling crag (it may be a memorial mark in bygone ages), had been loosened by heavy-antlered deer, or scrambling wild-goat; but the repeated voice resembled low continuous thunder, and was a good accident for a wonder-seeking traveller, who, leaving the perilous deep, was now surrounded by a sea of rocks more perilous still."

After all these sublimities a breakfast on board of broiled salmon, trouts from the Loch, mutton chops, "and the ordinary liquifications of tea and coffee," was a welcome descent from the ideal to the real.

We are now on the Island of Eig—haunted by the ghosts of the wretched inhabitants whom the M'Cleods of Skye, in a fit of vengeance, smothered in the Cave of Frances.

"The cave, as we have said, is in the face of a craggy bank, and can be reached either from above or from below, and it suited our convenience to descend from the higher ground. The mouth, or outer arch, is somewhat spacious, but it narrows rapidly by a descending roof, and after a few steps you are obliged to go down upon all fours and crawl in on hands and knees through a space (very damp and slimy) of some yards, as if you were a fox or a badger, there being room for only one (of these animals or yourself) at a time. But after this it opens into a very long narrow cavern, more than sufficiently lofty for any man, however honest and upright. It is pitch dark, but we explored it to the very end, by means of a few wax candles with which we had provided ourselves for the purpose. The sides are rocky and irregular, the pathway portion covered with large stones, with now and then a small projecting crag, the breadth about 14 feet, the length above 200. The bones of the victims lay scattered about the floor in various places, a considerable number at the far narrow end, to which it may be supposed the wretched creatures had retreated when the horrid choaking smoke began to roll its fatal wreaths upon them. A good many lie also near the entrance. * * Most of the skulls were gone, and what struck us as curious, there were scarcely any teeth lying among the stones."

Not far from this "bandit looking scene" the party came to shores peopled with associations not less romantic, though less painful. It was near Borrowdale House, on Loch-na-Nuagh, that 'Bonnie Prince Charlie' landed some hundred years ago. It was from the same remote quarter, after weeks of wandering and privation, that the Chevalier embarked for France. Loch Hourn, "the rainiest place on the earth"—the Kyles (a narrow strait which separates the Mainland from Skye)—Loch Alsh, with "the dim old Castle of Eilland Donan"—must not detain us, though the last ruin has its thousand legends as "the ancient stronghold of the Mackenzies of Kinteil," built in the time of Alexander II., and attacked in the time of James V. by Donald Gorme, of Sleat, with fifty sail of galleys, and successfully defended by one man and a boy; and finally (our author presumes) demolished in the year 1719, after the affair between General Wightman and the Duke of Ormond. At Loch Ainort, the party came upon the first fishery of importance:—

"Having run into Scalpa Sound, Loch Ainort opened on us. Outside its mouth were several curing vessels, lying, as we thought, too close upon the fishing-ground; so, in order that we might neither show nor imitate a bad example, we came to anchor at some distance within the Sound. Large shoals of herrings had been ascertained to be in this quarter, and numerous fishing-boats were lying along shore on both sides, their nets drying on the beaches, and little tent-like habitations, made of sails, erected here and there, for the accommodation of those who had arrived from a distance. From some of these ascended diagonally streaming wreaths of pale blue smoke, but ere long, as the evening shadows fell around us, the fires seemed extinguished, and the various boats were seen shooting out from every creek and bay towards the fishing-grounds. They are not allowed to place their nets either before sunset or after sunrise, lest the shoals should take alarm. As this was the first fishery of any importance we had yet fallen in with, we felt anxious to witness the proceedings, so retiring to bed soon after twelve, we rose again before two, and taking our small boat, were in the midst of the herring fleet just as they had begun to draw. Several were unsuccessful, some only partially so, while others, which we came along-side of higher up Loch Ainort, were hauling in the treasures of the deep like countless wedges of pure silver. Their drifts were shot across the Loch, some boats having five or six barrels of nets, others as many as eight or nine. A barrel measure extends about a hundred yards, the nets are attached together, the whole forming what is called the *drift*, which, being shot in a straight line, is anchored at either end with heavy stones, and supported intermediately by corks and buoys. The breadth of the net is four or five fathoms, and it hangs in the water perpendicularly, its lower edge being kept down by pieces of lead. It was a curious sight to see the busy brawny-armed boatmen hauling up these great black bundles of meshes, with the brilliant fishes sticking to them by the gills, and forming spots and stripes of silver. The net, as it uprose from the deep, might have been almost likened to a portion of the heavens above, so varied was the grouping of its constellations. Sometimes a black extent of pitchy darkness, then a solitary twinkling star, next 'shining out by twos and threes,' anon a blaze of light, followed by glittering though more scattered gems, a spangle here and there, with dimmer 'plæiads' intermingled. Many of these marine celestials were cunning enough, however, to enact a kind of Highland fling with their tails, the moment they found themselves drawn upwards, and so succeeded in tumbling into the water. These, we fear, were 'lost plæiads.' The *take* was not, upon the whole, a great one, but sufficient to show us the usual style and mode of working, one man managing the ground-line, and another that by which the nets are suspended, and so massing the depth together, and bundling the whole inwards over the gunwale of the boat. In one or two of the nets the herrings were very equally distributed among the higher and lower meshes, but in others, which had been among the least successful, it was only to the latter that any fish were found adhering. We infer from this, either that the shoal in partial spots had taken alarm, and sunk into deeper water, or that particular nets had been suspended too near the surface. Every thing, however, was conducted with great propriety; and although many boats had both to cast and haul in the immediate vicinity of each other, there was no squabbling nor quarrelling among the crews. Possibly the august presence of the Princess Royal may have exercised a benign influence on their sometimes contentious spirits."

We will now extract a passage which shows Mr. Wilson's descriptive powers in a more favourable light. The reader will suppose himself transferred from Loch Ainort to Loch Broom:—

"The district or parish of Loch Broom derives its appellation from a small fresh water lake, more than a dozen miles distant from the sea. Being, like every other place we ever saw or heard of in the Highlands, extremely moist in consequence of its surrounding hills: its Gaelic name is *Loch-a'-Bhraoin*, or the Lake of Showers—Braon or Braom (the precise orthography being of no greater consequence), signifying a shower of drizzle. The title has descended swimmingly to the sea, and has eventually been applied by these 'Children of the Mist' to the entire district, whether wet or dry. * * The parish, it appears, possessed a very powerful preacher in the troublous times of 1745. His proper name was Robertson, although he was usually distinguished by the name of 'Am Ministeir làidir,' or the Strong Minister. While present one day during divine service in the church of Fearn, a Gothic kind of building, covered with immense grey flags in place of slates, the roof came suddenly down upon the congregation. Mr. Robertson remained upright, and making his way to the principal door, perceived that the lintel was giving way at one end; he instantly placed his shoulder beneath it, and stood in that supporting position till those who belonged to the movement party made their escape. He then re-entered among the crumbling ruins, and extricated his clerical friend from beneath the sounding-board of the pulpit, under which he lay ensconced, with the addition of a mass of stones and rubbish. Having afterwards gone to London on business connected with the politics of the period, he was introduced to the Duke of Newcastle, who gave him a fair promise of pardon to one Hector Mackenzie, a condemned retainer of the Earl of Cromarty. The Duke, on his departing, proffered him his hand, which the Ministeir làidir squeezed with such energy, that his Grace reiterated his promise twice over, and the man was saved. He (the Minister, not of State, but of Loch Broom) was once attacked in his own parish by two strong ruffians, to the child of one of whom he had refused baptism, on the score of the parent's unsuitable character and qualifications. Finding him at some distance from the manse, they threateningly renewed their application for the ordinance, which was as resolutely refused, upon which the fellows laid violent hands upon the pastor, swearing they would never let him go till he complied. 'A desperate struggle ensued, and Donald, perceiving that the minister was stronger than himself and his neighbour, drew his dirk, and inflicted a deep wound on Mr. Robertson's right arm; notwithstanding which he beat them both, and sent Donald home again to study his catechism.' It happened curiously enough, at an after period, that while crossing the Thames in a boat, Mr. Robertson was assailed by a stentorian voice from one of the hulks in the river—'O! a Mhaisteir Seumas, am bheil thu' g'am fhàgnils' an so?' Oh! Mr. James, are you going to leave me here? Recognising instantly the speaker's voice, he answered, 'Ah! a Dhònuil, bheil cuimhn agad air l'a na biodaig?'—Ah! Donald, do you remember the day of the dirk? This was rather a home thrust, which the despairing convict tried to parry with, 'Och a Mhaisteir Seumas, is olc an t-àite cuimhnachan *so*,'—Oh! Mr. James, bad place for remembrance is *this*. And here the conversation ceased, but the minister, in the true spirit of his holy calling, lost no time in employing his influence, which was considerable (he had from the first espoused the Hanoverian cause, and been personally serviceable both to Lord Loudon and President Forbes, on their retreat from Inverness to the Western Islands, on the return of the then victorious clansmen from the battle of Falkirk), and succeeded in obtaining a pardon for his enemy. The reader will be glad to learn, that after the culprit's return to his native country, he commenced and continued one of the most attached and grateful of his reverend benefactor's parishioners."

Mr. Wilson's portraiture of this Dominie *Samson* has exhausted all the space which can be afforded to his first volume. The second contains matter more interesting, as we hope to prove on a future day.

Manners and Customs of Ancient Greece. By J. A. St. John.

[Second Notice]

THE Greeks having been eminently a gay and social people, the subject of their "entertainments" naturally occupies a distinguished place in every research into their domestic history. Mr. St. John remarks, that experience appears to have led mankind pretty generally to the conclusion, that health and comfort require men to eat at least thrice a day. In obedience to this gastronomic rule of three, the Greeks had their *ariston*, their *deipnon*, and their *dorpon*, corresponding in chronological order with our

Digitized by Google

breakfast, dinner, and supper. There were Greeks, however, as there are Englishmen, of extraordinary appetites and digestion, and for such there was introduced between the *deipnon* and the *dorpon* a fourth meal, called the *hesperisma*, equivalent to our English "tea." But this, as well as the *ariston*, or early breakfast, was a hasty, light, skirmishing affair, and was often dispensed with altogether. Athenæus refuses to believe that the frugal ancients could have thought of eating so often as three times in one day.

It would gratify us more to learn with accuracy the details of a small private family dinner at Thebes, or Athens, than the particulars of the most sumptuous banquet. Banquets are exceptions, in all countries, to the general daily habits of the people; but, as it usually happens, it is those exceptions which remain on record, while the ordinary routine of life has seldom found a chronicler. Mr. St. John observes, that "as *the greater includes the less*, instead of confining ourselves to the ordinary daily dinner of a Greek, we shall, in preference, describe their grand entertainments, introducing remarks on the former by the way." This seems hardly a just application of the maxim quoted. An account of a state dinner at Windsor Castle would give a reader, some thousand years hence, very little information indeed, as to the way in which a linen-draper of Cheapside dines. However, let us make a few extracts from the description of a grand dinner at Athens, such a feast as is called in Greek *eilapinè*. The initial proceeding was not unlike the first step which we take ourselves, when a dinner-party is resolved on.

"When a rich man desired to see his friends around him at his board, he delivered to his *deipnocletor*, a domestic kept for this purpose, a tablet, or as we should say, a card, whereon the names of the persons to be invited, with the day and hour fixed upon for the banquet, were inscribed. With brothers and other very near relations this ceremony was thought unnecessary. They came without invitation. So likewise did another class of men, who living at large upon the public and lighting unbidden upon any sport to which they were attracted by the savour of a good dinner, were denominated Flies, and occasionally Shades or Parasites."

The reason of this epithet is thus stated:—

"Among the Egyptians who shrouded all their poetry in hieroglyphics, *a fly* was the emblem of impudence, which necessarily formed the principal qualification of a Parasite, and in Hume's opinion is no bad possession to any man who would make his way in the world."

The Attic parasite, or fly, corresponded with our London "diner-out." The student will do well to be on his guard in all that relates to this class, as to many other characters and social usages amongst the Greeks, against the common error of understanding literally all the satirical hits and humorous descriptions of the comic writers. Our author is aware of this source of error, but we do not think he is always successful in escaping it. There is here and there a rash generalization from writers (for instance, Aristophanes and Lucian) whose humour is frequently of the broadest kind, and who were as often the caricaturists as the painters of life and manners.

In many cities and colonies of Greece, no banquet was given to which women were not invited. At Athens, however, it was not the fashion for married ladies to be present at the *eilapinè*. The *hetairæ* supplied their place on those festive occasions, a class of women to whose social position there is very little analogous in the situation which an unfortunate portion of the sex occupies in modern states. Mr. St. John considers their position as resembling "rather that of kings' mistresses in modern times, than that of plebeian sinners, whose deficiencies in birth and fortune exclude them from good society." There was no infamy attached to the *hetairæ*. A passage in Lucian intimates that they frequented the same baths with the married women of Athens. There was one religious festival, also, during which they asssociated with ladies of the fairest fame; although, oddly enough, such communication was prohibited at the theatres, a restriction which contrasts remarkably with the usages of Christian nations, in the case of females whose moral degradation is universally recognized. It was only, however, from scenes of revelry that the virtuous Athenian dames were habitually absent. The Greeks had their family-dinners, like ourselves, and it is to be collected from Menander, cited by Athenæus, that such parties were not less formidable in ancient times than they often are at the present day.

"That among the more simple and old-fashioned citizens of Athens, however, men and women, when of the same family or clan, dined together, we have the testimony of Menander to prove. He introduces one of his characters, apparantly a fop, observing that it was a bore to be at a family party, where the father, holding the goblet in his hand, first made a speech, abounding with exhortations: the mother followed, and then the grandmother prated a little. Afterwards stood up her father, hoarse with age, and his wife, calling him her dearest; while he meantime nodded to all present."

But, to proceed with our banquet, we find the ancients dressing for dinner, like ourselves:—

"It will readily be supposed, that gentlemen invited out to dinner were careful to apparel themselves elegantly, to shave clean, and arrange their beards and moustachios after the most approved fashion of the day. Even Socrates, who cared as little as most people for external appearances, bathed, put on a pair of new shoes, brushed his chlamys, and otherwise spruced himself up when going to sup at Agathon's with Phædros, Aristophanes, Eryximachos, and other exquisites. Even in Homeric times the bath was among the preliminaries to dinner, and guests arriving from a distance were attended through all the operations of the toilette by female slaves."

They had their religious forms, corresponding with the grace of Christian countries:—

"The Greeks were above all things a pious people, and regarded every banquet, nay, every meal, in the light of a sacrifice, at which the first and best portion should be offered as an oblation to the gods, with invocations and prayer, after which it was considered lawful to attend to their own appetites. An altar, accordingly, of Zeus stood in the midst of every dining-room, on which these ceremonies were performed, and libations of pure wine poured."

Music was a universal accompaniment of the feast, but even amonst the refined Athenians its strains were but little heeded while the edge of appetite remained sharp. The Greeks delighted in hot dishes, and it was the pride of their cooks to send up the viands glowing from the spit or frying-pan. There is, however, some exaggeration in the following passage, which is one of those where the author fails to make allowance enough for the breadth of colouring used by the comic writers:

"One of the greatest accomplishments a boon companion could possess, was the power to seize with the fingers, and swallow hissing hot, slices of grilled fish or morsels of lamb or veal broiled like kabobs, so as to be slightly burnt and crackling externally, while all the juice and flavour of the meat remained within. And the acquirement being highly important, great pains were taken to become masters of it. For this purpose some accustomed themselves daily to play with hot pokers, others case-hardened their fingers by repeatedly dipping them in water as hot as they could bear, and gargled their throats with the same, while one famous gourmand, more inventive than the rest, hit upon the ingenious device of wearing metallic fingerings with which he could have seized a kubob even from the gridiron. These proficients in the art of eating, an art practised indeed by all, but possessed in perfection by very few, enjoyed great advantages over the ignorant and uninitiated. And accordingly, when invited out, they generally succeeded in bribing the cook to send in all his dishes hot as Phlegethon, that, while the more modest and inexperienced guests sat gazing on, they might secure the best cuts, and come again before the others could venture on a mouthful."

The *deipnon* of the Greeks, included a variety of entertainments, besides the pleasures of the table. It may be compared to one of our London grand dinners, terminating in an evening party, with a concert, a dance, or some other fashionable pastime:—

"The Greeks had, properly speaking, no drawing-rooms, so that instead of retreating to another part of the house, they had the tables themselves removed immediately after dinner. Libations were then poured out to Zeus Teleios, and having sung a hymn to Phœbos Apollo, the amusements of the evening commenced. Professional singers and musicians were always hired on these occasions. They were female slaves, selected in childhood for their beauty and budding talents, and carefully educated by their owners. When not already engaged, they stood in blooming bevies in the agora, waiting, like the Labourers of Scripture, until some one should hire them, upon which they proceeded, dressed and ornamented with great elegance, to the house of feasting. But, besides these, there were other *artistes* who contributed to the entertainment of the demos, persons that, like our Indian jugglers, performed wonderful feats by way of interlude between the regular exhibitions of the damsels from the agora."

But the Greeks were eminently a conversational people. In this respect the Spartans were not behind the more polished Athenians. The intervals of the song and dance were filled with lively table-talk, and frequently there were many more talkers than listeners, as *occasionally* happens amongst ourselves. Xenophon relates an anecdote of Socrates, which shows that he disapproved of this confusion of tongues, instead of general and orderly conversation.

"But nothing could entirely restrain the Greeks from indulging in the pleasure of listening to their own voices. The buzz of conversation would soon be heard in different parts of the room, which, when Socrates was present, sometimes provoked from him a sarcastic reproof. For example, at Callias's dinner, observing the company broken up into knots, each labouring at some particular question in dialectics, and filling the apartment with a babel of confused murmurs; 'As we talk all at once,' said he, 'we may as well sing all at once;' and without further ceremony he pitched his voice and began a song."

The Greeks dreaded nothing so much as the blue devils. A story is told by Athenæus, of a Metapontine, who made a pilgrimage to Delphi, to inquire by what means he might get rid of them. At Athens there was established a regular "Wits Club" (like the "Odd Fellows," or "Monks of the Screw"), whose *bon-mots* reached as far as the thunders of Demosthenes, for they travelled to Macedon, and induced Philip to solicit a collection of them, which Mr. St. John considers "the first step towards those repositories of stray wit called Joe Millers." There were professional jesters, whose services were retained for festive occasions, a custom which differs but slightly from our own practice of inviting men of humorous and anecdotical powers, not for their own entertainment, but to avail ourselves of their pleasant resources to entertain our other guests. In ancient Greece, persons of this class were better off than they are amongst us; for they had their fee, as well as their dinner, in return for their *mots* and repartees. It would seem that the professed wits of Athens were sometimes unequal to the public demand for mirth, and upon such occasions it was customary to introduce *real* monkeys, or (to use our author's sarcastic language) "their more humorous brethren, the wits and jesters of the forest." These, we are told, were the favourite

Digitized by Google

buffoons of Anacharsis, the Scythian, who said (and we have often concurred with him), that "he could laugh at the tricks of a monkey, because his tricks were natural, but he found no amusement in a man who made a trade of it." The Athenians, with all their intellectual brilliancy, were fond of what we call "broad grins." We were lately much struck by a Greek epigram upon a man with a huge nasal organ, the humour of which is precisely in the extravagant vein of the Americanisms of the present day. One Proclus is said to have had such a length of nose, that he never heard himself sneeze!* Who would not take this to be a flower culled from a Kentucky newspaper?

On the subject of toasts we find the following passage, which suggests a classic origin for the "three-times-three" of modern topers:—

"Amid the enjoyments of the festive board, they recall to mind the friends of other days; and having first performed libations to the gods, those best and purest of friends, drank to the health and prosperity of former associates, now far removed by circumstances, and this they did not in the mixed beverage which formed their habitual potations, but in pure wine. There was something extremely delicate in this idea, for tacitly it intimated, that their love placed the objects of it almost on a level with their divinities, in whose honour, also, on these occasions, a small portion of the wine was spilt in libations upon the earth. The young in whose hearts a mistress held the first place, drank deeply in honour of their beloved, sometimes equalling the number of cups to that of the letters forming her name, which, if the custom prevailed so early, would account for Ægisthos's being a sot. Sometimes, however, taking the hint from the number of the Graces, they were satisfied with three goblets; but, when an excuse for drinking 'pottle deep' was sought, they chose the Muses for their patrons, and honoured their mistresses' names with three times three. This is the number of cheers with which favourite political toasts are received at our public dinners, though every one who fills his bumper, and cries 'hip, hip, hip, hurrah!' on these occasions, is, probably, not conscious that he is keeping up an old pagan custom in honour of the Muses."

According to Mr. St. John, the cooks of Athens were naturalists, painters, astronomers, and doctors; but the following passage is totally inadmissible as a picture of their cooks in general:—

"They usually stunned such as came to hire them with reciting their own praises, laying claim to as much science and philosophy as would have been sufficient to set up two or three sophists. In fact, to take them at their word, there was nothing which they did not know, nothing which they could not do. Painting they professed to comprehend as profound connoisseurs, and no doubt, the soles they fried tasted all the better for the accomplishment. In astronomy, medicine, and geometry, they appear to have made a still greater proficiency than Hudibras, notwithstanding that—

> 'In mathematics he was greater
> Than Tycho Brahe, or Erra Pater;
> For he by geometric scale
> Could take the size of pots of ale,
> Discern by sines and tangents strait
> If bread and butter wanted weight,
> And wisely tell what hour o' the day
> The clock does strike by algebra.'

"In all this he was a fool to the Athenian cooks; for, by the help of astronomy, they could tell when mackerel was in season, and at what time of the year a haddock is better than a salmon. From geometry they borrowed the art of laying out a kitchen to the best advantage, and how to hang up the gridiron in one place and the porridge-pot in another. To medicine it is easy to see how deeply they must have been indebted, since it not only taught them what meats are wholesome, and what not, but also enabled them by some sleight of art to diminish the appetite of those voracious parasites, who when they dined out appeared to have stomachs equal in capacity to the great tun of Heidelberg."

The cook in Athenæus who exclaims in verse—

> —I have, in fact,
> The power to lavish immortality
> On whom I please, or by my potent art
> To raise the dead, if they but snuff my dishes—

must have been, indeed, an illustrious *savant*, but such miracles of culinary science were probably as rare on the banks of the Ilissus as on those of the Thames.

Let us return, now, for a moment to the parasites, or "diners out." Men were no more invited to dinners at Athens than they are in London, without being expected to give a *quid pro quo*. The parasite was not, and could not have been, such a mere intruding gourmand as he is often painted by the satirists. A more unwelcome visitor is not be imagined than one who brings nothing to the entertainment but a voracious appetite; we may be certain that no host, from the day that mankind first began to give dinners, ever encouraged this unprofitable and expensive class of guests. The parasite was expected to make himself agreeable, and he did so in order to secure further hospitalities. His place at the table to-morrow depended upon his setting it in a roar to-day. He knew as his modern representatives know, that he was not invited to eat, but to talk, not to crack a bottle, but a joke. He was silent or dull at the peril of solitude and a salad. The terror of a diner-out is a mutton chop. Hence the industry with which he amasses jests and anecdotes; hence his opulence in scraps of scandal, his ample stores of chit-chat, his greatness at small-talk, and his marvellous memory for gossip. Sparkle he must, or the champagne sparkles not for him; he must say a good thing for every good thing he eats; it is with him a breach of honesty to swallow but a single morsel without tendering prompt payment in the shape of an epigram or the form of a pun. To do him justice, he is rarely so unprincipled; his conscience may be seared, but his appetite is sensitive; he is engaging that he may be engaged, and always entertaining in order to be often entertained. Amongst the Greeks we find that one of the most agreeable qualities of the diner-out was a memory stored with the productions of the poets. Where the poetic taste was diffused so widely, and no printing-press placed the songs of Anacreon or odes of Pindar in the hands of every member of society, it is easily conceivable how charming a living Anthology might make himself. Sometimes, it would appear, the parasite took the trouble of copying out the verses he traded on. Mr. St. John tells us—

"It was a common custom among parasites to make extracts from the poets and carry them in portfolios to the tables of their patrons, where they recited all such as appeared to be *à propos*. In this way the above Charmos obtained among the people of Messina the reputation of a learned man, and Calliphanes, son of Parabrycon, succeeded no less ingeniously by copying out the first verses of various poems, and reciting them, so that it might be supposed he knew the whole. Cleanthes, of Tarentum, always spoke at table in verse, so likewise did the Sicilian Pamphilos; and these parasites, travelling about with wallets of poetry on their backs, were everywhere welcomed and entertained, which might with great propriety have been adduced by Ilgen among his other proofs of the imaginative character of the Greeks."

Several specimens are given of the pleasantries of the parasites at table. We extract the following:—

"An anecdote so good as to have given rise to many modern imitations, is related of Philoxenos, of Cythera. Dining one day with Dionysios, of Syracuse, he observed a large barbel served up to the prince, while a very diminutive one was placed before him. Upon this, taking up the little fish, he held it to his ear and appeared to be listening attentively. Dionysios, expecting some humorous extravagance, made a point of inquiring the meaning of this movement, and Philoxenos, replied that happening just then to think of his Galatea, he was questioning the barbel respecting her. But as it makes no answer, said he, I imagine they have taken him too young and that he does not understand me. I am persuaded however, that the old fellow they have placed before your majesty must know all about it. The king, amused by his ingenuity, immediately sent him the larger fish, which he soon questioned effectually."

The light-hearted Greeks amused themselves, also, with riddles and charades, the enigma and the *gryphos*, with which it is probable their diners-out were furnished as well as with scraps of poetry. But we can easily believe, without accumulation of authorities, that the success of their banquets depended chiefly upon conversation and music. With the author's observations upon the contributions of the latter to social enjoyment, we must close our notice of his amusing work:—

"Among persons engaged in public affairs the excitement of political discussion was often, of course, intermingled with their more quiet pleasures. But with this we have just now nothing to do, nor with the enigmas which we shall describe anon. There was another, and more elegant practice observed by the Greeks at convivial meetings, which, though not peculiar to them, has nowhere else, perhaps, prevailed to the same extent,—I mean the introduction of music and the singing of songs, light, graceful, and instinct with wit and gaiety, to the barbitos or the lyre. Among the Greeks, generally, the love of music and poetry seemed to be a spontaneous impulse of nature. Almost every act of life was accompanied by a song,—the weaver at his loom, the baker at his kneading-trough, the reaper, the 'spinners and the knitters in the sun,' the drawer of water, even the hard-working wight who toiled at the mill, had his peculiar song, by the chaunting of which he lightened his labour. The mariner, too, like the Venetian gondolier, sang at the oar, and the shepherd and the herdsman, the day-labourer and the swineherd, the vintager and the husbandman, the attendant in the baths, and the nurse beside the cradle. It might, in fact, be said, that from an Hellenic village music arose as from a brake in spring. Their sensibilities were tremblingly alive to pleasure. There was elasticity, there was balm in their atmosphere, and joy and freedom in their souls.—How could they do other than sing? But, if music and poetry thus diffused their delights over the industry of the laborious, it was quite natural that where men met solely for enjoyment, these best handmaids of enjoyment should not be absent. Accordingly, we find that while the goblet circulated, kindling the imagination, and unbending the mind, the lyre was brought in and a song called for. Nor was the custom of recent date. It prevailed equally in the heroic ages, and, like many other features of Greek manners, derived its origin from religion."

The English Wife: a Manual of Home Duties. Clarke & Co.

This is another of those attempts, now almost daily made, to supply the radical deficiencies of English education by books of instruction, offering short cuts and bye paths to a *sera sapientia*. It is now pretty generally understood, that young women are committed to matrimony and its cares, ignorant of every thing connected with the duties of their new station: but the world has not yet discovered that such ignorance is but a part of their manifold deficiencies. It is not merely an unacquaintance with facts which disqualifies, but far worse, an habitual frame and constitution of mind, produced by false notions in their instructors of the requisites of female education. It is not merely that women are taught nothing that is useful, but they are so hedged in by restrictions, that the intellect itself is crippled,—that they are incapable of judging soundly of the facts with which after experience may bring them acquainted. Girls are shut out from all that mutual instruction which boys acquire out of school, as well as from the benefit of that desultory reading which forms the most useful part of the ordinary acquirements of men. If, as Sir J. Mackintosh has said, "an amendment of the general habits of thought is an object as important as even the discovery of new truths," this is especially applicable to education, and to the education more particularly of females. To minds thus imperfectly

* See Brown's 'Vulgar Errors,' the chapter on sneezing, where this epigram is quoted from the Greek anthology.

Digitized by Google

developed, books of abridged rules are especially useless. Even in the most abstruse sciences, the rules are simple and clear; it is the application that makes the difficulty; and regular study masters that difficulty, as much by forming and developing intellect, as by the special knowledge it produces. By want of this particular discipline, in its relation to physic, scholars, scientific men, with otherwise well drilled faculties, fail in their attempts to apply the scraps of medical lore doled out to them in books of domestic medicine: how, then, is the school-girl to comprehend them? With the medical man himself, the difficulty lies not so much in the choice of remedies, as in the discovery of the disease: what, then, but prejudice and presumption is to be looked for from the perusal by females of general directions, which must be modified in their application to the management of every special case?

But the scope of 'The English Wife' goes beyond the physical details of the nursery; for it embraces the moral, social, and economical duties of the wife and mother. Here the difficulties alluded to, though less obvious, are still more embarassing. Habits of self-judgment and self-reliance, alone, will enable man or woman to take a comprehensive view of their duties, and to apply principles with accuracy to each individual contingency as it arises. Still, the unceasing demand for such books as 'The English Wife' shows that they are wanting—that there are classes who read them, classes who feel their deficiencies, and take the only means within their reach for supplying them. We cannot, therefore, discountenance such works, nor look with indifference to the way in which they are executed.

'The English Wife' is very little better than 'The English Maiden,' by the same writer (No. 738). It is put together without attention to the points we have touched upon; and consequently, as a systematic whole, is unworthy of praise. There is, too, far more than an average portion of twaddle: and the author has too much mingled the practical rules of life with high religious considerations, of a character too ascetic and sectarian for general tastes; and yet, to his praise be it spoken, his views are occasionally less narrow than his system. Thus, for example, in treating on charity, we find the following passage, which bespeaks liberality and some reasonable acquaintance with good economical principles.

"We must, however, guard our fair country-women against a mistake into which the religious zeal of the present day is likely to lead them. We are not bound to send the bread of life to heathen lands, while the poor of our own shores are destitute both of this and of the bread that perisheth. The really Christian lady will feel the importance of the apostolic rule as to piety at home, and will find no difficulty in discovering that the proper way to remove mental and moral misery, is first to diminish the sum of physical suffering. She will follow the order exhibited in the Lord's Prayer, 'Give us this day our daily bread,' and then 'forgive us our trespasses;' by which we are taught that destitution must be first removed from the body, before the mind can be reasonably expected to be in a fit state for moral training. The children of our common Father must be first made partakers of the external bounties of his providence, before they can be expected to feel any desires to be made subjects of the kingdom of his grace. And then we may expect a blessed and a beneficial reaction. The health and soundness of the body would lead to a healthy and vigorous mind, and that would so operate through the intellectual principle, as to secure the due remuneration of industry, and thus the prevention of a recurrence of a state of destitution."

Here we have glimpses of the truth, if not of the whole truth; and we regret that such passages are not very consistent with the writer's general doctrines.

The Xanthian Marbles; their Acquisition and Transmission to England. Murray.

So many vague rumours have been current respecting the acquisition and removal of these Marbles, that Mr. Fellows has thought it necessary to submit the facts to the public; although the statement before us was originally prepared as a mere register of incidents, to be deposited among the records of the British [redacted]

In the spring of 1838, while travelling in Asia Minor, Mr. Fellows, as is generally known, was so struck with the beauty of the architectural ruins on the coast of Lycia, that he resolved to penetrate into the interior, and the result of his explorations was made known by the subsequent publication of his travels (see *Athen.* Nos. 598 and 606). The accounts therein given attracted the attention of the Trustees of the British Museum, and application was, at their request, made by our government to the Sultan for a firman, with permission to remove some of these newly-discovered works of art to England. Diplomatic matters, however, proceed so slowly, that, in the autumn of 1839, Mr. Fellows resolved to return to Lycia, and, to ensure accurate drawings of the monuments, he took with him Mr. Scarfe, an artist. On this second journey, he was still more successful, as was shown in a subsequent publication (*Athen.* No. 710). It was not until October 1841, that information reached England that the firman had been obtained and was in the hands of the consul at Smyrna. Government now resolved to despatch a vessel for the immediate removal of these treasures, and Mr. Fellows was applied to for instructions. These were sent, accompanied by an offer on the part of Mr. Fellows to accompany the expedition without remuneration. This offer was accepted, and Mr. Fellows started within three days for Malta. Capt. Graves, of the *Beacon*, was selected for the service, and Mr. Fellows joined that vessel at Port Naussa. He was then shown plans of the ruins of the city of Xanthus, and a map of the valley, made by Mr. Hoskyn, master of the *Beacon*, who had been engaged, it appeared, in examining the valley during the past summer.

"On witnessing the opening of the dispatches to Capt. Graves," says Mr. Fellows, "I was surprised to find that no funds were provided for the expedition, nor was the subject at all referred to in any of the papers. The orders to the Captain were simply to this effect:—'To sail to Smyrna for the firman, and thence to the nearest safe anchorage to the mouth of the river Xanthus, and there to put on board and bring away to Malta such objects as should be pointed out by Mr. Fellows.' This omission of placing funds in the hands of the Captain of the expedition was the first impediment I encountered; but knowing that the necessary expenses would be small, being merely for tools, trifling presents to the peasantry, or the occasional hire of their cattle, I offered to provide the funds required, feeling sure that the Trustees of the Museum had inadvertently omitted the supplies, but would gladly repay any sums advanced. We arrived at Smyrna on the 15th of November: a heavier cloud here hung over the expedition. The documents left with the Consul, and represented in an accompanying letter from our Ambassador to him, as well as to the Government at home, as 'the necessary firman,' and on which representation I had left England, were found to be only letters dated long before, and proposing that inquiry should be made as to what was desired by England, and to wait a report from the local authorities as to the practicability of granting the request."

Under these circumstances, Mr. Fellows and Capt. Graves proceeded to Constantinople; and, having procured the firman, Mr. Fellows purchased the necessary spades, pick-axes, crow-bars, and other needful things, and sailed for Kalamaky Bay:—

"My surprise was great," says Mr. Fellows, "on hearing from the Captain, a few hours before we were put on shore, that neither he nor any of his surveying officers were to be of the expedition, and that the whole was to be left to his first Lieutenant, who was a stranger to the country and had recently joined the ship. I urged the necessity for all the engineering skill the Captain could spare, to which he replied, that they could not leave the charts, but perhaps he might come down to see us. I was landed with the first party in order to seek the mouth of the river, which was not laid down in the charts. After a walk of two or three miles we found it, and made signals for the other boats. The party landed consisted of fifteen working-men, a boy, the Lieutenant, the Gunner, the Cavasses [police officers], a youth, the son of Mr. Wilkinson, our Consul at Rhodes, and myself. Our five tents were soon pitched, fires lighted, and our cutter, galley, and dingy boats secured within the river. High sand-hills arose for miles around us, and no signs of life were visible but the footsteps of the wolves, jackals, and hares. Huge trunks of decayed trees, washed down during past ages, afforded plenty of fuel for our fires, which vied with the full moon in illuminating our encampment, and must have served as a beacon to our ship, which had sailed afar to the northward. The river Xanthus is one of the most powerful, wild, and unmanageable streams I ever saw: the volume of water is very great, far exceeding that of the Thames at Richmond; the stream rushes probably at the rate of five miles an hour. For the first three miles from its mouth, where it winds through the high range of sand-hills, I had never before seen it, but above this had traced it to its source in the Yecilassies of the high mountains of the Taurus, probably a course of nearly two hundred miles. Our boats drew two feet and a half of water, and had great difficulty in making head against the heaviest part of the stream, which marked the deepest channel through the bar of sand formed at the entrance to the river. Once within this, to accomplish which cost us much labour and risk, the men having to jump overboard, to keep the boats in their course, the waters were deep and comparatively tranquil."

Who could suppose that they were reading an account of ancient Lycia, famed for its pastoral beauty, fair fields, and shady groves, the morals and the civilization of its people, even in the time of Homer! The people, we are well pleased to hear from Mr. Fellows, are not unworthy of their ancestors:—

"Our encampment soon attracted the attention of the peasants, whose invisible tents and huts were sheltered with their flocks amongst the bushes: their astonishment at everything they saw was evinced by groups collected on every hillock around us; and I soon found that the hospitality and kindness which I had before experienced was with this people a custom: eggs, poultry, fruit and milk were brought to us, and every attention afforded; they acted as pilots, by wading over the shallows and pointing out our best course for the boats."

On the 30th of December, the party pitched their tents on the plain, immediately below the ruins of the ancient city.

"For the officers and myself," says Mr. Fellows, "I induced a family, consisting of a mother, two daughters, and a son, to leave us their hut, which was admirably situated for our works. I found, as on my former visits to these people, that money was not the powerful inducement; all offers were ineffectual to persuade them to remove, until we represented the extreme damp and inconvenience we felt from the low ground and from remaining in our tents. They then agreed to move their family to about half a mile distant, and we whitewashed and entered our picturesque abode on the 2nd of January."

Subsequently, with reference to this family, and the simple habits of the people, Mr. Fellows observes—

"Provisions are here very cheap. Oxen or sheep were killed and weighed to us at one piastre per oke, being 1¼ lb. for a penny: wheaten bread made for us was the same price, but we paid the carriage of it from Fornas, eight miles distant: the finest oranges from Rhodes were one para each, equal to seventeen for a penny: woodcocks, wild-ducks and partridges were very abundant. Mahomet, a youth of eighteen, the son of our landlady, received each week the amount of our rent, which was generally acknowledged by presents of cream, fruit, or game. I asked what his mother would do with the money we had paid to her, and suggested that they should increase their stock of cattle; but he said why should they? they had enough. I then proposed that they should cultivate more land for corn. His reply was to the same effect, 'their stock of corn always lasted until the return of the harvest.' He then said that the money would make a dowry for his sisters."

Other instances are given, which tend to prove that the people of Lycia, as of old, are remarkable for integrity. On one occasion, it was necessary to drag some of the stones on sledges across nearly a quarter of a mile of growing corn, then about two or three inches above the ground:—

"This damage," says Mr. Fellows, "could not be avoided, but as soon as we had finished, I had the fences restored, and sent to the owner to request that he would state the injury done, that I might

Digitized by Google

repay him. He said that he would call the head men of the neighbouring villages together, and they should decide. On the following Friday (their Sunday) a party of eight or nine Turks walked thoughtfully over the land, stooping and examining the corn; in the course of an hour they gave their report, that 'trampling the corn down and the cutting off the blade with the sledge had not destroyed the seed, and that if God sent rain it would spring up again, and that no damage was done.' I was sorry for this decision, as I did not wish to have it said that we had not repaid them something; I therefore drew their attention to the furrow ploughed up by dragging a stick of timber over the ground; after re-consideration they assessed this damage at five piastres, about thirteen pence. I paid the owner three times that amount, and all were satisfied."

Mr. Fellows had no means at his disposal for exploration, and but little for the removal even of those works which lay on the surface of the ground. The immediate object of the expedition was to bring away "the bas-reliefs representing the legend of the Daughters of King Pandarus, which were around a *stele*, or high square monument, which we called the 'Harpy Tomb,'—the beautiful gothic-shaped tomb having chariots and horses sculptured upon its top, which we called the 'Horse Tomb,' and some three or four fragments of sculpture built in walls. These were the specified visible objects we sought to remove."

While proceeding with their labours and discoveries, for almost every stone removed disclosed new treasures, "on the evening of Thursday, the 6th of January, Capt. Graves, with eight gentlemen, among whom were Mr. Hoskyn and Lieut. Spratt, two of his surveying officers, arrived in the course of a tour down the valley of the Xanthus, and proceeded on the morning of the 11th to make researches in the Cragus mountains. I regret, (says Mr. Fellows) that in this ramble of thirteen days in and around the Cragus mountains they did not find the ancient city of Cragus; they visited only Pinara, Cydna, and Sidyma. Capt. Graves spent the whole of Monday, the 10th, amidst the ruins, and I am glad that he witnessed the commencement of our discoveries. He saw the seven first stones which were found; upwards of seventy were afterwards discovered, but these he has never seen. I mentioned my plans for taking down the tombs to Mr. Hoskyn, but the Captain left orders that neither of them were to be touched, as we had not the requisite machinery. At Malta I had stated to the Admiral that flat-bottomed boats would be indispensable for removing the stones down the river: he replied, that if timber was to be had, the ship's carpenters would construct them. I mentioned this want to Capt. Graves at Smyrna and at the mouth of the river. I now again urged the necessity for them, when he said that he would not have any of the stones taken down the river, and that proper stores must be obtained from Malta; that he should bring his ship off the mouth of the river on the 1st of March to take all hands away. I urged that he should sail at once, or communicate by the post to the Admiral requesting more assistance; but he replied that he would write to Capt. Beaufort to know if he should proceed with his duty or go on with the survey, and that the answer could not be at Malta until March. I represented the loss of the season, and my necessary return to England before the necessary completion of the expedition; but the order was given, and the Captain, with both of his surveying officers, continued their tour on the morning of the 11th of January."

Mr. Fellows was, naturally enough, annoyed at these strange hindrances:—"Before me," he observes, "lay a mine of treasure just opened, and all, whatever the extent, at our disposal; I had an excellent set of willing working men, the best season in the year, ample authority from our own as well as the government of the Sultan, and no difficulties or wants but to communicate with Malta for the simple boats and machinery required. This was refused: whatever we found must be left behind until other ships were sent; and, by the delay of our returning to Malta, the expedition would probably be too late for this season, on account of the heat of the weather and scarcity of water in the river. A year might pass ever before the treasures would be safe in English custody; ignorance of the peasantry, the curiosity or wantonness of travellers, might do them injury, or political changes might check the expedition."

Under these circumstances, Mr. Fellows resolved to devote all the energies of the party to the construction of cases for securing the works of art, so soon as discovered; but within ten days they found so many that half the men were employed in bringing in timber.

"On the 5th of January we saw from the heights above the city that the Isabella was off the coast, bringing us more men and some stores. Mr. Wilkinson was therefore sent down to see what assistance was required with camels or boats for the river. One of the Turks in the huts of Koonik lent him a horse, and about noon he trotted off down the valley. It was nearly six o'clock, and almost dark, when he returned with the sad news that a fatal accident had happened in landing the men on the beach. * * The report of the distress of the men, wet, cold, and without the means of obtaining fire, as well as Wilkinson's haste to send them succour, caused him to lose his way amidst the high thickets: the horse's feet sank in the mud of the untracked road, and he became faint. Wilkinson seeing the distant lights of our tents, dismounted, leaving his exhausted horse, and walked home with the sad news. He said that he knew where he had left the horse, and the next morning sent a Turk to seek it; but the search was in vain. On the following day Wilkinson went himself, and found only the saddle, a part of the bridle, and one hoof; the whole of the animal having been carried away and devoured by wolves. The marks of the blood and struggling of the horse pointed out the scene of its destruction."

Research seemed to be followed by success, almost as a matter of course. In removing some large stones forming a sort of avalanche in front of the precipice, Mr. Fellows found between thirty and forty pieces of sculptured frieze, making about 220 feet of frieze, and 11 statues. A characteristic incident of the country and people is here mentioned:—

"Our depôt for stones, as soon as cased, was at the foot of the cliff near which so many were found: this, therefore, was the constant haunt of our carpenters and men. The sailors observed that two or three days in each week a party of three or four Turks on horses, preceded by ten or twelve fierce-looking hounds, passed by them into the woods; a Turk generally came before the dogs making signs to the men to keep out of the way, as the dogs were fierce: in an hour or two they returned, the hounds looking much more docile, not requiring the caution of the keeper. This mystery was explained the following Sunday; some of the sailors followed the party, and found that the excursion was merely to feed the dogs: often within a mile of the ruins they shot two or three wild boars, which the dogs devoured, while their masters dismounted to smoke their pipes. This done, they returned home satisfied. The sailors soon made known by signs that they would like to have a boar, and through the interpreter their request was acceded to; but the Turks asked where their dogs were, not conceiving it possible that any but dogs ever ate the unclean meat: no Mahometan will even touch the animal or its skin. On the following day a fine boar was shot for the men three miles from our quarters: the Turks would not allow any of their horses to carry the dead boar; the sailors, therefore, with poles and handbarrows, brought home the huge beast. Sheers were soon formed, and the boar suspended and cut up in a manner worthy of an English butcher. All the Turks slunk off one by one, for the first time disgusted with our manners."

On another occasion, Mr. Fellows mentions—

"Some of the men formed a party, taking with them port-fires, to explore some arched vaults running beneath a huge pile of building attributable to the Greek age: after proceeding about thirty yards, other passages branched off, forming the crypt, or substructure of the halls above; all these were dry and in good preservation. A Turkish short sword, inlaid with silver, a flask made of a small gourd and half filled with gunpowder, a pocket pistol with flint lock, much braiding and silk buttons, fragments of a black silk handkerchief marked with blood, and the lower jaw-bone of a man containing all the teeth sound, were found in one of those passages. The jaw-bone, the only trace of the owner of these treasures, was judged by our surgeon to have been that of a negro. The pistol* was loaded with ball, and the powder retained all its igneous properties. There can be little doubt that wild beasts had dragged the probably dead man into this their den, leaving only those things, which, had it been the work of a robber, would have been taken away. We may infer from the sheathed sword and loaded pistol that the man had not been called upon to defend himself, and that he had not been murdered for the sake of his property. An iron spike with wooden handle, similar to an instrument I have seen used by the Turks in agriculture, was also found near the same place."

The following is a pleasanter anecdote:—

"One of the prettiest sights I witnessed while at Xanthus was caused by the novelty and use of our carpenter's grindstone; the peasantry came down from miles around to sharpen their tools. This became troublesome to our workmen, and the handle was taken off. The use of the stone then became a favour, which I often granted in order to oblige them, and to see the groups assembled around; each had his sword, pruning hook, axe, knife, or ploughshare in his hand, and patiently awaited his turn at the stone. On leaving the country I promised the people that I would send them one, to be placed under the care of young Mahomet, for the use of all the peasantry of the valley; and I hear from Malta that my present was sent and highly appreciated."

The expedition now drew to a close:—

"As it was tantalizing to seek about for objects which we should not be able to dig out or remove, I now confined myself for some time to re-copying, collating and taking impress casts on paper of the whole of the inscriptions in the Lycian language on the stele noticed in my former Journals. From this position I had a view, at a short distance, of the Harpy Tomb, and was amused to see that the men under the Lieutenant were busily employed in constructing a tower within it, precisely as I had suggested, a plan which had been deemed unfeasible: I had not heard a word spoken on the subject since the Captain left orders that neither it nor the Horse Tomb should be touched. I never interfered with the undertaking, and only visited the spot when the men had left their work. The whole of the stones in four days were at our depôt for casing."

On the 3rd of March the party re-embarked.

It is needless to enter into particulars of the results of their labours. We had the satisfaction, some time since, of announcing the safe arrival in England of the seventy-eight packages in which they were contained; and lately (No. 791) of reporting briefly on their character; and we hope they will soon be open to the public. We shall conclude, therefore, with a few words on the localities where they were found:—

"On the Acropolis, which must have formed the city of the earliest inhabitants, were found all the works of a peculiar eastern character,—the works of the Troes and of the Tramelæ. The cemeteries of these peoples are marked as theirs, by their formation, by being generally cut in the rock, by their sculpture, and the characters of the inscriptions; these tombs are principally in the rocky cliffs to the south-east. The city, built in the manner of the Greeks, seems to have been added to that of the early people, but its style of building does not appear to have extended over the old Acropolis. In this Greek-built district the sculpture and inscriptions are Greek; and, from the subjects of the bas-reliefs, the place must have contained buildings with friezes, representing the capture of the early city—so accurately illustrating the description given in Herodotus, that I could almost fancy that the neighbouring historian had written his history from this frieze, commemorating an event which happened about a century before his era. The cemeteries of this people are very extensive, spreading for two miles towards the south-east of the city, and also on the western side of the river. All these are sarcophagi, bearing Greek inscriptions. These cities, we read, were conquered by Brutus, and the description of the capture is fully borne out by the present position of the walls. The Roman conqueror appears to have destroyed most of

* "On removing the rust from the pistol, which was of very common manufacture, the name of Dover was found upon the lock. A salesman of cheap fire-arms of that name lived in London, about sixty years ago, which may give an idea of the date."

Digitized by Google

the buildings of the city, which must have been crowded with temples and public edifices. The materials of these, with reversed capitals, cornices, inscriptions, and even statues, now form walls of fortification to all the surrounding heights, and mostly built with cement: these range over an extent of some miles in circuit. I have found no Roman tombs or inscriptions, nor have I seen any sculpture or art of that people, excepting the piling together of walls. The next conquest appears to have been the effort of nature; evident marks of destruction and disjointing by the shocks of earthquakes are visible. This was probably either at the period of the destruction of the Colossus of Rhodes (B.C. 214), or at the time mentioned by Tacitus (A.D. 17), since which period I see no reason to believe that any but a solitary hermit has inhabited this city. A Turkish khan, probably used half a century ago, has been constructed amidst the ruins: it has fallen to decay, and the present inhabitants of the district live in huts and tents scattered around, but not amidst the ruins of the ancient city."

OUR LIBRARY TABLE.

Forest Days: a Romance of Old Times, by G. P. R. James, Esq., 3 vols.—On reading the announcement of this romance, we anticipated that it would turn out a tale of Robin Hood and his merry men; and so it proves to be; but the men and the story in which they figure are as inferior to Scott's, as the shooting of Hubert was to that of Locksley, the redoubtable archer in 'Ivanhoe.' We have no pleasure in such comparisons, and authors, we think, would do well not to force them on our attention: perhaps it is from a vivid recollection of the elder romance, that we cannot admit this English novel to be equal to some from French history, which Mr. James has recently published. Though we have enjoyed his descriptions of scenery—honest, healthy, wood-walks on paper—we have felt but little interest in any of the personages marshalled before us, in all the point-device accoutrement of the period—unless it be for the poor light o' love, Kate Greenly; and we cannot forgive Mr. James for leaving her fate a matter of uncertainty at the close of the story.

The Last Ball, and other Tales, by George Soane, 3 vols.—We should recommend this miscellany to all caterers for the Adelphi, the Olympic, the Queen's, and the Surrey, were we sure that its stores of melodrama had not already been in their hands, and that its mysteries had not been already illustrated with red fire! blue fire! and "A Grand Retributive Tableau as the Curtain Falls!!!!!!" Mr. Soane has grace, fancy, and power; nor is he ill read in those passages of life from which romancers draw their materials: and, for ourselves, we do not like his book the less for belonging to Leadenhall, rather than New Burlington or Great Marlborough Street. Whether any public remains to share our preference, is a matter on which we are incompetent to decide.

The Christian Mother, by Mary Milner.—Mrs. Milner writes in a gentle spirit, though she is sometimes too rigorous in her exactions, and, like the Puritans of old, insists more on prohibitions than on positive duties. Religion must be rendered repulsive to the young if its precepts are represented as always commanding to abstain and never permitting to enjoy.

The Shepherd's Evening Tales. 1. *Ethelwolf.*—Having one excellent quality of an evening tale, that of being an infallible soporific. The song is unintelligible,—and the harp a hurdy-gurdy.

Soldiers and Sailors, or Anecdotes, Details, &c. of Naval and Military Life, &c. by an Old Officer.—"What numberless things," exclaims one of the boys, whom this book is purported to instruct, "are necessary to be known by soldiers and sailors!"—It is evident that one, at least, has never been mastered by the Old Officer himself—we mean the art of writing English. But on other grounds this book fails to please, as it is crammed with the clap-trap morality thought essential to national melodrama some quarter of a century since.

Index to the Tracts for the Times, by the Rev. Dr. Croly.—Although Dr. Croly declares himself in the preface to be a decided opponent of the Tractarian Theology, his analysis of the Tracts is full, fair, and impartial, and his Index is equally valuable to those who support and those who impugn the doctrines therein maintained. The dissertation appended is of course controversial, but it is written with calmness and moderation; the author has taken care that his Rhetoric should not run away with his Logic, a fault too common with writers on both sides of the question. The chapter on Ancient Liturgies is valuable; and were we not determined to abstain from theological disputes, we should have gladly investigated some of the cases of literary forgery brought forward, and perhaps extended the list of suspicious ecclesiastical documents.

Church of the Saviour, by T. Bowring.—A poor and not very accurate compendium of Ecclesiastical History.

The Christian Souvenir.—A religious annual, published at Boston, U.S., and neither above nor below the average of its class.

The Stanley Ghost.—The Old Bridge.—Stupid stories, written, of course, with the best intentions.

Statistical Companion to the Pocket-Book, by C. R. Weld, Esq.—Such a compendium of statistical facts on subjects of constant reference has long been wanted. The position of Mr. Weld, as Assistant Secretary to the Statistical Society, gave him great facilities for the compilation of this little work, of which he has well availed himself, and he has received valuable assistance from others.

The German Word Book, by M. Blanchard.—Abridgment and selection are the things most wanted in works of this class. Here we have both; and as the little volume may be carried in a waistcoat pocket or a reticule, it will be found especially useful by travellers.

Foster's Arithmetic and Examples.—Mr. Foster has done much, but not all that is desirable, to simplify the study of arithmetic: he has not given sufficient prominence to the definition of quantity, as being "that which is composed of parts and is capable of being increased or diminished," from which it might have been deduced that all arithmetical operations are but varieties of addition and subtraction; his explanations of ratio and proportion are not sufficiently clear: but his account of fractions is very good, and his elucidations of the process of evolution or extraction of roots are still better. The examples chosen to illustrate the rules are varied and well selected.

List of New Books.—Polynesia and New Zealand, by the Rt. Rev. W. M. Russell, L.L.D., &c., with map and vignette, fc. 8vo. 5*s.* cl.—The Wine and Spirit Merchant's Companion, with an Essay on Distillation, by J. Hartley, 2nd edit. fc. 8vo. 5*s.* cl.—Memoir of Ebenezer Birrell, late of Stepney College, London, by his Brother, 2nd edit. 18mo. 1*s.* 6*d.* cl.—Outlines of Geography (Edinburgh Academy), Part I., "Modern Geography," 7th edit. revised 12mo. 2*s.* 6*d.* bd.—Newton's Principia, Sections 1, 2, 3, 9, 11, by J. H. Evans, M.A., 3rd edit. 8vo. 6*s.* bds.—Lieut. Eyre's Account of Military Operations at Cabul, with a Journal of Imprisonment in Affghanistan, 2nd edit. post 8vo. 9*s.* 6*d.* cl.—Mediterranean Sketches, by Lord Francis Egerton, post 8vo. 7*s.* 6*d.* cl.—Travels in New Zealand, by Dr. Dieffenbach, 2 vols. 8vo. 24*s.* cl.—Letters on South America, by J. ROYAL ACADEMY.

Professor Cockerell's Lectures on Architecture.

LECTURE II.

THE Professor said, that the developement of the human faculties was exhibited in the history of Architecture under its most favourable aspect. The art might be termed the epitome of civilization, the first fruits of social order and combination, of every discovery in science, and of every conception of beauty. Political history was of comparatively inferior interest, and betrayed, for the most part, the depravity of our species. The natural labours of man, those of agriculture, or commerce, their unvarying succession, brief endurance, and disappointment, leave melancholy convictions; but in the occupation of Architecture man finds the employment of those higher aspirations and idealities for which he feels himself born, as well as of his physical energies. Here he perceives that he has a soul; all his loftier conceptions—order, calculation, beauty, and immortality—are opened to his contemplation, and he seems to feel the power of extending his works and his memory beyond the bounds of nature and of time.

The exhibition of these innate and physical capacities seems to be his natural desire; and the progress of his operations coincides with his intellectual growth. In his boyhood he contends with the forces of nature; he moulds the vast rocks, and rears on end the monolithic obelisk; or, accumulating the masses with laborious endurance in the pyramid, he emulates the works of Nature herself; and exulting in the force of order and combination and his acquired skill, he exclaims, with the Babylonians, "Go to, let us build a city and a tower, whose top may reach unto the heavens, and let us make us a name." And although in our advanced civilization, we may smile at the superfluity of such labours, we must not forget that by them man first vindicated his capacities, and that metallurgy, mechanics, and all the manual exercise and discipline which fulfilled his apprenticeship to civilization, were brought into practice which soon employed itself in more intrinsic benefits.

The age of Alexander and the Romans abundantly illustrated this truth. Man now contends with the elements. The ocean is curbed by his ports, and quays, and Pharos: he sails across its bosom: marshes are drained; sewers, canals, aqueducts, and roads exhibit the mastery he had acquired, and his conquests over nature. Frontinus, whose work on aqueducts was written about the year 80, has a passage remarkably illustrative of the growth of this spirit in his time. After giving a description of the nine aqueducts under his care, brought to Rome by successive labours, making an aggregate length of about 142 miles, he exclaims, "with so many waters, and so many magnificent works necessary for their transport to this great city, will you compare the idle Pyramids of Egypt, or even the inert works of the Greeks, however celebrated and glorious in his ory?" The ingenuity of the architect now, therefore, issues to use, and through 1800 years it is more or less subordinate to it, either in the great business of religious and moral improvement in the building of churches, or the security of civil life in castles and mansions. Finally, in recent times it is contracted to absolute utilitarianism, and all its powers are bent to the perfection of the individual dwelling between party walls, in which every subject of the state is in the enjoyment of personal luxuries and conveniences of life unknown to the Pharaohs, the Medici, or the magnificent Louis the Fourteenth.

Thus, as Monsieur Guizot finely observes, each age and nation seems to have flourished for some beneficial purpose to mankind, which, being accomplished, it disappears from the stage.

The history of Architecture may be said to divide itself into five classes—Sacred, Civil, Military, Domestic, and Monumental. In the accompanying drawing [a roll about twelve feet square, containing a vast group of buildings inscribed within the outline of the pyramid, on a large scale] are seen indiscriminately some of the principal monuments of all these classes (except the Military), comprising a period of 3,334 years. We may say to the students, in the words of Napoleon to his troops, before the Pyramids of Gizeh, "Quarante siècles vous contemplent!"

This arrangement, done under the Professor's direction, about twenty years ago, appeared (he be-

Digitized by Google

lieved) for the first time in the Penny Magazine. A comparative view of the great buildings of the earth, on the same scale, might minister to that false estimate of merit, which is derived from material dimension; but that criterion would vanish before the comparison of renown; and the Parthenon, and other small buildings, as here represented, would abundantly illustrate the preference to be awarded to

The little body, but the mighty soul.

National attachment might excuse his pointing out the spire of the Old St. Paul's, the only one exceeding the height of the Great Pyramid. Those of Mechlin and Cologne, though designed to have exceeded it, remained imperfect. A limit seems to be placed to man's arrogance and vain glory. We were taught, like the Babylonians, that the God of nature delights not in the accumulation of his favours and his light, in isolated and single spots, but in the wide-scattered communication of them throughout all lands.

But the observations already offered, were illustrated still further by the sections [on a roll as large as the former, showing the structure of the most important temples, on the same scale]. The issue of the art in use and economy, was most remarkably shown in the comparison of those sections, in which we observe, that St. Paul's displays the largest bulk with the least material, hitherto contrived.

He should now call the attention of the students to two rolls [about sixteen feet long each], in the first of which the plans of the remarkable temples of the ancient world, from the Tabernacle in the Wilderness (1491 B.C.) to the reception of Christianity (313 A.C.), and in the second those from that epoch down to 1842, were all laid down to the same scale. There was displayed, as it were, the genealogy of temples, during 3,330 years.

It was Sacred Architecture which he purposed to review cursorily that evening; and short enough was the time for a subject so deeply interesting; indeed, such an expression might be deemed presumptuous; and it was obvious that we should be enabled to do no more than pass the plans in review, and remark upon those characteristics which became the more palpable on the synoptic view of centuries and ideas of such extent and variety; and which were less frequently commented upon. It might be objected by the student that subjects of such vast scale and importance and rare occurrence should be illustrated, rather than the more practical; but we should remember the dictum of Vitruvius, that the architect ought to pursue his studies "maxime in ædibus Deorum, in quibus operum laudes et culpæ æternæ solent permanere." In fact, the remains of these precious exemplars of skill and cost and labour, the types of our art, were still discoverable even from the most remote times, as if Nature herself, as well as man, had respected them.

In approaching Sacred Architecture, and in discussing the technical considerations of the forms and structures of temples, we cannot but bow with respect and veneration to those motives and affections, the noblest of the human heart, which have ever urged these sacrifices to the mercy and the majesty of the Creator,—and we recognize in the Grecian or the Druid, the Hindoo or the Christian temple, the universal sentiment so finely expressed in the Psalms, cxxix.:—

"Lord, remember David and all his trouble!

"How he sware unto the Lord, and vowed a vow unto the mighty God of Jacob,

"I will not come within the tabernacle of mine house, nor climb up into my bed,

"I will not suffer mine eyes to sleep, nor mine eyelid to slumber, neither the temples of my head to take any rest,

"Until I find out a place for the temple of the Lord, an habitation for the mighty God of Jacob."

In excavating the foundations of the Temple at Ægina, the remains of burnt woods and bones of sacrifices were discovered, mixed, no doubt, with libations and tears and aspirations as warm as those of David;—at Selinus we find the steps in front of one of the temples worn down almost to an inclined plane, by the feet of the devout. So again of the accomplishment of these vows amongst men of all ages and nations, we shall find the most solemn and full expression in the 8th chapter of the First Book of Kings, the dedication of the Temple by Solomon.

The resemblance of the plan of the Tabernacle in the Wilderness, and with its surrounding court (the first in our series, B.C. 1491), and still more, of the Temple of Solomon; with the arrangement of the Greek and Roman temple, down to the Antonines at the end of the second century of our era, is very remarkable. In the first the parallelogram is preceded by a portico of an irregular number, namely, of five columns. In the second (1012 B.C.) we have the Temple in Antis.

If we enter into particulars, we are still more struck with their correspondence; we find, for instance, the irregular number in the Temple of Jupiter at Agrigentum, one of the largest and most important of antiquity: seven columns compose the front; and we are reminded of Solomon's saying, (Prov. ix.) "Wisdom has builded her house, she has hewn out her seven columns." Again, at Pœstum we have a Temple (miscalled a basilica) with nine columns in the front. Other examples also might be cited. Again, of the Temple of Solomon, that of Themis at Rhamnus, and the frequent temple in Antis, with its pronaos and hieron, is the constant copy. The altar of sacrifice, that of incense, the laver, the table of show-bread, are all traced either in existing remains, in bas-reliefs, or in medals.

The connexion of Sacred and Classic Architecture is thus apparent; and the author of 'The Plagiarisms of the Heathen Detected,' (Mr. Wood, of Bath,) is borne out in this comparison of the *plan and arrangement* of temple architecture. The common error (and one to be carefully avoided) is the attempt to trace this resemblance in *the styles*, or the orthographic figure of the parts and orders—the mere vesture of the scheme; and the failure in straining the texts and examples (Corinthian or Doric) to a perfect correspondence, either in Wood, Villalpandus, or his learned predecessor, Wilkins, has always thrown a doubt upon these interesting investigations; but the comparison of the *plans* makes the Tabernacle the type of the Greek and Roman temple, a work which Paul as well as Moses assures us was inspired by the Deity, "for see, saith he, that thou make all things according to the pattern showed thee in the mount." (Heb. viii.)

It is remarkable that the earlier or cotemporary works of Egypt show no similar arrangement; nor was it likely that Moses should adopt and recommend any form associated with Egyptian recollections. The circular form of plan is indeed traced in Greece, and Rome more especially, and amongst the Druids, but the most frequent by far is the parallelogram, after the Tabernacle: in fact, the earliest inhabitants of the bordering countries were apparently monotheists; their connexion with the Jews through Tyre and Sidon, their respect for a people of superior knowledge and religious instruction, may well have sanctified their form with them: the ritual was the same with them; the idol took the place of the ark; with both, the temple was the Domus Dei; both were religions of sacrifice.

The ritual was thus the originator of the form of the temple, and must always be so. The Temple in Antis became (with a view to ornament, and by the successive inventions for decorum and dignity) the proselyte, peripteral, dipteral, and pseudo-dipteral. The much-boasted beauty of the Greek temple was not, then, an invention of taste, but one of ritual; and in the consideration of Templar architecture, in all times and countries, this important fact must be carefully borne in mind.

Another point of resemblance of classical and Jewish architecture, of great import, since it is the hinge upon which the whole system of ancient architecture turns, is the employment of "costly stones, even great stones, stones of ten cubits, stones of eight cubits." Upon this practice the whole character and taste of sacred and classical architecture depends. The tenth book of Vitruvius treats chiefly on large stones and their transport. The type of the Domus Dei admitted of no extension; the only mode of giving magnificence and dignity to temples, thus circumscribed in form and composition, was by the employment of monolithic masses, and by the exquisite detail of proportion, order, and sculpture bestowed upon them. The ancient world is full of examples of this remarkable principle, and the last and most signal one is that in the Temple at Balbec, by the Antonines, in which three stones measure, in the aggregate, upwards of 199 feet in length.

The Saviour, whose religion was soon to supersede all ancient laws, constantly illustrates his arguments by this practice: "the head stone, the chief of the corner, which the builders rejected," are his constant metaphors; and his prediction that of these great stones "there shall not be left one upon another," is literally verified in the subsequent history of Architecture.

Our remarks upon the uniform arrangement of plans of Greek and Roman temples, would be too long, and must be referred to the publications upon them specifically; but as brought together in this view it may be observed, that the temple at Ephesus, the size of which we learn alone from Pliny, exceeds all others in dimensions, and the constant limitation of length of the great temple to Jupiter especially (at Athens, Agrigentum, Selinus, Balbec, and Rome) to about 358 feet in length, might lead us to suspect the text of Pliny. Vitruvius gives us a few hints of the attachment of the ancients to numbers in his third book, with reference to the dimensions of temples. The investigation of this subject might be attended with curious results. The frequent dimension 358, by the addition of the stylobate, or by the local variation of the foot, may easily be supposed to refer to the number of days in the solar year. In the Temple of the Sun at Palmyra, the portico has 12 columns; these, added to the columns in the temple, make 52; the whole number of columns in the surrounding peribolus is 364. Wren seems to have had reference to this idea in his height of St. Paul's.

The sections of Ægina, the Parthenon, and the temple at Pœstum, exhibit the ancient arrangement of an interior divided into a nave and two aisles, by two rows of columns in double heights; those of Venus and Rome, and Balbec, exhibit the Roman form, namely, a vast vault,—in these instances, upwards of sixty feet diameter in masonry. The occupation of the whole of these interiors by the idol, their employment as a vast niche to receive the god (in ivory and gold, at Olympia and Athens), had something of monstrous, but magnificent; and invested with the art of Phidias, we may understand how even the rough soldier, Paulus Æmilius, might be moved even to tears, as we are told, in the presence of the beauty and majesty of the godhead, as figured by that great master.

Arrived at that period (313 A.D.) in which the Christian religion was adopted by the state, the range of temples now exhibited displays a total reverse of the previous arrangement. The old ritual of external worship and of sacrifice was abrogated. It was now internal and of the heart; the portions were now inclosed; a vast area covered with a roof, of which the basilica was the best model, constituted the Christian temple. Upon this the cruciform was engrafted, "in hoc vince," bearing the universal symbol, in plan as well as in every other situation. The theory of the Church of Constantine is handed down to us by Eusebius, bishop of Cæsarea; he describes the church of Tyre [which the Professor exhibited] and many others of his day, with the most interesting and instructive hints as to the signification and arrangement of sacred edifices, which may be very profitably consulted by the architect. The basilicas of St. Peter's and that of St. Paul's at Rome, in the form of the Latin cross, become the types of the Christian church throughout Western Europe, with very small variation (until the introduction of the dome, which then only modified it), down to the present day.

It was said that 1800 churches and religious structures were built during the reigns of Constantine and Justinian: those of the former were in the basilica form, which is liable to decay; those of the latter, to which the ritual and other important considerations gave a new form, resembled the Greek cross of equal lengths. The transept was covered with a large dome, and the ends of the cross with minor ones, forming a group highly favourable to architectural effect. This form, executed in Santa Sophia, became the wonder of the world, and the dome also, 120 feet in diameter, exceeded any executed since the Pantheon at Rome.

The Professor exhibited several Greek churches at Arta, Thessalonica, and other parts of Greece, measured by himself, as also the valuable researches on the Greek Church Architecture of the sixth and

Digitized by Google

seventh centuries, by M. Couchaud, which contained many hints of great beauty and interest to the practical architect. The churches of Russia were all upon this plan. Procopius was the author, who might be consulted with reference to this era of the art.

The dome, which had become the distinguishing feature of the Eastern church, penetrated into Italy, under the exarchate at Ravenna, in the church of Santa Vitali, 510 A.D.; and again at Venice, in St. Mark's, built by a Greek architect (976—1071). Until the eleventh century, the dome formed no part of the western church, except in those instances: it was then that the Pisans, the richest and most commercial people of Italy, began their great church (1063), and adorned the transept with this new feature.

The rivalry of nations is the great fulcrum of many a noble effect, in arts as well as politics; and to this motive chiefly, we may attribute the bold scheme of Arnolpho de Lapo, in the church of Santa Maria, at Florence, founded in 1290; in which, doubtless, after the model of the Pantheon, he proposed to place a dome, of nearly equal magnitude, over the transept, but raised into the air, in a way hitherto unattempted, except at Constantinople, where, however, the space was one-sixth smaller. But the inveterate and disastrous contests of these republics long deferred the execution, and it was not till one hundred and twenty years after, that Brunelleschi accomplished the work, as related in the very amusing and instructive account by Vasari.

It was just one hundred years after this successful work that Michael Angelo executed the dome of St. Peter's, confessedly in imitation of it, as he said himself, in contemplating the model—

Vò far la tua sorella,
Più grande già, ma non più bella.

In another one hundred and fifty years, we have the Domes of the Invalides, Val de Grace, at Paris, and St. Paul's, in London.

The family of Domes concludes with that of St. Genevieve (the Pantheon), and, like the successor of a noble but a worn-out race, exhibits all that meagreness and debility which precedes its extinction.

But the imitations of the types of the basilicas of St. Peter's and St. Paul's of Rome in the north and west of Europe,—*more Romano* to the eleventh century, from the eleventh to the sixteenth centuries *more Germanico*, by the societies of Freemasons,—have justly been the admiration of the world, for their unexampled hardihood and practical science, though the remarks on their principles of structure and of art, which the future lectures will have occasion to offer, will show that neither the geometrician nor the scientific architect need regret the impenetrable veil which conceals them. Any detailed discussion of the merits of the plans exhibited would lead beyond the bounds prescribed; but we must admit that, generally, the continental plans exceed our own in magnificence of design, especially in the double aisles and the western fronts. To what causes may be assigned the more modest design of our own churches, except to that characteristic prudence of our countrymen, which requires the full accomplishment of every enterprise undertaken, it may not be easy to determine; certain it is, that all the churches of this country are complete in their design and features, wherens those of the continent are very rarely so.

The words of our poet, though not always applicable to architects, unhappily, may be so to our pastors and masters.

When we mean to build, we first survey the plot,
Then draw the model; which if we find exceeds ability,
What do we then, but draw anew the model in fewer offices.
——— Consult surveyors, know our own estate,
How able such a work to undergo.
Or else we build like those, who half thro' give o'er,
And leave their part created cost
A naked subject to the watery clouds,
And waste for churlish Winter's tyranny.

With reference to the gradual verticality which the sections of this series of ancient and modern temples assumed, we might say, that the earliest were of the earth earthy, and the latter as sublime as the religion for which they were designed. Thus, the height of the Pantheon, at Rome, was equal to its diameter, or as 10 to 10; that of Venus, and Rome, was as 12⅔ to 10; that of the Baths of Caracalla, as 14 to 10; of St. Peter's, at Rome, as 17 to 10; of St. Paul's, London, 20 to 10, as also of Lincoln; and that of Cologne was as 34 to 10.

The last great temple of Christendom, was the Magdalene Church at Paris; it is 325 feet long by 136 feet wide and 120 feet high, and equalled the smaller temple at Balbec. It was the work of more than half a century. In England, great activity had been used in church-building during the last twenty-five years, but the warmest admirers of those zealous efforts could never pretend that any regulated architectural spirit has directed those works. No church of a monumental character had been attempted. The ascendancy of the high church party is, however, favourable to our art, and it is not unlikely, that under good direction, it may flourish in a few years. But there is much pedantry abroad, and an absence of all originality and intrinsic character in the taste of the day, which leans to the Roman Catholic form, the basilica, suited to a demonstrative form of worship, rather than the auditorium required by our ritual. Veneration for antiquity is to be respected and encouraged, but its transition to superstition is easy. The divines of 1680 have left us models, erected under the direction of Sir C. Wren, which have not been surpassed. Seven of the city churches were exhibited (measured by the Professor), which would be found as remarkable for their adaptation to our form of worship—offering the largest area, with the smallest obstruction to the sight and hearing,—as they were ingenious and admirable in taste and structure.

The favourite design of Sir C. Wren (laid down from the model now in St. Paul's,) was also exhibited. It was a precious legacy to posterity, which had never been surpassed in architectural beauty and arrangement, for the Anglo-Protestant Cathedral church, and would probably at some future time be executed.

But attachment to our national architecture may be indulged with great propriety by the adoption of the forms of the Lady Chapels, modified and suited to our ritual—as those of Wells, Ely, and others; or of the chapter-houses; and the Greek church. The basilica form requires length unsuited to our services, and the fragments or curtailed portions of that form, often practised with small success in our recent churches, seems to point at the greater advantage of the vertical arrangement, which the models, the Professor ventured to suggest, in the churches of Wren, and the examples quoted, would assure to us.

OUR WEEKLY GOSSIP.

We mentioned, last week, that a Library of reference and circulation was in the course of formation by the clerks in the Bank of England. We have since learned that a library of a like, but more humble, character was established, in November 1841, among the servants at the Athenæum Club; and has been attended with all the beneficial effects anticipated. The project was sanctioned by the Committee, who gave 5*l.* towards the formation of it. The subscription is one halfpenny a week or sixpence a quarter—is *voluntary*, and confined to the persons of the establishment: only three do not subscribe. The secretary has a *veto* on the choice of books. Works on party politics or polemical theology are not admitted, and a servant is appointed with a small quarterly stipend to issue, receive, and keep account of books lent out. The Committee contribute from the funds of the Club a sum equal in amount to that subscribed by the servants. It is a curious proof of the intellectual destitution which must have existed prior to the establishment of this library, that the work most in request is The Bible—a copy of which it might fairly have been assumed was, in this age of cheap distribution, home and *foreign*, in the possession of all persons of the class and character of servants; after this Blair's Sermons and Nicholls' Help to Reading the Bible—then Scott's Novels and Poems, Cooper and Marryatt's Novels, and Burns' Poems. Very few donations have been received from members, to whom the existence of the Library is scarcely known—notwithstanding, it already comprises one hundred and twenty-six volumes, after an existence of only fourteen months. The advantages that might be hoped for are obvious, and the result has proved them to be true. The servants in bad weather stay in the house to read, instead of going to public houses. Many men and women, who could previously read very imperfectly, have, from a desire to participate in the enjoyment of their companions, applied themselves closely, and now read with comparative facility; and it is well ascertained that some of the married men, when off duty, as is the practice in clubs, at nine on alternate nights, now regularly take books home and read them to their families, instead of going, as heretofore, to the customary places of resort for gentlemen's servants. In clubs, too, the men servants have some hours every third day for out-door exercise—and during the last summer it was common with them to take books into St. James's Park, and sit under the trees and read.

Mr. Westwood, the Secretary of the Entomological Society, is, we hear, preparing for publication, under the title of 'Palæographia Sacra Pictoria,' a series of specimens of the most important of our manuscripts of the sacred text, and other religious works, with the view to exhibit the various styles of art adopted their illumination and calligraphy.

We have received another letter from Mr. Moon, which, had it contained one word bearing on the question at issue between Mrs. Parkes and the projectors of the great "National twenty-five thousand guineas Lottery," we should undoubtedly have published; as it is, and out of kindness to Mr. Moon, we shall simply give the letter from Mr. Lloyd, which he enclosed:—

26, Soho Square, January 6, 1843.

My dear Sir,—In reply to your note just received, I beg to assure you most positively that Mrs. Parkes did distinctly state to me that she was anxious to place her stock at my disposal, for the use of the "National Art-Union." I replied, that I should be happy to receive from her a proposition with respect to any of her new plates, that she might have in progress; her rejoinder was, "that she could only treat for the whole of her stock." I remain, &c.

To F. G. Moon, Esq. (Signed,) Richard Lloyd.

With reference to the remarks contained in Mrs. Parkes' second edition, as to her having compared a print of the 'Mantilla' with a proof of the 'Lattice,' it is a *pure fabrication*, such a thing as the latter never having been in existence, a proof of the 'Lattice' never having been either sold, advertized, or even *printed*.

We must again point out the orthographical blunders of the Chapter of Westminster Abbey. In the *Athenæum* (No. 789) we noticed that the stone called 'Long Meg,' in the south cloister, had been inscribed to Gervas*us* de Blois. On Wednesday last, strolling by the spot, we found Gervas*us* converted into Gervas*uis*. The third trial will, perhaps, make it Gervas*ius*. Sus, suis, if it can be interpreted at all, must mean the tithe pig, belonging to the pious Capitulum—a latitudinarian image, perhaps, signifying the money-fees taken for showing the tombs.

We have recently been informed of a considerate act on the part of Prince Albert, for which the public have reason to thank him. A proposition was submitted to the Prince to enlarge the Queen's Private Library, at Windsor, which is situate at the West end of the North Terrace. The proposed enlargement could be most conveniently effected by adding to the library the room called the Queen's Drawing-room, one of the suite of state apartments, which holds the Zuccarelli Landscapes. But this alteration would have broken the connexion of the suite, and the public must have been passed through a dark lobby, besides losing one of the usual show-rooms. Although this change would have been very convenient to the Prince, it would certainly have been quite the contrary to the public; and we hear that he at once negatived the proposal, solely on the latter consideration. We cannot help contrasting with this, the communication of a correspondent, who complains of the regulations at Richmond Park, by which persons are forbidden *to walk on the grass*, under a liability of being shot by accident! The object, it is said, is to preserve the game.

The foreign journals announce the death, at Leipsic, in the 72nd year of his age, of Frederick Rochlitz, who, as therein stated, for more than forty years swayed the sceptre of musical criticism in Germany. He was the founder, in 1799, of the Leipsic *Musical Gazette*, his articles in which publication have been collected in three volumes, and recently reprinted for the third time. Herr Rochlitz was, besides, one of the most skilful *dilettanti* pianists in Germany, and the author of several works on vocal music, as well as of a collection of tales, in which the German society of his day is said to be ably reflected.

A letter from Rome of the 2nd inst., published in *Galignani*, speaks enthusiastically of the festivities of the eternal city. "What would Rome be without the Torlonias? We have passed the five weeks most delightfully, their splendid mansion being thrown open twice a week with French vaudevilles,

Digitized by Google

and the beautiful Princess did the honours, as usual, with all the grace and dignity of a noble Colonna. We are now emerged into the noise and gaiety of a carnival, five theatres being opened nightly, and the young people talk of nothing but of the series of balls in preparation by the Russian, Austrian, and French ambassadors, and the Princes Doria and Torlonia. There are above 6000 strangers already arrived in Rome, one-third of them English. The Russians are in great force, and the French, in society, consist of some twenty distinguished families of the *ancien regime*." The papers also mention, that the dispute between the Governor of Rome and Prince Borghese has been decided in favour of the latter, and he has again thrown open to the public the beautiful grounds which surround his villa. The Prince, it appears, was offended because, on the occasion of a balloon ascent from the Monte Pincio, the police entered to watch the people, without having first obtained the proprietor's consent. The Governor denied the Prince's right to close the grounds of the villa, which he inherits from the Cenci, and over which he contends that several Papal Bulls have given him certain powers. The matter was referred to the Pope.

To the long list of architectural restorations, commenced, or in progress, to which we have recently called attention, we may now add, that the Grand Duke of Tuscany has determined on the completion of the Duomo of Florence, the erection of which was commenced in 1290, under the direction of Arnolfo di Lapo. The whole of the marbles employed for the purpose are to be drawn from the Tuscan quarries of the Mount Altissimo, at Seravezza, whose produce, finer and more abundant, it is said, than that of the Carrara quarries, first obtained celebrity from the chisel of Michael Angelo.

Our Leipsic Correspondent has a few "more last words" to add respecting the liberty of the press in Germany. Leipsic, January 11.

Since my last, another circumstance has occurred, which may serve as a further illustration of what I have already stated as to the liberty of the press in Germany. The *Deutsche Jahrbücher für Wissenschaft und Kunst*, a monthly periodical published here, the contributors to which included some of our most liberal and distinguished writers, has been suppressed by the Saxon government, at the urgent request, it is understood, of the courts of Berlin and Munich. The 'Jahrbücher' ridiculed the efforts of Prussia to destroy the fruit of the doctrines disseminated by Hegel; it ridiculed Schelling, who, even at half-price, delivers lectures to empty benches at the Berlin University; it ridiculed by the parody noticed in one of my former letters (*Athen. ante*, p. 15) the 'gorgorismo' of His Bavarian Majesty—and these were crimes not to be forgiven. Saxony, a kingdom, with not quite so many inhabitants as the single city of London, is obliged to act by command of her Prussian and Bavarian neighbours, and these neighbours required that the licence should be withdrawn, without which no periodical paper can appear in this constitutional country! and even the wet sheets of a forthcoming number were seized in the printer's office. The obedient government published a manifesto, in justification of this proceeding, which no German paper will be allowed to controvert or answer, it being understood that the reasons assigned, and even the very wording of the order, were "a true copy" of a note delivered on the subject by the Prussian Minister at Dresden.

It is mentioned, in the German papers, that 'The Frogs' of Aristophanes is about to be performed at the theatre of the Palace, at Potsdam; the translation by Professor Franz, and the music by a young composer, M. Commer. It is added, that at a *fête* recently given to the Hellenist Boeckh, on his birth-day, the students sang two of the principal pieces of this music with great applause.—We find it stated, too, elsewhere, that a Greek theatre is about to be erected at *Sans-Souci*, by order of the King of Prussia, for the performance of the master-pieces of the ancient Greek drama.—To these dramatic movements, we may add one or two bits of intelligence gathered here and there.—Rubini's threatened retirement follows the manner of dramatic retirements in general. He is at Berlin just now, where he is to give twelve performances, and is expected in Madrid, where he has engaged for thirty. The Duke of Ossuna, by whose exertions the latter engagement has been effected, guarantees to the manager the sum of 6,000 piastres, towards the expense of the performances.—Alexander Batta, and his brother, have been gathering laurels at Munich.—Thalberg in Belgium, beginning at Brussels and Antwerp.—Ronconi is in Paris. The dramatists of Paris have had several performances, "*par extraordinaire*," before the tribunals. Thus, M. Léon Pellet, the opera director, seized, for his 60,000 francs awarded against Fanny Elssler, (as we announced at the time,) on the rich furniture in her apartments in the Rue Lafitte, of which, however, Fanny has regained possession, by appeal, on proof that the articles seized were the property of her sister Therese. Her advocate, in alluding to the ridicule which had been thrown on the triumphal march of *the* Elssler beyond the Atlantic, mentioned a fact before which ridicule at once retires. It should not be forgotten, said he, that she scattered charity around her with a munificent hand, and danced fifty-one different times for the benefit of the poor. The dispute has, we believe, at last been settled by mutual concessions and the intervention of friends.

The election of Vice-President to the Academy of Sciences, for the present year, has been the subject of a vehement contest between M. Charles Dupin, and M. Lionville. The former was elected on the third scrutiny. At the Academy of Inscriptions and Belles Lettres, Count Beugnot has been elected President, and M. Guigniaut, Vice-President; and at the Academy of Fine Arts, M. Blondel, President, and the Baron Desnoyers, Vice-President.

Letters from Constantinople of the 21st ult., quoted in the French papers, mention circumstances of painful interest relating to Captain Conolly and Colonel Stoddart. Reports have been for some time current that two British officers, travelling in Central Asia, had been seized by the authorities and put to death. The writer of the letter referred to, states that all doubt on the subject has been removed by official communication. According to *Galignani*,—"The two officers in question Colonel Stoddart, formerly attached to the mission in Persia, and Capt. Conolly, well known by his interesting work on Central Asia, were travelling for pleasure and information, when they were seized by the authorities of Bokhara on a charge of being spies. It is said that they could have got away through the friendly offices of the Russian political agent; but confiding in their innocence, and not supposing it possible that their lives could be in danger, they refused to avail themselves of the offer, and, after various trials and sufferings, they were at last taken from the prison in which they were confined, and dragged to the market place, where Colonel Stoddart was first beheaded. This execution having taken place, Capt. Conolly could, it is added, have saved his life if he would have consented to embrace Islamism, but he firmly rejected the offer of life on such a condition, and immediately fell under the knife of the executioner."

ROYAL POLYTECHNIC INSTITUTION.

Cary's NEW MICROSCOPE, estimated by Microscopists to magnify to SEVENTY-FOUR MILLION TIMES the Natural Size. New DISSOLVING VIEWS in Afghanistan, including the BOLAN PASS and View of GHUZNEE, the Hall of Waters in CONSTANTINOPLE, and Scenes in the HOLY LAND from the beautiful Sketches by D. Roberts, R.A., published by Mr. Moon. The COLOSSAL ELECTRICAL MACHINE, with brilliant experiments, is exhibited at a quarter to Three in the Day, and at Eight in the Evening. NAPIER'S PRINTING PRESS (double cylinder), Steam Engine, and other interesting Machinery, are in practical operation in the Hall of Manufactures. DAILY LECTURES on Chemistry and Natural Philosophy, by Dr. Ryan, M.D. L.L.D., and Prof. Bachhoffner.—Admission 1s., Schools, half-price.

N.B. An Elementary Class on Chemistry and Natural Philosophy is arranged, suited to young persons, the pupils of which have free access to the Institution. Terms, One Guinea per Quarter. Prospectus to be had of the Secretary.

Analyses, Assays, &c. by the Chemist of the Institution.

SCIENTIFIC AND LITERARY

ASIATIC SOCIETY.

Jan. 14.—Professor Wilson, Director, in the chair.—Among the donations, was one by Captain T. J. Newbold, of two silver coins of Tiberius Cæsar, in good preservation, which had been dug up by a ryot, in an earthen pot, with some hundreds of others, in Coimbatore. The Director observed, that Roman coins had been found not unfrequently in that part of India, though very rarely in such good preservation; and that it afforded evidence of communication with Europe at an early period, though it was singular that such discoveries of ancient hoards were made chiefly in this part of India.

The Director then read a letter from the Political Resident at Aden to the Bombay Government, dated September last, which communicated the discovery and copy of an ancient Himyaritic inscription, dug up there, in making a new road. The inscription was found at 20 feet beneath the surface, engraven upon a circular slab of pure, and very white, compact marble, 19½ inches in diameter, and is remarkable as being the only one that has hitherto been found at or near Aden, though that place was the principal port of the ancient Himyaric Kings. Other inscriptions, in the same character, have been found in the interior, as far north as Sand, but always on oblong marble blocks, which in most cases formed part of a gateway. The slab has been sent to Bombay, where several of those before found are deposited.

A letter was read from Captain Newbold, containing an account of the Bhuga of Mahanandi, a large thermal spring, at the Western base of that portion of the Eastern Ghauts called Nulla Mulla, about 15° north lat. and 79° east long. This spring, in a sequestered spot in the recesses of a jungle infested by tigers, and other beasts of prey, has been enclosed by the Brahmans within the massive walls of a temple sacred to Mahanandi, the Great Bull. Captain Newbold, in October last, accompanied the Chief Commissioner from his camp at Gazoopilly, in Kurnoul, to the spot. A large tank, filled by the spring, occupies the centre of the quadrangle. It is lined with stone, and measures 23 paces by 22. A *mandop* stands in the centre, canopying several lingams. The water enters with some force through seventeen apertures in the masonry, of which the principal one is rudely sculptured to represent a cow's mouth, in imitation of the source of the Ganges. The spring is said to be perennial, never suffering increase or diminution. The temperature was a little above 88° at its entrance, and 85° at its exit beyond the temple wall. The temperature of the air in the shade at the time, a quarter past seven in the morning, was 78°. The height of the place above the sea is about 800 feet. The water is remarkably transparent, and abounds in fish. The spring supplies a rivulet of considerable size, part of which feeds the large tank of Nundial, and the remainder is drawn away for the purposes of irrigation. It is perfectly tasteless, and, on testing, proved much purer than that of the neighbourhood. Two other warm springs were found by Captain Newbold, in the immediate vicinity of the temple, and a large one several miles further to the southward. He is of opinion that many more of a similar quality will be found, not only on this great line of mountains, but also in the Western Ghauts, and in the Himalaya chain.

A paper, by the Rev. Dr. Stevenson, of Bombay, on the Literature of India, was commenced.

GEOGRAPHICAL SOCIETY.

Jan. 9.—W. R. Hamilton, Esq. President, in the chair.

1. A letter was read from Major Rawlinson, accompanying notes on the comparative geography of Afghanistán, fuller details of which Major Rawlinson promises to send when ready.

2. Notes on Australia, by Mr. Sutter. This paper detailed the character of the rivers Macquarrie, Murrumbidgee, Bogan, Namoi, and Darling, which, though quite full in the rainy season, form, in the dry season, mere chains of ponds, which, however, communicate by the running of the water below the beds of the intervening parts. These parts are stony, and filter the water so that it is quite clear in the ponds. The stones in some places, from their form, are called lapstones; the accumulation of them in particular spots causes falls when the river is full, and on these great quantities of fish are stranded. From a description of the rivers, and the surprising and sudden changes effected on their margins, and on the face of the country generally, by seasonal causes, the paper proceeded to give details on the vegetable productions of the country, which are numerous, many beautiful, and some of the highest utility. Of the mineral productions not much is known; but some useful ones have been discovered, as iron, copper, marble, slate, pipe-clay, coal, and even gold in small quantity. The forests abound in Eucalypti, and there are many species of Acacia in the country; the bark of one kind is used for preparing a soft leather from the skins of the kangaroo. Birds are particularly abundant and beautiful; and the paper

Digitized by Google

detailed a great variety of them. Of the natives Mr. Sutter says, he has seen some of them as stout as Europeans; they are not numerous; he never saw more than 150 in a tribe; many of them are in the employ of the settlers, towards whom they are generally well disposed and very useful. The colonists have not the means as yet of developing their mineral wealth, having hardly, at times, hands enough for tending their flocks and herds, and for their wheat and hay cultivation. A few of the colonists cultivate the vine with success, and good wine is made. The climate differs much in places under the same latitude, by reason of elevation; and while snow falls frequently in Bathurst, it has only fallen once in fifty years at Sydney. With regard to the British population, Mr. Sutter gives them a much higher character than is generally ascribed to them. He thinks the colony is in a most flourishing state, and that the resources of Australia will eventually be found to be immense. He attributes much of the successful administration of the colony to the government of the late Sir Richard Bourke, and the present governor, Sir George Gipps.

MEETINGS FOR THE ENSUING WEEK.

Mon. Geographical Society, half-past 8, P.M.
— Institute of British Architects, 8.—'On the Design, Ornaments, and peculiar Architectural Characteristics of the South Porch of Malmsbury Abbey Church, with Notices of other remarkable Porches of the Middle Ages,' by J. Britton, Esq.—'Report of a Committee of the Institute upon the remains of Colour discoverable upon the Xanthian Marbles, recently brought over by C. Fellows, Esq.'
Tues. Entomological Society, 8.
— Zoological Society, ½ p. 8.
Wed. Society of Arts, 8.
— Medico-Botanical Society, 8.
Thur. Royal Society, ½ p. 8.
— Numismatic Society, 7.
— Royal Society of Literature, 4.
— Royal Academy, 8.—Architecture.
— Society of Antiquaries, 8.
Fri. Royal Institution, ½ p. 8.—Professor Brande 'On Starch.'

FINE ARTS

The Vicar of Wakefield. With thirty-two Illustrations. By W. Mulready, R.A. Van Voorst.

A believer in the general criticisms on art, so abundantly supplied of late years, must be convinced that engraving, in all its branches, has reached perfection. If any one still remains sceptical on the subject it is his own fault; the fact has been declared over and over again, loudly and positively, and by those, or their agents, who must have known the merit of the works on which they pronounced judgment, for, as Mrs. Parkes would say, "they ordered them and paid for them." For the last half-dozen years, not a print has been issued, by certain fortunate publishers, but it has been pronounced beautiful, splendid, unsurpassable, matchless; the poets, especially, were mad in love with them; and before a glimpse could be got by the public, some enthusiast had immortalized the work in verse. The result was, as might have been foreseen, that the public admired and wondered till it could admire and wonder no more; it grew positively weary of so much perfection; and now it is no longer "kind, courteous, and unreasoning," no longer content "to suffer general imposition for individual advantage"; it turns a dull, cold ear, alike to poetry and prose; and looks with suspicion on all who, by virtue of their office, call out "in the name of the prophet,"—in the belief that it will end, as a matter of course, in "figs"; or, in other words, in an appeal to the breeches pocket. It is not, perhaps, worth while to pursue this history further, at the present moment: although, be it observed, "'tis but a step" from those days of critical enlightenment and poetical enthusiasm to our own.

Amidst all this hubbub of the money-changers, the *Athenæum* preserved the equal tenor of its opinion, content to bestow praise, when praise was due, and resolved not to withhold censure, when the interests of art and the public required it: and our readers, who are "to the manner" used, will excuse it, if even our praise is cold, critical, and colourless, compared to the raptures which were and are among the things "ordered and paid for." In truth, these trade enthusiasts have such a flow and volume of words, that ordinary admiration and language toil after them in vain. The designs, for example, in the work before us, are, we admit, admirable, and full of genius: and the engravings are in a fine and pure taste, manifesting a right feeling for the art, and great skill in the engraver; but we can say no more, and not even that without explanation; and yet much more has been said, by others, of the humorous sketches in 'Punch,' and the illustrations in the 'Penny Magazine;' and we have just seen a very large engraving given with one of the Saturday newspapers, described "as an evidence of the perfection to which the art has arrived in England"!

Admirable, then, as are the illustrations to this beautiful volume, we do not esteem them perfect: and though the work, as a whole, is superior to any modern work, English or foreign, we do not think it the first of its class. According to the present fashion of wood-cutting, it would be difficult to surpass these illustrations until we find artists superior to Messrs. Mulready and Thompson. The designs are, we think, perhaps the best drawings that were ever engraved on wood; the cuts, among the finest specimens of wood-engraving. Yet to our mind, as works of art, they have been excelled by the older masters. There may be error, but there is no contradiction in these assertions, as our readers will admit when we have explained more fully.

Let us contrast the ancient and modern processes of producing a woodcut. Albert Durer and Holbein made their own designs, and by cutting them on the wood themselves, invested them with the utmost expression and feeling, which they, as artists, were capable of conceiving. The effects which they aimed to produce, were broad and simple. Little attempt was made at chiaroscuro, and the fewest lines, emphatic, and full of meaning, sufficed to convey the writer's idea. The cuts were produced to be worked with type, and as easily as type, and the designer knew full well the object, and the nature of the material he employed. He worked accordingly, and the result was successful. The spirit of the true artist pervaded the whole production. What is our present course? A modern designer would laugh if asked to produce a woodcut himself. If Mr. Harvey still retains the use of the graver, he is a rare exception among draughtsmen. Few modern woodcuts have much to do with the draughtsman's designs. The drawing is made at the cheapest rate, and the engraver is left to render it as he pleases. Both draughtsman and engraver are mere manufacturers, neither possessing the slightest *amour propre* of the genuine artist. The first gives the least possible drawing of forms and the greatest possible quantity of "effect," as it is termed, by means of "washing," or "tinting" with a brush. The latter keeps his establishment of journeymen; *Z rules* in skies, A cuts the face, B the drapery, and C the landscape. Some engravers assert that this partnership work is the best; and so reckless are they of all sense of propriety in art, and so thoroughly manufacturing is the spirit that animates them, that cuts are now sent forth unblushingly as the joint production of a firm; and there are such firms both in Paris and in London, though, as we have no wish to annoy individuals, we shall not name them. The modern woodcut thus sent forth from the factory, is generally an abortive attempt to emulate the effects of a copper-plate engraving.

We hold it impossible to get a genuine work of art, unless it come pure and unadulterated from the mind that conceived it. Our belief is, notwithstanding the opinion has been recently and ably combatted, that nearly all the early wood-engravings, which exhibit fine expression, were cut by their designers. There is an authentic manifestation of feeling in an author's own work, which endears it to all who can sympathize with art, and reconciles all its defects, as in the case of Bewick's works. His thoughts were often as gross as his drawing was faulty and coarse; yet Bewick had a strong feeling for the forms of nature, and no one has reproduced them with greater faithfulness. Still more strongly is the author's meaning marked in the few wood-engravings which that wonderful man Blake cut himself, for an edition of Thornton's Pastorals of Virgil. In token of our faith in the principle here announced, we have obtained the loan of one of Blake's original blocks, from Mr. Linnell, who possesses the whole series, to print, as an illustration of our argument, that, amid all drawbacks there exists a power in the work of the man of genius, which no one but himself can utter fully. Side by side we have printed a copy of an engraver's improved version of the same subject.

When Blake had produced his cuts, which were, however, printed with an *apology*, a shout of derision was raised by the wood-engravers. "This will never do," said they; "we will show what it ought to be" —that *is*, what the public taste would like—and they produced the above amendment! The engravers were quite right in their estimate of public taste; and we dare say many will agree with them even now: yet, to our minds, Blake's rude work, utterly without pretension, too, as an engraving—the merest attempt of a fresh apprentice—*is* a work of genius; whilst the latter is but a piece of smooth tame mechanism. We scarcely need add, that it is only for its genuineness, as a work of art, that it is estimable —in no respect as a model of style for wood-engravers to follow.

We cannot expect to see modern wood-engraving rivalling the ancient (though it may, and, as in the work before us, does, surpass it in respect of design and engraving, *taken separately*) until our artists will engrave their own works, which, in this age of division of labour, we have no hopes of witnessing. But, though our artists will not tread in the footsteps of their predecessors, and engrave their own designs, they may still take example from them, and make such designs that the engraver can follow religiously in every line, and that the printer can print readily with his type. It is for the perception of the true aim of wood-engraving, which most of Mr. Thompson's cuts exhibit, that we esteem them so highly. Of the superior merit of the designs themselves, we shall have something to say hereafter; but, for the present, we confine ourselves to their aspect as wood-engravings. They appear to us to be conceived and executed in the purest taste, in regard to the aim and capacities of the art; and though they follow the principles of the early great masters, they are original in their mode of treatment—almost as pure in character as the designs of Albert Durer: we say almost, because in some there is an attempt at aërial effect which we cannot commend. Years ago the *Athenæum* claimed for wood-engraving a character of its own (see No. 603), and protested against its adulteration by the attempt at copper-plate effects. The publication of this beautiful work affords us the opportunity of again protesting against the perversion of the art. Really, it is time to make a stand against the bastard crosses which result from stepping be-

Digitized by Google

yond the real boundaries of one art, and striving to realize the impossible effects of another. There is too much forgetfulness or ignorance on the part of the designers, even when the best are employed, that each art has its own legitimate boundaries, and claims peculiar principles of treatment. In our own country, it is almost impossible to cite any work of pretension, which of late years has recognized the obvious distinction between the arts of engraving on wood and on copper. We might instance some few exceptions in individual cases, as in the small vignettes by Edwin Landseer, Eastlake, and Callcott, in Rogers's 'Italy;' in a frontispiece, by Sir Augustus Callcott, to 'The Little Brackenburners;' and in the frontispiece to Mr. Van Voorst's edition of the Seven Ages of Shakspeare, by Mr. Mulready; the latter, however, seems to venture beyond the legitimate confines of the art. In the most important recent work, 'Thomson's Seasons,' illustrated by the Etching Club, the true principles of the art are almost entirely neglected. We might select instances where every line has been left to the engraver's discretion. But the woodcut of Wilkie's design for the Nurse in the Illustrated Seven Ages, affords even a stronger instance of the draughtsman's neglect of the principles of wood-engraving. There not a single line is Wilkie's, and the work is as distinct from the artist's design as any copper-plate engraving.

If there could be a Statute to regulate Art, one of its first enactments should be, (supposing that it recognized any wood-engraver who was not his own designer,) that every woodcut should be a perfect fac-simile of the design, and that the design should be drawn accordingly—no brush tints and mechanical ruling, but fair honest lines. As nearly as it is possible for one mind to reproduce the ideas of another mind, the wood-engraver can render the author's design, if it be given in genuine distinctness. The fame which the wood-engraver earns is proportioned to his skill in presenting a perfect likeness of the original drawing. His art is altogether different from copper-plate engraving. In the latter, the whole business is left to the engraver; he translates the painter's effects of light, shade, and colour in his own way, and according to his own fancy. With the direction of his lines, the designer has nothing whatever to do. The wood-engraver, on the contrary, is bound to render the design literally; and let him not despise this fac-simile work as beneath his abilities. It is clear that Mr. Thompson, who as a wood-engraver has never been equalled, does not. It is, in fact, the most difficult part of the art, and where perfect success is next to impossible. Hence it is quite a mistake to suppose that all fac-simile work may be equally well executed. The results will always be regulated by the knowledge, taste, and feeling of the engraver. In the engraving of figures—in the naked more especially—there is no artist who approaches Mr. Thompson, as the 'Seasons' abundantly prove. Scarcely another employed on that work shows that he has any acquaintance with the anatomy of the human figure, which is an essential part of the education of every engraver as well as draughtsman. In works of the very simplest appearance there is often the greatest variety of execution. Few things are apparently much more clear and easy than the heavy yet graceful outlines of Stothard, yet there have been but *two* wood-engravers who could do them justice—the poor insane Clennell, and the engraver of these Mulready cuts. Not to mention other instances of failure in this class of work, we refer the curious on this point to the sixth illustration in Mr. Van Voorst's edition of 'Gray's Elegy,' where it may be seen how an excellent artist in many subjects, could so sacrifice all the characteristic features of Stothard's designs, that it can scarcely be recognized as his.

But even in the very best fac-simile engravings, (and none that we have examined have ever surpassed in excellence the engravings in the work before us, and which it seems almost impossible to surpass as engravings for every delicacy of execution,) much of the original spirit of the draughtsman is of necessity lost. Let any person try to trace the handwriting of another, and, though he may reproduce it seemingly to a hair stroke, how much of its peculiarity will be gone! His very efforts to be correct will be destructive of its character. He can no more do the exact thing than he can be the exact person. So with fac-simile engravings, we repeat that no other than the hands of the artist who conceived the idea can possibly give full utterance to it. Unfortunately, Mr. Mulready has not learned, like Durer and Holbein, to handle the graver. Could he have cut these designs on the block, even rudely, like his predecessors, we will venture to say that they would have ranked high among the most perfect works of their kind. As it is, they stand as the best *reproduction* which one artist could make of another's ideas. Those who have not seen the artist's original drawings, have nothing to regret in the engravings of Mr. Thompson; but others who, like ourselves, have had the curiosity to inquire after, and the good fortune to see, the originals, must feel that many indescribable niceties and delicate shades of expression exist in them, which have not been preserved in the engravings. Beautiful as is the expression of the female face in the first cut, it is different in the original drawing. No one, we believe, could have entered more thoroughly and successfully into the spirit of these designs than Mr. Thompson, who, we are informed, has been engaged on them for some years, and has engraved every line of them himself, contrary to the practice of many wood-engravers, whose names often appear on works of which they have not cut a single line. It is curious to trace how, as he progressed and became imbued with the spirit of the drawings, he, the most accomplished master of his art, improved in the rendering of them. We may cite the dispute between young Thornhill and Moses (No. 7, p. 43,) and the attempt to rescue (No. 24, p. 209,) as cases in point. The first cut is executed with a kind of conventional delicacy in the lines, and an attempted gradation of distance; whilst in the latter, the full and emphatic lines of the draughtsman are brought out boldly and decidedly.

It is the practice, in executing wood-engravings, for the designer to draw on the wood. We are by no means sure that this plan ensures the highest and most faithful style of work on the engraver's part. Whatever may be gained by the artist's own drawing is more than lost by the process of engraving. Though the engraver has the actual lines before him, and strives to leave them untouched in their original purity, still, step by step, as he proceeds in the work of cutting, he destroys the effect of his subject, and with it the very evidence which should guide him. When done, he has nothing but his recollection to appeal to for correction if necessary. We are disposed to think, that in cases where the preservation of expression and style is important, both would be more perfectly secured by placing the drawing before the engraver, leaving him to render a fac-simile of it on the wood. If, like Mr. Thompson, he be a skilful draughtsman, he cannot go far wrong, because he has the artist's design to instruct and keep him right throughout the whole process, both of drawing and engraving. We have little doubt, that good as these cuts are, they would have been some degrees better if Mr. Mulready had furnished the design, and Mr. Thompson the fac-simile engravings. Considering Mr. Thompson's success in the postage stamp, drawn and engraved as it was by him on tough *brass*, there could have been no doubt of it with these cuts on wood. No such delicate relief engraving in metal has ever been executed, as that unjustly abused postage stamp, the merits of which the *Athenæum*, amid the party spirit which assailed it, maintained almost single-handed.

We have now to speak of other mischiefs which follow from abandoning the principle of fac-simile engraving on wood, and taking up with a spurious sort of copper-plate engraving. It is not a sacrifice only of the purity and essential simplicity of the art; but we get a bad copper-plate, and have lost all the facility and economy with which pure and simple wood-engraving may be printed. In their stead we have a slow, laborious, and costly process. The bastard offspring is at the mercy of the pressman. We repudiate all the tiresome "overlaying," and "bringing up," and manœuvring, to realize the affected blacks and shadows which ought never to be seen. Woodcuts were made to be printed with type, and as easily as type, or not printed at all. This opinion will shock all wood-engravers and printers too; yet we say it advisedly, and summon Albert Durer, and Burgmair, and Hans Schauflein, and Holbein to our aid. Among the moderns, we would bring forward also the best of them, Bewick and Stothard. We would have this facility of printing a very canon of the art. To make clear the sort of purity of style and simplicity of printing which we desire, we sought for some old wood-engravings, but failing to get them, have been content to obtain some fac-similes from Mr. Pickering, who, from his beautiful reprints of Holbein's Bible cuts and his Dance of Death, has kindly favoured us with the loan of the following blocks, and we rejoice in the opportunity of recalling public attention to them.

THE MISER.

THE COUNTESS.

THE MAGISTRATE.

Digitized by Google

ABRAHAM ENTERTAINETH THREE ANGELS.

JEROBOAM SENDETH HIS WIFE IN DISGUISE TO INQUIRE OF AHIJAH THE PROPHET.

We must deny ourselves the pleasure of doing more than just alluding to the spirit, humour, and satire of the three first of these old cuts, and the simplicity, breadth, and grandeur of the three last, especially the genealogy of Adam. We selected No. 5, to show Sir Joshua Reynolds's obligation to it for his Death of Cardinal Beaufort, in the Dulwich Gallery.

Here are these ever fresh and beautiful works, looking just as well, nay better, to our taste, printed at the rate of 800 or 1000 impressions per hour, as if they had been printed by Messrs. A. or B. at the rate of 250 copies per day. We have no reason to doubt that the majority of the Mulready cuts would have printed equally well.

We have said so much on the subject of wood-engraving that we have left ourselves but insufficient space to speak of Mr. Mulready's part in the work, which he has played in a way the very farthest removed from common-place. What is generally called illustration is rather reproduction or portraiture. Mr. Mulready has adopted a different principle, and probably the best and most effective kind of illustration if successful. It is certainly one which demands the highest powers on the part of the artist. His illustrations are not portraits, or fac-similes of the personages, scenes, and incidents described by Goldsmith: they are separate creations, having their own independent interest, but are yet auxiliary in *illustrating* Goldsmith far more completely than if the artist had chosen the more ordinary path of portraiture. Many of the subjects are merely suggested by Goldsmith, who has not embodied them in any description whatever. Take the first for example. "I had scarcely," says the Vicar, "taken orders a year, before I began to think seriously of matrimony, and chose my wife, as she did her wedding gown, not for a glossy surface, but such qualities as would wear well." What could an ordinary painter make of this?—no scene or incident or feeling to reproduce. Yet out of the words, "chose my wife as she did her wedding gown" Mr. Mulready has created one of the sweetest of designs, which at once *illustrates* the characters of the Vicar and his wife, and embodies them in their earliest and freshest aspect. It is a beautiful picture, independent of all connexion with the Vicar. You may dissociate each one of these designs from the tale, and it tells a story of its own, and has an independent interest. The conviction of young Thornhill (No. 31) is another example. In it no one can fail to read a tale of convicted guilt, and that the humiliation of the culprit brings joy to hearts which he had made sorrowful. This design also is one which rests on the artist's own conception, and not on the poet's. "'And art thou returned to me, my darling,' cried the Vicar, 'to be my comfort in age?' 'That she is,' cried Jenkinson, 'and make much of her, for she is your own honourable child, and as honest a woman as any in the whole room, let the other be who she will. And as for you, squire, as sure as you stand there, this young lady is your lawful wedded wife. And to convince you that I speak nothing but truth, here is the licence by which you were married together.' So saying, he put the licence into the baronet's hand, who read it, and found it perfect in every respect." What does this scene appear to suggest for a painter's art? Literally nothing. Yet we have a most effective picture by Mr. Mulready, who by inventing the incident of exhibiting the licence to young Thornhill, not related by Goldsmith, but perfectly appropriate to the scene, tells the whole intelligibly.

THE GENEALOGY FROM ADAM RECITED.

These designs may be examined, apart from the text, not only one by one, but as several series, each series telling a tale of its own. That which refers to the proceedings of young Thornhill may be thus detached, and is complete in itself. Take his first approach in the arbour (No. 5)—then the scene of his flirtation with Olivia (No. 14), where good Mrs. Primrose is measuring their respective height—next the elopement (No. 15)—then the heartless and insulting abandonment (No. 20)—Olivia's misery (No. 22)—and lastly the libertine's conviction (No. 31). It is completely a new version of a Rake's Progress. The words provoke a contrast with Hogarth's story. If Hogarth's series exhibits stronger character, and has more imagination and satire, Mulready's has greater delicacy and refinement, less exaggeration, and equal general truth to nature, and kinder sympathies with it. We turn from Hogarth's version with horror. That dreadful madhouse scene is a thing we would not willingly have seen, and there is but a solitary character for whom we feel the slightest regard. The Mulready series may provoke a tear of pity, but we recur to it again and again with fresh delight. Then, as regards the subordinate parts of the art, the drawing, composition, grace, beauty, the superiority of the modern artist is unquestionable. We may arrange others in like series. Select, first, 'The Rescue,' before the Vicar arrives at the gaol (24); a design exhibiting an admirable mastery in drawing, and the artist's powers and knowledge of his art—then the first entrance into the prison (25)—the impenitence and scoffing of the prisoners (26)—their reformation (27)—and, lastly, the Vicar preaching before his departure (29). Our fancy might induce us to continue this artificial classification probably much farther than the artist ever intended; but we have said enough to show that Mr. Mulready has had ideas of his own to work out, besides those of illustrating the Vicar of Wakefield: and a much more noble work this must be confessed to be, than that of merely embodying the conceptions of another.

There is still one other feature in these illustrations, on which we have a word to say. The characters which Goldsmith has drawn in the Vicar of Wakefield—perhaps his most perfect work of art—like the conceptions of all great artists—Fielding, Cervantes, Shakspeare—have both an individual and a general truth in them. Individual, as historic portraits, sketched with a picturesque truthfulness of detail, which identifies them with a particular time; general, as true pictures of the actions, passions, and feelings of mankind, common to all ages. Mr. Primrose represents equally the country vicar of the eighteenth century, and the good and simple-hearted man of all time. It is, perhaps, this very combination which ensures to characters thus drawn their ever-green permanency. The individuality of the portrait may even offend us by its literal fidelity, yet the skill with which its general truth to nature is drawn, makes its interest enduring. It is open to the painter, whilst illustrating an author, to look at the latter's conceptions in one or other of these aspects, but not, perhaps, in both. It is seldom that both interest us in the same degree as they do in the Vicar of Wakefield. As a picture of the times, no chapter in history can compare with it. As a picture of human nature, at all times applicable, it is still more interesting. It is therefore impossible to separate one of these aspects from the other without loss. Mr. Mulready has chosen the latter, and perhaps the larger view, and his characters, in respect to individuality of costume, &c., can scarcely be identified with a particular period. If he have thus sacrificed a minor interest, he has freed himself from its restraints, and invested his conceptions with general attributes, which will be valued so long as perfect delineation of the human form and character is understood and appreciated. Having these designs to show, we may smile at the imputation that we have no draughtsmen, or that we must send to Germany for instruction in drawing.

Digitized by Google

If Mr. Mulready do not make a cartoon for the Houses of Parliament, he may send a copy of this work as a substitute. Briefly, we have no hesitation in asserting the superiority of these designs as works of art illustrative of familiar life, over everything that has been done in recent times either in France or Germany, or our own country.

MUSIC AND THE DRAMA

THEATRE ROYAL DRURY LANE.

On Monday will be performed Shakspeare's Tragedy of MACBETH. Tuesday, Sir E. L. Bulwer's Play of THE LADY OF LYONS. Wednesday, KING JOHN. With the Opera of LA GAZZA LADRA. The Pantomime every Evening (Wednesday excepted).

MUSIC OF IRELAND.—Mr. HORNCASTLE, of Her Majesty's Chapel Royal, will give his THIRD ENTERTAINMENT on the NATIONAL MUSIC OF IRELAND at the MUSIC HALL, Store Street, on THURSDAY EVENING, NEXT, January 26th, with Vocal and Instrumental Illustrations.—Vocal Performers: Miss A. Williams, Miss M. Williams, and Mr. Horncastle. Harp, Miss Le Roy—Pianoforte, Mr. Williams—Union Pipes, Mr. O'Flannagan. To commence at 8 o'Clock. Tickets, 5s. each. Private Boxes, for Six or Eight, 1l. 10s.; to be had at the Hall, and of the principal Music-sellers.

THE PRINCE'S THEATRE.—The season of French plays set in on Monday evening, with promising brilliancy, both before and behind the curtain. Mr. Mitchell has wisely strengthened his general company. He has imported for lover a M. Rhozévil, from *Le Gymnase*, and for such characters as require youth, innocence, and prettiness, Mdlle. Prosper, from the same establishment, whose career, we augur, will be prosperous. Some, like ourselves, may be enlisted in favour of this young lady, by finding in her tones, and in her smile, a far-off resemblance of Mars; but the public generally has already accepted her as a favourite. The "star" of the company is, at present, Madame Albert. We will not tell how many years it is since she was last here: seeing that, with eyes, voice, and, above all, a true Frenchwoman's determination not to be beaten by Time, the lady is manifestly not a day older than when she took leave of us. Her reappearance was made in 'Madame du Barry'—one of those sentimental pieces from the Ancelot drama-factory, which is, to our thinking, profoundly immoral. Fancy the attempt to reinstate, as a heroine, the pretty, foolish, cowardly, imperious, vulgar Sultana of *Louis Quinze*,—now scolding the monarch because he allowed his chocolate to boil over; now clinging to the scaffold with a frenzy of animal terror which made her retributive fate doubly shocking! Something like this was the real woman; anything rather than this was Madame Albert: *naïve*, elegant, pathetic, and sensitive, and successful in proportion as the drama and her own taste led her astray from History. The dresses were sumptuous; the *mise en scène* more finished than last year: and unspeakable is the comfort of listening to three acts given with the easy conversational tones and gestures of every-day life, instead of the strange noises and forced attitudes which are traditional on our own comic stage.

The attraction of the Pantomimes appears to be all-sufficient during the Christmas holidays, and but little change has yet been made in the current entertainments at the two great houses. At Covent Garden 'Bluebeard' has been resuscitated, for the especial gratification of juvenile playgoers, on which night the audience was as pretty a sight as the show itself to the elder visitors. Novelties and revivals, however, are now being brought forward: 'Cymbeline' is announced at Drury Lane for to-night, and a new comedy, called 'Mothers and Daughters,' by Mr. Robert Bell, author of 'Marriage,' at Covent Garden, for Tuesday. The Haymarket closed on Saturday, with an address from Mr. Webster, who promised a galaxy of stars, and gas to view them by, against Easter; but some improvements in the audience part of the theatre are so obviously desirable, that we need only repeat the hint already given in other quarters of the expediency of considering the convenience of visitors to this popular place of amusement. Though the regular season terminated on Saturday, there have been one or two performances for benefits since; that on Mrs. Glover's night being one by a party of amateurs, who we were sorry to find attracted but a scanty attendance: a daughter of Mrs. Glover, Mrs. J. Bland, played Molly Maggs, in the farce of 'The Scape Goat,' and showed some cleverness and vivacity.

MISCELLANEA

Paris Academy of Sciences, Jan. 9.—A communication was made from the commission appointed to perform experiments with arsenic on sheep, with a view of ascertaining whether it is really innoxious to them, as the account given of its effects when administered for the cure of chronic pleurisy would seem to indicate, and for the purpose of ascertaining whether the flesh of the animal to which arsenic had been administered could with safety, and at what period, be used as food. It appears, from the results of the experiments that although arsenic cannot be said not to be a poison, when administered to sheep, it may be given in very large doses without producing a poisonous effect; but sufficient time has not yet elapsed for a decision to be come to as to the extent and duration of the absorption, and, consequently, the length of time that must be suffered to elapse before a sheep to which arsenic has been given may be safely slaughtered for food.—M. Pelouze read a paper on hypochlorous acid. It completes the researches of M. Gay-Lussac on the combinations of chlorine with its bases, and is specially intended to apply to the study of the use of chlorine as a test for the red oxyde of mercury.—A paper was read on the recent discovery of a mass of native gold, weighing 36 kilogrammes (about 80 English pounds), on the eastern side of the Ural. This enormous mass, which is double the size of any hitherto discovered, was found at a few feet beneath the surface, under singular circumstances. The establishment, formed at this part of the Ural for the purpose of seeking for gold, had tried every part of the ground near it, and the speculation being deemed a hopeless one it was abandoned, and the buildings which had been erected were demolished. It was precisely in the ground on which one of these buildings had stood that this mass of gold was found. M. de Humboldt, who made the communication, added some facts relative to the gold-mining industry in Russia. It appears that such is the prodigious increase of washed gold in Russia, and especially in Siberia, to the east of the southern chain of the Ural, that the total produce in the year 1842 amounted to 16,000 kilogrammes, of which Siberia alone furnishes 7,800 kilogrammes.—A communication on the savings bank of Paris, and its influence upon the population, has been made to the Academy by M. Charles Dupin. We find in it the following facts:—The Paris savings bank, which was founded in 1818, received during the first eight years the sum of 24,930,000fr. In the eight succeeding years, viz. from 1827 to the end of 1834, it received 44,679,000fr.; and from 1835 to the end of 1842 it received two hundred and fifty millions. During the first eight years the total number of depositors did not exceed 20,000, and in the second eight years it had not reached 49,000. It is now nearly 150,000. M. Dupin divides the depositors into three series: 1st, the working classes, or those who live by the labour of their hands; 2nd, the intellectual classes, whose occupations imply intelligence, management, and the means of acquiring capital; and, 3rd, persons having fixed incomes from houses or lands. Out of 100,000 depositors, 77,337 belong to the first class, 18,065 to the second, and 4,098 to the third.

Observations at the Royal Society, showing the great depression of the Barometer during the heavy gale on the 13th Jan. 1843, as also the great rise since that time.

Date.	Hours of Observ.	Barom. Flint Glass.	Barom. Crown Glass.	Attached Thermom.
Jan. 12.	3 P.M.	28.968	28.960	38.4
.. 13.	9 A.M.	28.354	28.346	39.0
.. ..	12½ P.M.	28.238	28.234	40.8
.. ..	¼ 1 P.M.	28.196	28.192	41.3
.. ..	2 P.M.	28.248	28.244	42.0
.. ..	3 P.M.	28.316	28.310	42.0
.. 19.	9 A.M.	30.538	30.530	41.7

The height of the Royal Society's Barometer above the level of the sea is 97 feet.

Archives of Catalonia.—Amongst the buildings set on fire during the bombardment of Barcelona was that containing the archives of Catalonia. There were collected there charters and acts of the early courts of Barcelona from the year 844, and documents relating not only to the province of Catalonia and the counts of Roussillon and Cerdagne, but to the kingdoms of Arragon, Valencia, Majorca, Sardinia, Sicily, and Naples. The building contained the proceedings of all the ministries from the union of the kingdom of Arragon with the principality of Catalonia, as well as copies of all treaties of peace, alliances, &c. There were also deposited there the original papers of the States-General, in 50 volumes, from those held at Perpignan by Peter IV., in 1350, to those held by Philip V., at Barcelona, in 1702. Not less than 856 original bulls of the Pope were there, from which the dates ranged from the Pontificate of Benedict IX., in 1024, to that of Clement XI., in 1709. There were 17,640 documents written on papyrus, parchment, or cotton paper. Those on parchment or paper were rolled up separately, but the parchments were tied up in collections. At the period when paper was first made of rags, about the thirteenth century, registers were formed to copy letters patent and other acts proceeding from the sovereign authority. The registers, begun in 1214, were concluded in 1808, and comprised 28 reigns from James I. to Charles IV. They were 6070 in number, and each register contained between 300 and 400 leaves in folio. The learned Capmany affirms, in the preface to the fourth volume of his *Mémoires Historiques sur Barcelone*, that the archives of the Crown of Arragon were the most memorable in Europe, if their antiquity, good preservation, extent, variety, and importance, were taken into consideration.—*Galignani's Messenger.*

Ancient Gaulish Monuments.—In digging some foundations, near the village of Menoux, on the Haute-Saône, there have recently been discovered some antique tombs similar to those which have been heretofore found in various parts of that department and in Switzerland, which antiquaries have agreed in pronouncing to be Gaulish. In them were swords with the short broad blade, daggers, spears, and the iron head of a small axe, believed to be the ancient *Francisque* used by horsemen in battle; also some plates of giralles, one of which is of bronze, bearing the representation of some symbolical animal, others being of iron inlaid with silver. Besides these are several urns of grey-clay of various shapes, some adorned with sculpture. In them were articles made of glass and small bones. The tombs bear no mark of christianity.

'Old Mortality.'—The only occupation of the old man was wandering about the country, repairing the tombstones of the Covenanters, travelling from one churchyard to another, mounted on his old white pony, till he was found dead one day by the road-side. His family experienced a singular variety of fortune. One of his sons went to America, and settled at Baltimore, where he made a large fortune. *He* had a son who married an American lady, and the latter outliving her husband, became Marchioness of Wellesley! His daughter was married to Jerome Bonaparte, and after her separation from him wedded Monsieur Serruier, the French Consul at Baltimore. What would 'Old Mortality' have said, as he bored among the neglected gravestones in Scotland, had he foreseen that the widow of his grandson was to become an English Marchioness, sister-in-law of the Duke of Wellington, and his granddaughter Queen of Westphalia, and sister-in-law of Napoleon?—*Inverness Courier.*

Trieste, Dec. 22.—Captain Bloomfield, an Englishman, accompanied by two other gentlemen, arrived here to-day. He has been commissioned by his Government to draw up a report respecting the condition of the roads in Bavaria, Tyrol, &c., and to furnish estimates of the probable duration of a journey from Trieste to London, with a view of providing materials for determining on the expediency of forwarding the overland Indian mail through Germany. Captain Bloomfield's report is highly favourable. He made the journey from London to this place, *vid* Ostend, Cologne, Frankfort, Munich, Augsburg, Innspruck, &c., in 135 hours and 25 minutes. This would enable the correspondence to be forwarded from Alexandria to London in 11½ to 12 days; but when the railroads, now in construction, shall have been finished, a considerable additional saving of time will be possible.—*Allgemeine Zeitung.*

TO CORRESPONDENTS.—P. R.—H. L.—J. A. R.—E. E.—Pemb.—Medicus—received.—J. L. K. we are obliged, but a notice of 'New Year's Eve,' at Hanwell, appeared twelve months since in this Journal (No. 742).—Mr. Green, of Newgate Street, and not Messrs. Wiley and Putnam, is the London agent for the sale of Bowen's 'Essays,' reviewed last week.

1 vol. 8vo. illustrated by 500 Engravings on Wood, 1l. 16s. cloth lettered,

A DICTIONARY OF GREEK AND ROMAN ANTIQUITIES.

By VARIOUS CONTRIBUTORS. Edited by Dr. W. SMITH.

"We do not pretend to have examined this Dictionary throughout; but the articles which we have consulted appear to us admirably done: they are terse in style, and pregnant, yet not cumbrously so, with accurate knowledge; the best and *latest* authorities are constantly cited.... It was a work much wanted, will be invaluable to the young student, and, as a book of reference (it is a single, handsome double-columned 8vo.), will be most acceptable on the library-table of every scholar."—*Quarterly Review*, June, 1842.

IV.

N.B.—In the Press, and will shortly appear, the above work adapted, with alterations, for the Bass Voice.

Publishing Weekly, Price Threepence, and in Monthly Parts, with numerous Illustrations,

PUNCH; or, THE LONDON CHARIVARI.
"The career of this little publication, from its *outset till now*, has been one of unfailing success; week after week it has sustained itself with astonishing constancy, and shown that its authors are inexhaustible in their resources. Masters of Momus, they reign over the kingdoms of satire and burlesque with unlimited sway. There is one thing, in addition to the cleverness of 'Punch,' which has not a little contributed to its success, and that is the unvarying good *humour* and *propriety* which prevails in it, and the total exclusion from its pages of all that is gross, low, or coarsely personal, a discipline the absence of which has swamped many previous attempts of the same kind."
—*Times.*
*** Also, a STAMPED EDITION, Price 4d., to go Free by Post. Office, 13, Wellington-street, Strand.

MR. JAMES'S NEW ROMANCE.
Now ready, at all the Libraries,

FOREST DAYS:

THE NURSERY RHYMES of ENGLAND, obtained principally from Oral Tradition. Collected and Edited by JAMES ORCHARD HALLIWELL, Esq.
"Not only all mothers, aunts, nurses (for nurses can even read now), are obliged to Mr. Halliwell for this careful and *elegant collection of this most popular portion of our national* poetry, but that grave and gray-headed scholars may find in them traces of manners long passed away, and sentiments that may awake a pleasing train of meditations. They are arranged into fifteen classes and accompanied with notes, that, without enlarging, are illustrative and interesting, and are a proof that scholarship and taste can deck the humblest subject it touches."
—*Monthly Magazine*, January.

ENGLISH SURNAMES: a Series of Essays on Family Nomenclature, Historical, Etymological, and Humorous. By MARK ANTONY LOWER, Esq. Post 8vo. pp. 260, with 20 Woodcuts, cloth, 6s.; large paper, 10s. 6d.
"A most amusing volume, mingling wit and pleasantry with *antiquarian research and historical interest.*"—*Weekly Chron.*
J. R. Smith, 4, Old Compton-street, Soho, London.

8, New Burlington-street, Jan. 21, 1843.

(*Publisher in Ordinary to Her Majesty.*)

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.
This Institution is *empowered by Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.
Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.
The effect of an Assurance on a person's own life *is to create* at once a *property in reversion*, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become *at once* possessed of a *bequeathable* property, amounting to 100*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life, a condition which he may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 100*l.*, which he can bequeath or dispose of in any way he may think proper.
Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the *Office*.
PETER MORRISON, Resident Director.
A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

CORPORATION of the AMICABLE SOCIETY for a PERPETUAL ASSURANCE OFFICE. Incorporated by Charter of Queen Anne, A.D. 1706. 13, Serjeants' Inn, Fleet-street, London.

Directors.

The Rt. Hon. the Earl of Devon	Welbore Ellis, Esq.
Benjamin John Armstrong, Esq.	Charles Fiddey, Esq.
John Barker, Esq.	John Hodgson, Esq.
John Bostock, M.D.	Mark Beaufoy Hampl'eacock, Esq.
W. Fuller Boteler, Esq. Q.C.	John Round, Esq. M.P.
Richard Holmes Coote, Esq.	Theophilus Thompson, M.D.

This Society (the oldest in existence for granting Assurances on Lives) is conducted on a plan which affords to ALL the members the full benefit of mutual assurance without personal liability.
Every person on whose life an assurance is effected for one or more Shares, whether for his own benefit, or by a contributor having an interest in his life, is admitted a member of the Corporation.
The respective interests of the members and contributors are represented by Shares in the Joint Stock of the Corporation, each share being guaranteed to produce 20*l.* *at the least*, upon the *death of the member*.
The *whole of the Profits* are divided among the representatives or nominees of the deceased members in proportion to the amount of their respective assurances, and without reference to the length of time during which the Policy may have been in force.
There is no proprietary body,—no commission is allowed to agents,—and the affairs of the Corporation are managed at the smallest possible expense; the profits are, therefore, the utmost the premiums can afford.
Persons whose lives are assured with this *Society* may travel to or from, or reside in, any part of Europe, without paying any additional premium. T. GALLOWAY, Registrar.

NATIONAL PROVIDENT INSTITUTION, 13, Nicholas-lane, King William-street, London, for Mutual Assurances on Lives, Endowments, Deferred Sums, Immediate and Deferred Annuities, enrolled under the Acts of Parliament relating to Friendly Societies.

Directors.

C. P. Bousfield, Esq.	Robert Ingham, Esq.
John Bradbury, Esq.	Joseph Janson, Esq.
William Cash, Esq.	S. Hayhurst Lucas, Esq.
Thomas Castle, Esq.	C. Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.

Medical Directors.
J. T. Conquest, M.D. F.L.S. | Thomas Bevan, M.D. F.L.S.
Solicitors—Messrs. Hardwick & Davidson.

THIS INSTITUTION *completed the Seventh Year of its establishment on the 15th of December, 1842, and, in accordance with a Rule made at its commencement, a careful valuation of its liabilities and assets has been made by an eminent Actuary, for the purpose of making the first division of profits amongst its members, the gratifying result of which is exemplified in the following instances, showing the profit assigned to policies from one to seven years standing:—*

Policies in Existence.	Age at commencement.	Sum Assured.	Amount of Bonus.	Original Premium.	Reduction in Premium.	Equal to a Reduction per Cent. on the Original Premium of
Years.	Years.	£.	£. s. d.	£. s. d.	£. s. d.	
7	59	1,000	163 11 0	63 0 0	27 17 2	44
7	46	1,000	115 12 0	40 1 8	16 3 5	40
7	32	500	44 7 0	15 2 11	5 1 4	34
6	50	1,000	106 5 0	45 10 10	15 10 7	34
6	31	500	37 2 0	12 17 6	4 2 5	34
5	51	1,000	91 3 0	47 2 6	13 5 4	28
5	30	600	37 2 0	15 8 0	4 1 2	26
4	42	500	28 19 0	17 12 1	3 13 3	20
4	28	1,000	46 14 0	24 3 4	4 16 5	19½
3	46	800	37 8 0	31 18 8	4 18 10	15½
3	25	2,000	69 6 0	44 5 0	6 14 11	15½
2	63	3,000	140 15 0	224 15 0	23 11 7	10½
2	26	500	11 11 0	11 10 0	1 2 6	9½
1	58	1,000	21 7 0	63 0 0	3 6 8	5½
1	31	1,000	11 1 0	25 15 0	1 2 10	5½

The Directors refer with great confidence to the above statement, as exhibiting the most satisfactory proof of the superiority of the principle on which this Institution is founded, namely, that of MUTUAL LIFE ASSURANCE, carried out under the protection and advantages afforded by the acts of Parliament relating to FRIENDLY SOCIETIES, and fully warranting them in thus directing the public attention to the peculiar privileges secured to all assurers.
Members, whose Renewal Premiums became due on the 1st inst., are reminded that the same must be paid within Thirty Days from that time.
The Report of the Directors to the Annual Meeting of the Members, held on the 15th of December last, Prospectuses, and every other information, may be had on application at the Office, or to the Country Agents. JOSEPH MARSH, Sec.
The business of the Institution will be removed to new premises, at No. 48, Gracechurch-street, during the month of March next.
London, Jan. 17, 1843.

Hamilton Blair Avarne, Esq.
Rdw. Boyd, Esq. *Resident*
E. Lennox Boyd, Esq. *Assist. Resident*
Charles Downes, Esq.
Charles Graham, Esq.
F. Charles Maitland, Esq.
William Railton, Esq.
John Ritchie, Esq.
F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esqs., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.
Edward Bates, Esq.
Thomas Camplin, Esq.
James Clift, Esq.
Rt. Hon. J. Humphery, M.P.
Lord Mayor of London
Rupert Ingleby, Esq.
Thomas Kelly, Esq. Ald.
Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of 50,000*l.* per annum, yearly increasing, and anaccumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 6	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

CROWN LIFE ASSURANCE COMPANY, 28, Bridge-street, Blackfriars, London.

Directors.

George H. Hooper, Esq. *Chairman.*
Lieut.-Colonel Moody, R.E. *Deputy-Chairman.*

John Chapman, Esq.
Charles Chippindale, Esq.
James Colquhoun, Esq.
R. D. Colvin, Esq.
Rear-Admiral J. W. D. Dundas, C.B. M.P.
Thomas Harrison, Esq.
Jameson Hunter, Esq.
Sir John Kirkland.
Richard Norman, Esq.
Alexander Stewart, Esq.
William Whitmore, Esq.
John Wilson, Esq.
William Wilson, Esq.

Auditors—J. H. Forbes, Esq., G. Hankey, Esq., O. Ommanney, Esq.
Physicians—{Dr. James Johnson, 8, Suffolk-place, Pall Mall East. {Dr. C. F. Forbes, F.L.S. K.H., 23, Argyle-street.
Surgeon—Samuel Solly, Esq. F.R.S., 1, St. Helen's-place.
Standing Counsel—Charles Ellis, Esq.
Solicitors—Messrs. Hale, Boys, and Austen.
Bankers—Bank of England.
Actuary—J. M. Rainbow, Esq.

The advantages of this Office, among others, are:—

1. A participation septennially in two-thirds of the Profits, which may be applied either in reduction of the Premium, or to augment the sum assured.

The following Bonuses have been assigned to all Policies, of at least three years' standing, effected for the whole duration of Life:—

FIRST DIVISION, IN 1832.

From 18*s.* to 2*l.* 12*s.* per cent. per annum on the sums assured, varying with the age, being equivalent, on the average, to 26½ per cent. on the premiums paid.

SECOND DIVISION, IN 1839.

From upwards of 1*l.* to upwards of 3*l.* per cent. per annum on the sums assured, or, on the average, 33 per cent. on the premiums paid for the preceding seven years.

2. Premiums may be paid in a limited number of annual sums, instead of by annual payments for the whole of life; the policy continuing to participate in profits after the payment of such premiums has ceased.

3. The Assurance or Premium Fund is not subject to any charge for interest to proprietors.

4. Parties (including Officers of the Army, Navy, East India Company, and Merchant Service,) may be assured to reside in or proceed to all parts of the World, at premiums calculated on real data.

5. Claims to be paid within three months.

6. The assured may dispose of their policies to the Company.

7. No charge but for policy stamps.

The Prospectus, Tables of Rates, &c. to be had at the Office in London, or of the Company's Agents.

T. G. CONYERS, Secretary.

EAGLE LIFE ASSURANCE COMPANY, 3, Crescent, Bridge-street, Blackfriars, London.

Established by Act of Parliament, 1807.

Directors—John Richards, Esq. *Chairman.*
Sir James M'Grigor, Bart. F.R.S., *Deputy Chairman.*

The Rt. Hon. Sir G. Ouseley, Bart. F.R.S.

W. Anderson Peacock, Esq.
Peter Skipper, Esq.
John Spurgin, M.D.
Henry Tufnell, Esq. M.P.
William Wybrow, Esq.

DISTINCT TABLES FOR MALE AND FEMALE LIFE.

The Directors have caused new Tables to be calculated, in which the relative values of the Lives of the two Sexes are at all ages distinguished; in consequence of this improvement the younger Male Lives are insured at premiums below the ordinary rates; the Female Lives lower than any other office.

Annual Premiums required for the Assurance of 100*l.* to be received on the death of a

Age.	MALE. Seven years.	MALE. Whole life.	FEMALE. Seven years.	FEMALE. Whole life.
20	£1 6 3	£1 2 6	£1 5 0	£1 15 1
30	1 12 2	2 9 10	1 8 9	2 3 3
40	1 17 4	3 4 4	1 13 9	2 15 0
50	2 12 3	4 13 4	1 17 3	3 15 0
60	4 7 11	6 18 2	3 7 0	5 14 7

Prospectus exhibiting this remarkable distinction at every age, may be obtained at the Office of the Company.

Four-fifths of the profits are divided among the assured for the whole term of life, whether residing abroad or at home.

The SEVENTEENTH ANNUAL GENERAL MEETING of the STANDARD LIFE ASSURANCE COMPANY, was held within the Company's Office, No. 3, George-street, Edinburgh, on Thursday, the 15th December, 1842.

ADDRESS BY THE DIRECTORS.

The progress of this Company during the past year, both as regards the new business acquired, and the result of the period generally, exhibits evidence of success and prosperity, so particularly marked, that the Directors consider it their duty to make it known to all those connected with the Institution, and by such notice to call public attention to the prosperous state of the Company's affairs,—satisfied that an extended knowledge of the principles upon which the Institution is founded,—its security, its advantages of division of profits, and its liberal management, is alone requisite to induce greater numbers to avail themselves of its benefits, and to make its future advancement still more pre-eminent.

The following are a few of the most prominent points brought under notice at the Annual General Meeting of the Company, held 15th December, 1842:—

1. New Assurances have been opened with the Company to a very large amount, exceeding greatly the results of *any* former year's business.
2. The number of new Policies has increased in a similar proportion, showing that the increase of business does not arise from large transactions swelling up the results.
3. The increase of sums assured and Policies, compared with the year ending 15th November, 1841, is above 25 per cent. upon each.
4. The Company continue to draw at high rate of interest on all their Investments; and their Funds, which are rapidly accumulating, are most satisfactorily secured, being, for the greater part, upon heritable property in Scotland.
5. The mortality of the year has been very limited. *One-ninth part only* of the Company's Income having been required to meet sums assured, which have become claims by the deaths of the parties, evincing the care which has been bestowed by the Directors in the selection of the lives.
6. The business of the Company is conducted with economy, but at the same time so as to secure efficient management, and the expenses form a very small per centage upon the Annual Revenue.
7. The Company's Books and Accounts are kept in the most efficient manner, and in corroboration of that statement the Directors have much pleasure in submitting the following extract from the Report by the Company's Auditor, Mr. Keith, after a careful investigation of the Books and Accounts of the Company for the past year:—

"I have much pleasure in reporting that the whole Books, Accounts, and Vouchers relative to the Affairs of the Company, continue to be kept in a most regular, distinct, and satisfactory manner, and reflect great credit on the Manager, and other Officers of the Company, for the clear and accurate way in which a Record is kept of transactions of so great and increasing magnitude and detail, as those of the Company."

The Directors have thus shown satisfactory progress in the business of the past year,—satisfactory results in the Institution generally, and they hope they may say a successful and efficient management,—it therefore only now remains for them to impress upon the Policy-holders, and all connected with the Company, how much they have it in their power to add to the increasing prosperity which has been reported, by disseminating a knowledge of the principles upon which the Company is established and conducted, and by bringing forward others to avail themselves of its benefits.

Life Assurance has as yet, comparatively, been confined to a very small portion of the community, but it is an institution which will make certain progress, although it may be by slow degrees. It is advancing steadily among the middle classes of society. It is now resorted to in many instances by the nobility to enable them to make a provision for younger children, and it is making progress among the humbler ranks of society,—being equally available as a protection to the industrious tradesman or mechanic, as to the highest in the land.

All those connected with such an institution as this should consider it to be a duty which they are bound to perform, to take every opportunity of disseminating a general knowledge of these benefits, and the Directors trust that they do not impress this in vain on those whom they are now addressing.

By order of the Board of Directors,
WILL. THOS. THOMSON, Manager.

Edinburgh, 3, George-street, 15th Dec. 1842.

DISEASED LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE ASSURANCE SOCIETY, 25, Pall Mall.

Presidents.

Sir Henry Halford, Bart. M.D. G.C.H. F.R.S. F.S.A.
Sir William Burnett, M.D. K.C.H. F.R.S.
Sir Matthew Tierney, Bart. M.D. K.C.H.

With a Board of twelve Directors.

Diseased as well as healthy lives assured at equitable rates.

F. G. P. NEISON, Actuary.

NORTH BRITISH LIFE INSURANCE COMPANY, 4, New Bank-buildings, Lothbury, and 10, Pall Mall East. Established 1809. Protecting Capital 1,000,000*l.*, fully subscribed.

His Grace the Duke of Sutherland, *President.*
Sir Peter Laurie, Alderman, *Chairman of the London Boards.*
Francis Warden, Esq. *Vice Chairman.*

The next Division of the Profits of this Company will take place in December, 1844. Prospectuses and every information may be obtained as above. JOHN KING, Actuary.

MARSHALL & CO., 12, Curzon-street, continue to supply WRITING PAPERS, &c. at city prices, viz.:—Letter paper, 9*s.*, 10*s.* 6*d.*, 12*s.*, 15*s.*; ream note, 4*s.*, 6*s.*, 8*s.*; palace note paper, five quires, 1*s.* 6*d.*; sealing wax, 3*s.* per lb.; card plate engraved, 100 printed, 4*s.* Newspapers lent to read, 9*d.* per week; neat leather blotting cases, 1*s.* 6*d.*, or with lock, 3*s.*; fancy inkstands, and every kind of article suitable for presents, equally cheap; envelopes, with stamps on, 1*s.* per dozen; neat leather envelope cases, filled, 2*s.* 6*d.* Circulating Library; terms, 2*l.* 2*s.* per annum; 1*l.* 11*s.* 6*d.* half year; 16*s.* per quarter.—12, Curzon-street, corner of Queen-street. Orders by post punctually attended to. Goods sent any distance.

CRESTS ENGRAVED on VISITING CARDS in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*; and also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at the Warehouses of Messrs. BARRY & SON, EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN, or sent on application any distance free of expense. Superfine letter papers, 2*s.*, 2*s.* 3*d.*, 2*s.* 6*d.*, 3*s.*, 14*s.* 6*d.*, 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream.

Either of the above papers may be stamped with crest, coronet, or initials, for the additional charge of 10*s.* per ream, Messrs. Barry & Son finding the dies and wafers from it at 7*s.* per 1,000. Their miscellaneous stock embraces dressing cases, writing desks, inkstands, fancy note paper and envelopes, suitable for invitations, complimentary notes, weddings, &c.; wafers from the antique, diurnal note and envelopes, envelope cases, Bibles and Prayers richly gilt, Mordan's gold and silver gauntlet pencil cases, elegant penholders and toilet and smelling bottles, souvenirs, card-cases, pocket-books, and every description of useful stationery, with postage stamps and envelopes at Government prices.

KEENE'S PATENT MARBLE CEMENT.

—This cement, which exceeds every other in hardness, is intended for interior uses, where strength and despatch in execution are required. From the smoothness of its surface, it is an advantageous substitute for wood in its application to skirtings, architrave, mouldings, &c., as it resists the action of fire, and keeps back vermin.

The coarse qualities form a paving not distinguishable from stone in colour and hardness, but of one-third the price. The best white quality takes a brilliant polish, and the scagliola made from this cement has a peculiar richness of colouring. The imitations produced in it of Florentine and other Mosaics, encaustic tiles, &c., for ornamental paving, are unequalled in their effect and moderate cost.

Keene's Cement has been applied with success for the altars of Catholic and other churches both in England and Ireland; and to its use in the Royal palaces, and Government buildings, besides numerous public and private works, the patentees can refer with confidence.

Patentees and Sole Manufacturers, J. B. WHITE & SONS, MILLBANK-STREET, WESTMINSTER.

Agents for its sale are appointed in the principal cities of the United Kingdom.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 132 years, 3, Birchin-lane. The finest description of Watches at the lowest prices, consistent with maintaining that character for superiority of workmanship which has distinguished their establishment during that period. The compensated duplex Watch, upon the principle of their Chronometers, to which government awarded the prizes three successive years, combines perfect accuracy with the utmost elegance, and is not surpassed by the pocket Chronometer. W. & Son have devoted considerable attention to the patent lever Watch, and considerably reduced the price, together with the small horizontal for ladies. They can offer a large selection of Second-hand Watches, at little above half the original cost. The utmost value allowed for old Watches in exchange. The most experienced workmen in the repairing department are employed on the premises for foreign and English manufacture.

Webster & Son, 3, Birchin-lane, Cornhill, London.

CASTOR OIL.—H. TAYLOR, Chemist, 10, Pall Mall, London, has prepared Castor Oil in a concentrated form, enclosed in Capsules of Gelatine, by which the disagreeable taste of this medicine is entirely avoided. They will be found the most pleasant method of taking that safe aperient medicine. The Dose is from one to four capsules. In Boxes at 2*s.* 6*d.* each, and can be sent by post for 4*d.*

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headache, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders.

TO LADIES.

ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family*.—A creamy, odoriferous preparation from *Oriental Exotics*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion*, it imparts a juvenile roseate hue, and to the *neck, hand*, and *arm*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle, duty included.

CAUTION.—Ask for "ROWLAND'S KALYDOR," and see that these words are on the envelope, as much *pernicious* trash is now offered to the Public as "KALYDOR" by Perfumers of *apparent* respectability.

*** To protect the Public from fraud, the *Hon. Commissioners of Stamps* have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20, Hatton-garden; sold by them, and by Chemists and Perfumers.

MR. COLBURN'S NEW PUBLICATIONS.

THE FOLLOWING ARE NOW READY:

THE HISTORY OF WOMAN IN ENGLAND,

AND HER INFLUENCE ON SOCIETY AND LITERATURE.

By MISS LAWRANCE,

Author of 'Historical Memoirs of the Queens of England from the Twelfth to the Sixteenth Century.' 1 vol. small 8vo. with Illustrations, 10*s.* 6*d.* bound.

"Although the study of English history has of late become so popular, the progress of female society in England has never received the attention which its importance demands. Little has been told us of women in Saxon times; and yet, even then, there were illustrious queens, and female scholars, whose exertions for the diffusion of knowledge demand the gratitude of their descendants—and scarcely more is known of female society during the Norman period, and yet it was at the bidding of the lady that the poet-fathers of England first sang. Even during the age of chivalry, many a lady, illustrious for her talents, and interesting from her romantic history, has no record, save in the seldom-opened pages of the monkish chronicler. Descending to more recent times we find the history of woman in England linked with the Reformation and each great event. To trace the progress of woman in England through these various phases of her history is the object of the present work. Beginning at the earliest period, it has been the chief aim of the writer to collect *contemporary* information from every available source, and thus the obsolete code of laws, the ancient popular tales, the will, the inventory, the legal record, the legend, and the satire, the testimony of the grave chronicler, and that of the manners-painting *trouvere*, the letter and the diary, have all been laid under contribution to throw light upon a subject as curious and interesting as it is important."

II.

ADAM BROWN, THE MERCHANT: A NOVEL.

By HORACE SMITH, Esq.

Author of 'Brambletye House,' 'The Moneyed Man,' &c. 3 vols.

III.

FREDERICK THE GREAT: HIS COURT AND TIMES.

Edited by THOMAS CAMPBELL, Esq.

The THIRD and FOURTH VOLUMES, COMPLETING the WORK.

IV.

JESSIE PHILLIPS: A TALE OF THE NEW POOR-LAW.

By MRS. TROLLOPE,

Authoress of 'Michael Armstrong, the Factory Boy,' &c.

PART I., price One Shilling, to be completed in Twelve Monthly Parts, with Illustrations by Leech.

V.

MEMOIRS OF LITERARY LADIES OF ENGLAND.

By MRS. ELWOOD.

2 vols. post 8vo. with Portraits, 21*s.* bound.

"A work of great merit. The first biography is that of Lady Mary Wortley Montagu; the last, that of Mrs. Maclean, better known as Miss Landon: it thus comprises our Blue Stockings from the commencement of the last century down to the present. Each biography is marked by good taste and excellent judgment."—*John Bull.*

VI.

COLLEGE LIFE.

By J. HEWLETT, M.A.

Late of Worcester College, Oxford,

Author of 'Peter Priggins,' 'The Parish Clerk,' &c. 3 vols.

"Remarkably pleasant and amusing volumes."—*Times.*

"This clever production presents College Life to us with as much spirit as fidelity."—*Sun.*

VII.

MEMOIRS OF THE QUEENS OF FRANCE.

By MRS. FORBES BUSH.

2 vols. small 8vo. with Portraits, 21*s.* bound.

"This charming work comprises a separate memoir of every Queen of France, from the earliest of her annals to the fall of Napoleon. It cannot fail of being a desirable acquisition to every library in the Kingdom."—*Sun.*

VIII.

NARRATIVE OF THE WAR IN CHINA,

From the Commencement to the Close; with Sketches of that singular and almost unknown Country.

By Commander J. ELLIOT BINGHAM, R.N.

New edition, with numerous Additions, embellished with a finely-coloured Portrait of the Emperor of China, a Map, and other Illustrations, 21*s.* bound.

"The completest account of the Chinese war yet given to the world."—*John Bull.*

IX.

LIVES OF THE QUEENS OF ENGLAND.

VOLUME THE FIFTH.

By AGNES STRICKLAND.

Comprising the Lives of Queen Katharine Parr and Queen Mary. Embellished with a Portrait of Queen Katharine, &c.

☞ New and revised Editions of the First Four Volumes are also now ready

"These volumes have the fascination of a romance united to the integrity of history."—*Times.*

X.

MADAME D'ARBLAY'S DIARY AND LETTERS.

A new and revised edition of the 5 vols. is now ready.

"Written in Madame D'Arblay's earliest and best manner—in true woman's English—clear, natural, and lively. The work ought to be consulted by every person who wishes to be well acquainted with the history of our literature and our manners. The account which Miss Burney has given of the king's illness contains much excellent narrative and description, and will, we think, be more valued than any equal portion of Pepys' or Evelyn's Diaries."—*Edinburgh Review.*

THE FOLLOWING ARE JUST READY:

XI.

THE THIRD VOLUME OF

LETTERS of MARY, QUEEN of SCOTS,

Illustrative of her Personal History; now first published from the Originals, with Notes

By AGNES STRICKLAND,

Authoress of 'Lives of the Queens of England,' &c.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 796. LONDON, SATURDAY, JANUARY 28, 1843. PRICE FOURPENCE. (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[James Holmes, Took's Court, Chancery Lane.]

GEOLOGY.—PROF. WEBSTER, F.G.S., will COMMENCE his LECTURES on MONDAY, the 6th of February.

The Course will consist of Thirty Lectures, and will be divided into three parts:—

1. The description of such simple minerals as enter essentially into the composition of rocks.

2. Geology properly so called; or the characters and superposition of the strata composing the crust of the globe, together with an account of the various phenomena exhibited by them.

3. The application of the above subjects to the Useful Arts.

Lectures on Monday, Wednesday, and Friday, at a quarter-past 12. Fee, 3l. The Course is open to Gentlemen who do not attend any other class in the College. An Evening Class will be formed, if desired by a sufficient number.

GEORGE LONG, A.M., Dean of the Faculty of Arts.
CHAS. C. ATKINSON, Secretary to the Council.
University College, London, Jan. 21, 1843.

THE ELECTROTYPE.—A Gentleman, who has had considerable practical experience in the art, is desirous of forming an ENGAGEMENT to superintend the process, either in a public or private concern. He has also a thorough knowledge of casting in plaster and sulphur.—Letters (post paid), 4, Finsbury-pavement, stating real name and address, will have immediate attention.

THE CITY UPPER SCHOOL for SINGING, conducted by MR. MAY, under Mr. J. Hullah's direct sanction, meet every TUESDAY EVENING, from Eight to half-past Nine o'clock, at the Barbican School Rooms, Barbican, where Tickets may be obtained. Terms, 5s. per quarter, payable in advance. Next quarter commencing 1st of February.

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

GERMAN AND FRENCH LESSONS, either Elementary or Conversational, are given in the above languages on very moderate terms, by a Lady educated for instruction from early childhood in Germany and Paris, who can offer excellent references of ability to teach, &c.—Apply to Mr. Chappell, Music Warehouse, 50, New Bond-street.

A GENTLEMAN, sedulously devoted to literary pursuits, residing at RYDE, in the ISLE OF WIGHT, proposes to RECEIVE into his family FIVE PUPILS, the Sons of Noblemen or Gentlemen, to be instructed in the Classics, the French and Italian Languages, English Composition, and the Mathematics. A judicious system of private tuition, thoroughly matured, and pursued with perseverance and energy, combined with the comforts of a superior home, an introduction to select society, and the enjoyment of a climate of unrivalled salubrity, will, it is hoped, present advantages not to be surpassed in any similar establishment. References of the first order. Terms, 100l. per annum. Pupils under 12 years of age, 70l. Address S. W., Royal Marine Library, Union-street, Ryde, Isle of Wight.

THE Principal of an Establishment by the Sea, at a rural and favourite Watering Place on the Sussex coast, well known for its salubrious air, is desirous of COMPLETING HIS LIMITED NUMBER OF PUPILS with a few YOUNG GENTLEMEN, whose health or studies may require more than ordinary attention. The course of instruction comprises all the usual branches of a liberal education, and the improvement, comfort, and happiness of the young gentlemen are objects promoted by the most assiduous care. Fifty Pounds per annum include every charge. A Prospectus, with references, will be forwarded on application, by letter, to A. B., Post Office, Eastbourne.

BRUCE CASTLE SCHOOL, TOTTENHAM.—Bruce Castle is rather more than five miles from London, and is about a quarter of a mile west of the high road to Hertford. It stands in a park containing nearly twenty acres of land, and the surrounding country is open and salubrious. A description of Bruce Castle will be found in the "Beauties of England and Wales," and in Lysons' "Environs of London."

In addition to the Conductor, there are six resident Teachers, one of whom is a native of France. The course of study is such as to enable a young man, immediately on leaving school, to enter one of the Universities, to engage in commerce or agriculture, or to adopt the military or naval profession. Much general knowledge is communicated by means of a course of private reading, in which the pupils are induced to engage. Lectures, too, are delivered on various branches of Natural Philosophy. In his plans of government and instruction the Conductor addresses himself, as far as possible, to the religious principles, reasoning powers, and good feelings of his pupils. The grounds of the school regulations, and of the formulæ employed in the studies of the pupils, are explained; and at all times the pupils are encouraged to apply for information respecting everything which is not perfectly clear to their minds. Acting on the principle referred to, and others connected with it, the Conductor has succeeded in rendering the acquisition of knowledge to a certain degree, what, with unlimited means, and under perfect arrangements, it would be entirely, namely, a source of continued pleasure to the scholar. In developing the same principles, also, he has been enabled to dispense, to a very great extent, with artificial rewards and punishments, and to associate the boys themselves in the business of school government. Corporal punishment he entirely discards, and, with rare exceptions, he has found that, by treating a boy as a reasonable being, possessed of good natural feeling, it is quite practicable to induce upright conduct, a gentlemanly demeanour, a desire to oblige, an anxiety to avoid the infliction of pain, either moral or physical. To the early formation of habits of industry, punctuality, and obedience, the cultivation of a love of knowledge, the elevation of the moral feelings, and the development of the mental and physical powers, the Conductor directs his most strenuous efforts; being convinced by long experience, that, besides the direct benefits conferred upon his pupils, it is by such means alone that he can hope to lay a sure foundation for solid acquisition. A similar view of the plans in use is given in a small pamphlet, entitled "Sketch of the System of Education at Bruce Castle, Tottenham." (Charles Knight, London, 1827.)

Information respecting the charges, and other matters of detail, may be obtained by application at Bruce Castle.

There is also a Preparatory School for boys between the age of four and nine, the pupils of which are under female superintendence, the plans of instruction being, with some modification, those generally adopted in infant schools.

The Vacation terminated with Wednesday, January 25.

EXTENSION OF THE PRINCIPLE OF ART-UNIONS.

THE ROYAL POLYTECHNIC UNION of LONDON.

Subscribers and the Public are respectfully informed that the ETCHINGS illustrative of the SONGS of SHAKSPEARE, by the Etching Club, are now ready for inspection. By the liberality of the Members of the Club, the Subscribers will receive Seventeen Etchings instead of the promised number of thirteen.—Subscriptions received by the Honorary Secretary, at 309, Regent-street, and 5, Cavendish-square.

THE JURYMAN'S LEGAL HAND-BOOK, and Manual of Common Law: adapted to the comprehension of Jurors and others, and affording information peculiarly useful to professional gentlemen, to the man of business, the parish officer, &c. By THOMAS H. CORNISH, Esq., of Gray's Inn, Barrister-at-Law.

Longman & Co. Paternoster-row; and E. Spettigue, Chancery-lane.

Now ready, price 4s.

THE BANISHED LORD: A TRAGEDY, in Five Acts.

"This is a true tragedy. Its great aim is to show the lamentable spectacle of a noble heart goaded to distraction by its own pride, when thrown among the petty, sordid, and disgusting characters of common life.....There is a bold grappling with the subject, a fulness of imagery, and a massiveness of language. De Mortimer is well wrought out." *Atlas.*—"The accent of the stage." *Spectator.*—"In construction, in metre, in manner of idea, frequently of imagery, and daring of speech, he follows the true model." *Monthly Magazine.*—"The English press has already teemed with criticisms of this remarkable play. It is evidently the work of a man of refined genius. We are, in the perusal, alternately charmed with the noblest bursts of passion in the most splendid versification, the gorgeous display of language which distinguishes Ben Jonson, and much of the pathos of Fletcher's most dignified domestic scenes." *Londonderry Standard.*

London: C. Mitchell, Red Lion-court, Fleet-street.

Just published.

PROCEEDINGS of the PHILOSOPHICAL SOCIETY of GLASGOW, for 1841–42, and First Number for 1842–43.

MR. KNIGHT'S EDITIONS OF SHAKSPERE.

I.

THE PICTORIAL EDITION.

THIS Work, the sale of which has far exceeded that of any edition of Shakspere ever published, consists of

COMEDIES, 2 VOLS., containing fourteen Plays, accompanied by Notes, Illustrations, and Critical Notices; with 335 Woodcuts, executed by the first Artists.

HISTORIES, 2 VOLS., containing ten Plays, and, in addition to the usual Notes, full Historical Illustrations, and an Essay on the Three Parts of Henry VI. and Richard III., with 304 Woodcuts.

TRAGEDIES and POEMS, 2 VOLS., containing eleven Plays, and the Poems; and, besides the accustomed Notes, &c. a full Illustration of the Sonnets; with 271 Woodcuts.

SUPPLEMENTARY VOLUME, containing Titus Andronicus, Pericles, Two Noble Kinsmen, Analysis of the Doubtful Plays, History of Opinion on the Writings of Shakspere, and Index; with 84 Woodcuts.

WILLIAM SHAKSPERE: A BIOGRAPHY.

This Introductory Volume, which will be completed in a few months, forms a distinct work, exhibiting our great Poet in association with the circumstances of his domestic position, and portraying the Literature, Manners, and Events of his Age. The subject includes a full HISTORY of the STAGE. The Volume will contain above 200 Woodcuts.

The Seven Volumes, without the Biography, occupy Forty-six Parts, price 6l. 15s.; or bound in cloth, 6l. 12s. 6d.

II.

THE LIBRARY EDITION.

This is a re-publication, in demy octavo, with an accurate revisal of the Text and Notes, of Mr. Knight's Pictorial Edition. Such Woodcuts are inserted as are strictly illustrative. The Seventh Volume will appear on the 31st of January, completing the publication of 25 Plays. The Work will be finished early in 1843. Price 10s. each volume.

III.

THE CABINET EDITION.

The want of a correct TEXT of Shakspere, in a neat form, and at a cheap rate, has long been felt. It is now generally acknowledged that the received Text, that of Steevens (inaccurately called the text of Steevens and Malone,) is shamefully disfigured through the tasteless and unwarrantable deviations from the original copies made by the modern Editors of Shakspere. The Text given by Mr. Knight, in his Pictorial and Library Editions, is founded upon the most careful collations; and a reason is assigned in those editions for every deviation from the received text of the modern copies. To print the Text of the Works of Shakspere, such as we may judge that it proceeded from his pen, so as to make his *real* words accessible to all, is the object of 'The Cabinet Edition.' Alexander applied the perfume-Cabinet of Darius to a noble use: 'I will have it,' he said, 'to serve for a case for Homer's books. The works of Shakspere, in like manner, deserve a Cabinet that may always be at hand, like the 'case for Homer's books.' This Cabinet Edition will not be rendered bulky by much Commentary. A few glossarial Notes will be added to the Text, to explain words and sentences which are not familiar to the general reader.

The Cabinet Shakspere is published in Weekly Numbers: each Number containing a complete Play, at Sixpence. Also, in Ten Volumes, at Half-a-Crown each, bound in cloth, with gilt edges, to be published Monthly.

CHARLES KNIGHT & Co. 22, Ludgate-street.

THE FARMER'S ENCYCLOPÆDIA, and DICTIONARY of RURAL AFFAIRS. By CUTHBERT W. JOHNSON, Esq. F.R.S. Barrister-at-Law, Editor of 'The Farmer's Almanac,' &c. One very thick vol. 8vo. with Wood Engravings of the best and most approved Agricultural Implements, 50s. cloth.

Forming the Thirteenth of the Series of 'Encyclopædias and Dictionaries.'

"Clearly and perspicuously written, full of useful and interesting information, and well worthy of being recommended as a valuable addition to the book-shelves of all our agricultural friends."—*Quarterly Journal of Agriculture.*

VI.

A DICTIONARY of ARTS, MANUFACTURES, and MINES; containing a clear Exposition of their Principles and Practice. By ANDREW URE, M.D. F.R.S. M.G.S. &c. One thick vol. 8vo. illustrated with 1241 Engravings on Wood, 2l. 10s. cloth.

Forming the Tenth of the Series of 'Encyclopædias and Dictionaries.'

"There is more original, valuable, and new matter in this volume than we have ever seen in any work of a similar character."—*Athenæum.*

VII.

A DICTIONARY of SCIENCE, LITERATURE, and ART; comprising the History, Description, and Scientific Principles, of every Branch of Human Knowledge: with the Derivation and Definition of all the Terms in general use. Edited by W. T. BRANDE, F.R.S. L. & E. &c.; assisted by JOSEPH CAUVIN, Esq., and other gentlemen of eminence in their respective departments. One very thick vol. 8vo. of nearly 1400 pages, with Wood Engravings, 60s. cloth.

Forming the Twelfth of the Series of 'Encyclopædias and Dictionaries.'

"Clear and authentic, copious without prolixity, it does not furnish a bald explanation of facts and terms, but a development of principles well illustrated and explained."—*Times.*

VIII.

AN ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. By J. GWILT. One thick vol. 8vo. illustrated by upwards of 1000 Engravings on Wood, 2l. 12s. 6d. cloth.

Forming the Fourteenth of the Series of 'Encyclopædias and Dictionaries.'

"This elaborate and learned work constitutes a complete body of architecture. The vast mass of matter is admirably arranged, put into a condensed and clear form, and illustrated with woodcuts, most of themselves are valuable examples independently of the text. Mr. Gwilt is eminently qualified for this laborious task, which he has executed with ability, and *con amore*."—*Spectator.*

IX.

A DICTIONARY, GEOGRAPHICAL, STATISTICAL, and HISTORICAL, of the various Countries, Places, and principal Natural Objects in the WORLD. By J. R. M'CULLOCH, Esq. In 2 thick vols. 8vo. (pp. 1920), illustrated with 6 large Maps, 4l. cloth.

Forming the Eleventh of the Series of 'Encyclopædias and Dictionaries.'

"The extent of information this Dictionary affords on the subjects referred to in its title is truly surprising. Every public room in which commerce, politics, or literature, forms the subject of discussion, ought to be furnished with these volumes."—*Globe.*

X.

A DICTIONARY, PRACTICAL, THEORETICAL, and HISTORICAL, of COMMERCE and COMMERCIAL NAVIGATION. Illustrated with Maps and Plans. By J. R. M'CULLOCH, Esq. A New Edition, with a new and enlarged Supplement, containing the New Tariff, the New Corn Law (with an Article on the latter), and bringing down the information in the work to September 1842. One closely and beautifully-printed vol. 8vo. of more than 1450 pages, 50s. boards.

*** The NEW SUPPLEMENT, separately, 5s. sewed.

XI.

ELEMENTS of MATERIA MEDICA and THERAPEUTICS; including the Recent Discoveries and Analysis of Medicines. By Dr. ANTHONY TODD THOMSON, F.L.S. &c. Third Edition, enlarged and improved. One very thick vol. 8vo. of more than 1200 pages, with upwards of 100 Wood Engravings now first inserted, 31s. 6d. cloth.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

THE FOLLOWING WILL BE PUBLISHED NEXT WEEK:

The Second Volume, price 25s., completing the Work, of The

BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings; illustrated by several hundred Woodcuts.

II.

A GRAMMAR of VOCAL MUSIC, for the use of Public Schools and Classes of Adults. Founded on the Method of WILHEM, and ADAPTED TO ENGLISH USE under the SANCTION of the COMMITTEE of COUNCIL on EDUCATION.

By JOHN HULLAH.

Royal octavo, 7s. bound.

The *Grammar of Vocal Music* is, in its plan and general details, the same work as the *Manual* of WILHEM'S *Method of Teaching Singing*; but the *words* of the Songs are for the most part different, and more particularly fitted for the use of Adult Classes: considerable additions, also, have been made both to the theoretical and practical portions.

III.

This day, with numerous Illustrations, the 2nd edition, revised and much enlarged, of

AN INTRODUCTION to the STUDY of CHEMICAL PHILOSOPHY; being a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S. Professor of Chemistry in King's College, London.

Early in February, Part I., to be completed in Three Parts, of

THE PHYSIOLOGICAL ANATOMY and PHYSIOLOGY of MAN; with Original Illustrations. By R. B. TODD, M.D. F.R.S.; and W. BOWMAN, F.R.S. of King's College, London.

NOW READY.

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER,

Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait from the Original Picture, by Sir Thomas Lawrence. 21s.

RECOLLECTIONS of SIBERIA, in the Years 1840 and 1841. By C. HERBERT COTTRELL, Esq. 8vo. with Map, 12s.

ARCHITECTURAL NOTES on GERMAN CHURCHES; with Notes of a Tour in Normandy and Picardy. By the Rev. W. WHEWELL, B.D. F.R.S., Master of Trinity College, and Professor of Moral Philosophy in the University of Cambridge. A 3rd edition, with Additions, 12s.

TRAVELS AND RESEARCHES

IN ASIA MINOR, MESOPOTAMIA, CHALDEA, and ARMENIA. By WILLIAM FRANCIS AINSWORTH, F.G.S. F.R.G.S. 2 vols. with Illustrations, 24s.

CHRISTMAS DAY and other SERMONS. By FREDERICK DENISON MAURICE, M.A., Chaplain of Guy's Hospital, and Professor of English Literature in King's College, London. 10s. 6d.

PARISH SERMONS. By JULIUS CHARLES HARE, M.A. Archdeacon of Lewes. 12s.

The TWENTY-FIRST VOLUME, 4s. 6d., also the ANNUAL VOLUME for 1842, 7s. 6d., of the

SATURDAY MAGAZINE. Published in Weekly Numbers at 1d., Monthly Parts 6d., Half-Yearly Volumes 4s. 6d., and Annual Volumes at 7s. 6d. each.

A STATISTICAL COMPANION to the POCKET BOOK, consisting of a variety of Tables and Statements from the highest official and other sources. By C. R. WELD, Secretary to the Statistical Society of London. 1s. stitched; or 4s. 6d. roan gilt.

PRINCIPLES of MECHANISM; designed for the use of Students of the Universities, and for Students of Engineering generally. By R. WILLIS, M.A. F.R.S., Jacksonian Professor of Natural and Experimental Philosophy in the University of Cambridge. With 250 Woodcuts, 8vo. 15s.

THE MECHANICS of ENGINEERING, intended for use in Universities and in Colleges of Engineers, By the Rev. Professor WHEWELL, B.D. F.R.S., Master of Trinity College, Cambridge. 8vo. 9s.

THE ELEMENTS of DESCRIPTIVE GEOMETRY; chiefly intended for Students in Engineering. By the Rev. Professor HALL, of King's College, London. With 80 Illustrations, 6s. 6d.

HINTS to GAS CONSUMERS; comprising Practical Information on:—

I. The General Properties of Coal-Gas.
II. Its Cost, as compared with other modes of Illumination.
III. The Convenience, Safety, and Utility of Gas-Light.
IV. Management and Economical Use of Gas.
V. Gas-Fitters and Gas-Fittings.
VI. Gas Stoves.

Second Edition, enlarged, 2s.

LONDON, SATURDAY, JANUARY 28, 1843.

REVIEWS

Pierce Penniless's Supplication to the Devil. By Thomas Nash. *With Introduction and Notes.* By J. Payne Collier, Esq. Reprinted for the Shakespeare Society.

As a specimen of early smoothness of style and command of the English language, this work is interesting, and well worthy of perusal; nor is it less remarkable as an instance of literary perversity and unreasonableness. The tribe of lettered grumblers, who rail

> On Lady Fortune in good terms—
> In good set terms,

and who think themselves the butts of the world's malicious shafts, whenever they cannot get more than the market price for the products of their brains, stand, indeed, in little need of Nash's lamentations to uphold them in their mistaken calculations; but it is curious to see the prejudice concerning neglected merit and contempt of literature, reproduced in ages the most different: even in this century of political economy, it is still part and parcel of established order; so that to question any scribbler's right to consider himself an exceedingly ill-treated gentleman, because he has not yet by his labours become a "lord indeed, and not a tinker, nor Christopher Sly," is to run a serious risk of passing for disaffected to Church and State, to say nothing of banishment to a literary Coventry.

To those unacquainted with Nash's quaint piece of satire, it may be necessary to premise, that Pierce Penniless represents genius at odds with fortune—an author without a patron or a penny (miserable alliteration!), and his supplication, addressed to the Devil, is to the effect, that he will be graciously pleased to send the demon Avarice to replenish his pocket, and to purge the town of the deadly sins, which, it would seem, had left no ground within it for the sin of bookmaking to stand upon. Whether in writing his diatribe, Nash intended mainly to attack the patrons of literature, or to expatiate on the general morality of his times, is not very clear: perhaps he meant a little of both, perhaps only to make a saleable book, that "the poore tenement of his purse" might no longer continue to be "the Devil's dauncing schoole." But whatever his design, the tune he harps upon is the old complaint of neglected scholarship; and a more decisive proof of the unfoundedness of the notion is not to be had or desired, than this its reappearance in all states of society. The error involved in the complaint of literary ill-usage is twofold: first, that there is any necessary connexion between merit and money, beyond that, like Macedon and Monmouth, they both begin with an M; and this mistake is the more unpardonable, because literary men are ever gibing and mouthing against the money makers as ignorant, dull, and unworthy. If money be at once so desirable and so accessible a good, why not turn aside and adopt its pursuit? or if, on the other hand, literature and philosophy be in their nature so exalted above the care for the creature comforts, why not embrace them cheerfully and heartily, with all their consequences? But the second mistake is more unreasonable still; and that is, the laying to the charge of literature that poverty, which has been, in so many instances, the consequence of the complainant's own misconduct. "Having tyred my youth with follie," says Pierce, "and surfeited my minde with vanitee, I began, at length, to look back to repentance, and addresse my endeavours to prosperitie:" and this is too often the history of "unrequited merit." The union between true genius and conduct is sufficiently rare, on account of the passionate character of the energetic and imaginative temperaments; but a long prevalent neglect of moral developement in the schools and universities of Europe, carried the same tendency to fitful irregularities among the commoner *literati*, who traded only on acquirements. Literary men, therefore, pretended too generally to be men of wit and pleasure on town; and when they had forfeited independence by debt, and disgraced learning by vice, they turned round on fortune, and abused the public for the well-merited contempt which they failed not to encounter. Thus our friend Pierce:—

"This is the lamentable condition of our times, that men of arte must seek almes of cormorants, and those that deserue best, to be kept vnder by dunces, who count it a policie to keep them bare, because they shuld follow their books the better; thinking, belike, that as preferment hath made themselves idle, that were earst painfull in meaner places, so it would likewise slacken the endeauours of those students, that as yet strive to excell in hope of aduancement. A good pollicie to suppresse superfluous liberalitie; but, had it been practised when they were promoted, the yeomandry of the realme had been better to passe than it is, and one droane should not haue driuen so manie bees from theyr honie-combes."

The whole complaint, indeed, exhibits the abject state of the mind in which it originated, and the cause is, perhaps, to be found in the eleemosynary education by which, on the revival of learning, scholars were wont to be raised. The time is not far back, when even the Church was indebted very principally to that source; of which Swift is a salient instance. Even Fielding displays the chaplain in the great man's house, as no better than a domestic servant, and a proper match for my lady's maid. From this cause probably arose the wretched abuse of dedications, and that cringing to the great, which certainly went far to justify the aristocratic conceit of the superiority of rank to learning.

Pierce not only charges the patrons of his day with avarice, but with ignorance also.

"What is the cause? how am I crost? or whence is this curse? Euen from hence, that men that should employ such as I am, are enamoured of their owne wits, and thinke whateuer they doo is excellent, though it be neuer so scurvie; that learning (of the ignorant) is rated after the value of the inke and paper; and a scriuener better paid for an obligation, than a scholler for the best poeme he can make; that euerie grosse brainde idiot is suffered to come into print, who, if hee set foorth a pamphlet of the praise of pudding pricks, or write a treatie of Tom Thumme, or the exployts of Vntrusse, it is bought vp thicke and three-folde, when better things lye dead. * * Beleeue me, gentlemen, (for some crosse mishappes haue taught me experience) there is not that strict obseruation of honour, which hath been heretofore. Men of great calling take it of merit to haue their names eternisht by poets; and whatsoeuer pamphlet or dedication encounters them, they put it vp their sleeues, and scarce giue him thankes that presents it. Much better is it for those golden pennes to raise such vngratefull peasants from the dung-hill of obscuritie, and make them equal in fame to the worthies of olde, when their doating selfe-loue shall challenge it of dutie, and not onely giue them nothing themselues, but impouerish liberalitie in others."

But if such were, indeed, the patrons of literature in general, what were the slaves who stooped to eulogize them? The life of Dryden is one long answer to the question. Observe how grossly Pierce himself mistakes this matter:

"But cap and thanks is all our courtiers payment; wherefore, I would counsell my frends to be more considerate in their dedications, and not cast away so many months labour vppon a clowne that knowes not how to vse a scholler; for what reason haue I to bestow any of my wit vpon him, that will bestow none of his wealth vpon me? Alas! it is an easie matter for a goodlie tall fellow, that shines in his silkes, to come and out face a poore simple pedant in a thred-bare cloake, and tell him his booke is prety, but at this time he is not prouided for him. Marrie, about two or three daies hence, if he come that way, his page shal say he is not within, or els he he is so busie with my L. How-call-ye-him, and my L. What-call-ye-him, that he may not be spoken withall. These are the common courses of the world, which euery man priuately murmures at, but none dares openly vpbraid, because the most artists are base minded: like the Indians, that haue store of gold & precious stones at commaund, yet are ignorant of their value, and therefore let the Spaniards, the Englishmen, & euery one load their ships with them without molestation: so they, enioying and possessing the puritie of knowledge, (a treasure farre richer than the Indian mynes) let euerie proud Thraso be pertaker of their perfections, repaying them no profit, and gyld himself with the titles they giue him, when he wil scarce return them a good word for their labor. Giue an ape but a nut, and he wil looke your head for it; or a dog a bone, and hele wag his tayle; but giue me one of my young masters a booke, and he will put off his hat and blush, and so goe his way."

Here is a plain profession of the learned man's own estimate of himself and his wares—glory for gold—honour for a mess of pottage! It is not for the love of truth, nor for an admiration of virtue, that he praises, but through a regard for sordid gain; yet is such base and mean conduct to be esteemed; and the chapman to be abused for knowing the true value of the goods he bids for, and striving to get his pennyworth for his penny.

Connected with the same charitable education, were the coarseness of manners prevalent among scholars, and that addiction to low vices, which the discipline of the universities was little careful to control, and which tended still further to lower the popular estimate of the literary character. Even to the days of "slashing Bentley," and the dogmatic Warburton, controversialists were the laughing-stock of better bred men, for the intemperance and invective in which they delighted to indulge.

But had it been otherwise—had education been given on wiser plans—the mistake would not have been less, that regards literature, in its relation to money, as more than a qualification to enter upon the learned professions. There is nothing in literature which should remove it beyond the ordinary laws regulating the remuneration of labour. The commercial value of learning, as of art, and all other things, is, as we said of the Art-Union prizes, just so much money as 'twill bring, and no more; and to confound this with its value in use, with its intrinsic excellence, is the miscalculation of ignorance and vanity. One or two extraordinary instances may be cited, in which learned men received not merely large pecuniary rewards, but great personal consideration, from patronizing princes; but the commodity was then scarce, and the wealthy purchased this object of desire as they purchased their gems, at a price proportioned to its rarity. Besides, the general ignorance of society made learning pass for wisdom; and by this opinion it really became a power possessing valuable consideration. All this, however, was but an accident; the diffusion of knowledge, which printing introduced, while it raised the public, lowered in a corresponding degree, its teachers, by rendering acquirements easier of access, and by making the depositaries of them more numerous. By widening the circle of readers, too, the quality of reading in demand became less recondite: wit was substituted for knowledge, amusement was adopted in place of improvement as an end; and by the time that authorship became a trade, the literary character had sunk into considerable disrepute. Grub Street, though taken for a reproach of poverty, was, in reality, as much the symbol of bankrupt wits, as of bankrupt fortunes.

Digitized by Google

In this state of society, authorship required less genius and less learning; and on that account alone, would justly be esteemed as a less ennobling profession. It thus frequently became the desperate resource of those who had none other; insomuch that the book trade had scarcely received its first developements, when authorship became miserably overstocked, and the commodity a drug in the market.

The intervention of the bookseller, with the application of capital to the trade, was, notwithstanding, an element of literary prosperity. If Milton obtained only five pounds for his poem, while Scott and Byron obtained a guinea per line, it was the extension of the trade in books that made the difference. These latter halcyon times have already passed away. A demand for inferior articles has divided the current of authorship into new and more humble channels. The mere power of writing, unaccompanied by other gifts, has ceased to be distinctive; and any one possessed of a quire of paper can compete for its honours and emoluments. More money can be raised from the public by a limited but quick return upon worthless literature, than by the more extensive but tardy income of standard productions; and there has ensued a consequent rush to supply this demand, that for the moment has contributed to lower both the consideration for literary talent and its money value.

It is thus pretty clear, that the whining about neglected merit, is not only in a great degree unfounded, but that the Pierce Pennilesses were, in all ages, far from being the most respectable aspirants to literary distinction. With respect to a more fashionable complaint in the present day, governmental neglect, and the withholding of state honours from men of learning, that is a truth of more general import. All classes, that have not parliamentary interest, or cannot give a *quid pro quo*, are defrauded of their fair share of these rewards: it is a common evil. With respect, however, even to that, public opinion is in a state of progressive amendment: at no time had good literature more solid consideration than at present: at no time were its representatives, according to their respective personal claims, more freely accepted on a footing of equality with the highest. But, to the honour of humanity be it said, conduct goes far in regulating the author's position in society; and there is little risk of a scampish Aretine meeting with toleration or fellowship. If, indeed, there still remains any cause for complaint respecting the position of literary men among the classes of society, it must be attributed as much to the absence of self-respect in the writer, as to assumption on the part of rank and wealth. The *sine superbiâ quæsitam meritis* seems very often to be forgotten; and the desire for high associations is mixed with such parasitic toadyism as is incompatible with self-respect. If literature be a distinction, if genius be nature's own aristocracy, and if philosophy be a benefactress to mankind, why should their representatives voluntarily take their place below the salt, and look up where they should look down? *Qui invidet, minor est:* they have judged themselves. For the rest, if wealth be an object, the counting-house and the exchange are open to all the world; or if these won't do, *Aude aliquid brevibus Gyaris et carcere dignum.*

Life in Mexico, during a Residence of Two Years in that Country. By Madame C—— de la B——. Part I. Chapman & Hall.

THERE was little need for the brief recommendation which Mr. Prescott, the historian of Ferdinand and Isabella, has prefixed to this book, so well is it calculated to make its own way. "The sex" is literally fast becoming a thousand strong! Mrs. Jameson in her birch-bark canoe, Mrs. Dalkeith Holmes on her horse, the Lady of the Baltic in her sledge—to say nothing of Idlers in Italy, Mediterranean yachters, and such foreign members of the sisterhood as Madame Dudevant and the Countess Hahn Hahn—make up a phalanx of tourists, before whose bright eyes and pleasant tongues we men must needs quail;—even though we number Borrows and Heads and Puckler Muskaus and Köhls, in our squadron! Here, the wife of a Spanish Ambassador permits the publication of journals written in a land hitherto unvisited by any one gifted with so keen an eye and so pleasant a pen; and we call on all to do admiring homage to the lively talents of Madame Calderon de la Barca. She begins her sketches on board the *Norma*, which conveyed her from New York to Havana, and bore an amusing freightage of Mexican varieties. But a voyage and its *dramatis personæ* have been often described; not so the Havana, the first glimpse of which produced a favourable impression:—

"Last evening, as we entered the beautiful bay, every thing struck us as strange and picturesque. The soldiers of the garrison, the prison built by General Tacon, the irregular houses with their fronts painted red or pale blue, and with the cool but uninhabited look produced by the absence of glass windows; the merchant ships and large men-of-war; vessels from every port in the commercial world, the little boats gliding amongst them with their snow-white sails, the negroes on the wharf—nothing European. The heat was great, that of a July day, without any freshness in the air."

Other hurried sketches are not to be passed over:—

"We adjourned to the balcony, where the air was delightful, a cool evening breeze having suddenly sprung up. A large ship, full sail, and various barks, passed the Marro. There were negroes with bare legs walking on the wall, carrying parcels, &c.; volantes passing by with their black-eyed occupants, in full dress, short sleeves, and flowers in their hair; well-dressed, martial-looking Spanish soldiers marching by, and making tolerably free remarks upon the ladies in the volantes. * *

"17th.—Yesterday we went to see the procession of the patron saint, San Cristobal, from the balconies of the Intendencia. It is a fine, spacious building, and, together with the Captain-General's palace, stands in the Plaza de Armas, which was crowded with negroes and negresses, all dressed in white, with white muslin and blonde mantillas, framing and showing off their dusky physiognomies. Two regiments, with excellent bands of music, conducted the procession, composed of monks and priests. San Cristobal, a large figure with thick gold legs, surrounded by gold angels with gold wings, was carried by to the music of '*Suoni la tromba*,' to which were adapted the words of a hymn in praise of Liberty. We attended mass in the morning in the Church of San Felipe, and entered, preceded, according to custom, by a little negro footman carrying a piece of carpet. There were few people in the church, but the grouping was picturesque. The black faces of the negresses, with their white mantillas and white satin shoes; the black silk dresses and black lace mantillas of the Havana ladies, with their white faces and black eyes, and little liveried negroes standing behind them; the officers, music, and long-bearded priests—all were very effective."

"Of course, I could not leave Havana without devoting one morning to shopping. The shops have most seducing names—Hope, Wonder, Desire, &c. * * A great ball given us by the Countess F——a, last evening, was really superb. The whole house was thrown open—there was a splendid supper, quantities of refreshments, and the whole select aristocracy of Havana. Diamonds on all the women, jewels and orders on all the men, magnificent lustres and mirrors, and a capital band of music in the gallery. * * Walking through the rooms after supper, we were amused to see the negroes and negresses helping themselves plentifully to the sweetmeats, uncorking and drinking fresh bottles of Champagne, and devouring everything on the supper tables, without the slightest concern for the presence either of their master or mistress; in fact, behaving like a multitude of spoilt children, who are sure of meeting with indulgence, and presume upon it."

We must skip the voyage from Havana to Vera Cruz, though it included a *Norte*—one of those sea-wonders more exciting than agreeable. Vera Cruz wore an aspect as repellant as that of the Havana had been inviting:—

"Anything more melancholy, *délabré* and forlorn, than the whole appearance of things as we drew near, cannot well be imagined. On one side, the fort, with its black and red walls: on the other, the miserable, black-looking city, with hordes of large black birds, called *sopilotes*, hovering over some dead carcass or flying heavily along in search of carrion. Still, as the goal of our voyage, even its dreary aspect was welcome, and the very hills of red sand by which it is surrounded, and which look like the deserts of Arabia, appeared inviting. * * A singular spectacle the wharf presented. A crowd, as far as the eye could reach, of all ages and sexes of Vera Cruzians (and a very curious set they seemed to be), were assembled to witness his Excellency's arrival. Some had no pantaloons; and others, to make up for their neighbours' deficiencies, had two pair—the upper slit up the side of the leg, Mexican fashion. All had large hats, with silver or bead rolls, and every tinge of dark complexion, from the pure Indian, upwards. Some dresses were entirely composed of rags, clinging together by the attraction of cohesion; others had only a few holes to let in the air. All were crowding, jostling, and nearly throwing each other into the water, and gazing with faces of intense curiosity."

The moment of departure from this doleful city was eagerly welcomed. The breakfast halt affords us a glimpse of a Mexican celebrity. This is Santa Anna, the *ci-devant* President:—

"A gentlemanly, good-looking, quietly-dressed, rather melancholy-looking person, with one leg, apparently somewhat of an invalid, and to us the most interesting person in the group. He has a sallow complexion, fine dark eyes, soft and penetrating, and an interesting expression of face. * * C——n gave him a letter from the Queen, written under the supposition of his being still President, with which he seemed much pleased, but merely made the innocent observation, 'How very well the Queen writes!' It was only now and then, that the expression of his eye was startling, especially when he spoke of his leg, which is cut off below the knee. He speaks of it frequently, like Sir John Ramorny of his bloody hand, and when he gives an account of his wound, and alludes to the French on that day, his countenance assumes that air of bitterness which Ramorny's may have exhibited when speaking of 'Harry the Smith.' Otherwise, he made himself very agreeable, spoke a great deal of the United States, and of the persons he had known there, and in his manners was quiet and gentlemanlike, and altogether a more polished hero than I had expected to see. To judge from the past, he will not long remain in his present state of inaction, besides having within him, according to Zavala, 'a principle of action for ever impelling him forward.'"

As the day, and the journey, went on, the scenery became lovely:—

"It was difficult to believe, as we journeyed on, that we were now in the midst of December. The air was soft and balmy. The heat, without being oppressive, that of a July day in England. The road through a succession of woody country; trees covered with every variety of blossom, and loaded with the most delicious tropical fruits; flowers of every colour filling the air with fragrance, and the most fantastical profusion of parasitical plants intertwining the branches of the trees, and flinging their bright blossoms over every bough. Palms, cocoas, oranges, lemons, succeeded one another, and at one turn of the road, down in a lovely green valley, we caught a glimpse of an Indian woman, with her long hair, resting under the shade of a lofty tree, beside a running stream—an Oriental picture. Had it not been for the dust and the jolting, nothing could have been more delightful. As for Don Miguel, with his head out of the window, now desiring the coachman to go more quietly, now warning us to prepare for a jolt, now pointing out everything worth looking at, and making light of all difficulties, he was the very best

Digitized by Google

conductor of a journey I ever met with. His hat of itself was a curiosity to us; a white beaver with immense brim, lined with thick silver tissue, with two large silver rolls and tassels round it. One circumstance must be observed by all who travel in Mexican territory. There is not one human being or passing object to be seen that is not in itself a picture, or which would not form a good subject for the pencil. The Indian women with their plaited hair, and little children slung to their backs, their large straw hats, and petticoats of two colours—the long strings of arrièros with their loaded mules, and swarthy, wild-looking faces—the chance horseman who passes with his *sarape* of many colours, his high ornamented saddle, Mexican hat, silver stirrups and leathern boots—all is picturesque. Salvator Rosa and Hogarth might have travelled here to advantage, hand-in-hand; Salvator for the sublime, and Hogarth taking him up where the sublime became the ridiculous. At La Calera, we had a distant view of the sea. Occasionally we stopped to buy oranges fresh from the trees, pine-apples, and granaditas, which are like Brobdignagian gooseberries, the pulp enclosed in a very thick, yellow, or green rind, and very refreshing."

It is customary for travellers from Vera Cruz to stop for a few hours' rest at the Plan del Rio; but Madame Calderon had resolved to sleep at Jalapa—and so went on—the air becoming cold as the party mounted the hills:—

"The cold increased, and at last by the moonlight, we had a distinct view of the Peak of Orizava, with his white nightcap on (excuse the simile, suggested by extreme sleepiness), the very sight enough to make one shiver. As we approached Jalapa, the scene was picturesque. The escort had put on their *sarapes*, and with their high helmets and feathers, went galloping along and dashing amongst the trees and shrubs. Orizava and the Cofre de Perote shone white in the distance, while a delicious swell of flowers, particularly of roses, gave token of the land through which we were passing. It was nearly two in the morning when we reached Jalapa, tired to death, and shivering with cold. Greatly we rejoiced as we rattled through its mountainous streets, and still more when we found ourselves in a nice clean inn, with brick floors and decent small beds, and everything prepared for us. The sight of a fire would have been too much luxury; however, they gave us some hot tea, and very shortly after, I at least can answer for myself, that I was in bed, and enjoying the most delightful sleep that I have had since I left New York."

A daylight inspection increased the liking of our authoress for Jalapa:—

"After breakfast we walked out, accompanied by various gentlemen of the place. The town consists of little more than a few steep streets, very old, with some large and excellent houses, the best as usual belonging to English merchants, and many to those of Vera Cruz, who come to live in or near Jalapa, during the reign of the '*Vomito*.' There are some old churches, a very old convent of Franciscan monks and a well-supplied market-place. Everywhere there are flowers—roses creeping over the old walls, Indian girls making green garlands for the virgin and saints, flowers in the shops, flowers at the windows, but, above all, everywhere one of the most splendid mountain views in the world. The Cofre de Perote, with its dark pine forests and gigantic *chest* (a rock of porphyry which takes that form), and the still loftier snow-white peak of Orizava, tower above all the others, seeming like the colossal guardians of the land. The intervening mountains, the dark cliffs and fertile plains, the thick woods of lofty trees clothing the hills and the valleys; a glimpse of the distant ocean; the surrounding lanes shaded by fruit trees: aloes, bananas, chirimoyas, mingled with the green liquidamber, the flowering myrtle, and hundreds of plants and shrubs and flowers of every colour and of delicious fragrance, all combine to form one of the most varied and beautiful scenes that the eye can behold. Then Jalapa itself, so old and gray, and rose-becovered, with a sound of music issuing from every open door and window, and its soft and agreeable temperature, presents even in a few hours, a series of agreeable impressions not easily effaced."

"Once again, making "a good step"—though Puebla, the second city of the Republic, is thereby passed over—we shall give Madame Calderon's first impressions of Mexico.

"But my thoughts, which had wandered three centuries into the past, were soon recalled to the present, by the arrival of an officer in full uniform at the head of his troop, who came out by order of the government to welcome the bearer of the olive branch from ancient Spain, and had been on horseback since the day before, expecting our arrival. As it had begun to rain, the officer, Colonel Miguel Andrade, accepted our offer of taking shelter in the diligence. We had now a great troop galloping along with us, and had not gone far before we perceived, that, in spite of the rain, and that it had already begun to grow dusk, there were innumerable carriages and horsemen, forming an immense crowd, all coming out to welcome us. Shortly after the diligence was stopped, and we were requested to get into a very splendid carriage, all crimson and gold, with the arms of the republic, the eagle and nopal, embroidered in gold on the roof inside, and drawn by four handsome white horses. In the midst of this immense procession of troops, carriages, and horsemen, we made our entry into the city of Montezuma. The scenery on this side of Mexico is arid and flat, and where the waters of the Lagunas, covered with their gay canoes, once surrounded the city, forming canals through its streets, we now see melancholy marshy lands, little enlivened by great flights of wild duck and water-fowl. But the bleakness of the natural scenery was concealed by the gay appearance of the procession—the scarlet and gold uniforms, the bright-coloured sarapes, the dresses of the gentlemen (most, I believe, Spaniards), with their handsome horses, high Mexican saddles, gold-embroidered *anqueras*, generally of black fur, their Mexican hats, ornamented with gold, richly furred jackets, pantaloons with hanging silver buttons, stamped-leather boots, silver stirrups, and graceful mangas, with black or coloured velvet capes. At the gates of Mexico the troops halted, and three enthusiastic cheers were given as the carriage entered. It was now nearly dusk, and the rain was falling in torrents, yet we met more carriages full of ladies and gentlemen, which joined the others. We found that a house in the suburbs at Buenavista, had been taken for us *provisoirement* by the kindness of the Spaniards, especially of a rich merchant who accompanied us in the carriage, Don M——l M——z del C——o; consequently we passed all through Mexico before reaching our destination, always in the midst of the crowd, on account of which, and of the ill-paved streets, we went very slowly. Through the rain and the darkness we got an occasional faint lamp-light glimpse of high buildings, churches, and convents. Arrived, at length, in the midst of torrents of rain, C——n got out of the carriage, and returned thanks for his reception, giving some ounces to the sergeant for the soldiers. We then entered the house, accompanied by the Mexican officer, and by a large party of Spaniards. * * By daylight we find our house very pretty, with a large garden adjoining, full of flowers, and rose-bushes in the courtyard, but being all on the ground-floor, it is somewhat damp, and the weather, though beautiful, is so cool in the morning, that carpets, and I sometimes think even a *soupçon* of fire, would not be amiss. The former we shall soon procure, but there are neither chimneys nor grates, and I have no doubt a fire would be disagreeable for more than an hour or so in the morning. The house stands alone, with a large court before it, and opposite to it passes the great stone aqueduct, a magnificent work of the Spaniards, though not more so, probably, than those which supplied the ancient Tenochtitlan with water. Behind it we see nothing but several old houses, with trees, so that we seem almost in the country. To the right is one large building with garden and olive ground, where the English legation formerly lived, a palace in size, since occupied by Santa Anna, and which now belongs to Señor Perez Galvez; a house which we shall be glad to have, if the proprietor will consent to let it. But what most attracts our attention, are the curious and picturesque groups of figures which we see from the windows—men bronze colour with nothing but a piece of blanket thrown round them, carrying lightly on their heads earthen basins, precisely the colour of their own skin, so that they look altogether like figures of terra cotta; these basins filled with sweetmeats or white pyramids of grease (*mantequilla*); women with robosos, short petticoats of two colours, generally all in rags, yet with a lace border appearing on their under garment; no stockings, and dirty white satin shoes, rather shorter than their small brown feet; gentlemen on horseback, with their Mexican saddles and sarapes; lounging *leperos*, moving bundles of rags, coming to the windows and begging with a most piteous but false sounding whine, or lying under the arches and lazily inhaling the air and the sunshine, or sitting at the door for hours, basking in the sun, or under the shadow of the wall; Indian women, with their tight petticoat of dark stuff and tangled hair, plaited with red ribbon, laying down their baskets to rest, and meanwhile deliberately *examining* the hair of their copper-coloured offspring. We have enough to engage our attention for the present."

That the Mexicans are what Galt's Mrs. Pringle called "substantial hands at a civility," Madame Calderon had early occasion to observe.

"Some Mexican visits appear to me to surpass in duration all that one can imagine of a visit, rarely lasting less than one hour, and sometimes extending over a great part of the day. And gentlemen, at least, arrive at no particular time. If you are going to breakfast, they go also—if to dinner, the same—if you are asleep, they wait till you awaken—if out, they call again. An indifferent sort of man, whose name I did not even hear, arrived yesterday a little after breakfast, sat still, and walked in to a late dinner with us! These should not be called visits, but visitations, though I trust they do not often occur to that extent. An open house and an open table for your friends, which includes every passing acquaintance; these are merely Spanish habits of hospitality transplanted."

A subsequent glimpse of manners may be here inserted.

"It grows late—a carriage enters the courtyard—a visit. There is no romance here. Men and women are the same everywhere, whether enveloped in the graceful mantilla, or wearing Herbault's last—whether wrapt in Spanish cloak, or Mexican sarape, or Scottish plaid. The manners of the ladies here are extremely kind, but Spanish etiquette and compliments are beyond measure tiresome. After having embraced each lady who enters, according to the fashion, which after all seems cordial, to say the least of it, and seated the lady of most consequence on the right side of the sofa, a point of great importance, the following dialogue is *de rigueur*:—'How are you? are you well?' 'At your service; and you?' 'Without novelty (sin novedad) at your service.' 'I am rejoiced; and how are you, Señora?' 'At your disposal; and you?' 'A thousand thanks; and the Señor?' 'At your service, without novelty,' &c. &c. &c. Besides, before sitting down, there is 'Pray be seated.' 'Pass first, Señorita.' 'No, madam, pray pass first.' '*Vaya*, well, to oblige you, without further ceremony; I dislike compliments and etiquette.' And it is a fact that there is no real etiquette, but the most perfect *laissez aller* in the world. All these are mere words, tokens of good will. If it is in the morning, there is the additional question of 'How have you passed the night?' And the answer, 'In your service.' Even in Mexico, the weather affords a legitimate opening for a conversational battery, but this chiefly when it rains or looks dull, which, occasioning surprise, gives rise to observation. Besides, a slight change in the degree of heat or cold, which we would not observe, they comment upon. The visit over, the ladies re-embrace, the lady of the house following her guest to the top of the staircase, and again compliments are given and received. 'Madam, you know that my house is at your disposal.' 'A thousand thanks, madam. Mine is at yours, and though useless, know me for your servant, and command me in every thing that you may desire.' 'Adieu, I hope you may pass a good night,' &c. &c. &c. At the bottom of the first landing-place the visitors again turn round to catch the eye of the lady of the house, and the adieus are repeated. All this, which struck me at first, already appears quite natural, and would scarce be worth mentioning, but as affording a contrast to our slight and indifferent manner of receiving and taking leave of our guests. All the ladies address each other, and are addressed by gentlemen, by their

Digitized by Google

Christian names, and those who have paid me more than one or two visits, use the same familiar mode of address to me. Amongst women I rather like this, but it somewhat startles my ideas of the fitness of things to hear a young man address a married woman as Maria, Antonia, Anita, &c. However, things must be taken as they are meant, and as no familiarity is intended, none should be supposed."

On the other hand, the outer world of citizens is offensively intrusive.

"Whilst I am writing a horrible lépero, with great leering eyes, is looking at me through the windows, and performing the most extraordinary series of groans, displaying at the same time a hand with two long fingers, probably the other three tied in. 'Senorita! Senorita! For the love of the most Holy Virgin! For the sake of the most pure blood of Christ! By the miraculous Conception!'—The wretch! I dare not look up, but I feel that his eyes are fixed upon a gold watch and seals lying on the table. That is the worst of a house on the ground floor.... There come more of them! A paralytic woman mounted on the back of a man with a long beard. A sturdy-looking individual, who looks as if, were it not for the iron bars, he would resort to more effective measures, is holding up a *deformed foot*, which I verily believe is merely fastened back in some extraordinary way. What groans! what rags! what a chorus of whining! This concourse is probably owing to our having sent them some money yesterday. I try to take no notice, and write on as if I were deaf. I must walk out of the room, without looking behind me, and send the porter to disperse them. There are no bell-ropes in these parts.... I come back again to write, hardly recovered from the start that I have just got. I had hardly written the last words, when I heard a footstep near me, and, looking up, lo! there was my friend with *the foot*, standing within a yard of me, his hand stretched out for alms! I was so frightened, that for a moment I thought of giving him my watch, to get rid of him. However, I glided past him with a few unintelligible words, and rushed to call the servants; sending him some money by the first person who came. The porter, who had not seen him pass, is now dispersing the crowd. What vociferous exclamations! A—— has come in, and drawn the curtains, and I think they are going off."

The street cries are various, and some of them almost as tempting, though less poetically worded than those recorded by Mr. Lane, in his book on Egypt:—

"There are an extraordinary number of street-cries in Mexico, which begin at dawn and continue till night, performed by hundreds of discordant voices, impossible to understand at first; but Señor —— has been giving me an explanation of them, until I begin to have some distinct idea of their meaning. At dawn you are awakened by the shrill and desponding cry of the Carbonero, the coalmen, Carbon! Señor,' which, as he pronounces it, sounds like 'Carbosiu!' Then the grease-man takes up the song, 'Mantiquilla! lard! lard! at one real and a half.' 'Salt beef! good salt beef! ('Cecina buena!') interrupts the butcher in a hoarse voice. 'Hay cebo-o-o-o-o-o?' This is the prolonged and melancholy note of the woman who buys kitchen-stuff, and stops before the door. Then passes by the *cambista*, a sort of Indian she-trader or exchanger, who sings out, 'Tejocotes por venas de chile?' a small fruit which she proposes exchanging for hot peppers. No harm in that. A kind of ambulating pedlar drowns the shrill treble of the Indian cry. He calls aloud upon the public to buy needles, pins, thimbles, shirt-buttons, tape, cotton-balls, small mirrors, &c. He enters the house, and is quickly surrounded by the women, young and old, offering him the tenth part of what he asks, and which, after much haggling he accepts. Behind him stands the Indian with his tempting baskets of fruit, of which he calls out all the names, till the cook or housekeeper can resist no longer, and putting her head over the balustrade, calls him up with his bananas, and oranges, and granaditas, &c. A sharp note of interrogation is heard, indicating that something is hot, and must be snapped up quickly before it cools. 'Gorditas de horna caliente?' 'Little fat cakes from the oven, hot?' This is in a female key, sharp and shrill. Follows the mat-seller. 'Who wants mats from Puebla? mats of five yards?' These are the most matinal cries. At mid-day the beggars begin to be particularly importunate, and their cries, and prayers, and long recitations, form a running accompaniment to the other noises. Then above all rises the cry of 'Honey-cakes!' 'Cheese and honey?' 'Requeson and good honey?' (*Requeson* being a sort of hard curd, sold in cheeses.) Then come the dulce-men, the sellers of sweetments, of meringues, which are very good, and of all sorts of candy. 'Caramelos de esperma! bocadillo de coco!' Then the lottery-men, the messengers of fortune, with their shouts of 'The last ticket, yet unsold, for half a real!' a tempting announcement to the lazy beggar, who finds it easier to gamble than to work, and who may have that sum hid about his rags. Towards evening rises the cry of 'Tortillas de cuajada?' 'Curd-cakes?' or, 'Do you take nuts?' succeeded by the night-cry of 'Chesnuts hot and roasted!' and by the affectionate venders of ducks, 'Ducks, oh my soul, hot ducks!' 'Maize-cakes,' &c. &c. As the night wears away, the voices die off, to resume next morning in fresh vigour."

The new year was ushered in with great festivity, a splendid fancy ball being given for the benefit of the poor. At this, Madame Calderon well nigh scandalized past forgiveness the world of Mexico, having chosen the dress of the Poblana peasants, for its prettiness, without an idea that the wearing of such a costume would subject her to evil construction, the class in question bearing but a bad reputation. Fortunately, however, she discovered her mistake in time. The theatre was early visited, and condemned. But Mexico has lions of greater interest in its antiquities. One is the castle of Chapultepec, a short league from the city, with Montezuma's cypress frowning in its court-yard, and a terrace round it commanding a superb view:—

"The whole valley of Mexico lies stretched out as in a map; the city itself, with its innumerable churches and convents; the two great aqueducts which cross the plain; the avenues of elms and poplars which lead to the city; the villages, lakes, and plains which surround it. To the north the magnificent cathedral of Our Lady of Guadalupe—to the south the villages of San Augustin, San Angel, and Tacubaya, which seem imbosomed in trees, and look like an immense garden. And if in the plains below there are many uncultivated fields and many buildings falling to ruin, yet, with its glorious inclosure of mountains, above which tower the two mighty volcanoes, Popocatepetl and Iztaccihuatl, the Gog and Magog of the valley, off whose giant sides great volumes of misty clouds were rolling, and with its turquoise sky for ever smiling on the scene, the whole landscape, as viewed from this height, is one of nearly unparalleled beauty."

Another excursion was to the church of Our Lady of Guadalupe, at the foot of the hill of Tepayac, where once stood the temple of Tonantzin, the Mexican Ceres.

Within the city, diversions less familiar than fancy balls, awaited the Ambassadress. She was compelled, we presume, in virtue of her office, to sit through a bull-fight! and honestly confesses, that, the first repugnance over, the scene acquired a certain fascination, which rivetted the eye and the interest. The fancy-ball, to which allusion has been made, was to be paid for by a slight attack of fever. Some will wonder how the ladies of Mexico ever recover, if their doctors be all as elaborate in their behaviour as the Sangrado now to be described:—

"I was attended by a doctor of the country, who seems the most harmless creature imaginable. Every day he felt my pulse, and gave me some little innocent mixture. But what he especially gave me was a lesson in polite conversation. Every day we had the following dialogue, as he rose to take leave:—'Madam! (this by the bedside) I am at your service.' 'Many thanks, sir.' 'Madam! (this at the foot of the bed) know me for your most humble servant.' 'Good morning, sir.' 'Madam! (here he stopped beside a table) I kiss your feet.' 'Sir, I kiss your hand.' 'Madam! (this near the door) my poor house, and all in it, myself, though useless, all I have, is yours.' 'Many thanks, sir.' He turns round and opens the door, again turning round as he does so, 'Adieu, madam! your servant.' 'Adieu, sir.' He goes out, partly reopens the door, and puts in his head, 'Good morning, madam!'"

Some of the fair ones, however, live to a great age, as the reader shall see, and he shall learn, too, what may befall old or young, when the Destroyer at last claims his prey:—

"Before I conclude this letter, I must tell you that I received a visit this morning from a very remarkable character, well known here by the name of *La Güera* (the fair) *Rodriguez*, said to have been many years ago celebrated by Humboldt as the most beautiful woman he had seen in the whole course of his travels. Considering the lapse of time which has passed since that distinguished traveller visited these parts, I was almost astonished when her card was sent up with a request for admission, and still more so to find that in spite of years and of the furrows which it pleases Time to plough in the loveliest faces, La Güera retains a profusion of fair curls without one gray hair, a set of beautiful white teeth, very fine eyes, and great vivacity. • • I found La Güera very agreeable, and a perfect living chronicle. She is married to her third husband, and had three daughters, all celebrated beauties; the Countess de Regla, who died in New York, and was buried in the cathedral there; the Marquesa de Guadalupe, also dead, and the Marquesa de A——a, now a handsome widow. We spoke of Humboldt, and talking of herself as of a third person, she related to me all the particulars of his first visit, and his admiration of her; that she was then very young, though married, and the mother of two children, and that when he came to visit her mother, she was sitting sewing in a corner where the Baron did not perceive her; until talking very earnestly on the subject of cochineal, he inquired if he could visit a certain district where there was a plantation of nopals. 'To be sure,' said La Güera from her corner; 'we can take M. de Humboldt there;' whereupon he first perceiving her, stood amazed, and at length exclaimed, '*Valgame Dios!* who is that girl?' Afterwards he was constantly with her, and more captivated, it is said, by her wit than by her beauty; considering her a sort of western Madame de Staël; all which leads me to suspect that the grave traveller was considerably under the influence of her fascinations, and that neither mines nor mountains, geography nor geology, petrified shells nor *alpenkalkstein*, had occupied him to the exclusion of a slight *stratum* of flirtation. It is a comfort to think that 'sometimes even the great Humboldt nods.' One of La Güera's stories is too original to be lost. A lady of high rank having died in Mexico, her relatives undertook to commit her to her last resting-place, habited according to the then prevailing fashion, in her most magnificent dress, that which she had worn at her wedding. This dress was a wonder of luxury, even in Mexico. It was entirely composed of the finest lace, and the flounces were made of a species of point which cost fifty dollars a *vara* (the Mexican yard). Its equal was unknown. It was also ornamented and looped up at certain intervals with bows of ribbon very richly embroidered in gold. In this dress the Condesa de —— was laid in her coffin, thousands of dear friends crowding to view her beautiful *costume de mort*, and at length she was placed in her tomb, the key of which was intrusted to the sacristan. From the tomb to the opera is a very abrupt transition; nevertheless, both have a share in this story. A company of French dancers appeared in Mexico, a twentieth-rate ballet, and the chief danseuse was a little French damsel, remarkable for the shortness of her robes, her coquetry, and her astonishing pirouettes. On the night of a favourite ballet, Mademoiselle Pauline made her *entrée* in a succession of pirouettes, and poising on her toe, looked round for approbation, when a sudden thrill of horror, accompanied by a murmur of indignation, pervaded the assembly. Mademoiselle Pauline was equipped in the very dress in which the defunct countess had been buried! Lace, point flounces, gold ribbons; impossible to mistake it. Hardly had the curtain dropped, when the little danseuse found herself surrounded by competent authorities, questioning her as to where and how she had obtained her dress. She replied that she had bought it at an

Digitized by Google

extravagant price from a French *modiste* in the city. She had rifled no tomb, but honestly paid down golden ounces, in exchange for her lawful property. To the modiste's went the officers of justice. She also pleaded innocent. She had bought it of a man who had brought it to her for sale, and had paid him much more than *à poids d'or*, as indeed it was worth. By dint of further investigation, the man was identified, and proved to be the sacristan of San ——. Short-sighted sacristan! He was arrested and thrown into prison, and one benefit resulted from his cupidity, since in order to prevent throwing temptation in the way of future sacristans, it became the custom, after the body had lain in state for some time in magnificent robes, to substitute a plain dress previous to placing the coffin in the vault."

In the tenth letter we come upon details of domestic economy, *apropos* of the settlement of the Embassy. The Mexican houses are complained of by Madame Calderon as too large and unfinished; the tradesmen, as given to the southern vice of overcharging; and servants seem to be even greater plagues in Mexico, than can be "met with elsewhere." Their dress favours personal untidiness: the *reboso* covers a multitude of sins; and this, with the graver additions of idleness, a tendency to change, to cheat, to quarrel, and to assassinate, must be looked for by ladies whose lot is cast in Mexico. The following extract embraces some of the contrasts of life and occupation, which may also fall under the observation of a resident.

"Yesterday, on returning from an evening drive there, having left C—n and several gentlemen who had dined with us, taking coffee and smoking upon the balcony, I found that by good fortune I had escaped being witness of a murder which took place before our door. These gentlemen had observed, for some time, a group of persons, male and female, of the lower class, talking and apparently amusing themselves; sometimes laughing, and at other times disputing and giving each other blows. Suddenly, one of the number, a man, darted out from amongst the others, and tried to escape by clambering over the low wall which supports the arches of the aqueduct. Instantly, and quite coolly, another man followed him, drew his knife, and stabbed him in the back. The man fell backwards with a groan, upon which a woman of the party, probably the murderer's wife, drew out her knife, and stabbed the man several times to the heart, the others, meanwhile, neither speaking nor interfering, but looking on with folded arms, and their usual placid smile of indifference. At the same time, some soldiers appeared in the distance, riding down the street, seeing which, the man and woman who had committed the murder, endeavoured to take shelter in our house. The porter had, fortunately, barred the doors, and the soldiers riding up, took them both into custody. No sensation was excited by this, which is an every-day occurrence. Yesterday I saw a dead man lying near the *Longa* (the Exchange) and nobody took any notice of him. 'You have been engaged in a disagreeable business,' said I to Colonel ——, who had come to pay us a visit, and was still *en grande tenue*, having just returned from the execution of one of his own soldiers, who had stabbed a comrade. 'Yes,' said he, with an air of peculiar gaiety; 'we have just been shooting a little *tambour*.' . . . . We were invited, lately to a 'dia de campo' (a day in the country), a very common amusement here, in which, without any peculiar arrangement or etiquette, a number of people go out to some country place in the environs, and spend the day in dancing, breakfasting, walking about, &c. The music consisted of a band of guitars, from which the performers, common men, and probably self-taught, contrived to draw wonderfully good music, and, in the intervals of dancing, played airs from the Straniera and Puritani. The taste for music is certainly universal, the facilities wonderful, the science nearly at zero. The ladies in general wore neither diamonds nor pearls, but a sort of demi-toilet, which would have been pretty if their dresses had been longer and their shoes not so tight. Some wore bonnets, which are considered full dress. Mexican women, when they sit, have an air of great dignity, and the most perfect repose of feature. They are always to be seen to most advantage on their sofas, in their carriages, or in their boxes at the theatre. There were immensely long tables, covered with Mexican cookery, which I begin to get accustomed to; and a great many toasts were given, and a great quantity of champagne drank. We danced a great deal, quadrilles, waltzes, and Spanish country-dances, walked about in the garden and orchard in the evening, and returned to dance again to the music of the indefatigable guitars, so that it was dusk when all the carriages set off, much about the same time, to bear each other company. . . . . The following day, the Countess C——a having been kind enough to procure an order for permission to visit the *Colegio Vizcaino*, which I was anxious to see, we went there with a large party. This college, founded by the gratuitous charities of Spaniards, chiefly from the province of Biscay, is a truly splendid institution. It is an immense building of stone, in the form of a square, on the model, they say, of the palace of Madrid, and possesses in the highest degree that air of solidity and magnificence which distinguishes the Mexican edifices, and which, together with the width and regularity of the streets, the vastness of the public squares, the total absence of all paltry ornament, the balconies with their balustrades and window-gratings of solid iron and bronze, render Mexico, in spite of its inefficient police, one of the noblest-looking cities in the world. The object of this college is to provide for the education of the children of Spaniards, especially for the descendants of Biscayans, in Mexico; a certain number being admitted upon application to the directors. There are female teachers in all the necessary branches, such as reading, writing, sewing, arithmetic, &c.; but besides this, there is a part of the building with a separate entrance, where the children of the poor, of whatever country, are educated gratis. These spend the day there, and go home in the evening. The others are kept upon the plan of a convent, and never leave the institution while they belong to it; but the building is so spacious and airy, with its great galleries, and vast court and fine fountains, garden and spacious azotea, that the children are perfectly well off. There are *portières* and sisters, pretty much as in a convent; together with an old respectable *Rectora*; and the most perfect order and cleanliness prevails through the whole establishment."

The Romish Church claims a large part in the interest of the Mexicans, and our authoress is happy in describing some of its festivals, with all their pomps and ceremonies. One peculiar feature is the presence of the Indians—a gentle mild-eyed race of worshippers, who gratify their own graceful tastes, and fulfil the demands of their spiritual teachers, by decorating, on such occasions, the sacred edifices with flowers and branches, in extravagant profusion. It is to Mexico again, that the lover of the picturesque must repair, if he desire to see that romantic act of faith,—the profession of a nun,—in all its olden splendour. But these matters, with glimpses of life in the *haciendas*, and a few words, perhaps, touching a revolution—one of those events, to which, like earthquakes, Mexico seems peculiarly liable—must be reserved for a future notice.

Frederick the Great, his Court and Times. Edited by T. Campbell, Esq. Vols. III. and IV. Colburn.

We have little, in the way of general remark on these concluding volumes, to add to what we have already observed concerning the former portion of the work (*Athen.* Nos. 740, 741). They who were not displeased by the first issue, will have little reason to be dissatisfied with the last. It is a like unambitious and unpretending compilation; there is the same abstinence from philosophical investigation, the same effort to present a level and amusing narrative, with a marked leaning to anecdote, in preference to disquisition. If the anonymous writer lays little claim to a place in the higher ranks of historians, he is at least entitled to praise for tact, in hitting off the style of work which is in present demand in the book market.

The third volume takes up its subject at the commencement of the Seven Years' War, by far the most interesting and trying period of Frederick's political and military existence. This war is important in the history of nations, as having definitively fixed the place of Prussia as an independent member of the European community, and as having given stability to a power rendered necessary in that great mosaic, which is known in modern politics by the term balance of power. Two great changes in the political combinations of the times assisted in creating a demand for some such establishment as that of the Prussian monarchy:—first, the rise and progress of the Reformation, which called for some *point d'appui* for the Protestant interest to act upon, in its defence against Catholic Austria; and secondly, the rising influence of Russia in western politics, against which no sufficient barrier could be raised by the small and independent states of the Germanic Confederation. How far these necessities were felt at the time, or entered into the speculations of cabinets, in favour of that instinct of aggrandisement which impelled Prussia to extend its dominions, it is not easy to decide. Probably individual jealousies and interests of a more temporary and selfish character impelled the cabinets, which took part, for or against Prussia, in this great contest; but it is certain, that the force of circumstances pointed in favour of Prussia, and that Frederick availed himself to the utmost of his character of a Protestant monarch; while there can be little doubt that the notion of pitting Prussia against Austria must have grown up, as experience demonstrated its capability for moderating the superiority of Vienna, so heavily felt by all the small potentates.

Giving, however, as much or as little as we please to this speculation, the Seven Years' War must still maintain its interest with the reader of our own days, who recollects the position Prussia held as an opponent of Napoleon, and now holds as an instrument of civilization and progress; while he must feel that the obstinate and heroic resistance of Frederick to foreign confederacies during that protracted struggle, effectually exchanged the titular monarchy into a real and substantive kingdom, consolidated within, and respected abroad. How powerful was the feeling of nationality fostered and developed in those disastrous wars, has since been proved by the facility with which Prussia recovered after the deplorable misfortunes of that war, and again after the still greater calamities of the French revolutionary contest.

As concerns Frederick himself, the Seven Years' War is interesting by the greatness alike of its successes and of its reverses, and by the wonderful energies and resources it called forth. There is, indeed, a striking coincidence of circumstances between Frederick's position at the moment of his greatest depression, with that of Napoleon during his ever memorable campaign for the defence of the French territory against conlesced Europe. Like Napoleon, too, Frederick had succeeded in fixing the attention of Europe on his personal sayings and doings,—in having gained the literary and philosophic power on his side,—and in thus effecting occasionally as much by a *bon mot*, or a characteristic trait of originality, as others attain only by a long series of successful combinations. Out of France there is nothing so essentially anecdotic as the career of Frederick.

The Seven Years' War, as it is seen by the author of the work before us, and in general by the ordinary run of thinkers, is remarkable for the greatness of the contrast between its military actions, with the sudden turns in its fortunes, and the smallness of its results, which were, in brief, but the *status quo ante bellum*. The destruction of human life — the devastation of

Digitized by Google

thriving and populous countries—were indeed enormous, and they are briefly set forth (though probably with some exaggeration) at the close of the third volume. Thus, on the score of men, it is stated that—

"The king calculates that the war cost him 180,000 soldiers and upwards of 1,500 officers; thirty-one generals and 161 staff-officers had either fallen in battle or died of their wounds. In the whole, the Prussian army lost during the war about 4,000 officers: for accidents and disease carried off about the same number as the sword. The Russians, who had fought four great battles, reckoned their total loss at 120,000 men. That power had not gained any extension of territory, but it had acquired a military reputation in the West, and, what was still more, it had established its authority in Poland. * * The Austrians, who had been engaged in ten battles, had sustained a total loss of 140,000 men, including the garrisons of Breslau and Schweidnitz. The French, by their own calculation, had lost 200,000; the allied English and Germans, 160,000; the Swedes, 25,000; the princes of the empire, 28,000. Thus, Frederick computed the loss of the belligerent powers at 853,000 dead."

The economic losses of this war speak even of a still more deplorable destruction of human happiness.

"The specie of the country was quite exhausted; the silver plate in the palace of Potsdam, together with the diamond buttons and other decorations of Frederick I., were gone; and the whole kingdom, especially the margravate of Brandenburg, was dreadfully devastated. All the king's enemies had drained his dominions, and levied moreover contributions to the amount of 125 millions of dollars. The fields lay uncultivated for want of cattle and seed-corn, and partly also for want of hands to till them. * * Archenholtz, the historian of the war, and an eye-witness of the miseries which it inflicted, draws a picture so deplorable of the state in which it left Germany in general as almost to exceed belief. 'The sufferings of great part of Germany,' he says, 'had been immense. Whole provinces had been laid waste; and even in those that were not, internal commerce and industry were annihilated; and this too in spite of the large sums which France, England, Russia, and Sweden, had scattered over them, either through their armies or by means of subsidies. The amount of these sums is calculated at 500 million dollars. Great part of Pomerania and Brandenburg was converted into a desert. There were provinces in which scarcely any men were to be found, and where the women were therefore obliged to guide the plough. In others, women were as scarce as men. At every step appeared extensive tracts of uncultivated land, and the most fertile plains in Germany, on the banks of the Oder and the Wesel, looked like the wilds of the Ohio and Oronoko. An officer affirmed that he passed through seven villages in the Hessian dominions, and met with only a single individual—the pastor of one of them.'"

"Such," observes the author, "were the only results of a contest that left all the parties precisely at the point from which they set out;" and far be it from us to underrate the wickedness or the folly thus commemorated. At the present moment more especially it would be well that similar sums total of every war were tabulated, for the information of those who lend themselves to swell the insane war-cry of journalists, and who by their indifference, if not their direct encouragement, abet a very small but active fraction of the European public, in their endeavours to disturb the general peace, on idle punctilios and the falsest pretences.

Still it must not be forgotten that the gains of Prussia as a nation were not of the purely negative character here supposed. The *status quo*, adopted as a basis of peace, was a formal acknowledgment that Prussia had the right of the strongest in favour of its territorial usurpations. The war had effectually decided the main point at issue—to what power Silesia should definitively belong: it had moreover established the character of the Prussian armies, and the claim of the monarchy to the highest consideration of other powers; while by the energies it had called forth at home, and the sacrifices it had occasioned, it hastened forward the civilization of the people, and laid the foundation for that superiority which the Prussian population is now universally allowed to possess over the subjects of the other German states. It is curious now to look back upon the immense results which hinged on the determination and firmness of one individual. Had Frederick, at the moment of his greatest depression, when Russia, Austria, Saxony, Sweden, and France, were combined for his destruction,—when, after a signal discomfiture, he slept on a truss of straw, in the ruins of a farm-house, on the field of a lost battle, and when he calmly contemplated the possibility of being driven from his throne—had he at that trying moment yielded to despair, and abandoned the field to his enemies, Prussia, broken up and partitioned among the conquerors, would have disappeared from the map, and the great bulwark of northern barbarism would be wanting to Europe. What difference was thus given to the fortunes of Napoleon it is hardly necessary to mention. Had the genius of Frederick not communicated its spark to the Prussian population, and while it developed their civilization, inspired them with a sentiment of national pride and national independence, that rallying point for Germany had been wanting, which enabled the sons of the Rhine and Danube to pour back the tide of war upon France, and to quench for ever the genius and the ambition of its restless ruler.

But we must leave these greater considerations, and return to the work itself, which has given rise to them. Among the other more important agencies called forth to curb the ambition of Frederick, was that of the antiquated and obsolete Diet of the empire; and there is something piquant in the contrast between the character of the philosophic king and that of the worn out Amphictyonic body thus opposed to him. It is pleasant to conceive the formal self-importance of the officials engaged in conducting the process, and to imagine the Sardonic grin of the devotee of strong battalions. The termination of the adventure is characteristic and amusing:—

"On the 14th of October, the advocate of the council repaired, in the character of an imperial notary, with two witnesses, to the residence of Baron Plotho, the Prussian ambassador at Ratisbon, to serve him with fiscal citation or summons, requiring the attendance of the elector and margrave of Brandenburg, to hear and see himself put to the ban of the empire, and deprived of all his territories, fiefs, grants, rights, immunities, and expectancies. Plotho received the notary in his dressing-gown; and the latter described the interview in an official document to this purport;—'And his excellency Baron Plotho flew into such a violent passion that he could no longer controul himself, but, with trembling hands and flushed face, and extending both arms towards me, at the same time holding the citation in his right hand, he exclaimed—'What! you think to serve it, do you, scoundrel!' I replied that it was my duty as notary, and I must execute it. Nevertheless, he fell upon me with the greatest fury, seized me by the fore-part of my cloak, and cried, 'Will you take it back?' As I declined to do so, he forcibly thrust the citation under the breast of my coat, and still holding me by the cloak, pushed me out of the room, and ordered two of his servants who stood by to fling me down stairs."

To the absurd appeals to public opinion like these, Frederick replied by deeds of valour, military skill, and fortitude in adversity, which gained for him the sympathies of all Europe; and it is worthy of more than a passing remark, that the Prussians already manifested that susceptibility to poetry, that excitable enthusiasm which in the War of the Independence, rendered the song so powerful an instrument of military success. The songs of Gleim, written for the occasion, and popular with the common soldiers, were, in effect, scarcely inferior to those of Theodore Körner.

Another source of Frederick's success was that which he possessed in common with Napoleon, namely, the power of playing on the passions of the soldiers, and of urging them, by a word, to the most desperate actions. It is curious to reflect how closely the exercise of this sort of personal influence is allied to charlatanism, and yet how essentially it differs in its results. There is no power exerted by a general more mighty in the hands of a genius, none more contemptible and ridiculous when attempted by imitative mediocrity. The whole narrative of the war abounds in the most striking traits of this influence exercised by the King over his soldiers—men, by the bye, often recruited from foreign countries, and almost always of the rudest and most demoralized classes. The following anecdote occurred after the repulse at Hochkirch:—

"Though deeply moved after the battle by the sight of his thinned regiments, he manifested the utmost serenity and composure. 'My dear Golz,' said he to the general of that name, 'we were wakened rather roughly; but I will repay those gentry in broad day for their incivility.' As the remnant of a regiment which had suffered most severely was passing, with the gunners at its head, he called out to them: 'Gunners, what have you done with your cannon?'—'The devil fetched them in the night,' replied one of them. 'Then we will take them from him by day, won't we grenadiers?' rejoined the monarch with a smile. 'Ay, that we will,' answered a grenadier, and with interest too.'—'I'll be sure to be along with you,' said the king. The only order issued on giving the parole was this: 'The regiments will be supplied with fresh powder. The men must pass the night in their clothes.'"

Another Napoleonic scene is related to have occurred after the battle of Liegnitz: the regiment of Anhalt Bernburg, which had been disgraced by the King on a former occasion, here received the King's good graces:—

"The army was ordered to form a line on the field of battle; and the king, riding along it from left to right, stopped before the regiment of Bernburg, which was at the head of the right wing. 'My lads,' said he, in the kindest tone, 'I thank you. You have behaved bravely, very bravely. You shall have every thing again—every thing.' The flugelman of the life company, a hoary veteran, named Fauser, stepping of his own accord out of the ranks, went up to the king: 'I thank your majesty,' said he, 'in the name of my comrades, for having done us justice. Is not your majesty again our gracious king?' Frederick, pleased with the manliness and warmth of this address, patted the brave spokesman on the shoulder, and replied; 'All is forgotten and forgiven, but your services this day I shall never forget.' He then dismounted, and said to the commander of the regiment: 'Let this old man be made sergeant.' By this time several of the privates, having collected round the king began to exculpate themselves for their behaviour at Dresden: the king replied, and the men argued and demonstrated with such familiarity and strength of lungs that the commander, fearful lest the king might be angry, would have driven them back. 'No, no, let them alone,' said he with a good-natured smile, and put an end to the dispute by repeating that they were brave fellows, and had that day nobly upheld the glory of Prussia. Fauser was living in 1789 as messenger to the deputation of the Chamber of Halle, where the regiment of Old Anhalt was in garrison."

Again, after the battle of Torgau:—

"Frederick rode from the left wing along the right. On coming to the regiment of the guard, he dismounted, and stopped before a blazing watch-fire, around which several grenadiers were sitting. He spoke affably to them, and they approached nearer and nearer to the king, and began to talk about the battle. At last, one of them, named Rebiak, to whom he had

Digitized by Google

often given money, had the boldness to ask him where he had been during the fight, adding that he used always to be at their head and to lead them into the fire, but this time they had seen nothing of him. With the utmost condescension, Frederick told the grenadier that he had been with the left wing, and therefore could not head his regiment. Amidst this conversation, he unbuttoned his coat, as if too warm, and the grenadiers observed a ball drop to the ground, while the holes in his cloak and uniform attested the danger to which he had been exposed. Rebiak eagerly picked up the ball, which passed from hand to hand, exciting the warmest admiration and enthusiasm. 'Indeed, thou art still our old Fritz!' cried the grenadiers, as with one accord. 'Thou sharest every danger with us. Cheerfully will we die for thee! Long live the king!' In speaking of this ball in later years, the king would jocosely observe: 'It durst not come any nearer.' It is still preserved in the Museum in Berlin."

Another amusing trait of this war is the intervention of the Pope to pray down the heretic King. After "the bootless victory" of Hochkirch, Daun, the Austrian commander, was covered with rewards; the Empress of Russia sent him a gold sword, and Clement XIII. presented him with a consecrated cap and a gold-hilted sword. "The cap was of crimson velvet, lined with ermine and laced with gold. In front was the figure of a dove embroidered in pearls." In the letter which accompanied this gift, we find the following improvement of St. Ernulphus, which we recommend to the study of the Oxford disciples of the *compellor intrare* doctrine. They can hardly improve on it:—

"As, then, thou far surpassest in virtues that hero and champion of the church, and fightest against heretics, who adhere to the most abominable errors with more persevering wickedness than the infidels themselves, we impart to thee the blessing of Heaven, that by means of the accompanying sword, thou mayst exterminate heresy, the pestilential stench of which is engendered by hell. The destroying angel shall fight by thy side; he shall annihilate the infamous race of the adherents of Luther and Calvin, and the supreme Avenger of all crimes will employ thine arm to sweep the ungodly tribes of the Amalekites and the Moabites from the face of the earth. May thine arm ever reek with the blood of these impious wretches! Put the axe to the root of this tree, which has borne such accursed fruit, and let the northern regions of Germany, after the charming example of the holy Charles the Great, be brought back to the true faith by sword, fire, and blood."

Backed by such soldiers as Frederick commanded, he could well afford to laugh at such displays of imbecility, and he bespattered the wielder of the Vatican thunder with reiterated pasquinades and satires:—

"'The more they persecute me,' he writes, 'the more I will scourge them; and if I fall it shall be under a load of their libels, and under broken arms on the field of battle.' Pezzl, in his 'Life of Loudon,' relates that, as soon as the king's satire on Daun's consecrated sword was published, the Court of Vienna formally declared that he had received no such present from the pope."

The author slily adds, that after Daun received the present he never gained another victory.

But though Frederick bore up, with the philosophy of a Stoic, against ill-fortune, and diversified the labours of war with elaborate correspondences with European literati, and with the composition of French poetry, nothing is more striking than the intensity of his suffering under these trials. The narrative gives many valuable extracts from the King's letters, which might cure an Alexander or a Napoleon of ambition. Thus, in writing to D'Argens, he says:

"Never in my life have I been in so critical a position as in this campaign. Be assured that a sort of miracle is requisite to surmount all the difficulties I foresee. I will not fail to do my duty; but bear in mind, my dear marquis, that I cannot controul Fortune, and that I am obliged in my plans to reckon a good deal upon chance, as my means are too scanty for me to trust entirely to myself. They are herculean labours which I have to finish, and that too at an age when my powers are forsaking me, when the infirmity of my body is increasing, and when, to confess the truth, even hope, the only consolation of the unfortunate, begins to fail. You are not sufficiently acquainted with matters to have a clear conception of all the dangers that threaten the State.—I know and keep them to myself. If the stroke that I am meditating succeeds, then, my dear marquis, it will be time to give ourselves up to joy. I lead here the life of a military Carthusian. My affairs occupy my mind not a little. The rest of my time I devote to the liberal sciences, which are a comfort to me, as they were to that great consul, the father of his country and of eloquence. I know not whether I shall survive this war: if I should, I am firmly resolved to pass the rest of my days aloof from troubles, in the bosom of philosophy and friendship. I know not yet where we shall have our winter-quarters. My house in Breslau was burnt to ashes in the last bombardment. Our enemies grudge us the very daylight and the air we breathe; still they must leave us some spot or other, and, so it is but a safe one, I shall be glad to see you there."

And again, in another letter to the same person:—

"Judge as you please of my way of thinking, my dear marquis. I perceive that we shall never agree in our ideas, that we set out with different principles. You are fond of life as a Sybarite; I consider death as a Stoic. Never will I see the moment that shall compel me to conclude a dishonourable peace; no eloquence shall seduce me to subscribe my disgrace. I will either bury myself beneath the ruins of my country, or, if this consolation shall appear too sweet for that Fate which persecutes me, I will put an end to my misery when I can endure it no longer. I have ever acted according to an inward feeling and the principles of honour; and my *last* steps shall be consistent with those principles. After sacrificing my youth to my father, and the years of manhood to my country, I think that I have a right to dispose of my old age as I please. Once more—never shall my hand sign a humiliating peace. I mean to close this campaign with a bold stroke, and either to conquer or to find a glorious death. * * Brandenburg existed before me, and will exist after me. States subsist by the propagation of the human species, and, so long as this is the case, the multitude will be led by ministers or by sovereigns. This comes to the same thing, and a little more folly or wisdom forms so slight a gradation as not to be perceived by the great mass. Do not imagine then that prejudices of self-love or vanity can change my sentiments. * * I have lost my friends and my dearest relatives; I am unfortunate, let me consider myself on what side I will; I have nothing to hope for. My enemies treat me with scorn, and their pride would like to trample me under foot."

We must here close our extracts from this part of the work, referring such of our readers as require a detailed account of the war to the work itself, or rather to the King's own history of that epoch. The peace in which it terminated was the product rather of the lassitude of all parties than of any marked amelioration of Frederick's position. But in making the military reputation of himself and his armies, he had done enough for the public security; and we shall now only have to follow him in his labours in improving the domestic resources, reforming the laws, and fostering the civilization of the people, he had so dearly won to his crown and government.

Rutland Papers. Edited by W. Jerdan, Esq. Printed for the Camden Society.

THE documents collected in this volume possess more antiquarian than historical interest, being illustrative of manners rather than of facts: extracts would consequently afford imperfect indications of the nature of its contents, and we shall therefore give a brief account of the several articles. The volume opens with "A Device for the Coronation of King Henry VII." Few monarchs felt more uneasy than the first of the Tudors respecting the ritual to be observed at this ceremonial: he knew that his title to the throne was derived from his wife, and that the great body of the English nobility accepted him not as the heir of the house of Lancaster, but as the husband of the heiress of the house of York. The author of the "Device" has made large concessions to the King's jealousy of his wife's claims: he has studiously separated the processions for the King and the Queen, and introduced into the latter many curious particulars of heraldic inferiority. The King's canopy, for instance, is enjoined to be made of cloth of gold from Egypt, supported by gilt staves, while the Queen's was to be of silver damask, supported by silver staves. The Editor remarks that the coronation oath administered on this occasion was similar to that taken by the Saxon kings; and other curious particulars seem to prove that Henry wished to appear as the restorer of a native English monarchy; for in the first question to be put by the officiating cardinal, he is asked, "Will you maintain, &c., the laws, customs, and liberties granted to your clergy and people by your noble predecessor and glorious king, St. Edward?" We need scarcely add, that the Plantagenets were always impatient of allusion to the laws and usages of Edward the Confessor. The second paper is an account of the "livery," or allowance for the support of himself and his household, granted to Garter king-at-arms when he went to France, for the purpose of celebrating the marriage between the Princess Mary and Louis XII. The provision made for the English visitors was ample; but we doubt whether its quality would be acceptable to our modern aristocracy, even though the preparation of the spiced hypocras and sweetmeats was intrusted to the apothecary.

Next follows a list of the persons who attended King Henry VIII. and Queen Katharine to the Field of the Cloth of Gold. Wolsey far surpassed all the rest in magnificence: his attendants were more than four hundred in number, of whom twelve were chaplains, and fifty in the rank of gentlemen: his train was four times as great as that of the Archbishop of Canterbury or the Duke of Buckingham. We find the great Earl of Kildare attending as an English baron, but no other Irish nobleman is mentioned in the list. The particulars respecting the pleasure palace erected at Guisnes are brief and uninteresting, and the record of precautions taken for the second day's meeting shows that the chivalrous monarchs placed little confidence in each other's honour.

Next follows a paper relating to the interview between Henry VIII. and Charles V. at Gravelines, which requires no particular remark, and then some documents connected with that emperor's visit to England. Some of the directions given to the Lord Mayor of London, to guide him in making preparations for the reception of the imperial suite, are sufficiently curious.

"Item, to assign the Kynges wax chaundeler to serue them of torches, quaryers, prelettes and sisus.

"Item, to assign a tallowe chaundeler for white lightes.

"Item, to assign iiij bochers for scruyng of oxen, shepe, calves, hogges of gresse, fleches of bacon, marybones, and such oder as shalbe called for.

"Item, to assigne ij fysshemoungers for prouision of lynges to be redy waterd, pykes, tenches, bremes, caluer salmon, and such oder deyntes of the fresshe water.

"Item, to appouynt ij fyshemoungers for prouision of see fysshe.

"Item, to appouynt iiij pulters to serue for the said persons of all maner pultry.

"Item, to prouide into euery lodegyng woode, coole, russhes, strawe, and such oder necessaries.

Digitized by Google

"Item, yt ys requyset that there may be alwayes ij carpenters in aredyne to furnysshe euery place with such thynges as shalbe thought good, as cupbords, formes, bordes, trestles, bedesteades, with oder necessaries wher lak shalbe.

"Item, to see euery lodegyng furnesshed with pewter dysshes [and] saucers as shalbe thought sufficient."

From some other documents we learn that marrowbones and caller (i.e. fresh) salmon were reckoned among the dainties of this period. The rushes and straw were substitutes for carpets: a subsequent paper shows that an accurate account had been taken of such houses in London as could furnish the luxury of feather beds.

Enough has been said to indicate generally the nature of the documents collected in this volume.

A Voyage round the Coasts of Scotland and the Isles. By James Wilson. 2 vols.

[Second Notice.]

Mr. Wilson's second volume opens with a picture of St. Kilda—life so simple and scenery so wild, cannot fail to interest by their strangeness and individuality. We shall link together extract and abstract, so as to bring before the reader, as best we may, its principal features.

Before the publication of Martin's Voyage, in 1698, little was known of St. Kilda. The people then, as now, were fowlers—not farmers, or fishermen—and living by the produce of their cliffs.

"Martin mentions the abundance of various kinds of sea-fish, and their unproductive mode of capture (which still prevails), being fished from the rocks, 'for they have neither nets nor long lines.' The crew of a boat who had landed from a vessel for water, discerning a prodigious number of eggs upon the rocks, were sufficiently adventurous to scale them, and at length obtained a competent supply, 'which one of the seamen was industrious enough to put into his breeches, which he took off for that purpose.' But some of the inhabitants took offence, either at the capture itself, or the mode of carriage, and rolled a few loose stones upon the seamen, which so alarmed them that they took to flight, 'abandoning both breeches and eggs for their own safety; and the tarpaulin breeches were no small ornament in a place where all wore grided plaids.'"

The island and the people had undergone but little change in 1758, when visited by the Rev. K. Macaulay. The population, however, had dwindled from one hundred and eighty, the number of persons counted by Mr. Martin, to eighty-eight. There are now one hundred and five.

"We have mentioned that there is only a single boat in St. Kilda, and the same seems to have been the case in Mr. Macaulay's time. One cannot help feeling surprised at this, considering the risk of accident to their single craft, and the frequency with which the cragsmen are intentionally left for several days on the detached islands, while collecting birds and eggs. An accident of the kind alluded to, occurred some time after Mr. Macaulay's visit; that is, in the year 1759. In the beginning of October of that year, nineteen men put to sea from the main-island, bound for Borrera; ten of these landed there, while the remaining nine returned towards St. Kilda; but for three successive days the wind blew with such fury, that there was no possibility of landing. The crew sheltered themselves under the lee side of a lofty rock, being nearly starved through cold and hunger. On the fourth day they made for the Bay, though with little hope of safety, and steering for the sandy portion of the beach, they attempted a landing, during which three men were washed away, the six others being thrown upon the beach. The boat was broken to pieces. The unhappy men left at Borrera soon became aware of their own disconsolate situation. They immedintely began to collect a store of sea-fowl, probably by that time just upon the wing for southern regions. There was also a small stock of sheep upon the island, and Stallir's subterranean dwelling before mentioned. There they slept securely during night, and loitered away the winter as they best could. On the return of the sea-fowl, in March, they resumed their accustomed occupation, and laid in a large store of birds, sufficient, besides supplying their own necessities, to load the Steward's eight-oared boat. Left on that lonely rock in October, they were not relieved till June. By that time, most of them were clad in sheep-skins, or the feathered garments of the larger sea-fowl tacked together."

Between the visits of Martin and Macaulay, St. Kilda enjoyed the spiritual consolations of the Rev. Alexander Buchan, who first officiated there as catechist, was afterwards licensed, and was the first resident minister; the first, too, "who introduced the alphabet into the island," and who published a few notes and experiences of his own, from the extreme simplicity of which may be gathered some idea of the state of knowledge among the flock over which he presided. He once paid a visit to Glasgow, and expresses his astonishment "at the length of the voyage, and the many great kingdoms," that is, islands, "which he sailed along."

"He never imagined that such big houses of stone were made with hands; and for the pavements of the streets, he thought it must needs be altogether natural, for he could not believe that men would be at pains to beat stones into the ground to walk upon. He stood dumb at the door of his lodging with the greatest admiration, and when he saw a coach and two horses, he thought it to be a little house that they were drawing at their tail, with men in it; but he condemned the coachman for a fool, to sit so uneasy, for he thought it safer on the back of one of the horses.' 'When he went through the streets, he desired to have one to lead him by the hand. Thomas Ross, a merchant, and others, that took the diversion to carry him through the town, asked his opinion of the High Church. He answered that it was a large rock, that there were some in St. Kilda much higher, but that these were the best coves he ever saw; for that was the idea he conceived of the pillars and arches upon which the church stands. When they carried him into the church, he was yet more surprised, and held up his hands with admiration, wondering how it was possible for men to build such a prodigious fabric, which he supposed to be the largest in the universe.' 'He did not think there had been so many people in the world, as in the city of Glasgow; and it was a great mystery to him to think what they could all design by living so many in one place. He wondered how they could all be furnished with provisions; and when he saw big loaves, he could not tell whether they were bread, stone, or wood. He was amazed to think how they could be provided with ale, for he never saw any there that drank water (they have no ale, beer, nor other liquors in St. Kilda).' 'When he observed horses with shoes on their feet, and fastened with iron nails, he could not forbear laughing, and thought it the most ridiculous thing that fell under his observation. He longed to see his native country again, and passionately wished it were blessed with ale, brandy, and tobacco (of which last they are great lovers), and iron, as Glasgow was.'"

By these fragmentary sketches we trust that the curiosity of the reader has been awakened, and that he desires to know something of the present state of a world so entirely apart from his own. It was on the 2nd of August that our author's party neared St. Kilda.

"On a near approach to the principal island, the first and most conspicuous object which presents itself is a long rugged promontory, called the Dun. This is, in fact, an island, being separated from St. Kilda by a narrow strait, nearly dry at low water, though its general aspect and actual character are those of a sheltering horn of the adjoining bay. It forms the left hand barrier of this bay, as you sail inwards toward the village, and from either side exhibits an extraordinary and striking appearance, from the irregular and almost fantastic form of its upper outline, which seems to present congregated groups of gigantic faces and fantastic forms. This peculiar effect is no doubt owing to portions of the rocky mass having decayed, or been worn away by the moist and wintry winds, while other harder and more enduring portions have withstood their power."

The scenery loses somewhat of its peculiar character as the bay is entered.

"A fine expansive semicircular shore presents itself, not hemmed in by dark and desolate rocks, but sloping gently upwards to the village, which stretches rather along its right hand portion, and consists of about thirty round roofed houses, with various enclosures, the whole encompassed by a stone fence, containing about forty acres of arable land. This comparatively sloping ground continues to extend to the leftwards of the village, and beyond the cultivated range, almost till it meets the annectant base of the Dun; but immediately beyond and above it the mountain range rises more steeply, but still by no means precipitously, and though certainly not so green as the pastures of Peeblesshire, yet the prevailing verdure, the gradual uprising of the land, the absence of trees, and even a certain smoothness and uniformity of aspect and of outline in the hills which formed the immediate back ground, reminded both the Secretary and myself very strongly of that southern county. * * There was, however, one peculiar character in the scene before us. The ridges of the hills and many of the steeper and more exposed portions of their sides, were covered by numerous small cairn-like conical structures of dry stone, from eight to ten feet high. These, we afterwards found, were for the purpose of drying and preserving their hay and fuel, which latter commodity consists merely of some poor fibrous superficial turf, with little or no peaty substance in it."

The party was welcomed ashore by innocent Mr. Buchan's successor, the Rev. Niel Mackenzie. This good man is schoolmaster, writing-master, civil counsellor, as well as spiritual director of his flock.

"We then proceeded onwards to the so-called village, by a narrow road or footpath. The houses, or at least the front ones, form a pretty regular line, though some are placed farther back or behind the others, so, as in these parts, to make the line double. They run rather inwards and upwards than along the Bay, and have the appearance of being detached from each other, though sometimes two small dwellings join together. As stones are plenty in the island, the walls are of great thickness, or, rather, each wall is double, there being built, first of all, a couple of very strong dykes, within a foot or two of each other, and then the intermediate space is crammed with earth, which fills up all the interstices, and produces a comfortable dwelling. The doorway is very low, and the great thickness of these double walls produces a space as you enter, which may be called a passage. There are generally two rooms together, each apartment being covered by a separate roof, although there are smaller single tenements for widow women and old maids."

The dwelling-houses altogether may amount to thirty.

"All along the fronts, or rather gable ends of the principal row of houses, there is a kind of rough causewayed road or footpath, sufficient for at least two people to walk abreast, and almost all around every house there is a double or triple row of large stones, which must form dry stepping places nearly at all seasons of the year. As every kind of manure, especially the ashes of their scanty supply of fuel, is of great importance, and the latter article is injured by exposure to moisture, there are covered outhouses for such collections, while animal garbage, such as *viscera*, and heads and feet of birds, are thrown into a circular open pit, of which one is attached to (we should rather say dug in the vicinity of) each little group of houses."

At the time of Mr. Wilson's visit a *shower* of puffins brought plenty to the town, for it was then the time of bird harvest, (if the expression may be permitted,) by which the St. Kildeans mark their seasons of rejoicing.

"Instead of talking of flowers and plants, and the 'leafy umbrage' of the forest, as signs of summer, and of dry and desolate trees as winter's emblems, Mr. Mackenzie spoke of the *cheering influence* of the first arrival of solan geese in spring, and of the dull and gloomy aspect of the rocks in winter, when they are left 'with scarcely a single bird.'"

Digitized by Google

The corn harvest of the island seems to confine itself to certain riggs of barley, which are subdivided into twenty portions, belonging to a corresponding number of families.

"There are, besides, about eight smaller families who are not so portioned. In ordinary years, they are said to raise sufficient grain for their own consumption. The hill pastures are common, seven shillings being paid for each cow's grazing, and one shilling for each sheep, above ten, annually. The caschrom, or plough-spade, was in common use on Mr. Mackenzie's first arrival, but he has since contrived to render the use of the English spade almost universal, and the introduction of drains has nearly doubled the produce of the arable land. We saw one large open drain, leading through the cultivated portion, which he induced them to cut through soil and rocky fragments, by a bribe of a pound and a half of tobacco divided among them. * * Two or three small horses still exist upon the island (originally imported to carry turf), but they are found to be of no use, and therefore no charge is made for their pasture, and we believe the people would willingly part with them to any person who would carry them away. So whoever desires a cheap horse, we recommend him to proceed forthwith to St. Kilda. There are, in all, about fifty cows upon the island, of small size, but yielding a delicious milk, which, in the making of cheese, is mingled with that of ewes. There are about 2000 sheep, including those of Borrera and Soa. The Soa sheep are chiefly of the Danish breed, with brown and black wool, and one or two more horns than the usual complement. But the great product of St. Kilda is feathers, collected, as we have said, by the general population, every working man doing what he can to fill the boat during each excursion to the rocks or neighbouring islands, until the requisite supply has been obtained and stored away. In this way old age and sickness are of no disadvantage to the individual, beyond the physical sufferings which they may entail, for his house, grazing, and fuel privileges belong to him as a member of the community, and the feathers are collected by the able-bodied, who also distribute a due proportion of the general stock of solan goose-flesh, fulmars, and other delicacies, to the feeble or inefficient. Of course, your widow woman and others, who have no husbands to work for the general benefit, are expected, when in health, to do what they can to contribute, in some measure, to their own support, by snaring puffins and other poultry at their convenience; but no one who is really unable to work need fear want, as he is sure of his share from the general stock."

The gardens—of which there are but few—grow "some cabbages and a few potatoes," and the minister reaches the luxury of carrots and onions. Turnips do not succeed; peas and beans never reach the stage of pods. Mustard, seapinks, and the corn marigold (*Calendula arvensis*) were the only flowers noticed by Mr. Wilson.

Good Mr. Mackenzie spoke favourably of his *subjects*. Though narrow-minded, and slow to adopt improvements, he described them as a moral and kindly people, somewhat addicted to psalm-singing, but literally obeying the scriptural injunction of taking care of "the fatherless and the widow," such, "or others unable to maintain themselves, being supported by the community in equal proportions."

"The St. Kilda community may, in many respects, be regarded as a small republic, in which the individual members share most of their worldly goods in common, and, with the exception of the minister, no one seems to differ from his neighbours in rank, fortune, or condition. Indeed, a peculiar jealousy is alleged to exist on this head, no man being encouraged to go in advance of those about him in any thing, which, of course, must be a drawback on improvement. However, many kind and Christian features are engrafted on the system, such as widows and orphans, or others unable to maintain themselves, being supported by the community in equal proportions. They thus strictly obey what has been called the eleventh commandment:—'A new commandment I give unto you, that ye love one another.' They are frequently very ill off during stormy weather, or those periods of the year in which the rocks are deserted by their winged inhabitants. * * The people pay their rent (about 60*l.*, as we were told) chiefly by means of feathers, which they collect from both the young and old birds, and each family is also bound to furnish about twenty-three pecks of barley every year. This, however, I believe, is made up by an additional supply of feathers. Of these, the quantity which the *nation* must furnish is 240 stones, each family contributing what it can to the general stock, which is laid up for the proprietor, or, rather, his tenant, in the slated store-house near the shore."

The men, though generally undersized, looked stout and active.

"The prevailing dress greatly resembled that of the fishermen of Long Island—small flat blue bonnets, coarse yellowish white woollen jerkins, and trowsers also of coarse woollen stuff, of a mixed colour, similar to that of heather stalks."

To bring before us a clear view of the primitive state of the inhabitants, we must, as in the case of Mr. Buchan, fix our eyes on the doings of its minister. He was taken on board the cutter, and made much of—

"He ate heartily of several unaccustomed articles, and with an undisguised and almost youthful relish, which it was delightful to look upon. The curry-soup and pancakes were thought *surprising*—the malt was swallowed, though deliberately—the wine and liqueurs were almost entirely avoided. He said he had long led so abstemious a life from necessity (for the pride of the ascetic was far from him, and he knew the lawfulness of the moderate use of all the 'creatures of God'), that he had now almost lost the remembrance of these more exciting beverages; and that, as in such forgetfulness they were least missed, he had no desire for any partial renewal of enjoyments which might make him covet what he could never hope to obtain. When pressed after dinner to take another glass of wine, he said, 'If you please, I would rather just speak a little more,' meaning thereby to express his pleasure in conversing about many things which were, of course, as dead letters to those among whom he had sojourned for nearly twelve long years."

The voyage, however agreeable to Mr. Mackenzie, occasioned some anxiety on shore. While touching at some point of land, the party were interrogated as to the purposes of Mr. Wilson and the Secretary—what they meant by keeping the minister from home all night—and whether it was their intention to carry him off to America or some other foreign country. In the latter case the St. Kildeans prayed for due notice; as they were ready to accompany their pastor wherever he chose to go! At the minister's bidding, too, some of the young fellows exhibited their daring and agility.

"We then stood still upon our oars, and the minister rose and waved his hat. Suddenly we could hear in the air above us a faint huzzaing sound, and at the same instant three or four men, from different parts of the cliff, threw themselves into the air, and darted some distance downwards, just as spiders drop from the top of a wall. They then swung and capered along the face of the precipice, bounding off at intervals by striking their feet against it, and springing from side to side with as much fearless ease and agility, as if they were so many school-boys exercising in a swing a few feet over a soft and balmy clover field. Now, they were probably not less than seven hundred feet above the sea, and the cliff was not only perfectly perpendicular in its upper portion, but as it descended it curved backwards, as it were, forming a huge rugged hollow portion, eaten into by the angry lashing of the almost ceaseless waves. In this manner, shouting and dancing, they descended a long way towards us, though still suspended at a vast height in the air, for it would probably have taken all their cordage joined together to have reached the sea. A great mass of the central portion of the precipice was smoother than the wall of a well-built house, and it was this portion especially, which was not only perpendicular, but had its basement arched inwards into an enormous wave-worn grotto, so that any one falling from the summit, would drop at once sheer into the sea. It was on this, the smoother portion of the perpendicular mountain, that one or two of the cragsmen chiefly displayed their extraordinary powers, because, as there was nothing to interrupt either the rapid descent of the rope, or its lateral movement, or their own outward bounds, we could see them sometimes swinging to and fro, after the manner of a pendulum, or dancing in the air with a convulsive motion of the legs and arms (presenting a painful resemblance to men hanging in the agonies of death), or tripping a more light fantastic toe, by means of a rapid and vigorous action of the feet against the perpendicular surface of the rock. These men merely capered for our amusement, but caught no birds, for such was, in fact, the adamantine smoothness of the surface, that not even a winged inhabitant of the air could have found rest for the sole of its foot. But on either side, the precipice, though equally steep, was more rugged, and there we could perceive that the cragsmen, having each a rope securely looped beneath his arms, rested occasionally upon his toes, or even crawled, with a spider-like motion, along projecting ledges, and ever and anon we could see them waving a small white fluttering object, which we might have taken for a pocket handkerchief, had we not been told it was a feathery fulmar. They twisted their necks, and then looped their heads into a little nooze or bight of the rope above them, and by the time the men were drawn again to the top of the rock, each carried up a good bundle of birds along with him."

It seems strange that, vowed as are the men of St. Kilda to a desperate occupation like this, not a native of the island can swim! And little less remarkable appear to us the inadequate precautions taken for carrying on the pursuit with greater safety.

"We ascertained that there is never more than a single man above, supporting the weight of the one below. Each of these couples has, as it were, two ropes between them. The rope which the upper man holds in his *hands*, is fastened round the body and beneath the arms of him who descends, while another rope is pressed by the *foot* of the upper man, and is held in the hand of the lower. One would think that this kind of cross-working would be apt to pull the upper partner from the top of the cliff, and that both would be speedily dashed to pieces, or drowned among the rocks below; but it is said that scarcely more than one or two accidents have happened within the memory of the present generation. We were told it once occurred that two men had descended close together, suspended by the same rope, when suddenly the higher of the two perceived that several strands above his head had given way, and that the rope was rapidly rending from the unaccustomed weight. Believing the death of both to be inevitable if he delayed an instant, and with but small hope even of his own life, under existing circumstances, he cut the cord close *beneath* his own body, and consigning his companion to immediate death, was himself drawn to the crest of the precipice just in time to be seized by the neck as the rope gave way."

We wish that we could have further enlarged this picture by pointing out at length one or two of the gradual signs of progress discernible even in this marginal corner of the world. Something has been done in the improvement of house-building—a little towards the gathering of flocks and herds; but the excessive poverty of the people, and the disheartening length of the winter, are serious obstacles to any very important amelioration. The origin of the improved method of house-building is worth recording.

"Some years ago an accomplished and liberal English gentleman of fortune, Sir Thomas Dyke Ackland, visited St. Kilda, in his yacht, and being much interested by the natives, and distressed by an inspection of their incommodious, and, as he thought, unhealthy dwellings, he left a premium of twenty guineas with the minister, to be given to the first person or persons who should demolish their old house and erect a new one on a more proper and convenient plan. This was certainly a handsome donation on the part of the English baronet, though as small a sum as ever before sufficed to lay the foundations of a modern city. We formerly mentioned, that a characteristic feature in the mental constitution or social

Digitized by Google

polity of the St. Kildeans consisted in their tenacious adherence to uniformity, no man being allowed or at least encouraged, to outstrip his neighbours in any thing leading rather to his own advantage than the public weal. From this cause it was some time before any one was bold enough to advance beyond the habits of his ancestors and contemporaries, although, at last, a spirit bolder than the rest made up his mind to proceed in accordance with the plan prescribed. Every obstacle, however, was thrown in his way by his more indolent or less aspiring neighbours; and it is probably one disadvantageous result of an otherwise amiable and interesting system almost of community of goods, that it tends to check the exertions of individuals to raise themselves above their neighbours, as the active and intelligent are scarcely in any way better off than the lazy or less enlightened. However, at length the individual alluded to proceeded to the work of demolition and reconstruction, and was followed almost simultaneously by about half a dozen others. A general masonic movement then took place, after which the worthy clergyman, who may be regarded, under the Divine Master whom he serves so faithfully, as the presiding genius of the island, contrived to prevent undue haste, and that incompleteness of work which might result from hurried labour; and as it was now obvious, that whoever might have had the merit of commencing, all were likely to come to a quick conclusion at one and the same time, it was arranged that the great prize should be shared in equal portions by the heads of houses in the whole community. Thus the ancient city of St. Kilda was rased to its foundations, and one of modern structure erected in its place. * * In speaking of the modern city of St. Kilda, it need not be supposed that the improvements produced were of a very striking or impressive character, or that any signal amelioration of the domestic condition of the people was instantaneously effected. But Mr. Mackenzie endeavoured, while he could not essentially deviate from the old plan, to free it from its greatest vices. He expended the twenty guineas chiefly in small square four-paned windows, so that each dwelling is now pervaded by at least a portion of the light of day."

Perhaps no more forcible picture of dreariness has been often presented than the following paragraph, taken from a simple year-book kept by the minister, extracts from which are published by Mr. Wilson.

"*November.*—This is the deadest month of the year. The bulk of the fowls having deserted our coast, leaves the rocks so black and dead. There is pleasure in seeing any thing move in this more than solitary place. Our minds seem to be revived by seeing a few wild fowls, such as swans, geese, woodcocks, and snipes, though the most of them pay us but a short visit on their way, no doubt, to more hospitable climes."

Here we must stop for the present. We have been detained within the compass of a hundred pages, so that a large portion of Mr. Wilson's second volume still remains untouched. Should opportunity permit, we shall yet bring under notice some interesting particulars of the herring fishery at Wick and the kelp manufacture of Orkney.

OUR LIBRARY TABLE.

Life and Times of St. Bernard, by Dr. A. Neander, translated by M. Wrench.—Few persons have ever exercised a greater personal influence in their generation than the Abbot of Clairvaux. His biographer endeavours, by an analysis of the intellectual condition of Christendom, to explain the reasons of the extraordinary power with which Bernard was invested, and particularly his triumphs over much abler men, Abelard and Arnold of Brescia. We deem that the explanation lies on the surface; Bernard was an eloquent expositor and defender of the prejudices of his age, while his opponents were directly opposed to popular opinion. The metaphysics of both parties are now forgotten, and even Dr. Neander's great abilities must fail to rescue them from oblivion.

The Principles of Gothic Ecclesiastical Architecture, by M. H. Bloxam. Fifth Edition, illustrated with two hundred woodcuts.—The numerous editions of this little work attest the revolution in public feeling towards Gothic architecture, out of which we hope good may ensue: though we have our doubts on the subject, for at present we have mere feeble repetitions and imitations, and miserable brick and plaster abortions affecting on a trumpery baby-house scale forms and characteristics which can only be sufficiently developed on a great scale. But we have only to point out the increased and increasing popularity of Mr. Bloxam's manual, the cheapest and most helpful little book on the subject. The illustrative examples are selected with judgment, and abound in greater numbers than could be reasonably expected in a work at the price. We could have wished that the question-and-answer form had been abandoned: unless a writer has some dramatic powers, which Mr. Bloxam has not, and does not affect to have, this mode of treating a subject is puerile and repulsive.

The Teacher's Companion, by R. N. Collins.—This is a manual for Sunday-school teachers, constructed on the principle that it is both practicable and desirable to place very old heads upon very young shoulders. There is an introductory essay by the Rev. D. Moore, in which the sin of "Sabbatic errantry" in children is denounced with a fervour and zeal unequalled since the days of the Long Parliament. It would be well if the writer would endeavour to comprehend the difference between the Christian "Lord's Day" and the Jewish sabbath.

Universal History, Literature, and Painting, in 25 illuminated Chronological Tables, by Major J. Bell, 5th edit.—The difficulty in compiling works of this class is to keep the exact line of usefulness, neither running into perplexing detail, nor resting content with vague generalities. From the days of Franklin, who, we believe, first suggested the colouring of these tabulated histories, to our own, we have never seen one that kept the right proportion throughout; it was always possible to trace in it the course of study most congenial to the compiler, and therefore the misleading error, by the exaggerated importance given to particular periods or persons. We could in this way raise objections to the work before us; especially in what relates to modern literature and art, where the ground was comparatively new and the compiler left to his own judgment; but it is needless to criticize a work which has already received the sanction and approbation of the public, as is proved by a fifth edition having been called for.

List of New Books.—Sabbaths at Home, or a Help to their Right Improvement, by Henry March, 3rd edit. 12mo. 5*s.* cl.—A Comprehensive Salary, Wages, Income, and Interest Table, by T. Martin, 12mo. 1*s.* 6*d.* cl.—Freeman's Farmer's Account Book, new edit. folio, 8*s.* 6*d.* bds.; ditto, 4to. 5*s.* bds.—Outlines of Pathology and Practice of Medicine, by W. P. Alison, Parts I. and II., 8vo. 12*s.* cl.—De Wette, or Human Life; or Practical Ethics, translated by Samuel Osgood, 2 vols. p. 8vo. 16*s.* cl.—Jahr's Homœopathic Pharmacopœia, translated by James Kitchen, M.D., 8vo. 12*s.* cl.—A Shillingsworth of Nonsense, 2nd edit. 1*s.* swd.—Church Poetry, or Christian Thoughts in Old and Modern Verse, 18mo. 4*s.* cl.—Englishman's Library, Vol. XXIV., "Church Clavering, or the Schoolmaster," by the Rev. W. Gresley, 12mo. 4*s.* cl.—Ranke's History of the Popes, translated by Kelly, Part III., medium 8vo. 4*s.* swd.; ditto, complete in 1 vol. 12*s.* swd.—The Voice of the Anglican Church, by Rev. H. Hughes, fc. 8vo. 4*s.* 6*d.* cl.—Life of William Wilberforce, by his Sons, new edit. abridged, 12mo. 6*s.* cl.—Memoirs of the Life of the Rev. J. Williams, Missionary, by Rev. E. Prout, 8vo. 12*s.* cl.—The Advancement of Religion, the Claim of the Times, by the Rev. A. Reed, D.D., 8vo. 10*s.* cl.—The Christian Preacher, or Discourses on Preaching, by several Eminent Divines, 5th edit. with two appendices, by E. Williams, D.D., fc. 8vo. 4*s.* 6*d.* cl.—The Truth divested of Mystery, or the Scriptures Scripturally Unfolded, 12mo. 5*s.* 6*d.* cl.—Ermeler's Lesebuch, new edit. enlarged and improved, by A. Heinmann, 12mo. 5*s.* cl.—English Country Life, by Martingale, post 8vo. 9*s.* cl.—History of Woman in England, by Miss Hannah Lawrance, Vol. I., post 8vo. 10*s.* 6*d.* cl.—The Work Table and Embroidery Frame Companion, 32mo. 3*s.* cl.—The Ladies' Work Table-Book, 61 Engravings, fc. 8vo. 4*s.* 6*d.* cl.—The Charges on Vessels, British and Foreign, at all the Ports, Sub-Ports and Creeks, by James Daniell, 8vo. 5*s.* cl.—Mason on the National and State Government of the United States, 12mo. 5*s.* 6*d.* cl.—The Dublin Almanac and General Register for Ireland for 1843, 8vo. 12*s.* 6*d* bd.—Sir Robert Peel and his Era, post 8vo. 7*s.* 6*d.* cl.—Collier's Shakspere's Plays, Poems, &c., Vol. VII., 8vo. 12*s.* cl.—Dodd's Parliamentary Pocket Companion, 1843, 32mo. 4*s.* 6*d.* cl.—The Opinions of Sir R. Peel, by W. T. Healy, Esq., post 8vo. 12*s.* 6*d.* cl.—Milton's Poetical Works, edited by James Montgomery, with 120 illustrations, by W. Harvey, 2 vols. 8vo. 24*s.* cl.—The Double Duel, by Theodore S. Fay, Esq., 3 vols. post 8vo. 18*s.* bds.—Sir Michael Paulet, a Novel, by Miss E. Pickering, 2nd edit. 3 vols. post 8vo. 1*l.* 11*s.* 6*d*, bds.—The Tuft Hunter, by Lord W. Lennox, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Cabool, a Personal Narrative of a Journey to, and Residence in that City, by A. Burnes, C.B., 2nd edit. 8vo. 18*s.* cl.—The Russian Campaign of 1812, translated by von Clausewitz, with a map, 8vo. 10*s.* 6*d.* cl.—Kennedy's Profession is not Principle, 7th edit. 12mo. 3*s.* 6*d.* cl.

ROYAL ACADEMY.

Professor Cockerell's Lectures on Architecture.

LECTURE III.

THE chronological table* offered to the students was designed to assist their study of the history of Architecture, so strongly recommended; it was a sketch capable of great developement—the intelligent observation of antiquity was an all-important object with the architect. No consideration could confer more importance and dignity on the art than that it was identified with Time—that the architect himself was a part of history, and that the marked works he performs were, by the consent of language, termed Monuments. Such a table presented at one view the religious and moral, the political and technical influences which have guided and developed the art. Through the early centuries we trace it as one of the most active engines of civilization; but it is long before we find the table rich with the names of patrons, architects, or works, and then with many voids of tedious centuries between. The dearth of wisdom or wealth in governments, or genius or liberality in the individuals, account for the barren ages; as naturally as do the contrary for the fruits of all the muses. They follow each other as natural consequences, as effects from causes. And it is glorious to recognize the coincidence of epochs favourable to art with the most wise-hearted and generous spirits of history.

Under whom were those more remarkable buildings of Egypt raised? It was when Sesostris built his library, and pointed to its destination by the significant and enlightened superscription—Ψυχης ιατρειον—"The health of the soul." When were those bright edifices erected which have ever attracted the traveller to Athens from every part of Europe, and still do so? It was when Pericles could discuss the buildings he designed with a Socrates, a Plato, a Phidias, and an Ictinus—and so, with minor splendour, an Augustus, a Justinian, a Medici, a Louis XIV., a Frederick the Great, a George III., or a King of Bavaria, have known how to illustrate their era; and, however a half-sighted economy has calculated and complained of the cost, history may be defied to prove that states have suffered from these expenses; those wise princes knew how fructifying they were in real commercial benefits; and never wanted the address to silence the item-counting economists. "Do you complain of these expenses?" said Pericles; "I will find the remedy. I myself will defray them, provided you will allow my name to be inscribed upon the walls." He might have added,—"You are prompt enough to vote money to carry on an Affghan war, on a pretence, into Sicily, and fill Syracuse with carcases, to your own disgrace and ruin; but these expenses, trifling in the comparison, these becoming ornaments, these productive fructifying decencies of a great state, you grudge."

When Louis's accounts of Versailles were made up, and his Minister of Finance asked what was to be done with them—"Burn them," said the monarch. He knew as well as Necker the secret "that the arts and sciences repay with usury the expenses of the state in providing for their exercise and culture." He knew, too, that they formed not a tithe of those arrogant and unsuccessful wars which he waged with all his neighbours.

But why are the two centuries before our era less fertile in names? because the Roman sword began to supersede the olive branch of Olympia: and why again do they cease after the second century of our era? because the Emperor himself (Hadrian) professed the art, and murdered his rival Apollodorus, the last great architect of Greece. And now, for twelve centuries, they are obscure under the antagonist rules of feudal and ecclesiastical aristocracy, and reappear only with Liberty and the Muses.

Again, for himself, the architect lays to heart the care and circumspection due to *lasting monuments*, and the penalty which the absence of these is to inflict on him in the curse

Of Ripley and his rule:

and for his patrons, his duty to awaken them to the seriousness of these responsibilities, the compromise of national honour and credit in works which are nothing less than state matters; and were so esteemed in Athens by the appointment of a minister,

Note.—The Works of those in Capital Letters are still extant.

the δεμιυργος, answerable for their success. He is humiliated in finding that his own design, with the originality of which he had flattered himself, is but a repetition of former essays. Again, in the contemplation of the slowness of invention and the imitative nature of our species through centuries. The arch and the dome essayed during 1,000 years before they assumed the form of the Pantheon or the Bridge of Narni; and 1,400 more are required to accomplish a humble imitation in the dome at Florence. That the Egyptian, Greek, and Roman, as if spell-bound, did as their fathers did—that the monuments themselves are but the copies, more or less altered, the successors of a remote ancestry receding into the night of Time. Pliny tells us that the Temple of Ephesus had been seven times rebuilt. The oldest monuments of Egypt and of Greece, and of our own countries, are composed of *fragments* of still older ones:—

> Vixere fortes ante Agamemnona
> Multi: sed omnes illacrymabiles
> Urgentur ignotique longa
> Nocte, carent quia vate sacro.

"They had no *artist*, and they died."

But the technical reflections on this table are not less instructive. The struggle of 2,600 years with the monolithe;—the influence of fashions in the design, and of slavery in the execution, of works, reducing the cost by at least one quarter;—the lever, the lewis, the trochlea, and every engine employed by modern masons, are recognized in all the oldest buildings of the East; Stonehenge being one of the few buildings which displays the infancy of art;—the inferiority of ancient cities in the distant view as a conglomerate of low buildings, to those of the modern world with towers and campaniles;—the changes which customs induce;—the church-bell, which in the seventh century hardly exceeded 1 cwt., and terrified Clothaire and his troops under the walls of Orleans; then the delight and boast of communities, and gradually becoming 80 tons in the nineteenth century at Moscow, enlarging during those centuries the towers and structures for its reception, and altering by degrees the whole face of Architecture;—the use of glass, in narrow windows in the first century, a vast improvement on Phengytes, used till then; the manufacture of the civilized only, till the twelfth century; then infusing colours with unseen lustre,—glazing in part only the domestic windows, which had shutters below until the seventeenth, and now in one sheet filling the entire sash. Meanwhile, Architecture bends to this manufacture, and changes its features and proportions with the phases of its improvement. And, lastly, cast-iron, which within forty years has discovered capacities which will alter the whole structure of buildings. We may say with the poet—

> Loin d'ici ce discours vulgaire
> Que l'art pour jamais dégénère,
> Que tout s'éclipse, tout finit;
> La nature est inépassable,
> Et le génie infatigable,
> Et le Dieu que la rajeunit.

The principle to be inculcated seems then to be the acceptance and employment of every useful element of our art, and so to engraft new features, and bend it to the march of human improvement, as to be consistent with taste, while it is also to the great end of use. Thus we shall obtain new creations in the art—which a servile imitation refuses.

These are amongst the advantageous reflections which the contemplation of the chronological table will give rise to.

This evening the Professor purposed offering some remarks on the principal monuments of Civil Architecture amongst the ancients. As ritual prescribed the forms of Sacred Architecture, so political and civil institutions prescribed those of Civil Architecture: where monarchs sway we have their palaces, suited to the temporal governor of the earth: regarded as God's vicegerent while living, and as demi-gods when dead, their mausolea endure through all ages, in the Pyramids, or in the Moles Hadriana; and where these are supported by castes, we have the Labyrinth, the Temple Palace, and the Treasury—in Republics none of these are found, but the Temple, the Gymnasium, the Theatre, the Stoa, the Basilica, and public works abound; when states are absolutely commercial, as Tyre or Carthage, nothing remains but their name in history: their architecture seems to have been confined to the perishable Trireme.

The uncertainty of future existence made duration in the present the earliest object of solicitude; monuments in the pyramid or the obelisk are the most remote architectural works which have reached us. In 1732 B.C. Jacob raised a memorial to Rachel, "that is the pillar upon Rachel's grave unto this day." "The kings of Egypt," says Diodorus Siculus, did not think that the fragility of the body deserved a solid habitation; indeed, they regarded their palaces

Digitized by Google

as simple lodgings, in which each successively inhabited; but they considered their tombs as their peculiar habitations, as their fixed and perpetual domicile."

The subject of pyramids would never be mentioned without acknowledgment to the labours of Colonel Vyse, which for princely liberality and English endurance and disinterestedness are unparalleled, as indeed also for their great interest, since on this subject, debated for so many centuries, he has left nothing to desire.

But, to the architect, no monument of antiquity could be more precious than the tomb of Absalom, in the valley of Jehosaphat, which is monolothic (for the most part), or rather cut in the living rock, and exhibits an Ionic temple *in antis* (like Solomon's Temple), with a Doric entablature, an Egyptian cornice, and a Tholus or circular attic, surmounted with a conical top and a pomegranate; all features in perfect correspondence with the reasonable expectations regarding Jewish architecture, which, however original in *plan* and disposition, would never be so in ornamental style, because the comparative smallness of the nation, the fortunes of individuals limited by law, the agricultural habits of the people, their discouragement of taste, and their position between great and flourishing countries so remarkable for its cultivation as to lend their artists to the Jews, whenever occasion demanded, were all opposed to the invention of any peculiar and original style of architecture.

A beautiful representation of this remarkable tomb had appeared in Roberts's 'Holy Land;' there could be no doubt as to its identity, since tradition amongst the Jews on such a point might always be accepted as full and sufficient evidence—its perfect correspondence with holy writ (II Samuel, ch. xviii.) is striking:—"Now Absalom in his lifetime had taken and reared up for himself a pillar, which is in the king's dale: for he said, I have no son to keep my name in remembrance, and he called the pillar after his own name, and it is called unto this day Absalom's place." Wren calls it "the most observable monument of the Tyrian style." "It were to be wished," says he, "some skilful artist would give us the exact dimensions to inches, by which we might have a true idea of the ancient Tyrian manner."

Labyrinths are amongst the earliest and most astonishing of architectural works; they were found in Egypt, Crete, Lemnos, and Tuscany. Herodotus describes them as surpassing in extent and magnificence: the one he describes (Eut. cxlviii.) was composed of twelve courts, having apartments of two kinds, fifteen hundred above the surface of the ground and as many beneath, in which were the tombs of their kings. "No one could enter them," says Diodorus Siculus, "without a guide." Yet Pliny tells us they were not contrived like the ornament commonly called by that name; in that of Lemnos, says he, were 150 columns turned in a lathe, which a child could move; and this is remarkable as evidence of the use of such a machine in the capitals of the Parthenon, which has been always supposed.

The living use of the Labyrinth is left to conjecture; but we may easily conceive their adaptation to a people of castes, with whom they might be colleges for those aristocratic classes surrounding the throne. We are told that all the youth of Egypt, born on the same day with Sesostris, were set apart and educated with the young prince, and thus it was that he found himself surrounded in manhood by attached companions, who carried his conquests and his fame to the greatest height. Where could so vast a generation be educated but in the Labyrinth?

The Professor doubted the interpretation commonly applied to the so called temples of Egypt; he believed them to be rather temple palaces, in which the temporal administration of a great country was carried on, together with the spiritual. The ruins of Karnac covered ten acres. Within the walls was inclosed a space equal to the whole length of St. James's Street, and four times its width. The comparison of this plan with that of the Louvre and its courts, with the use of which we are familiar (and exhibited with plans of Luxor and Dendera, and Diocletian's palace, and others drawn to the same scale), would show the high improbability of the employment of such vast spaces for the priesthood alone; and it could be shown, especially at Dendera, that all the public business of the realm might be conducted there, and that the Pharaoh himself very probably resided, as in the Arab villages at this day, upon the broad terraces which these vast buildings afforded, raised into the air, and removed from the vermin, inundations, mirage, and confinement, to which the habitations on the soil of Egypt were subject.

The Pharaoh united the offices of monarch and high priest, and all the dignity and imposing awe which the arts could afford, were associated with his presence. The palace was approached through an avenue of sphynxes of a mile in length. The Pylæ were seen afar off raising a vast front of uniform surface, on which were engraved on one side the Pharaoh in his warlike attributes reviewing his troops, charging the enemy, whom he annihilates at a stroke, besieging cities; on the other, in his peaceful, administering justice, and the more sacred duties of his priestly office. In front of this were obeliska (the smallest of which is now in Paris), and colossal figures of the Pharaohs.

The first court equals in size Waterloo Place, from the column to Pall Mall. Here, under a colonnade, "the King sat in the gate," with "his princes and counsellors;" this was "his porch of judgment," the sculpture and painting of the ceiling symbolized appropriately the passage of the soul through human vicissitudes to a final judgment.

The columnar grove beyond, 325 feet by 266, afforded a waiting hall (the only cool one in Egypt) for all the court, so pompously described in Daniel: "the princes, the governors, the captains, the judges, the treasurers, the counsellors, the sheriffs, and the rulers of the provinces." Through these was the approach to the Sekos for the god; and on the face of each column of the avenue were represented on one side Osiris, on the other the Pharaoh.

The paving above all this showed a surface prepared for other buildings, apparently of timber: holes occur for the reception of the posts, very large ornamental spouts for the discharge of sewage and water, IN A COUNTRY OF NO RAIN, and therefore only wanted for the uses of a great family. The parapet walls forming the external face of the Temple Palace, surmounted with the usual cornice, defend and partially conceal these buildings; and at Dendera especially are chapels for the daily services of the Pharaoh and his family on this higher level, and the staircases by which they arrived at them. These were the "*ivory palaces*," the habitations of cedar, and sandal, and almug woods, alluded to in the 45th Psalm, and in which each Pharaoh might indulge his taste, and be "*glad*," and enjoy exemption from the inconveniences of the nether world.

Some very beautiful drawings, by Mr. Jones, representing the actual remains and restorations of the Pilæ, were obligingly exhibited, by permission of that gentleman. An interesting part of the ruins of Karnac was not to be forgotten, namely, a triumphal gate built by Shyshack on his return from Jerusalem, whence he had taken the golden shields put up by Solomon, as described in I Kings, xiv.

The Treasuries of Atreus, forty-eight feet in diameter, and the gates of Mycenæ, and the Treasury of Orchomenos, of still larger diameter, are the only monuments of Homeric pretension, unless the Lycian remains, discovered by Mr. Fellows, can be proved to be of that remote period, and that the taste of Sarpedon can be identified by them.

Amongst the objects of Civil Architecture, few have had more influence on the art than Theatres, both in their external elevation, in the application of the orders in relief on the pier and spandrel of the arch, and in the internal elevation, the scene, which has been the occasion of so much caprice and corruption of taste. The theatre, being constantly employed for parliamentary assemblies, required a permanent scene; as well as moveable, and adapted to the performance. It was a subject of vast architectural study and expense. Pliny (lib. xxxvi.) tells us that Caius Antonius silvered the scene; Petronius gilt it; Quintus Catullus clothed it in ivory. Scaurus surpassed them all; he raised 360 columns, in three ranges: the first was of marble, 38 feet high, the next was in glass, the third of wood gilt. 3,000 bronze statues ornamented the intercolumniations. Curion, unable to surpass Scaurus, built two theatres of wood, which, being back to back, could be turned so as to form an amphitheatre for gladiators, displaying the skill of the Roman carpenters to great advantage.

Vitruvius (lib. vii. c. 5), lamenting the depravation of taste, tells us that Apaturius of Alabanda offered a design for a scene of two stories, the upper called Episcenius, filled with every caprice, Centaurs did the office of columns, Pediments were twisted in a variety of shapes; all which pleased the people of Tralles, for whom it was designed; but Licinius, a mathematician, exposed its absurdity, and it was accordingly reformed on better principles.

The scene of Laodicea (amongst many which the Professor exhibited) was the most extensive, being no less than 254 feet in length. The Theatre of Orange, lately published by M. Caristie, was a valuable addition to our information on the Roman scene.

Palladio's scene of the Theatre at Vicenza gives the best idea of this feature of ancient architectural magnificence.

Originally of wood, and continuing so for many centuries, it was not until the third century before our era (232 B.C, the Theatre at Epidaurus,) that they were built in stone and marble. The Greek theatre approached the amphitheatre, and was a horse-shoe comprising 200° or more, because the orchestra was reserved also for the performance; but the Roman Theatre did not exceed 180°, because the orchestra was occupied by the senators.

The Odeum was a covered theatre, chiefly for music; that of Herodes Atticus, at Athens, was the most magnificent in Greece, and had a roof of cedar. The space covered was 240 feet by 159. The construction of such a roof, without obstructing sight or hearing, or injuring external architecture, offers a problem to the architect of no easy solution, and is one of great interest in the present times, as we are frequently called upon to cover large areas for occasional assemblies.

But as modern theatres were more to the point with students, the Professor called their attention to a magnificent work, lately published, on 'The Great Modern Theatres of Europe,' by M. Contant, which he exhibited.

The Amphitheatre was then considered: although of early Tuscan origin, and originally formed in earth or scaffolding, it was not executed in permanent materials till the end of the first century. One in earth had been discovered by Sir C. Wren at Dorchester. That of Vespasian (as shown in a diagram) was too large for the site of Trafalgar Square, Charing Cross, &c. The Velarium, 550 feet by 450, with which the Colosseum was covered during exhibitions, was a surprising contrivance, and had been made the subject of a work by the architect Fontana. M. Hittorf had suspended the roof of a panorama in the Champs Elysées, somewhat in the manner of the Velarium, with great skill. This work, published, was here exhibited.

The Gymnasium, in which the youth of Greece were instructed for the defence and honour of their country, in every department of prowess, was an interesting object of civil architecture. The plan of that of Ephesus, published by the Dilettante Society, was exhibited, and it was gratifying to observe the use which the late Professor Mr. Wilkins had made of this example, in illustration of the text of Vitruvius, which had hitherto been misunderstood.

The Gymnasium was the more interesting as the type of those Thermæ, the Roman baths, which have furnished the great school of architectural instruction, and from which the best inventions of the architects of the Middle Age, and of the revival, had been derived.

The name, Thermæ, as well as the express declaration of Vitruvius, declare that these institutions were exotic: a refinement adopted from Greece in the time of Augustus. During the first three centuries of our era, seven of these were erected; they were well calculated to indulge that love of luxury which rapidly corrupted the Roman manners under the Emperors, as well as to gratify that constant excitement of novelty and splendour, which gave popularity to the government. Some idea of their extent may be conceived from the plan (exhibited) of the Baths of Caracalla laid down upon that plot which is comprised between Regent Street, Pall Mall, St. James's Street, and Piccadilly, covering about twenty-eight acres. Cameron assures us, that those of Diocletian, somewhat larger, afforded hot

Digitized by Google

baths for 18,000 persons at the same time: a bell rung at two o'clock to announce that the water was warm. The mask of a paternal urbanity was often affected by the despotic emperors, who frequently bathed with the people. One day Hadrian recognized an old companion in arms in poverty, scraping himself with a tile instead of the strigil; accosting him kindly, he furnished him with a slave, and all that could be wanted to his future comfort. Such an example could not but be infectious: accordingly when he came again, he was surrounded with poor acquaintances scraping themselves with tiles; but, calling them together, he observed, that being many they could scrape each other, without any superfluous expense of slaves or furniture. The Thermæ were in fact vast clubs, castles of indolence, in which every easy exercise of body or mind, and every delight of the senses might be indulged. The gardens, raised about thirty feet above the general level, were adorned with every fragrant shrub and flower; the choicest works of sculpture, obelisks and fountains, exedræ for the enjoyment of the shade or the sun (of a structure well worthy the student's attention) terminated the walks. In the central building was the great hall, the type of Gothic structure in ecclesiastical architecture, namely, the groined ceiling reposing on a column, and abutting on an extended pier, with the nascent flying buttress. The space of the naves (varying from 76 to 90 feet) being twice that of York, the widest of our cathedrals. The area covered, offers the largest space with the smallest obstruction in the support, of any scheme yet devised, and cannot be too much admired. It has been well observed of those structures, that we discern in them the type of all that has been since done *in architecture*, just as throughout the animal creation we trace the more or less resemblance to the type man. The interest excited amongst the French students recently (as exhibited in their late competition for the grand prize), promises that this admirable feature of ancient architecture will be reproduced in Europe before many years pass. It was proposed for the new Public Library at Cambridge; it was employed by Sir C. Wren in Bow Church, on a small scale; and is executed on a still smaller scale, with considerable differences, but with happy application, in the Bank of England, by Sir J. Soane. But the cloisters, the surrounding rooms and baths, their various forms and structures, and the happy union of the arch and the trabeated systems, would lead to more observation than can be here admitted. To the students he should say of them,

Nocturnâ versate manu, versate diurnâ.

Palladio designed to have published a book upon them, the drawings for which were afterwards edited by Lord Burlington. Mons. Blouet has published a magnificent work, giving all the restorations and details, which large excavations and very careful study of them enabled him to obtain.

The Basilica is also of Greek origin, as the name imports. The kingly hall was such as Solomon built in the palace of the forest of Lebanon. It was the Westminster Hall of ancient governments for administration of justice, commercial exchange, great public meetings, &c. The building at Pœstum, so called, was more probably a temple, because the Greeks were not accustomed to apply sacred architecture to civil purposes.

The Basilica of Trajan was the most magnificent exemplar of this species of building which the Professor could point out: with its forum, temples, and approaches, it covered twelve acres. The central hall or basilica, 540 by 168 feet, would contain St. Paul's in length and in width, exceeded only in the extreme ends of the cross. The central nave, 278 by 78, would contain the whole of Westminster Hall, in plan *as well as* in section. In Rome were eighteen basilicas, and one at least in every city of the empire. Their subsequent adaptation to the Christian temple makes them highly interesting to the student. Vitruvius, lib. v. c. 1, describes the basilica, and his own work at Fanum, which differs from the usual form in some particulars.

OUR WEEKLY GOSSIP.

We have before us the first number of *The Foreign and Colonial Quarterly Review*. We were somewhat startled a short time since on reading, in a contemporary, a paper on 'Reviewing and Reviewers,' wherein the principles on which the *Foreign Quarterly* is *now* conducted, were severely condemned. We were the more surprised, because the improvement under the new management is obvious and great; but we allowed the article to pass without comment, flattered perhaps into silence, by the many gracious things which the writer was pleased to say of the *Athenæum*.* The prospectus, however, prefixed to this *Colonial Quarterly*, throws a little light on the subject, for it is twin-brother to the article above mentioned. Now, on the question as to how a critical journal of foreign literature should be conducted, we have a few words to say; and as we have no interest in the question, they may be received as impartial. In our view of the matter, the functions to be discharged are of the most exalted kind; and to perform them adequately would demand a rare combination of genius, acquirement, foreign correspondence, with an almost unlimited command of money. The spirit which should preside over such an undertaking should be large and liberal, of the most comprehensive and transcendental order, embracing not merely the whole of the different literatures which exist in Europe, each in itself, but also the probable action of each on all. It should penetrate the causes of the phenomena, and estimate their tendencies. A work of this character is not, we fear, to be expected from this country. Not only does the state of the book trade oppose itself to any great and combined effort to cover so large a space, but the state of the public mind is ill-adapted to entertain and relish the result. The English of the present generation (it cannot be concealed) rank low among the philosophers of Europe; and have little time or taste for any speculations but those of profit. The projector, therefore, of a foreign review, such as we understand it, would have to train his own public, and to combine much light and simply amusing reading, with a carefully selected series of topics tending to bring about a better acquaintance with all that is thought and done on the continent. Without entertaining any immediate expectation of the fulfilment of our notions of excellence, we long thought and said that much more might be made of the resources within editorial reach, than had ever been effected by the *Foreign Quarterly*; and it was with much pleasure that we discovered in the second number published under the new editor, more decided evidences of a tendency in the right direction than had before characterised that journal: in brief, the *Foreign Quarterly* under the *old* management, and the *Foreign and Colonial* under the *new*, are excellent examples of what a foreign review should *not* be. We by no means deny the ability with which this new journal is conducted—we readily admit that particular papers are ably written,—for example, one of fifty pages on 'The Tariff,' and another on 'The Peace and Treaty with China'—but its most intimate relation to foreign literature is in the titles which are prefixed to the articles; and it represents the movement and progression of the European mind, by standing still or running backwards. We do not on this account impute any particular blame to the conductors—they may have a special purpose, and may consider what we have said (only they would use a different phraseology) as praise—if so, let them take it—but we repeat, that the *Foreign and Colonial Review* is an example of what a foreign review ought not to be.

The Wellesley Library was sold last week. It was but small, and the only remarkable circumstance connected with it was that an eighteenpenny pamphlet, published last year, and still on sale, brought 195*l.* 1*s.*! This increased value is *attributed* to some few manuscript notes by the late Marquis; but we believe may more justly be set down to the accident of an unlimited order having been given; for the Duke of Wellington, the purchaser, and whose instructions were simply to "buy it," expressed, as well he might, his surprise, when informed of the price. The notes were as follows. At page 6 the writer observes. "He [the Marquis] sent indeed a strong army of observation under Sir J. Craig," &c. The note thereon is, —"The army 'in the field,' as it was called, and as in my time it 'always' was, with all equipments prepared for immediate service, was the only preparation made against the 'certainly meditated' attack of Zamaun Pchah.—W." At page 15 the writer quotes from Alison's History, where that author speaks of the overthrow of Colonel Monson's division, and the disastrous confidence thereby generated among the restless and rebellious native chiefs, &c.; and observes: "When again, in the war with Holkar, the Marquis deviated from his usual policy," &c., and "these impending evils were arrested by a recurrence to those better and wiser councils, which, with the one exception, characterized the whole of the Marquis Wellesley's government," &c. The Marquis, in his note, observes—"I never deviated at any time from my fixed policy; Monson (a poor, weak, though brave man), with the best intentions, deviated from it, and I spared him on a fixed principle, 'never to cast blame on those whose intentions were fair and honest, although my own fame might suffer.' All the phrases 'departed,' 'recurring to,' &c., are quite misapplied—they should be corrected. Monson's advance and retreat were no acts of mine. I wish the author of this letter, who seems to be a well-informed and judicious person, would inform Mr. Alison of these facts. Mr. Alison's work is excellent, and most fair to me, but he has made some mistakes which I could correct if I knew him or any of his friends.—W."

The following communication from a correspondent relates to the price of exhibition catalogues:—

Permit me to express my gratitude for the suggestion thrown out some short time since in the *Athenæum*, that a ticket should be appended to every picture in the National Gallery, with the name of the painter, &c. It is so excellent that I feel assured it must be complied with. In the same spirit I would suggest that the price of the catalogue at the Royal Academy Exhibition should be reduced to sixpence: considering the numbers required, the cost ought not to exceed threepence. It is painful to be constantly applied to, by respectable persons without catalogues, for information; and numbers would purchase at sixpence who cannot afford a shilling.—I am, &c.

An Amateur, but no Artist.

The question is altogether one of profit. The Academy has no other source of revenue but its Exhibitions—and if it makes more money by selling the catalogue at a shilling than it would by selling it at sixpence, we do not see that the public have a right to interfere. We however doubt the result, and should like to have the experiment tried.

A private letter from Berlin lately mentioned, that a sale of pictures was likely to take place there, early in the spring, which would be worthy the attention of those who cater for the National Gallery, and of amateurs generally. We have now received from Mr. Nutt, of Fleet Street, a catalogue, from which it appears that the collection was formed by Mr. Reimer, an extensive publisher, and is to be sold without reserve. There are no less than 680 pictures.

M. Ferdinand Denis, one of the conservators of the Bibliothèque Saint-Geneviève, has presented to the Geographical Society of Paris, a bust of Don Henry of Portugal, surnamed "the Navigator." The bust is the work of M. Jules Droz, by whom it has been copied from an authentic portrait in the manuscript, which contains the 'History of the Conquest of Guinea,' by Gomez Eanez de Azurara, which manuscript, written in 1453, by order of Alphonso V., was known to exist in Spain till the year 1702; from that period supposed to have been lost, till discovered by M. Denis, in 1838, in the Royal Library at Paris.

The musical reports and rumours of the last fortnight comprise less of interest than is customary at this season. We may mention, however, as having taken place, Mr. Bennett's second pianoforte Soirée: and the performance at the Oxford Street Opera House of an English version of 'Lucia di Lammermoor'—of which more in a future number; when, also, we shall have to speak of 'La Donna del Lago' as given at Covent Garden. Not the least interesting entertainments of the hour are those exhibiting Scotch and Irish music given by Mr. Wilson, Mr. Horncastle and Messrs. White and Crouch. These are worthy of the notice of all liberal musicians; but our countrymen, especially, might find in them materials towards the establishment of a school of English dramatic music of greater value than such as the German or Italian theatres supply. We are glad to call attention to the grand concert in contemplation for the benefit of those bereaved by the recent shipwrecks. The artists will come forward, we doubt not, with their usual liberality—it is to be hoped that the public will follow their example. Of our own Italian

* He was however in error, when he stated that the "*Athenæum*, the *Morning Post*, &c. took their cue" with reference to Montgomery's 'Luther' from "the leading journal," as is proved by the conclusive fact, that the review in the *Athenæum* appeared *before* that in *The Times*.

Opera the tidings are few. It is said that the manager has secured Signora Tadolini, and has *not* secured Tamburini. It is said that Costa is at work on a new opera, and that Madame Albertazzi is about to travel hitherward, possibly in search of an engagement; since Madame Viardot has been bespoken for Vienna, when her Parisian campaign is over.

In Paris, matters are more animated. Signor Ricci has arrived to superintend the production of his 'Corrado d' Altamura;' and Herr Dreyschock, the last of the wonderful pianists, whose performance of octave passages has surprised a good half of Germany, has also made his *début*. The Concerts of the *Conservatoire* have begun; the *programme* of the first included one of Mendelssohn's symphonies, which was favourably received. Lastly, at the *Opéra Comique*, MM. Scribe and Auber's last work has just been given. The *libretto* is based upon the well-worn anecdotes of Farinelli's chivalrous benevolence, and the ascendancy he exercised over the moon-struck King of Spain. The singers are Mdlle. Rossi-Caccia, Mdlle. Thillon, MM. Roger and Grard. The opera has been successful, but not after the measure of 'Le Domino Noir' and 'Fra Diavolo.'

As for music in Italy, for the present it may be given up as all but desperate. No report of new singers, save now and then a rumour in praise of Miss Clara Novello; no composers, in spite of the promise of four new operas for *La Scala* at Milan. A paragraph declares that Rossini has been dedicating a new *Requiem* to the Pope; thus announcing a second step in the career of sacred music; but the fact wants confirmation.

ROYAL POLYTECHNIC INSTITUTION.

Cary's NEW MICROSCOPE, estimated by Microscopists to magnify to SEVENTY-FOUR MILLION TIMES the Natural Size. New DISSOLVING VIEWS in Afghanistan, including the BOLAN PASS and View of GHUZNEE, the Hall of Waters in CONSTANTINOPLE, and Scenes in the HOLY LAND from the beautiful Sketches by D. Roberts, R.A., published by Mr. Moon. The COLOSSAL ELECTRICAL MACHINE, with brilliant experiments, is exhibited at a quarter to Three in the Day, and at Eight in the Evening. NAPIER'S PRINTING PRESS (double cylinder), Steam Engine, and other interesting Machinery, are in practical operation in the Hall of Manufactures. DAILY LECTURES on Chemistry and Natural Philosophy, by Dr. Ryan, M.D. L.L.D., and Prof. Bachhoffner.—Admission 1s., Schools, half-price.

N.B. An Elementary Class on Chemistry and Natural Philosophy is arranged, suited to young persons, the pupils of which have free access to the Institution. Terms, One Guinea per Quarter. Prospectus to be had of the Secretary.

Analyses, Assays, &c. by the Chemist of the Institution.

THE CHINESE COLLECTION, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious saloon, 225 feet in length, and embracing upwards of fifty figures as large as life, all fac-similes, in their native costumes, from the highest mandarin to the blind mendicant; also many thousand specimens, illustrating the appearance, manners, and customs of more than three hundred million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d.; Children under Twelve, 1s.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

Dec. 14, 1842.—Mr. Murchison, President, in the chair.

1. 'On the Ridges, elevated Beaches, inland Cliffs, and Boulder Formations of the Canadian Lakes and Valley of St. Lawrence,' by Mr. Lyell, F.G.S.

Jan. 4, 1843.—Mr. Murchison in the chair.

1. Mr. Lyell's paper concluded.—After adverting to his former Paper on the recession of the Falls of Niagara (*Athen.* No. 750), and the observations which he made jointly with Mr. Hall in the autumn of 1841, Mr. Lyell gave an account of additional investigations made by him in June, 1842, in the course of which he found a fluviatile deposit, similar to that of Goat Island, on the right bank of the Niagara, nearly four miles lower down than the Great Falls. The fresh-water strata of sand and gravel here alluded to, occur at the whirlpool. They are horizontal, about 40 feet thick, plentifully charged with shells of recent species, and are placed on the verge of the precipice overhanging the river. They are bounded on their inland side by a steep bank of boulder clay, which runs parallel to the course of the Niagara, marking the limit of the original channel of the river, before the excavation of the great ravine. Another patch of sand, with fresh-water shells, was found on the opposite, or western side of the river, where the Muddy Run flows in, about half a mile above the whirlpool. From the position of these strata, it is inferred, that the ancient bed of the river, somewhere below the whirlpool, must have been 300 feet higher than the present bed, so as to form a barrier to that body of fresh water in which the various beds of fluviatile sand and gravel above mentioned were accumulated. This barrier was removed when the cataract cut its way back to a point farther south. The author also remarks, that the manner in which the fresh-water beds of the whirlpool and Goat Island come into immediate contact with the subjacent Silurian limestone, shows that the original Valley of the Niagara was shaped out of limestone as well as drift. Thence he concludes, that the rocks in the rapids above the falls, had suffered great denudation while yet the falls were at or below the whirlpool. Mr. Lyell thinks that the form of the ledge of rock at the Devil's Hole, and of the precipice which there projects and faces down the river, proves the falls to have been once at that point. An ancient gorge, filled with stratified drift, which breaks the continuity of the limestone on the left bank of the Niagara, at the whirlpool was found to be connected with the valley of St. David's, about three miles to the north-west. This ancient valley appears to have been about two miles broad, at one extremity, where it reaches the great escarpment of St. David's, and between 200 and 300 yards wide at the other end, or at the whirlpool. Its steep sides did not consist of single precipices, as in the ravine of Niagara, but of successive cliffs and ledges. After its denudation, the valley appears to have been submerged and filled up with sand, gravel, and boulder clay, 300 feet thick.

The author passes to the general consideration of the boulder formation on the borders of Lakes Erie and Ontario, and in the Valley of St. Lawrence, as far down as Quebec. Marine shells were observed in this drift, in several localities, at Montreal attaining a height probably exceeding 500 feet above the level of the sea. Similar shells were found as far south as the western and eastern shores of Lake Champlain. They are all northern species, and imply a former colder climate. Rocks in contact with the drift, are smoothed and furrowed, as beneath the drift in Northern Europe.

The author next describes the ridges of sand and gravel surrounding the great lakes, and regarded by many as raised beaches. Those examined, preserve a general parallelism to each other, and to the neighbouring coast, and some of them have been traced for more than 100 miles continuously. They vary in height, and are often very narrow at their summit, and from 50 to 200 yards broad at their base. Cross stratification is very commonly visible in the sand. They usually rest on clay of the boulder formation, and blocks of granite, and other rocks from the north, are occasionally lodged upon them. They are steeper on the side towards the lakes, and they usually have swamps and ponds on their inland side. They are higher, for the most part, and of larger dimensions, than modern beaches. Mr. Lyell compares them all to the osars in Sweden, and conceives that, like them, they are not simply beaches which have been thrown up by the waves above water, but that many of them have had their foundation in banks or bars of sand. They are supposed to have been formed and upraised in succession, and to have become beaches as they emerged, and sometimes cliffs undermined by the waves. The transverse and oblique ramifications of some ridges are referred to the meeting of different currents, and do not resemble simple beaches. The author concludes that most of the ridges were formed beneath the sea, or on the margin of marine sounds; some of the less elevated ridges, however, may be of lacustrine origin, and due to the oscillations in the level of the land since the great lakes existed. For unequal movements analogous to those observed in Scandinavia, may have uplifted fresh-water strata above the barriers, which divide Lake Michigan from the basin of the Mississippi, or Lake Erie from Ontario, or the waters of Ontario from the ocean: Considerable differences of level may have been produced in the ancient beds of these vast bodies of fresh water, while the modern deposit, and the subjacent Silurian strata, may to the eyes appear perfectly horizontal. The author then endeavours to trace the series of changes which have taken place in the region of Lakes Erie and Ontario, referring first to a period of emergence when lines of escarpment, like that of Queenstown, and valleys, like that of St. David's, were excavated; secondly, to a period of submergence, when those valleys, and when the cavities of the present lake basins, were wholly or partially filled up with the marine boulder formations; and lastly, to the re-emergence of the land, during which rise the ridges before alluded to were produced, and the boulder formation partially denuded. He also endeavours to show how, during this last upheaval, the different lakes may have been formed in succession, and that a channel of the sea must first have occupied the original Valley of the Niagara, which was gradually converted into an estuary and then a river. The Great Falls, when they first displayed themselves near Queenstown, must have been of moderate height, and receded rapidly, because the limestone overlying the Niagara shale was of slight thickness at its northern termination. On the further retreat of the sea a second fall would be established over lower beds of hard limestone, and a third fall would be caused over the ledge of hard quartzose sandstone, which rests on the soft red marl seen at the base of the river cliff at Lewistown. These several falls would each recede further back than the other, in proportion to the greater lapse of time during which the higher rocks were exposed before the successive emergence of the lower ones. Three falls of this kind are now seen descending a continuation of the same rocks on the Genessee river at Rochester. Their union in the case of the Niagara, into a single fall, may have been brought about in the manner suggested by Mr. Hall, by the increasing retardation of the highest cataract in proportion as the uppermost limestone thickened in its prolongation southward, the lower falls, meanwhile, continuing to recede at an undiminished pace, having the same resistance to overcome as at first. Mr. Lyell considers the time occupied by the recession of the falls from the whirlpool to be quite conjectural, but assigns a foot, rather than a yard a year, as the more probable estimate. Thus he shows the mastodon, found on the right bank, near Goat Island, though associated with shells of recent species, to have claims to a very high antiquity, since it was buried in fluviatile sediment, before the falls had receded above the whirlpool.

2. 'Notice on a Suite of Specimens of Ornithroidicnites, or Footprints of Birds on the new Red Sandstone, Connecticut, United States,' by Dr. Mantell, F.G.S. —These specimens were accompanied by a letter from Dr. Deane, of Greenfield, Massachusetts, the original discoverer of these curious footmarks, of which more than thirty varieties have been found, mostly bearing a striking resemblance to the tracks of living birds. They are invariably those of a biped, and in some instances the progress of the animal may be followed over as many as 10 successive steps. One example is fourteen inches in length.

3. A letter was read from Mr. W. C. Redfield, to Mr. Lyell, 'On newly discovered Ichthyolites in the new Red Sandstone of New Jersey,' narrating his discovery of two distinct fish beds, both containing remains of the genus Palæoniscus in that formation, and also of Ornithroidicnites, in the sandstone between the beds.

4. A letter was read from Mr. Charles Nicholson, accompanying some fossil bones found imbedded in the banks of the Brisbane river, New South Wales.

5. An extract of a letter was read from his Excellency, George Grey, Governor of Adelaide, accompanying a section of the country between the eastern shore of the St. Vincent's Gulf and Lake Alexandrina, New South Wales, and noticing some fossils obtained in that district.

INSTITUTION OF CIVIL ENGINEERS.—*Jan.* 17.—This was the Annual Meeting. The Report of the Council gave a satisfactory account of the proceedings of the Institution, which have been regularly recorded in the *Athenæum*. The increase of members and the financial affairs of the Institution were also satisfactory. The Telford and Walker Medals and Premiums were presented—(for account of the award see *Athen.* No. 787). The President addressed the meeting at some length on points which could not with propriety be adverted to in the official report of the Council. He gave reasons for the election of Honorary Members, showing that scientific acquirements, or the patronage which, from the elevated position of the parties, they were enabled to extend to engineering in its various branches, had been the only motives for joining the Institution. He pronounced an eulogium on Mr. Ewart, the late Inspector of Steam Machinery for the Navy, and alluded to the Memoir of Capt. Huddart, for which a medal had been presented to Mr. Cotton. Among the engineering works, the Thames Tunnel, which has just

Digitized by Google

been completed, was especially mentioned, and praise awarded to Sir Isambard Brunel for the skill and energy displayed in the undertaking. Prof. Wheatstone's applications of Electro-magnetism, and some interesting facts, were also mentioned.

The ballot for the Council took place, when the following gentlemen were elected:—Messrs. J. Walker, *President;* W. Cubitt, B. Donkin, J. Field, and H. R. Palmer, *Vice Presidents;* W. T. Clark, G. Lowe, J. Macneill, J. M. Rendel, G. Rennie, R. Sibley, J. Simpson, J. Taylor, T. Wicksteed, J. Miller, F. Braithwaite, and W. Cubitt, other Members and Associates of Council.

SOCIETY OF ARTS.—*Jan.* 18.—R. Twining, Esq. in the chair. Mr. Higgs described an instrument called the Monochord, calculated to facilitate the study of vocal music. The monochord is an oblong rectangular box, made of mahogany, 26 inches long, 2½ inches wide, and 2¼ inches high. On the upper surface are marked the diatonic and chromatic scales: a single wire is extended lengthwise over a bridge at either end of the instrument, and the different notes are produced by moving a third bridge along the top of the instrument with the right hand, while the wire is touched with one finger of the left hand. Unlike the tuning fork, which is capable of producing only one tone or note, the monochord produces any of the notes, either of the diatonic or any other scale. It also gives a correct idea of vibration and the theory of sound.

Mr. Whishaw read an account of Messrs. Carmichael & Co.'s machine for excavating earth-work, which has received in America the appellation of the Yankee Geologist. The machine is composed of the following parts, namely, a strong wooden platform, mounted on wheels, which run on a temporary railway: second, a powerful crane, firmly fixed at one end of the platform; third, on the other end of the platform, a steam engine, which actuates the machinery: fourth, a shovel, scraper, excavator or digging tool, which is suspended by a strong chain from the jib of the crane, which chain passes over pulley wheels, and thence round a drum connected with the machinery, and lastly the arrangement of wheel-work necessary to produce the various evolutions and motions of this novel machine. As to the quantity of earth excavated in a given time, it may be stated that 30.719 car (waggon) loads, each containing 1½ cubic yard of hard excavation consisting of clay, sand, coarse gravel, and boulders of various sizes, some of them closely bedded together, and many of them requiring blasts to cause their displacement, were excavated in forty-six days. A machine of this description is at present at the St. Katherine's Docks, but not put together: within, however, a very short time it is expected that it will be set to work, and thus afford an opportunity of judging of its capabilities.

HORTICULTURAL SOCIETY.—*Jan.* 17.—R. H. Solly, Esq., in the chair. Miss Horrocks, J. French, Esq., and Mr. Robert Cooper, were elected Fellows. A paper, 'On Heating Hothouses by Steam,' was read, from Mr. Walker, gardener to R. W. Grenfil, Esq. Instead of heating water in large pipes by smaller ones conveying steam and traversing them longitudinally, it was proposed to introduce the end only of a steam-pipe into that of a larger water-pipe, which is continued round the house. The steam is generated in a boiler, and can thus, by pressure, be made to heat the water in the pipes to any required temperature: it may also be thrown into the atmosphere by means of a perforated pipe. To prevent abstraction of heat, the steam-pipe is to be isolated on wooden sleepers, and to be inclosed in a tunnel of the same material.—Mrs. Lawrence exhibited a magnificent specimen of *Dendrobium nobile*, covered with flowers; *Lælia albida; Cyrtochilum maculatum; Peristeria guttata;* a fine plant of the recently-introduced *Manettia bicolor*, whose red and yellow tubular flowers, although rather scantily produced, had a pretty effect; *Clerodendrum splendens*, a species lately brought from Sierra Leone, and bearing panicles of rich scarlet; with cut blooms of *Spermodyctium azureum* and *Astrapæa Wallichii*, the latter a large stove plant, with immense leaves, and producing freely at this season its drooping clusters of light carmine flowers: a Knightian medal was awarded for the Dendrobium. From Sir E. Antrobus were an exceedingly well cultivated specimen of *Euphorbia jacquiniflora*, fine plants of *Epiphyllum truncatum*, and *Epacris impressa:* a Banksian medal was awarded for the Euphorbia. Messrs. Lucombe & Pince exhibited a pretty little Melastomaceous plant, of recent introduction from Mexico; it is somewhat similar in habit to *Saponaria ocymoides*, and thrives in a moderately warm greenhouse, where it produces its rosy lilac flowers in profusion: a Banksian medal was awarded for it. From G. Loddiges, Esq., a cut specimen of *Epidendrum densiflorum*, a species nearly allied to *E. nutans*, and, when in the hot-house, diffusing an agreeable fragrance: for this a Banksian medal was awarded. A large collection of cut Orchidaceous flowers was sent by T. Brocklehurst, Esq.; amongst them were a fine dark variety of the singular *Stanhopea Wardii; Myanthus cristatus*, having the labellum covered with long white excrescences, resembling hairs; *Dendrobium tetragonum*, a curious species, with the segments of the perianth of a light primrose colour, margined with reddish brown, and not unlike the extended limbs of a large spider: a certificate was awarded to the Stanhopea. From E. Johnstone, Esq., was a collection of cut Camellias, with specimens of *Garrya elliptica*, a hardy evergreen shrub, bearing catkins of great length, similar to those of the Hazel, *Acacia pubescens*. From W. Block, Esq., a very large flower of *Camellia Donckelaeri;* its size appeared to have arisen from its having been grafted on some strong-growing variety. G. Crawshay, Esq., exhibited twenty-five bunches of Black Hamburgh Grapes, cut from the same vines as those brought forward at two previous meetings: they were equally good on this as on former occasions; to bring them to this perfection, not quite two sacks of house-cinders had been consumed, the fire not having been lighted more than twenty-five times during the season, and then only to exclude frost or excessive damp. From Mr. Hammond, were some good Seedling Apples, which are stated "to unite the properties of the Golden Pippin and Nonpareil; like the former, they may be eaten as soon as gathered, and they will keep nearly as long as the latter, some of the fruit of 1841 having continued sound until May." The flesh is yellowish, crisp, juicy, and rich. From J. Moorman, Esq., handsome specimens of the Easter Beurré, Beurré d'Aremberg, Jean de Witte, Nelis d'Hiver, Passe Colmar, and Glout Morceau Pears, six good varieties for late keeping: a certificate was awarded for them. From the garden of the Society were two specimens of *Amaryllis aulica; Acacia vernicifua*, a handsome, compact-growing species, with orange-coloured flowers, well adapted for growing in small greenhouses; *Hoitzia Mexicana*, with pale flesh-coloured flowers, of great beauty; cut flowers of the deliciously scented *Chimonanthus fragrans* and *grandiflora*, hardy shrubs, requiring only to be protected while in bloom from wet, and worthy of a place in every garden. A model was exhibited of Jucke's Patent Furnace. In this the fire-bars form an endless chain passing over two drums, one at each end of the furnace, and are kept in motion, at the rate of about eight feet per hour, either by hand or by a strap connected with a steam-engine. The consumption of fuel is regulated by a door in front, which can be raised to any desired level. The air is constantly passing through the fire-bars, and the clinkers are carried along by the revolving bars, and fall over into an iron box at the extremity of the grate. The apparatus can be removed from beneath the boiler, when necessary. The smoke is said to be consumed.

LINNEAN SOCIETY.—*Jan.* 17.—E. Forster, Esq., in the chair. Mr. Taylor exhibited specimens of Camelina sativa, a cruciferous plant, with siliquose fruit. The seeds are used in New Zealand for the purpose of obtaining oil, which they yield in abundance. The produce is large, being 40 or 50 bushels of seed per acre. Seeds, as well as the oil, and the cake after the expression of the oil, were exhibited. A paper was read from W. Griffiths, Esq., on the developement of the embryonal sac in the ovules of Santalum, Loranthus, and Viscum. The author corrected some previous statements which he had made, and entered fully into the changes he had observed in the growth, structure, and position of the embryonal sac, nucleus, and pollen tubes in two species belonging to the natural order Santalaceæ. Mr. R. H. Solly exhibited specimens of the curious wood of Phytocrene. Messrs. W. Osborne, Neesom and D. Rush, were elected Fellows.

MEDICO-BOTANICAL SOCIETY.—*Jan.* 11. Dr. Farre in the chair.—Mr. Rodgers delivered a lecture on the proximate principles of opium. After alluding to the interest of the drug in a physiological and medicinal point of view, and the important results that have taken place in vegetable chemistry from the discovery of its ultimate principle, morphia, he gave the comparative analysis of Smyrna opium by Mulder, and referred to the other principles described by Courbe and Palletier, and then explained the several processes by which they could be detected. Much has been said about the tests for opium. Mr. Rodgers observed that it is one of the few organic poisons, which admit of decisive detection: for if we can obtain proof of the presence of morphia by the tests already enumerated, and the red colour by the action of the per-salts of iron on the meconic acid from a suspected solution, by the means recommended in various toxicological works, there cannot be a doubt of the existence of opium.

Jan. 16.—*Anniversary Meeting.* The following gentlemen were elected officers for the ensuing year.—*President*, Earl Stanhope; *Treasurer*, T. C. Cope, Esq., jun.; *Secretaries*, John Foote, Esq., Joseph T. Coullen, M.D.; *Conservator*, Dr. Farre; *Librarian*, E. Saunders, Esq.; *Professor of Botany*, office vacant; of *Chemistry*, J. E. D. Rodgers, Esq.; of *Materia Medica*, Dr. Sigmond; of *Toxicology*, Dr. Cooke.

MICROSCOPICAL SOCIETY.—*Jan.* 18.—J. S. Bowerbank, Esq., in the chair. A paper was read from that gentleman, 'On the Structure of the Shells of Molluscous and Conchiferous Animals.' The researches of the author into the structure of the organic tissue of the Corallidæ, published in 1842, suggested to him the idea of pursuing a similar course of investigation into the nature and origin of the testaceous coverings of the Mollusca and Conchifera. The first subject examined was the young cartilaginous lips of the common garden snail, *Helix aspersa;* subsequently he directed his attention to the testaceous coverings of numerous species of adult univalve and bivalve shells, and the paper contained the results of the examination. In conclusion, the author alluded to the fact, that there must be, of necessity, some vascular connexion between the animal and its shell, although he had at present failed in detecting it. Drawings of the principal parts described accompanied the communication.

ENTOMOLOGICAL SOCIETY.—*Nov.* 7, 1842.—Various new and beautiful insects were exhibited. The following memoirs were read:—1, 'Notice of the Occurrence of Dipterous Larvæ in the Human Stomach,' by H. Johnston, Esq. 2, 'Notice of Entomological Captures near Stockton-upon-Tees,' by John Hogg, Esq. 3, 'Descriptions of New Indian Coleoptera,' by the Rev. F. W. Hope. 4, Continuation of a Memoir on the Trogidæ and Geotrupidæ,' by Mr. Westwood.

Dec. 5.—A fine collection of insects from the island of Hayti was presented by A. Tweedy, Esq., consul of that island. The president announced that, upon the suggestion of Mr. Hope, the formation of a series of committees had been undertaken, for the purposes of investigating by reporting annually upon the entomological peculiarities of the species of insects inhabiting various geographical districts. The memoirs read were, 1, 'Descriptions of new British Chalcididæ,' by A. H. Haliday, Esq.; and 2, 'Description of a new Species of the hymenopterous genus Ænictus, from Southern Africa,' by J. O. Westwood.

Jan. 2, 1843.—A large collection of British and foreign crustaceæ was presented, and many curious insects exhibited. Mr. Westwood read a notice of a new British genus and species of homopterous insects, and also communicated a notice from M. Guérin Méneville relative to the completion of the text of the *Iconographie du Règne animal*, and a new arrangement of the species of the genus Rhipicera to appear in the *Spécies et Iconographie générique.*

ELECTRICAL SOCIETY.—*Jan.* 17.—The papers were—'Assaying by Galvanism,' as practised by Mr. Roberts many years ago, and which is said to be superior to either the dry or wet mode of ordinary use.—'The Dissection of a second *Gymnotus electricus*,' by Mr. Letheby, accompanied by a series of drawings, illustrative of the electrical and nervous functions of this extraordinary creature.—Schœnbein's new battery, consisting of cylinders of zinc and

Digitized by Google

iron, or, by a more recent improvement, of active and passive iron, excited in either case by the same means as Grove's battery.—'Report of Mr. Armstrong's Steam Electrical Apparatus,' by Mr. Ibbetson. Under unpromising circumstances, a spark of 15 inches was taken; and a moderately sized jar was discharged 120 times in a minute.—'On the Disturbance of Electrical Equilibrium,' by Mr. Roberts.

MEETINGS FOR THE ENSUING WEEK.

SAT. Asiatic Society, 2, P.M.
— Botanic Society, 4.
WED. Geological Society, half-past 8.
— Society of Arts.—General Meeting.
THUR. Royal Society, half-past 8.
— Royal Academy, 8.—Architecture.
— Society of Antiquaries, 8.
— Zoological Society, 3.
FRI. Royal Institution, ½ p. 8.—Mr. E. Solly, jun., 'On the Causes and Effects of Smoke, and the Method of Preventing it.'
— Botanical Society, 8.

MUSIC AND THE DRAMA

THEATRE ROYAL DRURY LANE.

On Monday will be performed Shakspeare's Tragedy of MACBETH.
Tuesday, Sir E. L. Bulwer's Play of THE LADY OF LYONS.
Wednesday, AS YOU LIKE IT, from the Text of Shakspeare.
Thursday, last time of its performance, Handel's Opera of ACIS AND GALATEA; and other Entertainments.
Friday, A PLAY.
The Pantomime, of HARLEQUIN AND WILLIAM TELL: or THE GENIUS OF THE RIBSTONE PIPPIN, every Evening, being the last Week of its Performance.

Mr. HENRY RUSSELL will give his LAST VOCAL ENTERTAINMENT, at the HANOVER SQUARE ROOMS, on WEDNESDAY EVENING, February 1, previous to his departure for America, when he will introduce the Dream of the Reveller, the General's Last Battle, the Newfoundland Dog, the original Mississippi Song, the Prairie Song of the Far West, the Maniac, the Ship on Fire, &c. Tickets, 2s. 6d. each; reserved seats, 4s. each; reserved family seats to admit four, 10s. 6d. each. To be had of Messrs. Cramer, Addison, and Beale, 201, Regent Street, and of all the principal Music-sellers.

MUSIC OF IRELAND.—Mr. HORNCASTLE, of Her Majesty's Chapel Royal, will give his FOURTH and LAST ENTERTAINMENT before his departure for Dublin, at the MUSIC HALL, Store Street, on THURSDAY EVENING, NEXT, February 2nd.—Vocal Performers: Miss A. Williams, Miss M. Williams, and Mr. Horncastle—Harp, Miss Le Roy—Pianoforte, Mr. Williams—Union Pipes, Mr. O'Hannigan.—To commence at 8 o'Clock. Tickets, 2s. each; reserved seats, 2s. 6d.; private boxes, for six, 18s.; for eight, 1l. 1s.; to be had at the Hall, and of the principal Music-sellers.—On the fulfilment of his Engagement in Dublin, Mr. Horncastle will recommence his Entertainments at the Music Hall.

COVENT GARDEN.—'Mothers and Daughters' is another instance of the mistaken notion entertained by some modern dramatists, that five acts of dialogue constitute a comedy: for nearly four hours on Tuesday did the audience sit, patiently listening to the tediousness of a few venerable characters, grown grey in the service of the stage, who 'talked an infinite deal of nothing;' alternately aiming at epigrammatic smartness, and indulging in flights of fustian. The most inveterate proser was *Lord Merlin*, the sage of the piece, played by Mr. Vandenhoff, who uttered homilies in pulpit style, and shook his head with significance. This ponderous impersonation of the virtues of the whole peerage is the golden fish, for which the intriguing *Lady Manifold* angles with her artful daughter; but not a nibble does she get. At length a hungry pike, in the shape of a half-pay officer, gorges the bait, and finds himself hooked—the girl having no money: and the rich old lord remains a bachelor, and the widow Manifold has the mortification to see his nephew and sole heir marry her humble companion. Mrs. Orger's performance of *Lady Manifold* was the only redeeming feature of the representation; and, if different from what the author intended, it bore the stamp of nature: there is a homely frankness and geniality in the style of this actress, that wins upon an audience; and the hysterical burst of emotion with which she forgave her disobedient daughter, whom she had just before been scolding with great gusto, was a sudden outbreak of motherly feeling that took the audience by surprise. Mrs. Walter Lacy, as the artful little puss, played the coquette cleverly; and Miss Vandenhoff as the victim of dependence reminded one of Patience on a Monument. Harley as the adventurer struggled between the assumption of gentility and his farcical tendencies, but the latter ultimately prevailed; and there being no dramatic consistency to violate, his facetiousness had its full fling. The stage was well furnished, and the "comedy" well received by the author's friends, who called for him at the end, and to whom Mr. Bell bowed his thanks from a private box: but for all this flattering augury of success we doubt if 'Mothers and Daughters' will prove attractive.

DRURY LANE.—'Cymbeline,' one of those beautiful creations of Shakspeare that bear the rough handling of the stage though they suffer from it, has been revived with a less degree of finish in the article of scenery and costume than distinguished others of Mr. Macready's Shakspearian revivals, and some needless omissions of dialogue; but withal, in a manner to deserve encouragement and afford gratification. The incident on which this play is founded is revolting to our notions, but the delicate structure raised on this gross foundation lifts us above licentious circumstances into a region of pure and exalted sentiment far beyond its contaminating influences. Without *Posthumous* and *Iachimo* we could not have had *Imogen*; and no price is too great for so exquisite a creature, in whom the finest qualities of the sex are embodied: yet still she is a woman. Miss H. Faucit does not realize our idea of the character, but her acting is powerful, and in the scene where she implores *Pisanio* to kill her, she is touching: she becomes the page's disguise well, too: but her tenderness seems affected, and her indignation is too furious and vehement for the gentle *Imogen*. Mr. Macready represents *Iachimo* as a jovial, reckless voluptuary, who makes a rash boast in a moment of excess, and is urged on to his villany more for the sake of winning his wager than out of an inherent love of mischief. This is an ingenious gloss of the character, but not, we think, the true reading. Shakspeare intends *Iachimo* as a representative of the subtle, malignant, and profligate Italian, who panders to his sensual appetites and plumes himself on his craft and treachery; and the 'yellow' Italian is contrasted with the honest, confiding Briton. Mr. Macready's look, manner, and speech are consistent with his own version of the character; therefore he does not appear a dissembler in his interview with *Imogen*, and his actions are consequently at variance with his assumed nature. Mr. Anderson as *Posthumous* is hard, loud, and somewhat mechanical: *Pisanio* is discreetly played by Mr. Elton; and Mr. Phelps as *Belarius* is rugged and robust, with a touch of kindliness in his nature. Mr. Compton's *Cloten* is an amusing exhibition of imbecility, but he swaggers too much. Messrs Hudson and Allen sang the dirge over Fidele, as written by Shakspeare, with feeling and simplicity that made it duly impressive.

MISCELLANEA

Explosion at Dover.—The great experiment of exploding 18,500 lb. or 8¼ tons of gunpowder, under Rounddown Cliff, took place on Thursday at 2 o'clock, and was successful. The account says, that on the signal being given, the miners communicated the electric spark to the gunpowder by their connecting wires; the earth trembled to half a mile distant, a stifled report, not loud, but deep, was heard, and the base of the cliff extending on either hand to upwards of 500 feet, was shot as from a cannon from under the superincumbent mass of chalk seaward, and in a few seconds, not less, it is said than 1,000,000 tons being dislodged by the fearful shock, settled itself gently down into the sea below, frothing and boiling as it displaced the liquid element, till it occupied the expanse of many acres, and extended outward on its ocean bed to a distance of perhaps 2,000 or 3,000 feet. Tremendous cheers followed the blast, and a royal salute was fired. The sight was, indeed, truly magnificent. Such was the precision of the engineers and the calculations of Mr. Cubitt, that it would appear just so much of the cliff has been removed as was wanted to make way for the sea-wall; and it is reckoned the blast will save the company 1,000*l.* worth of hand labour. Not the slightest accident occurred. On the cliffs were Major-General Pasley, Sir J. Herschell, the Astronomer Royal, Professor Sedgwick, and many engineers.

British Museum.—"I have lately noticed with pleasure your remarks on the delay in giving access to new books in the British Museum. As to printed books we are told that they are for some months inaccessible except as a matter of favour, thus defeating the privileges to the public of the Copyright Act in its requisition, that copies of new books should be delivered to the Museum within two months; and it must be remembered that few book *buyers* frequent the Museum to read, but the majority are those working men of letters to whom speedy access is important. The same occurs as to manuscript additions to the library—where no protection of publishers can be pleaded.—Yours, &c. A CANTAB." [We have not said one word about "the delay in giving access to new books at the British Museum." A correspondent, indeed, some time since complained that needless time was occupied by the binder, but it does not necessarily follow that all books sent to the binder are *new*. Be this as it may, our opinion is that the public should not have access at all to "new books"—no, nor for twenty or more years after publication. If 'Cantab' reads the Copyright Act correctly, then authors and publishers who live by the *sale* of their works are bound to furnish *gratuitously*, early copies *to the most frequented libraries in the most populous and most literary cities* of the three kingdoms—London, Oxford, Cambridge, Edinburgh, and Dublin. Rare encouragement this for his friends the men of letters!]

The 'National,' the 'Sweeps,' and the 'Little-gocs.'—As we foresaw, the toleration of these nuisances has led to their extension in every direction. From the Polytechnic, and its hundred thousand tickets at a shilling, it crept up to any number of tickets at 20*s*—The 'National' forthwith speculated on the chance of 25,000 gulls, at 21*s*—The 'Sweeps' tried tickling for 20*l*—Then the pastry-cooks baited with twelfth-cakes. Heretofore it has been all for 'love of art;' now 'love of literature' puts forth its claims, and

The Proprietors of the ——— Newspaper announce that it is their intention to present gratuitously
A Silver Service of Plate

To their Subscribers who have pre-paid their Subscriptions for Six Months of the year 1843, and which Subscriptions will entitle them to a chance in the distribution of the Service of Plate, which will consist of

A Silver Tea Pot	weighing	25 ozs.
A Silver Sugar Basin	..	12½ ozs.
A Silver Milk Ewer	..	7 ozs.
One Pair of Silver Salts	..	ozs.
One Pair of Silver Table Spoons	..	30 ozs. per dozen.

Which will be publicly drawn for on ——— at 12 o'Clock at Noon.

Remarkable Phenomena.—We published last week the *observations* made at the Royal Society, showing the extraordinary depression of the barometer during the gale of Friday the 13th. A correspondent has obligingly forwarded us a copy of the *Belfast Whig*, from which it appears that like, and other remarkable phenomena, were observed in that town. "On Thursday last, the evening tide, according to our almanacks, took place at thirty-eight minutes past seven o'clock, which was very correct; but the tide, which was at its height at that hour, remained so without change, till half-past nine o'clock. The tide of yesterday (Friday) morning was at its height at twenty-six minutes past eight o'clock, and rose to eleven feet three inches, being two feet and three inches above the previous tide—a most remarkable difference, and worthy of notice, when the very low state of the barometer is taken into consideration. In addition to these phenomena, it is singular, that the storm glasses were, the whole of yesterday, in a remarkably unsettled state—the index of the wheel barometers, in all parts of the town, went right round the circle, passing over the lowest marks, and rising, the reverse way, to beyond 'fair;' afterwards, the index came back the way it traversed, and then remained at the lowest point, 'very stormy.' The marine barometers were affected in exactly a similar way. Indications of this kind took place about the 6th of January, 1839—the period of that dreadful storm which levelled lighthouses, and laid prostrate the pride of the forests." A like depression took place at Manchester: at 11 o'clock on Friday A.M. it was at 27.90.

Durability of Photographic Impressions.—M. Ulex, of Hamburgh, lately subjected some daguerréotypes to a series of experiments for the purpose of determining their durability. He states, in a communication published in *The Annals of Chemistry*, "For the purpose of ascertaining the manner in which they would be affected by light, I covered one-half of one of these impressions with paper, and hung it up, so as to afford a direct southern aspect, thus exposing it for weeks to the continued action of the sun's rays. When, after this time, the protecting cover was removed, not the slightest difference could be perceived in the two several halves of the impression. The same impression was then exposed, in the water-bath, to a temperature of + 60° R. = 167° F., without,

Digitized by Google

however, its undergoing, in this instance, the slightest alteration. Other impressions were then exposed to steam, to the action of carbonic acid, ammonia, and even for some time to the action of sulphuretted hydrogen gas, and to the gas of hydrosulphate of ammonia, without, however, the impressions losing in the slightest degree the distinctness of their outlines, or being destroyed. A pure silver plate in contact with the air, if only for a short time exposed, is, as is well known, rapidly blackened by the action of sulphuretted hydrogen. In the manner, however, in which these impressions are generally kept, that is to say, between paste-board and glass, both pasted together, not even the slightest tinge of brown will be produced by the presence of sulphuretted hydrogen. If a photographic impression is completely rubbed away by means of a piece of leather and rotten-stone, so that the bright surface of the silver alone is apparent, and the silver plate is then heated, the impression will reappear distinctly with all its outlines. This experiment serves likewise as an additional confirmation of the statements given by Moser. At the present time the photographic impressions are, almost without exception, gilt, according to the method introduced by Fisot. In the case of an impression treated in this manner the gold coating defies all noxious influences. We arrive, then, at this result—that the preference, as regards durability, must justly be given to photographic impressions over paintings in oil."

Roman Antiquities.—There have lately been discovered near the town of Hyères, in the Var, the remains of an ancient Roman city. Excavations having been made to the extent of between 80 and 100 yards in a line from the sea-shore, there have been opened out a hypocaust of large dimensions, reservoirs, &c., and several walls faced with curious paintings, one of which is semi-circular. These paintings were at first very fresh, but faded on exposure to the light and air. They are composed of arabesques, figures of men and animals, flowers, and other ornaments, fantastically arranged, similar to the most beautiful of those found at Herculaneum and Pompeii. Pottery, vases, medals, coins, &c. have also been dug up.

Source of Fat in Animals.—The observation by Liebig, that the fibrin of plants and animals is identical in its composition, led to the inevitable conclusion, that the animal organization merely modifies the state of the substances presented to it by the vegetable kingdom, and does not form any solids, as plants do, from their gaseous constituents; or, in other words, the fibrin or curd of milk exists ready formed in the vegetables which serve as the food of the cow, while the main constituents of the blood, in like manner, are derived directly from the vegetable matters which constitute the food primarily of all animals. No exception could be urged to this affirmation in reference to the formation of blood and muscle. The anomaly which presented itself was in the instance of fat, which, as far as experiment had carried us, did not appear to exist in sufficient abundance in vegetable food, to authorize us to ascribe its origin to such a source. Liebig quotes the instance of a lean goose, weighing 4 lb., which, in 36 days, gains 5 lb. weight by consuming 24 lbs. of maize, and yields 3½ lb. of pure fat. The latter could not be derived from the maize, said Liebig, because maize, according to such experiments as had been made upon it before Liebig wrote, did not contain the thousandth part of its weight of fat. The ingenious views of Liebig have led Dumas and Payen to make a series of experiments, for the purpose of determining the quantity of fatty or oily matter in maize. They have found 9 per cent. of yellow oil to exist in this vegetable; hence they conclude, when a lean goose eats 24 lb. of maize, it takes up 2½ lb. of fatty matter, which, with the fat previously existing in the animal, is sufficient to account for the source of the 3½ lb. of fat. Dumas adds the remarkable intelligence, that hay, such as it is met with in the trusses eaten by animals, contains 2 per cent. of fatty or oily matter.—*Proceedings of the Phil. Society of Glasgow.*

To Correspondents.—The Museum of Economic Geology is in Craig's Court, Charing Cross.—Amicus—No. 447 of the *Athenæum*, with the steel engraving of the elevation of the new Houses of Parliament and Ground Plan, may still be had of our Publisher.

CAMPBELL JAMES DOWNER, Sec.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 3*l.* 2*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

CROWN LIFE ASSURANCE COMPANY, 83, Bridge-street, Blackfriars, London.

Directors.

George H. Hooper, Esq. *Chairman.*
Lieut.-Colonel Moody, R.E. *Deputy-Chairman.*

John Chapman, Esq.	Jameson Hunter, Esq.
Charles Chippindale, Esq.	Sir John Kirkland.
James Colquhoun, Esq.	Richard Norman, Esq.
B. D. Colvin, Esq.	Alexander Stewart, Esq.
Rear-Admiral J. W. D. Dundas, C.B. M.P.	William Whitmore, Esq.
Thomas Harrison, Esq.	John Wilson, Esq.
	William Wilson, Esq.

Auditors—J. H. Forbes, Esq., G. Hankey, Esq., O. Ommanney, Esq.

Physicians—{Dr. James Johnson, 6, Suffolk-place, Pall Mall East. Dr. C. F. Forbes, F.L.S. K.H., 23, Argyle-street.

Surgeon—Samuel Solly, Esq. F.R.S., 1, St. Helen's-place.

Standing Counsel—Charles Ellis, Esq.

Solicitors—Messrs. Hale, Boys, and Austen.

Bankers—Bank of England.

Actuary—J. M. Rainbow, Esq.

The advantages of this Office, among others, are:—

1. A participation septennially in two-thirds of the Profits, which may be applied either in reduction of the Premium, or to augment the sum assured.

The following Bonuses have been assigned to all Policies, of at least three years' standing, effected for the whole duration of Life:—

FIRST DIVISION, IN 1832.

From 18s. to 2*l.* 12s. per cent. per annum on the sums assured, varying with the age, being equivalent, on the average, to 26½ per cent. on the premiums paid.

SECOND DIVISION, IN 1839.

From upwards of 1*l.* to upwards of 3*l.* per cent. per annum on the sums assured, or, on the average, 32 per cent. on the premiums paid for the preceding seven years.

2. Premiums may be paid in a limited number of annual sums, instead of by annual payments for the whole of life; the policy continuing to participate in profits after the payment of such premiums has ceased.

3. The Assurance or Premium Fund is not subject to any charge for interest to proprietors.

4. Parties (including Officers of the Army, Navy, East India Company, and Merchant Service,) may be assured to reside in or proceed to all parts of the World, at premiums calculated on real data.

5. Claims to be paid within three months.

6. The assured may dispose of their policies to the Company.

7. No charge but for policy stamps.

The Prospectus, Tables of Rates, &c. to be had at the Office in London, or of the Company's Agents.

T. G. CONYERS, Secretary.

EAGLE LIFE ASSURANCE COMPANY,

3, Crescent, Bridge-street, Blackfriars, London.
Established by Act of Parliament, 1807.

Directors—John Richards, Esq. *Chairman.*
Sir James M'Grigor, Bart. F.R.S., *Deputy Chairman.*

The Rt. Hon. Sir G. Ouseley, Bart. F.R.S.	Charles T. Holcombe, Esq.
Sir A. Denman Croft, Bart.	W. Anderson Peacock, Esq.
Lieut.-Gen. Sir John Wilson, K.C.B.	Peter Skipper, Esq.
Chas. B. Baldwin, Esq. M.P.	John Spangin, M.D.
	Henry Tufnell, Esq. M.P.
	William Wybrow, Esq.

DISTINCT TABLES FOR MALE AND FEMALE LIFE.

The Directors have caused new Tables to be calculated, in which the relative values of the Lives of the two Sexes are at all ages distinguished; in consequence of this improvement the younger Male Lives are insured at premiums below the ordinary rates; the Female Lives lower than any other office.

Annual Premiums required for the Assurance of 100*l.* to be received on the death of a

Age.	MALE. Seven years.	MALE. Whole life.	FEMALE. Seven years.	FEMALE. Whole life.
30	£1 6 3	£2 2 6	£1 5 0	£1 15 1
39	1 13 2	2 9 10	1 8 9	2 3 2
40	1 17 4	2 4 4	1 12 9	2 15 0
50	2 12 3	4 12 4	1 17 3	3 15 0
60	4 7 11	6 18 2	3 7 0	5 14 7

Prospectus exhibiting this remarkable distinction at every age, may be obtained at the Office of the Company.

Four-fifths of the profits are divided among the assured for the whole term of life, whether residing abroad or at home.

By order, HENRY P. SMITH, Actuary.

PELICAN LIFE ASSURANCE OFFICES,

70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with *safety*; those adapted to the RETURN SYSTEM entitle its assured to an *equitable* participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

NATIONAL PROVIDENT INSTITUTION,

13, Nicholas-lane, King William-street, London, for Mutual Assurances on Lives, Endowments, Deferred Sums, Immediate and Deferred Annuities, enrolled under the Acts of Parliament relating to Friendly Societies.

Directors.

C. P. Bousfield, Esq.	Robert Ingham, Esq.
John Bradbury, Esq.	Joseph Janson, Esq.
William Cash, Esq.	S. Hayhurst Lucas, Esq.
Thomas Castle, Esq.	C. Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.
Thomas Hodgkin, M.D.	

Medical Directors.

J. T. Conquest, M.D. F.L.S. | Thomas Bevan, M.D. F.L.S.

Solicitors—Messrs. Hardwick & Davidson.

THIS INSTITUTION completed the Seventh Year of its establishment on the 15th of December, 1842, and, in accordance with a Rule made at its commencement, a careful valuation of *its liabilities* and assets has been made by an eminent Actuary, for the purpose of making the first division of profits amongst its members, the gratifying result of which is exemplified in the following instances, showing the profit assigned to policies which have existed from one to seven years:—

Policies in Existence.	Age at commencement.	Sum Assured.	Amount of Bonus.	Original Premium.	Reduction in Premium.	Equal to a Reduction per Cent. on the Original Premium of
Years.	Years.	£.	£. s. d.	£. s. d.	£. s. d.	
7	59	1,000	163 11 0	63 0 0	27 17 2	44
7	46	1,000	115 12 0	40 1 8	16 3 5	40
7	33	2,000	177 10 0	54 1 8	20 11 6	39
7	32	500	44 7 0	13 2 11	5 1 4	39
6	52	2,000	227 19 0	97 11 8	34 5 10	35
6	50	1,000	106 5 0	45 10 10	15 10 7	34
6	31	500	37 3 0	12 17 6	4 2 5	32
5	51	1,000	91 3 0	47 3 6	13 6 4	28
5	41	2,000	146 13 0	69 10 0	18 11 0	26½
5	38	500	37 2 0	15 8 0	4 1 2	26
4	42	500	28 19 0	17 12 1	3 13 3	20
4	28	1,000	46 14 0	24 3 4	4 16 5	19½
3	48	800	37 8 0	31 18 8	4 18 10	15½
3	26	2,000	69 6 0	44 5 0	6 14 11	15½
2	63	3,000	140 15 0	224 15 0	23 11 7	10½
2	26	800	11 11 0	11 10 0	1 2 6	9½
1	42	2,000	26 14 0	70 8 4	3 3 9	4½

The Directors refer with great confidence to the above statement, as exhibiting the most satisfactory proof of the superiority of the principle on which this Institution is founded, namely, that of MUTUAL LIFE ASSURANCE, carried out under the protection and advantages afforded by the acts of Parliament relating to FRIENDLY SOCIETIES, and fully warranting them in thus directing the public attention to the peculiar privileges secured to all assurers.

The Report of the Directors to the Annual Meeting of the Members, held on the 15th of December last, Prospectuses, and every other information, may be had on application at the Office, or to the Country Agents.

The next Division of Profits will take place in December, 1847. JOSEPH MARSH, Sec.

London, Jan. 17, 1843.

The business of the Institution will be removed to new premises, at No. 43, Gracechurch-street, during the month of March next.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, 24, Lombard-street.

Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.

Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.

Loans may be obtained on personal or other security by individuals assuring their lives with this Association.

Risks taken on the Lives of Master Mariners and Passengers by sea, either for the term of life, or for the voyage.

Applications for appointments as Agents and Medical Referees in the country, to be addressed to

EDWARD GILBERTSON, Secretary.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

METCALFE'S NEW PATTERN TOOTH-BRUSH,

made on the most scientific principle, and patronized by the most eminent of the faculty. This celebrated brush will search thoroughly into the divisions of the Teeth, and clean in the most effectual and extraordinary manner. Metcalfe's Tooth-brushes are famous for being made on a plan that the hairs never come loose in the mouth, 1*s.* each. An improved Clothes-brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. A newly-invented Brush for cleaning Velvet with quick and satisfactory effect. The much-approved Flesh-brushes as recommended by the faculty, and Horsehair Gloves and Bands. Penetrating Hair-brushes, with the durable unbleached Russian bristles, which do not soften in washing or use like common hair. A new and large importation of Fine Turkey Sponge, and Combs of all descriptions.—Caution. To be had, wholesale and retail, ONLY at Metcalfe's Sole Establishment, 130 B, Oxford-street, nearly opposite Hanover-square.

Beware of the words "From Metcalfe's," adopted by other houses.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.

—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

PLATE ENGRAVED on REASONABLE TERMS.

—J. PAYNE begs to inform the Nobility and Gentry that he has removed from 22, Fleet-street, to 16, Great Castle-street, Regent-street, where he will continue to engrave Silver and Plated Spoons and Forks, Table Knives, &c. with Crest or Cypher, in a superior manner, at 3*s.* per dozen. Waiters, Tea Sets, and other articles of plate engraved with Arms or Crest at equally reduced prices. Joshua Payne has engraved plate for several members of the Royal Family and many of the Nobility, specimens of which may be seen at his house, 16, Great Castle-street (one door from Regent-street), near the Polytechnic Institution.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*,

and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and NAME, 5*s.* Note paper 4*s.*, 6*d.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 4*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY—Terms: 1*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

H. WALKER'S NEEDLES (by authority the Queen's Own),

with the new large eyes, are easily threaded, even by blind persons, and work with great ease, having improved points, temper, and finish. The labels are correct like those of Her Majesty and His Royal Highness Prince Albert, in relief, on coloured grounds. H. Walker's improved fish hooks, steel pens, hooks and eyes are recommended. For the home trade neat packages of needles or pens, from 1*s.* to 10*s.* value, can be sent free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value. Every quality, &c. for shipping. H. WALKER, Manufacturer to the Queen, 20, MAIDEN-LANE, WOOD-STREET, London.

SILVER SUPERSEDED,

and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	d.		s.	d.
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	3	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1	6	Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 20*s.*; a best Gothic border ditto, Japan tray, 12*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A. Palmer's Candle Lamp, bronze or lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 3*s.* 6*d.* per pair.

41 and 42, Barbican, and at 16, Norton Folgate.

MARSHALL & CO., 12, Curzon-street,

continue to supply WRITING PAPERS, &c. at city prices, viz.:—Letter paper, 9*s.*, 10*s.* 6*d.*, 12*s.*, 15*s.*; ream note, 4*s.*, 6*d.*, 6*s.*; palace note paper, five quires, 1*s.* 6*d.*; sealing wax, 3*s.* per lb.; card plate engraved, 100 printed, 4*s.* Newspapers lent to read, 9*d.* per week; neat leather blotting cases, 1*s.* 6*d.*, or with lock, 3*s.*; fancy inkstands, and every kind of article suitable for presents, equally cheap; envelopes, with stamps on, 1*s.* per dozen; neat leather envelope cases, filled, 2*s.* 6*d.* Circulating Library; terms, 3*l.* 3*s.* per annum; 1*l.* 11*s.* 6*d.* half year; 16*s.* per quarter.—12, Curzon-street, corner of Queen-street. Orders by post punctually attended to. Goods sent any distance.

CRESTS ENGRAVED on VISITING CARDS

in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*; and also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at the Warehouses of Messrs. BARRY & SON, EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 23*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 6*d.*, 12*s.*, and 8*s.* per ream; note ditto, 16*s.*, 14*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream.

Either of the above papers may be stamped with crest, coronet, or initials, for the additional charge of 10*s.* per ream, Messrs. Barry & Son finding the dies and wafers from it at 7*s.* per 1,000. Their miscellaneous stock embraces dressing cases, writing desks, inkstands, fancy note paper and envelopes, suitable for invitations, complimentary notes, weddings, &c.; wafers from the antique, diurnal note and envelopes, envelope cases, Bibles and Prayers richly gilt, Mordan's gold and silver gauntlet pencil cases, elegant penholders and toilet and smelling bottles, souvenirs, card-cases, pocket-books, and every description of useful stationery, with postage stamps and envelopes at Government prices.

CASTOR OIL.—H. TAYLOR, Chemist, 10, Pall Mall, London,

has prepared Castor Oil in a concentrated form, enclosed in Capsules of Gelatine, by which the disagreeable taste of this medicine is entirely avoided. They will be found the most pleasant method of taking that safe aperient medicine. The Dose is from one to four capsules. In Boxes at 2*s.* 6*d.* each, and can be sent by post for 4*d.*

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most

efficacious remedy ever discovered for the relief of persons suffering from Influenza; the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as recent ones in adults, will be removed by a few doses (frequently by the first), and asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Vendors, in bottles at 1*s.* 1½*d.*, or 2*s.* 9*d.* each.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.

—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, polishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE.—The Name and Address of the Proprietors, *A. ROWLAND & SON, 20, HATTON GARDEN, LONDON,* are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA,

is the original of the now numerous concentrated preparations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the Compound Decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrofula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms and after an improper use of mercury.

Prepared and sold in pint bottles, 20*s.*; half-pints, 10*s.*; and quarter-pints, 5*s.* 6*d.*, by Thomas Butler, Chemist, 4, Cheapside, corner of St. Paul's Churchyard, London; and may be obtained of J. Sanger, 150, Oxford-st.; Davenport & Co. 30, Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.

☞ The above Medicine has been prepared and sold by the Advertiser and his Predecessor, in the same premises, very nearly 20 years. An individual in the same street has, within a short period, succeeded to the business of the late Mr. George Butler (who first commenced business as a Chemist and Druggist about 7 years since), and, preparing a similar medicine, modestly announces in print that the said George Butler's preparation is the *original*, asserting also its superiority to an *imitation* sold under a similar name. It is consequently necessary to caution the public against being imposed on by such a statement, and to repeat that the old establishment of 'BUTLER' in this City has no connexion with any other of the same name.

No. 4, Cheapside, *corner of St. Paul's Churchyard.*

THE LATE GEORGE BUTLER.

WILLIAM JACKSON, formerly with the late

Mr. A. John Mariner, and now successor to the late Mr. George Butler, 93, Cheapside, corner of King-street, London, established 1616.—GEORGE BUTLER'S FLUID EXTRACT of SARSAPARILLA, now prepared solely by his successor, William Jackson, is the Compound Decoction of Sarsaparilla of the London Pharmacopœia, concentrated to such a degree that a dessert spoonful diluted with a quarter of a pint of water is precisely the same as the compound decoction ordered by the Royal College of Physicians. Purchasers are earnestly requested to test by dilution the relative strength of this preparation with others sold under a similar name, and he feels assured that the superiority of the preparation made by him and his predecessor, its purity, and the great care bestowed in the process of evaporation, will always ensure the decided approbation and preference which it has received of the medical profession. W. Jackson is unwilling to refer to the invidious observations annexed to an advertisement (for obvious reasons) of a similar preparation by "an individual in the same street," but he is anxious to maintain the credit of the above preparation, and to state that his concern has always been known as a Medical and Dispensing Establishment, and that "Turlington's Balsam," "Stoughton's Elixir," and other nostrums of a like character, have never been sold at his establishment with his name attached thereto as the proprietor of them. He declines taking any further notice of the malignant remarks alluded to. W. Jackson begs to repeat the caution that there exists no connexion between his establishment and any other of the name of "Butler." Please, therefore, to observe that the labels have upon them, in full, the address, 93, Cheapside, corner of King-street, London. Established 1616.

TO EXTEND THE INFLUENCE OF BRITISH ART, BY CIRCULATING FINE EXAMPLES OF THE BRITISH SCHOOL OF PAINTING AND ENGRAVING.

THE NATIONAL ART-UNION.

PATRON,

HIS ROYAL HIGHNESS PRINCE ALBERT.

VARIOUS circumstances have combined to suggest the establishment of an ART-UNION upon a more extended and comprehensive scale than that of the "SOCIETIES" at present in existence; with a view to associate, for one common purpose, persons of similar habits and tastes, however removed by distance; to increase the means of justly appreciating the Fine Arts, and participating in their beneficial influences; and, by circulating Works of unquestionable excellence, to give a right bias and a wise direction to that taste for the beautiful and instructive in Art, which is becoming, not gradually, but rapidly, universal in Great Britain.

The Societies which, within the last few years, have been called into existence, in this country, originated, as our readers are aware, with the patrons of Art in Germany. The idea was borrowed first in Scotland; it was introduced thence into London; the spirit spread its influence to Ireland and the English provinces; and several such Institutions are now in operation—all stimulated by one great and honourable motive, but each having some peculiar characteristics, and all acting upon grounds independent one of another.

The vast advantages that arise to a community from a proper cultivation of the Arts, and the salutary enjoyments produced by them, are too obvious, and too generally admitted, to require comment. The astonishing increase of Institutions for their promotion, and of Societies for their encouragement, in this country, has only kept pace with the public sentiment. The spirit of the age, rejecting the less refined pleasures of former times, requires those that are derived from the cultivation of Science, Literature, and THE ARTS,—because it has been taught to appreciate their value. The aristocracy, of rank or commerce, are deriving their "home enjoyments" from the mind and hand of the Painter; while the taste, and it may be said the judgment, formerly confined to the higher, have spread to the middle, classes of society, by whom the inferior productions of the graver are now almost invariably rejected. Fortunately, Science has been summoned to the aid of the Arts,—the invention of the ELECTROTYPE will, by multiplying to any extent the productions of the burin, enable the producer of a fine Print to supply it at the cost, formerly, of the commonest engravings—such electrotyped copies being, in all respects, as excellent as the originals, of which they are fac-similes,—a result that rests upon indubitable authority, and is "established by the proof that it has been found impossible, by most competent judges, to distinguish the one from the other."

The MANAGERS of the "NATIONAL ART-UNION" avail themselves of this power to answer the increased demand for ART of unquestionable excellence; and submit their PLAN with confidence to the Public.

In its leading provisions, it resembles THE SOCIETIES now in operation, and with which the Public are already familiar; *first*, in supplying an impression of a most costly Engraving for each Guinea subscribed; and *secondly*, in distributing Works of Art, the productions of British Artists, which will be appropriated in the usual manner of drawing.

In the "NATIONAL ART-UNION," however, there are some peculiar features, upon the importance of which, as serious and valuable improvements, its projectors calculate for success.

These they have now to explain:—

With reference to the PRINTS distributed,—One for each Guinea subscribed:

1st. The Print is DELIVERED to the Subscriber, *at the time his Subscription is paid*; thus removing one of the principal objections to existing Art-Unions, which have delayed the issue of one Print until long after another Print has become due; causing considerable disappointment and vexation by continual postponements.

2nd. As, at least, THREE OR FOUR Engravings are submitted to the Subscribers, from which a choice may be made, for each Guinea subscribed,—and as these Engravings are varied as to subject and size, the Subscriber is enabled to select a Print suitable to his taste; and not compelled, as in previously existing Societies, to accept a Print, the character of which may not be agreeable to him, or which does not possess sufficient merit as a work of art. *In short, he can ascertain the true worth of the Engraving before he becomes a Subscriber.*

3rd. The Prints issued by the NATIONAL ART-UNION are greatly superior to any that have been hitherto published by a Society. They are all *Line Engravings*; engraved in every instance by the most eminent of British Engravers, from the choicest works of the most famous of our British Painters; and the expenditure in their production has been at least *thrice* the amount paid by any existing similar Institution.

With reference to the PRIZES for distribution among the Subscribers:

1st. The sum to be expended in the purchase of PRIZES,—Paintings, Drawings, Sculpture, and Proof Impressions of fine Prints,—shall amount to the FULL HALF of the total sum subscribed, exclusive of the Engravings distributed at the time of subscribing.

[No Painting, Drawing, or work in Sculpture, can be selected as a Prize of less value than Twenty-five Guineas; but the smaller Prizes will consist of the finest Proofs of rare and costly Prints, which cannot but be considered more desirable acquisitions than inferior Pictures of small price.]

2nd. The plan of drawing the Prizes will be precisely that adopted by the London Art-Union, and will take place within the current year.

3rd. The Pictures which are to be purchased with the amount of the Prizes distributed by the Institution, may be purchased, at the option of the Prize-holder, from any accredited Artists' Exhibition in the United Kingdom within Twelve Months after the Prizes have been declared. Thus the Prize-holder will avoid the necessity of a Journey to London, or the only alternative of selecting his Picture by deputy.

4th. Any Prize-holder of Two Hundred Pounds and upwards, who cannot select a Picture to his taste from the Exhibitions, will have the privilege of giving a commission to any Artist of his own selection, subject to the approval of a majority of the Committee. This arrangement will avoid the difficulty of which there has been a universal complaint, inasmuch as in nearly every instance, Pictures of the highest merit are purchased previous to Exhibition.

5th. The number and value of the Prizes will depend upon the amount of Subscriptions, and will be determined by the Committee immediately on the Subscription Lists being closed.

6th. Should it come to the knowledge of the Committee that any private arrangement has taken place between a Prize-holder and an Artist, with a view to an improper appropriation of the whole or any part of the amount of a Prize, it will be forfeited, and awarded to some one of the Institutions for the benefit of decayed Artists; and should any Prize-holder select a Picture of less value than the amount of his Prize, the sum so unexpended shall be applied to the same purpose.

7th. No Picture, Drawing, or work in Sculpture, shall be selected by a Prize-holder, the price of which has not been left, previous to the opening of the Exhibition wherein it is exhibited, with the Clerk or Secretary, or proper person appointed to make such price public, and any reservation for Copyright which may make the price doubtful, shall render it ineligible for selection.

The period for drawing the Prizes will be duly announced. It will take place in London, and Subscribers will be invited to attend. The proceedings will be conducted under the superintendence of the Committee, and at least TWELVE of the Town and Country Agents, who will represent the interests of the Subscribers.

PRINTS FOR DELIVERY TO SUBSCRIBERS OF THE YEAR 1843.

I. ANCIENT ITALY.

PAINTED BY J. M. W. TURNER, R.A.; ENGRAVED BY J. T. WILLMORE.

II. MODERN ITALY.

PAINTED BY J. M. W. TURNER, R.A.; ENGRAVED BY WILLIAM MILLER.

III. & IV. (*The Pair to each Subscriber of One Guinea.*)

THE LATTICE. | **THE MASK.**

PAINTED BY E. LANDSEER, R.A.; ENGRAVED BY J. H. ROBINSON.

The two first-named are NOW COMPLETED, by the two eminent Line Engravers, Messrs. WILLMORE and MILLER: the size of each is 2 ft. 4 in. by 1 ft. 9 in. The interest and beauty of the subjects have been universally acknowledged; and as Engravings they will be classed among the most successful efforts of modern times. The Pair, after LANDSEER'S exquisite Pictures, engraved by J. H. ROBINSON, are partially known; but the extreme delicacy and cost of the Engraving demanded a proportionate charge, which excluded them from the hands of all but a very few. The application of the Electrotype has justified their introduction into this Plan.

That this plan originates in private enterprise cannot be treated as an objection, inasmuch as *in this country such is the origin of nearly every great and prosperous national undertaking*—which can benefit its projectors only by really benefiting the Public.

Specimens of the above-named Plates may be seen, and Prospectuses, with every further information, obtained at the Offices, 26, Soho-square.

London, January, 1843.

RICHARD LLOYD, J. L. GRUNDY, } *Secretaries.*

*** The Names of the Gentlemen forming the Committee will be shortly announced.

JACOB WALEY, JOHN ERICHSEN, DURANCE GEORGE, } Hon. Secs.

SCHOOLMASTER WANTED.—A Married Man, to undertake a large Parochial School in the country, and act as Clerk. A Master understanding the Mixed or Norwood System of Education would be preferred, and he must be able to teach Singing on Hullah's system. Salary 80l. a year, with a cottage. If found efficient, and otherways qualified, an introduction to Deacon's orders in the Church may be expected. Direct N. B., care of Mr. J. W. Parker, Publisher, West Strand.

A GENTLEMAN, sedulously devoted to literary pursuits, residing at RYDE, in the ISLE OF WIGHT, proposes to RECEIVE into his family FIVE PUPILS, the Sons of Noblemen or Gentlemen, to be instructed in the Classics, the French and Italian Languages, English Composition, and the Mathematics. A judicious system of private tuition, thoroughly matured, and pursued with perseverance and energy, combined with the comforts of a superior home, an introduction to select society, and the enjoyment of a climate of unrivalled salubrity, will, it is hoped, present advantages not to be surpassed in any similar establishment. References of the first order. Terms, 100l. per annum. Pupils under 12 years of age, 70l. Address S. W., Royal Marine Library, Union-street, Ryde, Isle of Wight.

EDUCATION AT LUBEC, IN GERMANY.

THE very superior nature of the Education imparted to Youth at the higher Schools and Colleges of Germany, and more particularly, the great proficiency in Modern Languages, History, Geography, Mathematics, and other practical branches of instruction, to be attained by Pupils destined for the Army or Navy, or for Commercial pursuits, has long convinced reflecting parents and guardians of the advantages to be conferred on the Youth under their charge, by sending them over to Germany, to complete their Education at one of those Institutions.

The College or High School at Lubec, denominated "The Catharineum," has for centuries enjoyed high repute as one of the first of these Collegiate Schools; a Commercial Institution in the same city, for the communication of practical commercial and counting-house knowledge to Pupils of a more advanced age, has attained to almost equal celebrity, and an English Gentleman resident there, who has been a Master at the Catharineum nearly Twenty Years, has an Establishment for the reception of a limited number of Pupils, destined to attend either of those Institutions, under whose care parents and guardians may rest assured, that the Youth they may intrust to his charge will meet with not only all the superintendence requisite to their obtaining a knowledge of the German and French Languages, and to insure due progress in their other studies, but also all those comforts of home and social intercourse, and that attention to the religious and moral opinions of English parents, the want of which so often deters persons from sending youth abroad.

For a Prospectus and further Particulars, Terms, &c., apply to W. L. NEWMAN, Esq., Insurance Office, York.

EXTENSION OF THE PRINCIPLE OF ART-UNIONS.

HER MAJESTY the QUEEN and PRINCE ALBERT have been graciously pleased to accept and express their approval of the work, 'The Songs of Shakspeare, illustrated by the Etching Club,' designed for presentation to the Subscribers to the Royal POLYTECHNIC UNION of LONDON, for the year 1843. The PRESIDENT and other Members of the Royal Academy are subscribers.

This beautiful work may now be taken in rotation as quickly as copies can be supplied by the printers. It may be viewed. The prospectuses may be obtained, and subscriptions paid to the Honorary Secretary, at No. 5, Cavendish-square; 309, Regent-street; the Union Bank of London, and its branches; Messrs. Smith, Elder & Co. Booksellers, Cornhill: Mr. Limbird, Bookseller, 143, Strand; also to honorary country agents.

BOOKBINDING and BOOK and PRINT-SELLING, established 1781.—Mr. HERING, late of 9, Newman-street, Oxford-street, begs to acquaint the Nobility and Gentry, by whom he has been so many years supported, that he has REMOVED his establishment to 153, REGENT-STREET, between New Burlington and Vigo-streets.

Now ready, Part Second, for February, 1843,

Also a Miscellaneous Collection of Books, and a few Articles of Furniture.

THE LOGGIE OF THE VATICAN.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on SATURDAY, Feb. 11,

THE beautiful LUNETTES, the BIBLE SUBJECTS, and the PILASTERS, copied from Raffaelle's Loggie of the Vatican, executed to adorn the fine Gallery erected by J. NASH, Esq. the celebrated Architect, at his residence in Regent-street, and subsequently at East Cowes Castle. These exquisite Works were executed at the desire of George IV., who addressed an autograph letter to Pius VII., requesting the permission to have them copied; also several Portraits of George IV. at different periods of his life, after Sir Thos. Lawrence and others, the property of the Earl of Shannon, by whose directions they have been removed to London.

May be viewed a week preceding.

A MADEIRA HOUSE, 36, Bedford-square.—For the Benefit of Persons in delicate Health, or labouring under old or variable Disorders of the Internal Organs, or of the Joints.—A complete and liberal Family Establishment has been formed, in which an uniformly high temperature, with airiness, and the indispensable comforts of an invalid in retirement, has been carefully considered,—professionally directed by a Gentleman who has peculiar opportunities of observing the advantages of a warm climate, as well as the methods required to render it safe and available.—Applications for particulars must be by letter, addressed to Mr. R. Nuth.

One or two domestics, in delicate health, and of superior character, may find an advantageous engagement.

Mark Boyd, Esq.	Adam Duff, Esq.
John Connell, Esq.	

Bankers—Union Bank of London, 8, Moorgate-street, Argyle-place, Regent-street, and Pall Mall East.

Standing Counsel—P. Laurie, Esq.

Solicitors—Messrs. Parken and Webster, and Messrs. Johnstone and Farquhar.

The Directors grant Letters of Credit and Bills at 30 days' sight, on Sydney, Port Philip, Hobart Town, and Launceston, free of charge. Bills transmitted for collection.

By order of the Board, G. H. WRAY, *Manager.*

Agents: R. Allan, Esq., 8, St. Andrew-square, Edinburgh; Messrs. H. Thompson & Co., Dublin; and John Harrison, Esq., Belfast.

H. WALKER'S NEEDLES (by authority the Queen's Own), with the new large eyes, are easily threaded, even by blind persons, and work with great ease, having improved points, temper, and finish. The labels are correct likenesses of Her Majesty and His Royal Highness Prince Albert, in relief, on coloured grounds. H. Walker's improved fish hooks, steel pens, hooks and eyes are recommended. For the home trade neat packages of needles or pens, from 1s. to 10s. value, can be sent free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value. Every quality, &c. for shipping. H. WALKER, Manufacturer to the Queen, 20, MAIDEN-LANE, WOOD-STREET, London.

PLATE ENGRAVED on REASONABLE TERMS.—J. PAYNE begs to inform the Nobility and Gentry that he has removed from 22, Fleet-street, to 16, Great Castle-street, Regent-street, where he will continue to engrave Silver and Plated Spoons and Forks, Table Knives, &c. with Crest or Cypher, in a superior manner, at 3s. per dozen. Waiters, Tea Sets, and other articles of plate engraved with Arms or Crest at equally reduced prices. Joshua Payne has engraved plate for several members of the Royal Family and many of the Nobility, specimens of which may be seen at his house, 16, Great Castle-street (one door from Regent-street), near the Polytechnic Institution.

CARD-PLATE ENGRAVED TO ANY PATTERN 2s., and 100 Visiting Cards, from plate, 2s.; Plate engraved with CREST and Name, 5s. Note paper 4s., 6s., 8s., and 10s. per ream; letter, 8s., 10s., 12s. 6d., and 15s. per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5s. per ream, or richly finished in gold, silver, or colours, at 1s. 6d. per quire: no charge for the die. Wafers from the die, 1s. per 100, or 6s. 6d. per 1,000; high satin palace note paper, five quires, 1s. 6d.; envelopes, 5s., 7s. 6d., and 9s. per 1,000, or 1s. per dozen stamped; sealing wax from 4s. per lb.; best drawing pencils 4s. per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1s. 6d. per pack, or four packs for 5s. Newspapers lent to read at 9d. per week. CIRCULATING LIBRARY —Terms: 3l. 3s. per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s. d.		s. d.
Table Spoons and Forks, per doz.	16 6	Mustard Spoon	0 6
Desert ditto, ditto	12 6	Tea Spoons, per dozen	5 6
Fish Knives	5 6	Gravy Spoons	3 6
Soup Ladles	6 6	Salt ditto	0 6
Sauce Ladles	1 6	Sugar Tongs	1 6

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 33s.; a best Gothic border 30-inch Japan tray, 12s.; a dozen ivory table knives, 11s.; dessert ditto, 9s.; a pair of carvers, 4s. 6d. A. Palmer's Candle Lamp, bronze or lacquered, 9s.; a solar ditto, to burn common oil without smoke or smell, 25s.; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1s. each; best ivory-handle razors, 3s. 6d. per pair.

41 and 42, Barbican, and at 16, Norton Folgate.

In demy 8vo. price 8s. 6d. cloth, with a Map,

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.

By WILLIAM DESBOROUGH COOLEY.

"A truly classical work.....This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gräberg da Hemsö, in the *Rivista Europea*, May, 1842.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. .....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

ENGINEERING SCHOOL CLASS-BOOKS.

In cr. 8vo. 4s. 6d. bd. with 220 Diagrams engraved for the work,

EUCLID'S ELEMENTS of PLANE GEOMETRY; with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.B.
Author of the 'History of Maritime and Inland Discovery,' 'The Negroland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared"—*Athenæum*—"which, for brevity, clearness, and discerning attention to the wants of learners, cannot be easily surpassed."—*Dublin University Mag.*

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 130 Propositions deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"Will be found of considerable value as an aid to teachers of the Mathematics."—*New Monthly Mag.*

In fc. 8vo. price 1s. 6d.

COOLEY'S FIGURES of EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations, printed separately for Use in the Class-room.

Whittaker & Co. Ave Maria-lane, London.

*** Orders received by all Booksellers.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

1. A System of Popular Geometry. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By George Darley, A.B. Fourth Edition. 4s. 6d. cloth.

2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.

3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.

4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, Article 'Mechanics.'*

Taylor & Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

BY THE PROVOST OF ETON.

Just published, in 12mo. price 3s. the 4th edition, revised and corrected, of

THE PHILOSOPHICAL WORKS of JOHN LOCKE. With a Preliminary Discourse, Introductory Prefaces, and Notes, by J. A. ST. JOHN, Esq., Author of the 'Manners, Customs, Arts, &c. of the Ancient Greeks.'

"An edition of the Philosophical Works of Locke has long been wanting. It is in fact matter of surprise, that a body of writings, in which the most popular metaphysical system of modern times is developed, should never before have been presented to the world in a collected form, and detached from all miscellaneous compositions."—*Preliminary Discourse.*

London: George Virtue, Ivy-lane, Paternoster-row.

This day is published, price 2s. cloth lettered,

THE FIFTH EDITION OF

EVERY LADY HER OWN FLOWER GARDENER. By LOUISA JOHNSON. To which is now added, a Chapter on Window Gardening, by CHARLES M'INTOSH, F.C.H.S.; and a description, with Engravings, of Ward's Domestic Greenhouses.

THE NATURAL HISTORY of SELBORNE. By the Rev. GILBERT WHITE.

A new edition, in fcap. 8vo. price 7s. 6d., with 26 Illustrations; and Notes by the Rev. LEONARD JENYNS, M.A. F.L.S. &c., Author of 'A Manual of British Vertebrate Animals.'

"Every body knows that the History of Selborne has gone through many editions; no one, however, has, to our minds, so fully entered into the feelings of the author as Mr. Jenyns. His notes are judicious and apposite, neither too many nor too few."—*Gardener's Chronicle*, Dec. 24, 1842.

John Van Voorst, 1, Paternoster-row.

Just published, in large 4to. full coloured, and neatly bound, price 18s.

BECKER'S OMNIGRAPH ATLAS of MODERN GEOGRAPHY; compiled from the latest and most authentic sources, and including all the recent Geographical and Nautical Discoveries throughout the World.

"The new and very beautiful mode of producing maps by means of the Patent Omnigraph, is so superior to the old style of engraving, that it cannot fail of commanding a decided preference, independent of its very moderate price. The letters in every word, whether large or small, are so uniform in size, so beautifully distinct, and stand out in such high relief, that the eye is never wearied as in the old maps, by tracing their contents, or finding the places required: desiderata of so much consequence, that this New Omnigraph Atlas must soon find a place, not only in every school, but in every library in the kingdom."—*London Review.*

London: Smith, Elder & Co. 65, Cornhill.

WILLIAM MULREADY, R.A.

Square 8vo. price One Guinea; or in morocco 15s. extra,

THE VICAR of WAKEFIELD. With 32 Illustrations by William Mulready, R.A. The whole engraved by John Thompson. Published December 20th.

Sir Walter Scott says the Vicar of Wakefield is "one of the most delicious morsels of fictitious composition on which the human mind was ever employed;" and, "we read the Vicar of Wakefield in youth and in age—we turn to it again and again, and bless the memory of an author who contrives so well to reconcile us to human nature."

"It is the nearest to perfection of any volume that has hitherto issued from the British press."—*Art-Union*, January, 1843.

"One of the most beautiful editions of any standard author that has appeared for many years, and decidedly the best which has ever been published of this deservedly popular English classic."—*United Service Gazette*, January 7, 1843.

John Van Voorst, 1, Paternoster-row.

SCHOOL BOOKS BY WILLIAM BUTLER.

1. EXERCISES on the GLOBES and MAPS, interspersed with some Historical, Biographical, Chronological, Mythological, and Miscellaneous Information; on a New Plan. NEW WORKS

PRINTED FOR

LONGMAN, BROWN, GREEN and LONGMANS.

I.

BIOGRAPHICAL DICTIONARY of

the SOCIETY for the DIFFUSION of USEFUL KNOWLEDGE. The Third Half-Volume (Vol. 2, Part 1,) 8vo. 12*s.* cloth.

It comprises Alexander of Seleucia to Auguste Amoil; including Lives of Alfieri, the Alfonsos, Alfred, the Alis, the Allens, Alleyn, the Alvarez, Ambrosius, &c.

*** The First Volume, containing 1661 Memoirs, 8vo. 24*s.* cloth; or in Two Parts, 12*s.* each, cloth.

"This work gives every assurance of being the best biographical dictionary we have yet had. The attainments and industry of its editor, the skill he has shown in the management of other extensive works, and the list of known contributors, each taking the part he is most versed in, and signing his articles with his initials, are all favourable indications; and the articles we have examined do not disappoint our expectations. In place of the threadbare list of facts and dates usually found in such dictionaries, a detailed and interesting memoir is given under all names of note, taken chiefly from original sources. In every case a list of authorities is given at the end of the article, for the convenience of those who wish to inquire further, or to verify the author's statements."—*Westminster Review.*

II.

REPORT on the GEOLOGY of the

COUNTY of LONDONDERRY, and of Parts of Tyrone and Fermanagh." Examined and described under the Authority of the Master-General and Board of Ordnance. By J. E. PORTLOCK, F.R.S. F.G.S. M.R.I.A. ADDISON, Esq. Author of 'The History of the Knights Templars.' Square crown 8vo. with 5 Plates, 5*s.* cloth.

A Full and Complete Guide, Historical

and Descriptive, of the TEMPLE CHURCH. (Abridged from the above.) Square crown 8vo. 1*s.* sewed.

IV.

THE LAST YEAR in CHINA, to the

Peace of Nanking; as sketched in Letters to his Friends. By a FIELD OFFICER actively employed in that Country. Fcap. 8vo. with New Map, 7*s.* cloth.

V.

THE ENGLISHMAN'S FIRST

GERMAN BOOK: arranged on an entirely new plan. By LUDWIG SCHWABE. 12mo. 6*s.* 6*d.* cloth.

In Three Parts separately as follow:—

A CONCISE GRAMMAR; intended as an Introduction to Ollendorff's New Method of Learning to Read, Write, and Speak German in Six Months. 12mo. 3*s.* 6*d.* cloth.

A GUIDE to GERMAN SPELLING and PRONUNCIATION. 12mo. 2*s.* cloth.

A PROGRESSIVE GERMAN READER; containing a Selection of Amusing and Instructive Pieces, in Prose and Verse, from the best German Authors. 12mo. 2*s.* 6*d.* cloth.

VI.

THE DRESDEN GALLERY, Nos.

28 and 29, just received, imperial folio, 20*s.* each.

CONTENTS:

No. 28	Van Dyk	Charles the First.
	Teniers.....	A Chemist in his Laboratory.
	Paul Veronese ..	The Concina Family.
No. 29	A. Van der Werff	The Banishment of Hagar.
	Netscher	A Lady at her Toilet.
	Rubens.....	A Satyr and Nymph.

VII.

A CATALOGUE of above Three

Hundred and Sixty SCHOOL BOOKS and EDUCATIONAL WORKS, published by Messrs. Longman and Co. 4to. To be had GRATIS of all Booksellers in Town and Country; or forwarded, free of postage, to any person applying for it to Messrs. Longman and Co. by letter, post paid.

The School Catalogue, just reprinted for 1843, is considerably extended, and, it is believed, rendered more generally useful, by the introduction of an extensive Series of Works on the various branches of Natural Philosophy, Civil Engineering, and other subjects. The division of History has also been rendered much more complete. An extensive list of School Prizes, and works suitable for Presents to Young Persons, is also now added.

EDINBURGH REVIEW, No. 155.—The Editor having resolved on an early publication of Number 155, all ADVERTISEMENTS must be sent to the Publishers on or before Wednesday next, the 8th, and BILLS cannot be received later than Friday next, the 10th instant.

39, Paternoster-row, Feb. 4, 1843.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

OBSERVATIONS upon the TREATY

of WASHINGTON, signed August 9, 1842. By GEORGE WM. FEATHERSTONHAUGH, Esq. F.R.S. F.G.S., late one of Her Majesty's Commissioners for the North American Boundary. 8vo. with Map, 3*s.*

A GRAMMAR of VOCAL MUSIC,

for the Use of Public Schools and Classes of Adults. Founded on the Method of Wilhem, and adapted to English use, under the Sanction of the Committee of Council on Education. By JOHN HULLAH. Royal 8vo. 7*s.* bound.

The GRAMMAR of VOCAL MUSIC is, in its plan and general details, the same work as the MANUAL of WILHEM'S METHOD of TEACHING SINGING; but the Words of the Songs are for the most part different, and more particularly fitted for the use of Adult Classes: considerable additions, also, have been made both to the theoretical and practical portions.

No. II. price 8*d.* of

HULLAH'S PART MUSIC, CLASS B,

containing Five Pieces of Sacred and Three of Secular MUSIC in SCORE, for the VOICES of WOMEN and CHILDREN.

No. II. price 8*d.* of

HULLAH'S PART MUSIC, CLASS C,

containing Five Pieces of Sacred and Two of Secular MUSIC in SCORE, for the VOICES of MEN.

These Two Classes will be continued on the 1st of every alternate month.

The Second Volume, price 25*s.* (completing the Work,) of The

BIBLE CYCLOPÆDIA, a Comprehensive

Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings; illustrated by several Hundred Woodcuts.

Subscribers are requested to complete their Sets, as the Numbers will be sold separately for a short time only.

The Fourth Volume, price 4*s.* 6*d.* with Portraits, of

LIVES of EMINENT CHRISTIANS,

by the Rev. R. B. HONE, M.A., Vicar of Hales Owen; containing Lives of JOHN BRADFORD, ARCHBISHOP GRINDAL, and JUDGE HALE. *Next week.*

The FIRST VOLUME contains the Lives of Archbishop Usher, Dr. Hammond, John Evelyn, and Bishop Wilson. The SECOND VOLUME, Bernard Gilpin, Philip de Mornay, Bishop Bedell, and Anthony Horneck. The THIRD VOLUME, Bishop Ridley, Bishop Hall, and Robert Boyle.

AN INTRODUCTION to the STUDY

of CHEMICAL PHILOSOPHY; being a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Professor of Chemistry in King's College, London. With numerous Illustrations, the 2nd Edition, revised and much enlarged. 21*s.*

LIFE and CORRESPONDENCE of

the late SIR ASTLEY PASTON COOPER, Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait, from the Original Picture by Sir Thomas Lawrence. 21*s.*

A SYSTEM of LOGIC, Ratiocinative

and Inductive; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. In 2 vols. 8vo. *In a few days.*

THE PHILOSOPHY of the INDUCTIVE SCIENCES, founded upon their History, containing the

Philosophy of Pure Mathematics—the Philosophy of the Mechanical Sciences—of Physics—of Chemistry—of Mineralogy—of Botany—of Zoology—and the Logic of Induction. By the Rev. WM. WHEWELL, B.D. F.R.S., Master of Trinity College, and Professor of Moral Philosophy in the University of Cambridge. 2 vols. 8vo. 30*s.*

By the same Author, 3 vols. 8vo. price 2*l.* 2*s.*

A HISTORY of the INDUCTIVE SCIENCES, from the Earliest Times to the Present.

THE FIFTH EDITION OF

BRANDE'S MANUAL of CHEMISTRY; thoroughly Revised and greatly enlarged; and incor-

porating all new Facts and Discoveries in the Science, Foreign as well as British. By WILLIAM THOMAS BRANDE, F.R.S. of the Royal Mint; Professor of Chemistry in the Royal Institution. (1,500 closely-printed pages, 8vo.) with numerous Illustrations, 35*s.*

By the same Author, 8vo. uniformly with the MANUAL OF CHEMISTRY, 15*s.*

A DICTIONARY of MATERIA MEDICA and PHARMACY.

PRACTICAL CHEMISTRY for FARMERS and LANDOWNERS. By JOSHUA TRIMMER, F.G.S. Post 8vo. 5*s.*

By the same Author, 8vo. with 200 Illustrations, 12*s.*

PRACTICAL GEOLOGY and MINERALOGY, and the CHEMISTRY of METALS, with an Intro-

ductory Discourse on the Nature, Tendency, and Advantages of Geological Pursuits.

London: JOHN W. PARKER, West Strand.

REVIEWS

History of Béarn and the Basque Country— [*Histoire du Béarn*]. By M. A. Mazure. Pau, Vignancour.

So many curious details are attached to the history of Béarn, and the country of the Gascons and Basques, that a good account of this part of France cannot fail to excite interest. The Princes of Béarn were powerful sovereigns, who maintained their independence against France, Spain, and England. Some of them come forth as heroes of romance, and to most of them some remarkable legend is attached. The gorgeous and magnificent Gaston Phœbus, the object of Froissart's enthusiastic admiration, shines out a principal figure in the picture of his times. Love, war, the chace, poetry, and festivities, gifts, and courtesy, all belong to him; and many are the romantic tales which the most poetical and amusing of the chroniclers tells of his favourite; not omitting certain acts of cruelty and tyranny which it were in vain even for his friend to slur over, such as the murder of his son and brother, and the harshness to his terrified wife. The *oubliettes* of the old town of Orthez could tell sad tales of the mercies of a great lord in those times when no check was offered to a sovereign's *will*; but the fair and bold Gaston was a noble knight, and he alone might render his country illustrious, even if the Fleur des Marguerites had not lived amongst those mountains, nor the *great Reformer*, Jeanne d'Albret, the mother of the hero of all time, and he, the most beloved of murdered Princes, Henri Quatre himself.

The Basque country is full of mystery and interest, from the manners of its people and their strange language—unlike all, even the dialects, patois, or others of the neighbouring nations; and even etymologists are content if they find a resemblance in stray words from countries seven leagues beyond man's life.

Here extended the English sway for several centuries, without however interfering with the Basque or Béarnais independence, and the country, consequently, has peculiar claims on the attention of England. Here the Black Prince and his court and armies resided, and visited, and travelled, and here many of the last struggles took place before our domination in France ended altogether.

M. Mazure has given to the world a volume which must be considered as valuable, and which is so amusing that it may fairly be recommended to the lover of light literature, who would hesitate to pore over the learned tomes of Palassou and Du Mèze, Marca, and other useful but heavy writers; and the reader may well congratulate himself that M. Mazure, who, it appears, is not a native of Béarn, should have been induced by chance, as he informs us, to undertake the history of a spot so remarkable in the annals of his country. He has given specimens of the poetry of the Béarnais from its rich mines, and rendered the pastorals of its shepherd minstrels with much taste. But that his volume would have swelled beyond the limits he had probably allotted to it, he would, no doubt, have given many more of these treasures, which we have always looked upon with favour, and which offer curious pictures of the people amongst whom they were composed,—showing the delicacy and refinement of mind which may exist under the roughest outside.

The Moors for some time maintained their abode in Béarn, and tradition preserves the memory of their sojourn. On the walls of the façade of the church of Arcizac was long to be seen an effigy of the holy warrior Missolun, who is said to have commanded the Béarnais when they drove back the miscreants of Mahomet. Every year, on the 24th of May, a popular fête took place near the spot where stood the statue of the ancient saviour of the country. The figure was crowned with garlands, and songs were sung commemorating the great victory: these customs lasted till the end of the last century. There is also a spot in Béarn called the *Lande* of the Moors—*Lanne-Maurme*, where the famous battle is supposed to have taken place.

The Pyrenean peasant still points out to the traveller places where the tradition of "Charlemagne and all his peerage" is still rife. The mighty cleft in the mountain, whose wall screens France from Spain, is called the Cleft of Roland, which he made with one stroke of his famous sword. On one of the snow-crowned rocks is still seen the print of the foot of the hippogriff, which monster, as Ariosto relates, alighted there with the hero, after having made a leap of fourteen leagues. At Roncesvalles, "that fatal field of glory," repose the twelve peers; and from the depth of a profound ravine, even now, we are told, may *at times* be heard the blast of

> —— that wild horn,
> O'er Fontarabia's vallies borne,

when it sounded for the last time from the lips of the unfortunate Paladin, who hoped, even to the latest moment, that his Emperor would hear the summons and be in time to save.

The castle of the giant Ferragus, who fought in single combat with Rolando, is still to be seen overlooking the storm-beaten rocks of Biaritz, and the name of the hill of *Atalaya* seems still to tell of its Moorish masters.

There is no want of legends in Béarn, for when the fairy mythology, which is abundant, ceases, Monkish wonders take their place. There is scarcely a ruined wall of what was once a monastery which has not a story attached to it; such as that of Marcignac, where the pious wife of Centule the Fourth, Prince of Béarn, retired, after her marriage with too near a relative was dissolved. The holy Gisla became abbess of the convent she had chosen, and the fame of her piety spread far abroad: a miracle at length confirmed the estimation in which she was held. The abbey was on fire, and the whole building was threatened with inevitable destruction; the nuns, however, had a chance of escape, but Gisla exhorted them to die martyrs to their vow of never quitting their sanctuary. Heaven saw the pious maidens kneeling at the altar, awaiting their fate, and the danger was turned away. The flames, which a moment before raged with fury, suddenly stopped and sunk, and the nuns and their abbess were saved. The son of Gisla became Lord of Béarn, and was a mighty warrior, besides founding cities and churches. He was brother in arms of that famous Sancho Ramirez who added to his escutcheon *five heads*, in memory of five Moorish kings whom he had killed.

Some time after this redoubted knight was no more, a curious scene occurred, very characteristic of the people and customs of Béarn. Their young Countess Marie had married a lord of Moncade, Baron of Catalonia, and was induced to agree to offer homage to the King of Aragon. This so much shocked the Béarnais, that they threw off their allegiance to her, and banished her from the kingdom. They now sought for a new chief, and twice were unfortunate in their choice; so that these independent patriots found it necessary to put both those persons to death. They then became puzzled what to do, and having a natural leaning to their old princess, resolved to despatch two wise lords of their country, to choose one of her infant sons, then in their cradle. When they arrived at the place they went to visit the children, whom they found asleep, one having his hands closed, the other open. After a little deliberation, they determined to accept for their chief the infant with the *open hands*, as they took it for a certain sign that he would be a liberal prince, as, indeed, it afterwards proved.

A descendant of this chief was a Gaston, who opposed Edward I., of England, and was thrown into prison by that terrible warrior, who revenged his defeat in Santonge, by fearful reprisals, and gave up the town of Orthez to his soldiers to pillage and destroy as they pleased. Gaston was obliged to agree to a composition with the English prince, and he was released from his dungeon in a castle in Gascony. An appeal to the King of France was agreed on, and when both were in presence of the suzerain, Gaston threw down his glove of defiance against the King of England, calling him a traitor and felon knight. Edward, starting forward, and commanding his people, who heard the charge with rage, to stand back, picked up the glove himself, and entreated that a single combat might be allowed between them. The King of France, however, opposed this, and the question of their dispute was decided by law—rather an unusual thing in those days.

M. Mazure relates all the anecdotes of the famous Gaston de Foix, which Froissart has furnished; amongst others, that which exhibits the strength of body of a celebrated man-at-arms of the period:—

It happened on Christmas Day that the Count de Foix held his court at Orthez: he dined in the hall with all his knights; after dinner they left the hall and came into a gallery, to reach which you mount a tower staircase of twenty-four steps, and in this gallery is a chimney, where it is the custom, when the count is there, to light a fire, but not otherwise; there was but a small fire made, for ordinarily he does not like to see much. Nevertheless, he is in a place to have good logs, for Béarn is all wood, and there is plenty to warm oneself with, if it is so desired, only with him a little fire is more usual. When he came into the gallery he looked at the fire, and said to the knights, "Look here, what a wretched fire for so cold a time!" Ernanton d'Espagne had seen in the court asses laden with wood; he instantly descended, took one of the asses on his shoulders, carried it up stairs, and placed it load and all on the hearth: at which the count, and all who were with him were greatly amused.

The scene is quite Homeric, and told with the earnest simplicity of the chronicler, who places the whole party *living* before the reader.

The magnificent Gaston Phœbus left no legitimate son, and dying suddenly of apoplexy, could not make such arrangements as secured to his natural sons a proper provision. Gratian, however, became a grandee of Spain, and was the origin of the family of Medina Celi. Ivain, his favourite, was one of those who perished at Paris in that fearful fête, when Charles VI. nearly lost his life, having made one of the dance of savages, whose hairy dresses took fire. Ivain de Foix's costume being too close to be got off, he was horribly burnt, and died in agonies.

There are some curious particulars in this volume respecting the ancient *Fors*, or laws of Béarn, which from early time protected, in the strictest manner, the rights of the people, and which no change of government has been able to alter. Every town and valley of Béarn had certain privileges, which these *Fors* confirmed; the Prince, powerful as he was, had no right to infringe the laws laid down by this charter, nor did he venture to attempt it but at peril of his life, as in the case of the two princes, who were put to death by their indignant subjects. In the charters of Gaston IV., the great legislator of Béarn, these words occur respecting the people: "they are free, they used their goods." Duels were not encouraged, but *allowed*, at this period; and it was enacted, that "if a man, knight (*caver*), or otherwise, accused another of

Digitized by Google

murder, or treason, they might combat, and the aggressor was forced to appear on the day fixed, to answer the accuser. If the aggressor was a man of common birth, he was only allowed to fight on foot, armed with a stick or club, and bearing a shield, the knight being on horseback, armed cap-à-pee. If the knight was the culprit he had only the right of the club, for it was an established rule, that the aggressor descended from his rank to that of the injured party. The lord had a right of fine on the unsuccessful combatant, or on him who failed to answer the challenge.

On occasion of an amendment in the laws, this phrase occurs, which is remarkable, and applicable to all periods: Gaston Phœbus speaks. "In the name of God it ought not to be thought strange that, as times alter, changes should be made in the statutes, when utility and necessity require it. For God, who is all wisdom, altered in the New Testament for the salvation of his faithful people, many things which he had ordained in the ancient law." Modern lawgivers could not express themselves more to the purpose.

Favyn's account of the birth of Henri IV. is given in full by M. Mazure, and is so characteristic, that we cannot resist reproducing it:—

The Princess of Navarre being near her term, took leave of her husband, and set out from Compeign the 15th of November. She crossed all France to the Pyrenees, and directed her steps to Pau, where her father, the King of Navarre, then was; she arrived in the town after eighteen days' journey. King Henry had made his will, which the Princess was very anxious to see, because it had been represented to her that it was to her disadvantage, and in favour of *a lady who governed* her father. For this cause, though she had tried every means to get a sight of it, it was a thing impossible, the more so, as, on her arrival, she had found the king ill, and dared not speak to him on the subject. But the coming of his *good girl*, as he called her, so delighted him, that it set him on his legs again. The Princess was endowed with a fine natural judgment, fostered by the reading of good books, to which she was much addicted; her humour was so lively that it was impossible to be dull where she was. One of the most learned and eloquent princesses of her time, she followed the steps of Marguerite, her mother, and was mistress of all the elegant accomplishments of the age. The King, who was aware of her wish respecting the will, told her she should have it when she had shown him her child; and, taking from his cabinet a great box, shut with a lock, the key of which he wore round his neck by a chain of gold, which encompassed it five and twenty or thirty times, he opened the box, and showed her the will. But he only showed it at a little distance, and then locked it up again, saying, "This box and its contents shall be yours: but in order that you may not produce me a crying girl or a puny creature, I promise to give you all, on condition, that while the infant is being born you sing a Gascon or Béarnais song, and I will be by." He had lodged his daughter in a room in the second story of his castle of Pau, and his chamber was immediately beneath; he had given her, to guard her, one of his old *valets de chambre*, Cotin, whom he commanded never to stir from the Princess, night nor day, to serve her in her chamber, and to come and tell him the instant she was taken ill, and to wake him if he was ever in so deep a sleep. Ten days after the Princess's arrival at Pau, between twelve and one o'clock at night, the day of St. Lucie, 13th of December, 1553, the king was called by Cotin, and hurried to her chamber; she heard him coming, and began immediately singing the canticle, which the Béarnais women repeat when lying in,—

Noustre Dame deou cap deou poun,
Adjoudat me à d'aqueste hore,

for at the end of every bridge in Gascony is an oratory, dedicated to the Virgin, called, *Our Lady at the end of the bridge*, and that over the Gave, which passes into Béarn from Jurançon, was famous for its miracles in favour of lying-in women. The King of Navarre went on with the canticle, and had no sooner finished it than the prince was born who now reigns over France. Then the good king, filled with great joy, put the chain of gold round the neck of the Princess and gave her the box containing the will, saying, "This is your property, and this is mine," at the same time taking the infant, which he wrapped in a piece of his robe and carried away to his chamber. The little prince came into the world without crying, and the first nourishment he took was from the hand of his grandfather, for having taken a clove of garlic he rubbed his little lips with it, then, in his golden cup he presented him wine, *at the smell of which the child, having lifted up his head*, he put a drop in his mouth, which he swallowed very well.* At which the good King, full of joy, exclaimed, before all the ladies and gentlemen in the room, "You will be a true Béarnais!" kissing him as he spoke.

When the father of Henry, Anthony of Bourbon, was informed by the Duchess de Montpensier of the plot formed to murder him, as the head of the Protestant party, a plot, whose victims, most of them, were sacrificed at a later period, he called his captain of the guards, and thinking his death certain, as he understood the King intended to stab him with his own hand, he spoke to him thus:—

"Renti," said he, "I am going to a place where my life is to be sacrificed: but never was skin sold so dear as I will sell them mine; if it please God, he will save me. Nevertheless, I charge you, by the fidelity which I have always proved in you, to render me this last service. If I die, take you my shirt, and carry it all bloody to my wife and my son, and conjure my wife, by the great love which she has always had for me, and by her duty, since my son is not yet of an age to revenge me, that she send my shirt, pierced and bloody as it is, to all foreign and Christian princes, that they may avenge my death."

This a singular picture of savage honour at so late a period, and a strange comment on the Christian and Protestant feeling of a

soul made of fire,
With whom revenge is virtue.

Anthony, however, was not murdered; that fate was reserved for his son!

The remarks of M. Mazure on the terrible slaughter of the civil wars, are judicious, and his details will be read with interest; and those on the races of the Pyrenees, namely, the mysterious *Cagots*, Bohemians, &c., are interesting, although no light is thrown on those puzzling subjects, which must always attract the attention of the curious. With respect to the race of Cagots, it is to be regretted that hitherto one author had merely followed another, content with combatting a former opinion, without examining for himself, and thus placing the subject in a new point of view. This void is, however, we are happy to find, about to be filled up through the perseverance and industrious zeal of M. Francisque Michel, Professor at Bordeaux, who has now in the press a work on the 'Accursed Races of France and Spain,' (i. e. the Cagots of the Pyrenees, Capots of Languedoc, Gahets of Guienne, Colleberts of Bas-Poitou, Caqueux of Brittany, Cacous of Le Mans, Marrons of Auvergne, Chuetas of Majorca, and Vaqueros of Asturia). M. Michel has devoted several years of diligent search and inquiry to this subject. Not content with examining all the printed works which bear on the subject, he has gone through all the archives to be found in the south-west of France, from the Pyrenees to Brittany inclusive; and all the north of Spain has been subjected to his investigations. The long-disputed question of these Parias of Europe will therefore, perhaps, at last be settled; at least no person is better qualified, from his extensive antiquarian knowledge, to determine it, than this indefatigable *savant*, to whom the literature of the Middle Ages owes so much.

To return, however, to M. Mazure. We shall close our notice with a popular song of Béarn, still sung in chorus in the mountains, and composed at the time when their prince, Henry II. D'Albret was taken prisoner, with Francis I., at the Battle of Pavia. It has all the tone of an old Moorish ballad:—

The Captivity of Francis I.

When the King, from France departing,
Other lands to conquer sought,
'Twas at Pavia he was taken,
By the wily Spaniard caught.

"Yield thee, yield thee straight, King Francis,
Death or prison is thy lot."
"Wherefore call you me King Francis?
Such a monarch know I not."

Then the Spaniard raised his mantle,
And beheld the Fleur de lys;
Then they chain him, and, full joyous,
Bear him to captivity.

In a tower where moon nor sunlight
Came but by a window small,
There he lay, and, as he gazes,
Sees a courier pass the wall.

"Courier, who art letters bringing,
Tell me what in France is said."
"Ah! my news is sad and heavy,
For the King is ta'en or dead!"

"Back with speed, oh courier, hasten,—
Haste to Paris back with speed:
To my wife and little children,
Bid them help me at my need;

Bid them coin new gold and silver,
All that Paris has to bring;
And send here a heap of treasure,
To redeem the captive King.

A Plea for National Holy-days. By Lord John Manners, M.P. Painter.

In this age of doubt and disquietude the nostrums for the cure of the body politic are as plentiful as those for the cure of the body physical—and the specifics are as widely different. In the one, indeed, may be found a type of the other, and we take Sir Andrew Agnew and Lord John Manners to be the moral representatives of the "Brandy and Salt" and the "Cold Water" omnipotencies. Sir Andrew, year after year, wearied and exhausted the patience of parliament to induce it to make men happy by making them uncomfortable. Lord John preaches a very different doctrine: and, without entering into particulars, or pointing out how exactly these moral doctors represent the old Puritan and Cavalier parties, we may say generally, that the Baronet's mission was a crusade against cheerfulness, whilst the Lord is for the diffusion and encouragement of it. They both indeed desire "a better observance" of Sunday, but they interpret "better" very differently. We, as is well known, take rank under the banners of Lord John; "a merry heart," said the wisest of men, "doeth good like a medicine."

Lord John Manners advocates the restoration of national holidays and recreations. Though he endeavours to keep clear of the question whether Sunday shall be treated as a holiday, it is obvious that his leaning is in that direction; and he revives, appropriately enough, our recollection of Charles the First's re-issue of his father's Declaration on the subject. Not less for its own merits, than as the sentiments of the only "martyr" which the English reformed Church has inrolled in its calendar, we shall quote here some portion of that document. The Declaration sets out by stating, "that the King had rebuked some Puritans and precise people" for meddling with "our good people for using their lawful recreations and honest exercises upon Sundayes and other holydayes, after the afternoon sermon or service,"—and that the rebuke had been misunderstood. It then recites—

—"the general complaint of our people, that they were barred from all lawful recreations and exercise upon the Sundayes, in the afternoon, after the ending of all divine service; which cannot but produce two evils—the one, the hindring of the conversion of many whom their priests will take occasion hereby to vex, perswading them that no honest mirth or recreation is lawful or tolerable in our religion, which cannot but breed a great discontentment in our

* The wine, tradition says, was the famous strong wine of Jurançon, considered excellent, and much sought after at the present day.

Digitized by Google

people's hearts, especially of such as are peradventure upon the point of turning; the other inconvenience is, that this prohibition barreth the common and meaner sort of people from using such exercises as may make their bodies more able for war, when we or our successors shall have occasion to use them; and in place thereof sets up filthy tipplings and drunkenness, and breeds a number of idle and discontented speeches in their alehouses. *For when shall the common people have leave to exercise, if not upon Sundayes and holy-dayes, seeing they must apply their labour and win their living in all working dayes?* * * And as for our good people's lawful recreation, our pleasure likewise is, that, after the end of divine service, our good people be not disturbed, letted, or discouraged from any lawful recreations, such as dancing, either men or women, archery for men, leaping, vaulting, or any other such harmless recreations; nor from having of May-games, Whitsonales, and Morris-dances, and the setting up of May-poles, and other sports therewith used, so as the same be had in due and convenient time, without impediment or neglect of divine service; and that women shall have leave to carry rushes to the church, for the decorating of it, according to their old custom. But, withal, we do here account still as prohibited, all unlawful games to be used upon Sundayes only, as bear and bull-baitings, interludes, and at all times, in the meaner sort of people, by law prohibited, bowling."

It would carry us far beyond our present purpose to attempt to trace the influences which, springing out of the Reformation, have been operating since that event, or to consider the new causes which have arisen to discourage those necessary recreations which the church of our ancestors found it good and wholesome policy to promote:—

"It has of late years been made frequently a source of complaint that the English people, who of yore were famous over all Europe for their love of manly sports and their sturdy good humour, have year after year been losing that cheerful character, and, contrariwise, been acquiring habits and thoughts of discontent and moroseness. It is true that, in towns, debating clubs, and reading rooms, and halls of science, and gin-shops have sprung up with a mushroom speed of growth; and many humane and good people imagine that a course of astronomy, or a lecture on geology, is all the recreation of mind or body that a man who works sixty hours a week requires."

The healthy disposition of all mankind is towards cheerful recreation, and this disposition would manifest itself as vigorously as ever, though perhaps in a different direction, as a national expression of feeling, if opportunities were afforded for its indulgence. We see strong evidence of this in our own day, in the increasing habit of frequenting our national monuments, the British Museum, the National Gallery, Hampton Court, &c. It is quite delightful to observe the growing interest which all classes take in Hampton Court,—a visit to which place, with its fresh air, its parks, its gardens, fountains, terraces, and out-of-door beauties, partakes particularly of the character of *recreation*. The official returns of visitors to Hampton Court, kept by order of the Commissioners of Woods and Forests, show that the numbers during the four years since the public have been admitted freely to that palace have increased above fifty per cent. The visitors are most numerous on Sundays, though the palace is only open during three hours in the afternoon. The average numbers on Sundays are one-third more than on Monday, nearly three times as many as on Tuesday, about four times the numbers of Wednesday and Thursday, and nine times those on Saturday. In the month of July last year, above 50,000 persons passed through the state apartments, and on Sunday, 17th July, 4,660 persons, being the greatest number on any one day except Whit-Monday. The total numbers for the last year nearly reached 180,000. By far the greater proportion of these visitors belong to the working classes, as they are emphatically called. They go in vans holding twenty and thirty persons, men, women, and children. Sometimes eighty of these vans may be counted on one day at Hampton Court. It is a custom for operatives working together to club weekly their pence and twopences for the purpose of raising a fund for these excursions. One or two musicians generally accompany each van, to enliven the journey, and to make music for the dances which go forward under the chesnuts in Bushy Park after the visit to the palace. The importance of throwing open this palace cannot, we believe, be overrated. Half a dozen such acts on the part of the clergy, with their cathedrals, and the aristocracy with their mansions, would do more to extinguish Chartism than anything else. In the opening of Hampton Court on a Sunday, we see the germ of regeneration for more satisfactory employment of that blessed day than that which Southey so truly describes in his 'Letters of Don Manuel Alvarez Espriella,' to which Lord John Manners alludes, but only quotes in part. As the book may possibly be unknown to many of our readers, we here reprint the passage:—

"What is the scene in England at this time? All public amusements are prohibited by the dæmon of Calvinism. The Savoyard, who goes about with his barrel-organ, dares not grind even a psalm-tune upon the sabbath. The old woman who sells apples at the corner of the street has been sent to prison for profanation of the Lord's-day, by the Society for the Suppression of Vice; the pastrycook, indeed, is permitted to keep his shop-window half open, because some of the society themselves are fond of iced-creams. Yonder goes a crowd to the Tabernacle, as dismally as if they were going to a funeral; the greater number are women;—inquire for their husbands at the alehouse, and you will find them besotting themselves there, because all amusements are prohibited as well as all labour, and they cannot lie down, like dogs, and sleep. Ascend a step higher in society,—the children are yawning, and the parents agree that the clock must be too slow, that they may accelerate supper and bed-time. In the highest ranks, indeed, there is little or no distinction of days, except that there is neither theatre nor opera for them, and some among them scruple at cards. Attempts have even been made to shut up the public ovens on this day, and convert the sabbath into a fast for the poor. And these are the people who ridicule Spanish gravity, and think they have reformed religion because they have divested it of all that is cheerful, all that is beautiful, and all that is inviting. Our peasantry have a never-failing source of amusement in the dance and the viola. Here the poor never dance; indeed, illegal dancing is a punishable crime, and if they do not dance illegally they cannot dance at all. This requires some explanation. Partly from custom, still more from the nature of the climate, there is no dancing here in the open air; the houses of the poor are too small for this diversion, they must therefore meet at some public house where there is a room large enough. The rich do this also; but dancing at a peso-duro a-head, and dancing at two reals, are very different things—the one is called a ball, the other a sixpenny hop. The rich may take care of their own morals, the police must look after the poor."

We join with Lord John Manners in recommending these passages to the attention of the Council on Education. His Lordship would have national holidays restored through the influence and under the direction of the Church. Be it so: all we desire is to get the holidays. But we fear that in these angry times, any recognition of national holidays must keep clear of Sectarianism, High Church, Low Church, or No Church. If holidays are to be restored as a Church measure, the Dissenter, we suppose, will take alarm and oppose them. We had rather that the question should stand on its own merits—the good that holidays will do to the health and morals of the people;—and if Church and Dissenting Chapel see fit to throw open their doors on those days, by all means let them do so. We can easily imagine a revival of the practice of frequenting places of public worship on holidays, if the places themselves, and the services belonging to them, were made as attractive as they might easily be. Even on days not holidays, see how people will flock to a performance of Purcell's or Tallis' service at Westminster Abbey. We recently had an opportunity of observing the great numbers that attended the daily services at St. George's Chapel, Windsor, where certainly the choir is under admirable discipline, and we shall watch, with some curiosity, the effect produced by the daily services which it is proposed to have at the Temple Church. But we are wandering from Lord John Manners's pamphlet, and must return to it by quoting some of the author's evidence on this point:—

"In several rural parishes where saints'-days services have been established, or revived, at hours most suited for the labouring population, a readiness has been shown to attend them; and we have abundant reason to hope that, were the observance of them encouraged, rather than discouraged, by modern laws and habits, not only would our churches be filled with humble worshippers, but the poor and needy would feel, in many little and unsuspected ways, far more than they can feel now, that the Church is indeed to them a mother—an endless well of comfort and consolation, running over with blessings, temporal and eternal, alike in the heats of Lammas or the snows of Christmas."

We might take some exceptions to the following, yet there is truth in it:—

"The country is flooded with money; capitalists have not known how to employ their capital; Spanish loans, American projections, railroads here, emigration there, mines in Mexico, opium in China; no matter what or where—this among private men: then in parliament, hundreds of thousands of pounds for printing blue-covered books, which one man in every hundred thousand looks at; a million for depriving the Basques of their liberty; untold millions for slaughtering the Affghans and the Chinese, because the former would not submit to our insolent dictation, and the latter to our invasion of their fiscal code: besides vast sums for sending out two ships with bottled air to the Niger, warming and lighting the House of Commons, &c. Surely any one, previously ignorant of the history of our times, reading this short list, would exclaim, 'How magnificent a nation! What sums must it not have spent in raising cathedrals and churches, colleges and hospitals! How stately must be its halls for the public amusement! How plentiful and umbrageous its public walks! How frequent and how joyous the holy-days of its people!"

His Lordship appears to us to answer successfully the objection that the people ought not to have holidays because they are not employed in the best way:—

"People seem to reason thus:—'The English labourer is the most industrious, hardworking, sober of his class in the world; he would not know what to do with a holy-day if you gave him one; and, industrious and sober as he is while working six days a week, only look at him when something extraordinary occurs to give him a holy-day time—an election, a new king, or a coming of age: he makes a beast of himself, and that clearly shows that he is better without a holy-day than with one.' Putting aside the shockingly low view of English nature, which people who think thus must entertain, I should argue from their own premises to a very different conclusion. If it is true that, at these occasional cessations from work, the English labourer breaks loose from propriety, is it not because he has been so long bound to one unvarying course of toil that he knows not rightly how to appreciate or use the unwonted holy-day! It would be as logical to argue against holy-days for school-boys, from their pea-shooting, and making faces at all the good folks they meet in their wild glee on their road home, as to conclude that because, as things now are, an election or a coronation produces a debauch, the fewer holy-days the people have, the better it is for their morals. Indeed, it is a strange contradiction to aver that the

Digitized by Google

English labourer is so steady and plodding that he does not want a holy-day; and then, that when he has one, he loses all his steadiness, and runs riot in dissipation. The truth is, as in many other matters, the abuse springs from the non-use. Once again accustom Englishmen to the manly games and ecclesiastical festivals of their forefathers, and the Frenchman or the Italian will no longer need to be held up to them as models of holy-day enjoyers."

The author adduces evidence from the Sanitary Report, proving the physical deterioration of the natives of Manchester, Birmingham, and Spitalfields, and he ascribes the evil in great part to the monstrous system of "all work and no play,"—and builds upon it a fair argument in favour of his plea. Another result from the observance of holidays would be—

—"the increased facilities offered thereby to the best of all education—the precepts, the converse, the love of parents. I am not blind to the merits of infant schools; but I may be allowed to lament the sad necessity that compels so many thousand parents to delegate to strangers a duty till of late years held to be peculiarly their own, and to think none the worse of any plan which should promote, rather than diminish (which too many of our modern philanthropical schemes do), parental authority and family intercourse."

Here, as elsewhere throughout the pamphlet, the author raises points for discussion, on which we cannot enter. Best, no doubt, of all education, is parental education, but this begs the question that the parent is sufficiently intelligent, or that his circumstances enable him, to give it. Our experience of the working classes inclines us to believe, with sorrow, that the infant school, on the whole, is a better place for the child than the unwarmed and unwatched cellar or garret of its parent, or the street, into which the children are not unusually sent during the parent's unavoidable absence.

Mediterranean Sketches. By Lord Francis Egerton. Murray.

Among our lettered aristocracy, the author of this volume has always held a high place, for refined taste and liberal accomplishment. He has, however, strength enough, to ruffle it in a republic of tourists and poets. As a traveller, he was content to take the good and the ill of the lands through which his wanderings led him, in a hearty, courageous, and genial spirit; and now he trusts his little volume to the finish of its verse and the unpretending vigour of its prose, rather than to beauty of illustration or extrinsic adornment, for its chance of a place on the library shelf.

A new record of wanderings in the East, entitled 'The Pilgrimage'—and written in the resonant nine-line stanza, can hardly fail to recall 'Childe Harold' to the reader's memory. Yet, save in their choice of scene and of metre, no two men can be less alike than the two noble wearers of the palmer's staff and scallop shell. Lord Byron grasped all the romance of the isles of Greece, with a force, which was felt throughout Europe: rarely has society been stirred by an enthusiasm so fervid. He knew and felt the passion of the East. By the side of the unfamiliar but life-like creatures his genius evoked, the Hafeds and Zelicas of other writers—yes, even when finished by the elaborately brilliant pencil of Moore—look but phantoms. Since the Childe's day, however, Poetry has gone forth on her wanderings in another disguise. She now wears the rosary of the Caloyer; not the dagger of the Corsair. For one traveller, who dreams of Lara and Gulnare—who sees Abydos and thinks of its Bride—and who murmurs to himself the all but Homeric muster of the spearmen and Chiefs at Tepaleen—there are now a hundred who lose themselves in dreams of the older world, as the poet (not Lord Francis) has expressed it:

Then onward, through the Holy land
My pilgrim path unwearying hold;
Where ancient prophets stood, to stand
—Mid ruin they foretold.
How pleasant, yet how strange to see
The fisher cast his net
Within the lake of Galilee;—
Or on Mount Olivet
To watch the setting sun-light gem
The old towers of Jerusalem.

To the class of contemplative, not passionate pilgrims, Lord Francis Egerton belongs. Yet he is anything but ascetic in his devout recollections, as the following stanzas will sufficiently indicate:—

Round yonder watch-fire's blaze the muleteers
In circle close.—The leader of the throng,
Fluent and fast, to never sated ears
The tale recites, or chants the Arab song,—
Wild stanzas, strange adventures. Loud and long
The applause resounds, as each invented sleight
Of magic art, or fate of Afrite strong
By Genii quelled in preternatural fight,
Fills as the story rolls each breast with fresh delight.

He little thinks, the tale he loves to tell,
Which cheats his willing comrades of their rest,
Through many a midnight hour defrauds as well,
In foreign garb and other language dressed,
Of slumber's boon the children of the West;
How many a sad or vacant mind the page,
With the same legendary lore impressed,
Has cheered, assuaged life's ills through every stage,
Given youth one smile the more, one wrinkle snatched from age.

For not alone beneath her palm-tree's shade,
Amid the nargile's ascending cloud,
Does Eastern fiction dwell, or Scherezade
Dispense her favours to the listening crowd.
All ranks, all nations at her shrine have bowed;
The pictured forms her lively pencil drew
Please in all climes alike; and statesmen proud
In grave debate have owned her lessons true,
Finding that ancient lamps sometimes excel the new.

Far other task meanwhile for me delays
The needful gift of well-earned sleep's repose;
The beam that from my tremulous cresset plays
Its light upon the sacred volume throws.
Oh! who in distant climes the rapture knows,
E'en on the spot of which the tale is told,
To mark where Tabor frowns or Jordan flows,
To feel at morn our steps shall print the mould
Where Gideon pitched his camp or Sisera's chariot rolled!

Such rapture ours, when, on Esdraelon's plain,
Tabor in front and Jezreel left behind,
By Kishon's source we pitched. Oh! ne'er again
Shall joys of power like these to fill the mind
Rise in the civilized haunts of human kind.
How went I forth to watch the shivering ray
On Carmel's crest; to hear upon the wind
The jackal's howl; or rippling sounds betray
Where Kishon's ancient stream rolled on to Acre's bay.

How, to our tents when morning's moisture clung,
Our memory turned to that oracular dew
From the full fleece which pious Gideon wrung!
'Twas here perchance that Israel's champion knew
The sign which spoke his high commission true;
Down yonder vale perhaps, by Kishon's ford,
Towards the slumbering heathen's camp he drew
His chosen hundreds, silent—till the sword
Flashed to the frightened skies, of Gideon and the Lord."

The prose notes to 'The Pilgrimage' are more available for extract, and we shall draw upon them for a couple of scenes—the first showing life among the Druses:—

"*Town of Hasbya.*—On our way to this destination, we descended into one of the most agreeable valleys I had seen, watered by a fine stream, and rich with mulberry groves and olives, which might vie in size with those of Ramla or Jerusalem. Leaving this, we ascended by a rocky and difficult road the narrow defile Hasbya. The town of that name occupies one of the most picturesque sites in Syria, suspended on high cliffs, and with the snows of Hermon above it at no great distance. Its population must amount to some thousands; and I had seen no buildings so respectable since Nablous. Our ascent lay on the other side, however, of the ravine, which became more narrow and precipitous as we mounted. It was a holiday; and as the Queen of England's reputation had preceded her, the inhabitants poured out in great numbers, and in their best dresses, to see her pass. It was the gayest scene I had witnessed in Syria. Some aged females went so far as to burn incense before her horse's nose, and others presented her with flowers. Our reception was very different from that of a poor Jew whom I had met a short time before, near the entrance to the defile. I was riding somewhat apart, and beyond the reach of an interpreter, when I met with what I considered a religious procession. It consisted of an old man mounted, a closed palanquin on a horse's back, and a troop of boys who were chanting a sort of chorus. The old man saluted me lowly as I passed, and I rode on returning his salute, somewhat puzzled. Don Quixote would unquestionably have charged, or at least have stopped the procession, and instituted a rigid inquiry into its objects. If so, his proceeding would have been for once justified by common sense and humanity, as well as chivalry; and if I had known myself what I afterwards learned, I should, perhaps, considering the age and strength of the offending parties, have acted Don Quixote on the occasion. The old man was a poor Jew transporting a sick wife from the interior to the coast; and the boys were a rabble of juvenile bigots,—whether Druse, Mahometan, or Christian, I cannot say,—who were persecuting him with some ribald song, which was afterwards, before he could reach Hasbya, improved into pelting and beating. This was one of the consequences of the Damascus story, which was now the universal theme of conversation."

"*Encampment above Hasbya.*—An hour's most precipitous ascent from Hasbya brought us to our promised Paradise. Its appearance was inviting. A magnificent tree afforded a shade for our largest tent, and more than one fine spring bubbled up at a few yards' distance. Our muleteers had kept their word so far, and were certainly not answerable for the persecution of the desert wind, which followed us even to this elevation. Its propinquity to the snow was demonstrated by the arrival the next day of a mule-load of that article, which, covered with a horse-cloth, afforded us a supply for our water and wine during our stay. All accounts concurred in describing the heat we here endured as without example for the season, and rare at this height in July or August. We were visited here by a Christian chief or prince, of very interesting appearance and handsome mild physiognomy, and, as I was told, of a family whose genealogy is counted back for many centuries. He was superbly mounted, and followed by one attendant and a beautiful greyhound of the long and silky eared breed, which we call Persian. Stripped of feudal authority by Mehemet Ali, he consoled himself with the sports of the field, which, as the Pacha's disarming measures had not been extended to this neighbourhood, he was still allowed to enjoy. He was just returned from a hunting expedition to the valley of the lake Houlé. He said that his horse had been positively forced back by the hot wind, and that in the night the party had been compelled by it to break up a bivouac, and regain the upper grounds with all speed. The conflux of natives to the Frank strangers' camp, though highly amusing, from the great richness and variety of the costume of the three sects which seem much mingled here, was at times oppressive. Besides the population of the neighbouring village, the parties from Hasbya, who came up and established themselves for the day to stare at us, were numerous, and comprised probably the whole beauty and fashion of that place. The race is a fine one, and there was no lack of the former commodity. One young woman, evidently, by the value of the jewellery she wore, a person of rank, was as lovely a young creature as eye could behold. She had walked up from Hasbya; but had met with some repulse in approaching Lady F.'s tent, and, not having the persevering impudence of many others, was mourning her hard fate apart when I heard of her case, and procured her the introduction she desired and deserved. The Druse young ladies behaved unfairly, pressing noisily and eagerly upon our privacy, but playing every trick of coquettes with their veils whenever we returned their fire. I found the best receipt at last was to sketch them, when they usually giggled and fell back. One, however, stood the shot, holding her horn on high, and seated like a queen on a throne of loose stones, one bare leg protruding from her drapery below, her silver bracelets shining in the sun, and her dark eyes still brighter flashing over the veil she held up—foolish woman!—to her pretty nose. Another Druse lady, who visited Lady F., consented, without difficulty, to disclose the mysteries of the horn, and, removing its veil, showed us the manner in which it was fastened and worn. This visitor, a handsome and stately woman, besides the silver bracelets and other ornaments of that metal commonly worn, wore jewellery and precious stones of some value."

The second picture is rather more after the manner of Salvator Rosa:—

"*A Whirlwind.*—Nothing could be more conve-

Digitized by Google

nient or refreshing than this place; but in the night a change came over the spirit of our dream. Various appearances in the heavens had betokened a sudden alteration in the unusually hot weather. As we were retiring to rest, a whirlwind suddenly came down the ravine with such violence, as soon to make it evident that our large tent could not long stand up against it. The affair, indeed, was so sudden that Lady F. had barely time to escape, and her maid was for some time buried in the ruin. One of our small tents was also blown down; and Dr. G., who was sleeping in it, suffered severely afterwards from the chill of the sudden exposure to a temperature of some 60 degrees less than that of Tiberias. Luckily but a few drops of rain accompanied this convulsion. Lady F. took refuge in a house in the village; and the loss of baggage was found in the morning limited to that of an old, but only bonnet, long reserved for state occasions, which had been blown over three fields, and was found unfit for further service. After a hard day's journey, however, this interruption of repose was any thing but refreshing. This rush of the mountain air into the rarefied medium below lasted for about three quarters of an hour, after which it subsided into a chilly but moderate breeze. The villagers were kind and active in their hospitality. We were now to cross one of the highest ridges of Libanus, which rose directly above us. The positive news here first reached us of an extensive insurrection, and that the country we had just left, Rashya, and Hasbya itself, were in open revolt. I was alarmed less from implicit belief in this or in any other report than on account of our muleteers, who I foresaw might leave us to return to their families at Rashya; as yet, however, they showed no symptom of such an intention. We climbed the ridge by a picturesque zigzag, amid some rain and mist, in less time than from the appearance I had expected. We had but one patch of snow of a few yards to cross; and however dangerous the sudden transition to such a climate, I enjoyed even the wet blast, which came like a breath from Scotland, and compelled me to coil my lowland plaid about me as though I were sporting in that country. I paid dearly afterwards for the luxury. We met one or two armed and mounted messengers as we advanced, and all the information we could collect confirmed the accounts of the insurrection. In the numerous large villages we passed, however, there was no unusual stir. The views we obtained from commanding points were very magnificent,—the ravines deep, and clothed with fine wood; but I have seen no scenery in Libanus which could bear comparison with that of European mountains. We passed the ruin of a very magnificent palace, formerly the residence of a Druse prince, who long divided the sovereignty of this country with the Emir Beschir, and at length fell in battle with his successful rival. Their neighbourhood was indeed too close for long endurance of simulated amity; for some two leagues further we found ourselves at the gate of Taak el Deen, the mountain palace of the Emir Beschir."

"*Taak el Deen.*—Descriptions of this nest of the old eagle of Libanus are numerous; and M. de Lamartine could hardly in his poetic prose exaggerate the singularity of its fantastic features of position and construction. Its picturesque beauty is somewhat diminished by the rounded forms of the hills, which rise behind and above it. In ordinary times I apprehend that a train of Frank travellers would hardly have been delayed at the Emir's gate; but on this occasion it was necessary to transmit our credentials to the Emir before it was opened to us, and some ten minutes elapsed. We were then admitted, and shown into a wing of the palace which is usually appropriated to travellers,—a small elevated court, with a circular fountain in the centre, into which open some half dozen rooms with unglazed and grated windows: these we soon furnished. We were informed that our dinner would be provided from the Emir's kitchen. It took some time to prepare, but when it arrived, both in quality and variety, gave us a very agreeable impression of Eastern cookery and hospitality. We found the temperature rather chilly, and one regular shower of rain fell before evening. I suspect that it was here, after enduring heat and fatigue without sensible inconvenience, I laid the foundation of an internal state of disease, which never left me till I escaped from a southern climate at Lyons. Our terrace commanded a view of the long outer court of the palace,—a busy scene of saddled and tethered horses, of messengers riding in and out, and occasionally small armed parties entered to swell the garrison. I suspect that the visit of an English party rather perplexed our entertainer at such a moment. He declined an interview for this evening; and I at one time had reason to think he intended to allow us to depart without one, which I should have regretted, but felt no claim to press for the honour. In the morning, however, he sent an attendant to show us over the palace. Our cicerone was very proud of some rooms which had been for a long time in progress under the superinspection of some Damascus artists. They were prettily decorated, reminding one a little of the Alhambra; but not, I think, improved by some fresco paintings representing subjects of the chase, which were here considered the triumph of art: a double-barrelled gun was pointed out to me in particular as a chef-d'œuvre; and they were really not ill executed by some Landseer of Damascus. One of the oddest ornaments was the face of a large clock painted in the ceiling, with the name of a London maker on it. We were conducted afterwards to the bath, kitchen, and bakery. The bath was gorgeous; the kitchen, with sixteen cooks at work, much resembled the large vaulted monastic kitchens to be seen in our colleges; and in the bakery we found many men and boys, baking flat barley loaves for the consumption of some 2000 individuals."

These passages, we think, will stimulate the reader to search the volume for companion pictures.

Ten Thousand Things relating to China. By W. B. Langdon, Esq. Chinese Collection, Hyde Park Corner.

This volume is designed for visitors to the magnificent collection of Chinese objects recently opened: it discusses the religion, government, literature, arts, and customs of the people of the Celestial Empire, in conjunction with those objects in the exhibition most closely connected with these several topics; and it would not be easy to find more information respecting China condensed into a smaller space, or presented in a more pleasing form. Though designed chiefly for visitors to the collection, the work contains much that will interest the general reader, and we shall select from it a few passages, the most characteristic of the peculiarities of the Chinese people. Our extracts must necessarily be miscellaneous, as the divisions of the work are determined by the arrangements of the exhibition.

The account of the Buddhistic creed, given as a comment on the representations of the three Buddhas, past, present, and future, is incomplete and partially inaccurate; but most writers on Buddhism might profitably imitate Cicero's honest confession, "Though I have translated the Timæus of Plato, I do not understand it;" and after having read countless treatises on Buddhism, we find it difficult to comprehend a religion whose chief lesson to its followers is "to do *nothing*, to think on *nothing*, and to live as much as possible on *nothing*," and whose four chief sects are divided according to the extent in which they understand this *nothing*. Those who are interested in observing how far the human mind, in ages the most distant, and in countries the most remote, has a tendency "to assume the same forms," and be distinguished by the same manners," will be amused to find that the Buddhist account of the Infernal Regions is similar to the celebrated treatise on the Geography of Hell, by Ægidius de Calumna, in the thirteenth century, and that the Chinese notions of Paradise are nearly the same as those of the Mohammedans, though the latter were unquestionably taken from the writings of the Syrian bishop Ephraim, commonly called "the Euphrates of the Church," who, on his part, borrowed largely from the Rabbinical traditions. It is also curious to find that the Chinese Buddhists are not indisposed to enlarge their Celestial hierarchy.

"No Sabbath is observed by the Chinese, nor is it intimated in their divisions of time. It will, however, be interesting to the Christian world to learn that by some of the Chinese our Saviour, *Ya-soo*, is ranked among the number of the gods; while all the better informed classes, consider Him as a just and perfect man. The Virgin (*Ma-le-ya*, or Maria) being placed by them in the same class."

The account of our Saviour, translated from the Chinese mythology, by the late Dr. Milne, is too long to be extracted, but we mention it because it will no doubt possess interest for a large class of readers. For the same reason we must pass over a strange tale, translated by Professor Kidd, illustrating the Chinese superstitions respecting a future state, and at the same time affording a fair specimen of the class of literature which is most popular in China; but the following verses, quoted in the tale, to illustrate the description of a storm, may be noticed for their picturesque merit.

"The winds increase the snow's coldness,
The snow's rapidity, the wind's fierceness,
The flowers of the willows scattered in the whirlwind,
The goose's feathers dancing in confusion;
The eternal order of the firmament disturbed,
The points of the horizon undistinguished,
The earth overspread—the heavens covered with blackness,
Nature's beauty utterly destroyed.
Scenes which a poet might delight to study,
But which cause the traveller to sigh for death."

It is interesting to find that the lotus lily is as great a favourite with the Chinese ladies as it was with the princesses of ancient Egypt (see *Athen.* No. 508): no higher compliment indeed can be paid to a belle of the Celestial Empire than to compare the impression of her little feet to the flowers of her favourite water-lily. Many anecdotes are related of the enduring love of the Chinese females.

"'There is only one heaven,' said a forlorn maiden, when her parents upbraided her for spending her days in sorrowful libations of salt tears at the tomb of her lover;—'and he was that heaven to me!' The deep well and flowing stream have often borne a melancholy witness to the indissoluble nature of female affection."

Some of the feats of the Chinese jugglers rival those which the Emperor Jehanghir has recorded in his Memoirs, and which European writers, with little respect for imperial veracity, have stigmatized as "falsehoods." Without at all denying that Jehanghir is a little inclined to enact the part of Baron Munchausen, we must confess that the following trick is nearly as difficult of explanation as any which he mentions.

"The following scene occurred in the drawing room of a foreign resident in Canton. Two jugglers were introduced before the company assembled; after going through a number of surprising feats of skill and agility, one of these men handed to the other a large china basin. This basin, after a few flourishes above his head, and being turned upside down to convince the spectators that it was empty, the exhibitor suddenly allowed it to fall, but caught it before it reached the floor. This movement brought him into a position resting upon his heels, the basin being now hidden from view by the folds of his garments. In that attitude he remained for a few seconds, with hands extended, but in no way touching the basin. With a sudden spring he stood upright, and displayed to the astonished spectators the basin filled to the brim with pure clear water, and two gold fishes swimming in their native element."

Gambling, according to the account of every traveller, seems to be universal in China. The lower orders are as fond of the game of *loto* as the people of the ancient Pharaohs (see *Athen.* No. 509), and quite as noisy in the game as the lazzaroni of Naples. Classical authority may be found for the following barbarous sports.

"Quails are trained for fighting, and also a species of cricket. Two of these insects are placed in a bowl together, and irritated by a straw, when they attack each other with great violence, though the combat does not usually end in the death of either, but in the retreat of one. Hundreds of dollars are staked on the result of these miniature conflicts, and large sums are often paid for victorious warriors. The gamesters fight them for *cakes*, but in their slang

Digitized by Google

dialect, each cake is understood to mean a certain sum of money."

Quail-fighting was as common in ancient Greece as ever cock-fighting was in England, and the scholiast on Aristophanes mentions that wagers were laid on battles between beetles and spiders. A more childish amusement may give some hints to our young friends:—

"Of out-door amusements, the most popular is kite-flying. In this the Chinese excel. They show their superiority as well in the curious construction of their kites, as in the height to which they make them mount. By means of round holes, supplied with vibrating cords, their kites are made to produce a loud humming noise, like that of a top. The ninth day of the ninth moon is a holiday especially devoted to this national pastime, on which day numbers may be seen repairing to the hills for the purpose of kite-flying, and after amusing themselves, they let them fly wherever the wind may carry them, and give their kites and cares at once to the wind."

The inhospitality of the Chinese to foreigners accidentally cast upon their shores has so often been made the theme of unmerited reproach, that we gladly lend our aid to give publicity to the following edict respecting shipwrecked foreigners, issued by the Emperor Keen Lung, in 1737.

"Along the whole extent of our coast, it continually happens that foreign ships and people are driven on shore by gales of wind. It is hereby ordered, that the Governors and Lieutenant-governors of provinces take the lead, and cause officers to be particularly attentive in affording compassion; that they employ the public money to bestow food and raiment on the sufferers, and to refit their ships: after which, that they cause their goods to be returned, and see that they are sent home to their own country. This is done to manifest the extremely tender feelings of my imperial mind towards men from remote regions. Take this order and command it to be an *everlasting law.* —Respect this."

As one of the principal circumstances which led to the late war was the anxiety of the imperial court to prevent the drain of bullion occasioned by the export of Sycee silver in exchange for opium, we shall extract the description given of this precious metal, and of its importance in the public transactions of the empire.

"The native sycee silver * is used by officers and soldiers, and in the payment of taxes, &c.; but in the markets, foreign coin (Spanish) is exchanged for copper money. Sycee silver is manufactured at the shops of native bankers. Suppose, for example, that the officers of the several departments and districts are wishing to pay over to the heads of the government the revenue arising from the land-tax, and the various duties on merchandise, to go to the bankers' shops, and obtain the amount in pure silver, making up to the bankers any deficiency there may be between it and the money they may bring. The bankers having paid over into the provincial treasury the money for the officers, bring back a receipt for proof of the same. Besides, those who have to pay the duties of salt, take the money to the bankers' who pay its equivalent in pure silver, at a rate of one or two per cent. below that arising from the land-tax. These banks have furnaces, in which the workmen place the silver to fuse it, and then pour it into clay moulds, and in this way it is formed into ingots, some of which are large and some small. After the metal is cold and hard, it is thrown out of the mould,—the ingot having upon it the date of a given year, of a given district, and perhaps also the kind of tax for which it was cast to pay, with the names of the workmen and the shop where it was cast. Then after it has been lodged in the provincial treasury, if found to be debased, inquiries can be made respecting it at the shop from which it came."

The account given of the marriage ceremonies among the Chinese does not add much to the information already published by Davis, Murray, and others: but the painting in the collection which the description illustrates (No. 1239 of the Catalogue) is full of interest, and gives a far more vivid notion of the gaiety and splendour with which bridal festivities are celebrated than mere words could convey.

Repeated visits and long examination are necessary to gain a knowledge of the details of this interesting and varied exhibition, and every repetition will be found more pleasant than the preceding visit. A curious illustration of a passage in Deuteronomy escaped our notice in our earlier visits, though it well deserves to be remarked. The Hebrews were enjoined to write the words of the Law, and particularly the profession of faith called *Shema*, "on the posts of their houses and on their gates." (Deut. vi. 9.) The Talmud directs that a *Mezuza*, containing the *Shema*, (that is, a slip of parchment containing Deut. vi. 4—9, called *Shema*, or "Hear," from the first word of the passage,) should be fastened to every door-post in the house, and this custom is rigidly observed by the devout Jews of the present day. In the same manner we find that the Chinese suspend choice maxims from their sacred books, written on silk or paper, or carved on wood, from the walls and pillars of their houses and temples. The saloon containing the collection is thus decorated, and several of the maxims are very creditable specimens of Chinese proverbial philosophy. A few will serve as examples.

"'As the scream of the eagle is heard when she has passed over, so a man's name remains after his death.'—'Following virtue is like ascending an eminence, pursuing vice is like rushing down a precipice.'—'Man perishes in the pursuit of wealth, as a bird meets with destruction in search of its food.'—'Petty distinctions are injurious to rectitude; quibbling words violate right reason.'—'Those who respect themselves will be honourable; but he who thinks lightly of himself, will be held cheap by the world.'—'Time flies like an arrow; days and months like a weaver's shuttle.'—'In making a candle we seek for light, in reading a book we seek for reason; light to illuminate a dark chamber; reason to enlighten man's heart.'—'Let every man sweep the snow from before his own door, and not trouble himself about the frost on his neighbour's tiles.'—'In security do not forget danger; in times of public tranquillity do not forget anarchy.'"

Those who wish to become acquainted with the usages of the Celestial Empire should visit this interesting collection repeatedly, for they will find useful instruction even in its minutest details.

Life in Mexico, during a Residence of Two Years in that Country. By Madame C—— de la B——. Part I.

[Second Notice.]

WE cannot better resume our extracts from this amusing book, than by another illustration of Mexican contrasts. The time of the sketch is Lent.

"Enter the Viga about five o'clock, when freshly watered, and the soldiers have taken their stand to prevent disturbance, and two long lines of carriages are to be seen going and returning, as far as the eye can reach, and hundreds of gay plebeians are assembled on the side-walks with flowers and fruit and *dulces* for sale, and innumerable equestrians in picturesque dresses, and with spirited horses, fill up the interval between the carriages, and the canoes are covering the canal, the Indians singing and dancing lazily as the boats steal along, and the whole under the blue and cloudless sky, and in that pure clear atmosphere; and could you only shut your eyes to the one disagreeable feature in the picture, the number of léperos busy in the exercise of their vocation, you would believe that Mexico must be the most flourishing, most enjoyable, and most peaceful place in the world, and, moreover, the wealthiest; not a republic, certainly, for there is no well-dressed *people*; hardly a connecting link between the blankets and the satins, the poppies and the diamonds. As for the carriages, many would not disgrace Hyde Park, though there are some that would send a shiver all along Bond Street; but the very contrast is amusing, and upon the whole, both as to horses and equipages, there is much more to admire than to criticise.....There, for example, is the handsome carriage of the rich ——, who has one of the finest houses in Mexico; his wife wears a velvet turban, twisted with large pearls, and has at this moment a cigar in her mouth. She is not pretty, but her jewels are superb. How he made his fortune, partly by gambling, and partly by even less honourable means, let some abler chronicler relate. Or look at this elegant *carratela*, with its glass sides all opened, giving to view a constellation of fair ones, and drawn by handsome gray *frisones*. These ladies are remarkable as having a more European air than most others, brighter colours, longer and simpler dresses, and Paris bonnets. Perhaps they have been in Europe. It is remarkable that the horses of the gentlemen all appear peculiarly unmanageable every time they pass this carriage. Another handsome, plain carriage, containing the family of one of the ministers; mother and daughters all beautiful, with Spanish eyes, and dark glowing complexions, followed close by a hackney coach, containing women with rebosos, and little children with their faces and fingers all bedaubed with candy.....Some of the coachmen and footmen wear Mexican dresses, and others have liveries.....But here come three carriages *en suite*, all with the same crimson and gold livery, all luxurious, and all drawn by handsome white horses. Is it the President? Certainly not; it is too ostentatious. Even royalty goes in simpler guise, when it condescends to mingle in the amusements of its subjects. In the first carriage appear the great man himself and his consort, rather withdrawing from the plebeian gaze. There is here much crimson and gold, much glass and well-stuffed cushions, much comfort and magnificence combined. Two handsome northern steeds, white and prancing, draw this commodious equipage. The next is a splendid coach, containing the children and servants, while in the third, equally magnificent, are the babies and nurses. By the side of the first carriage rides an elderly gentleman, who, were his seat firmer, might be mistaken for a *picador*. He wears a rich Mexican dress, all covered with gold embroidery; his hat with gold rolls is stuck jauntily on one side, contrasting oddly enough with his uneasy expression of countenance, probably caused by the inward trepidation of which he cannot wholly repress the outward sign while managing his high-bred steed, and with his feet pressing his silver stirrups, cautiously touching him with a whip which has a large diamond in the handle. But the chief wonder of his equipment, and that which has procured him such a retinue of little ragged and shouting boys, is his saddle. This extraordinary piece of furniture, which cost the owner five thousand dollars, is entirely covered with velvet, richly embossed in massive gold: he sometimes appears with another, inlaid with pure silver. His whole appearance is the most singular imaginable, and the perturbation of spirit in which he must return when it begins to grow dusk, and he reflects at once upon his own value, and his countrymen's taste for appropriation, must balance the enjoyment which his vanity receives from the admiration of the little boys in the Paséo. Just as these millionaires pass by, an old hackney-coach, in their wake, attracts our attention, exactly the sort of quaint old vehicle in which it sometimes pleases Lady Morgan to introduce her heroines. In it are six figures, closely masked, their faces covered with shawls. After many conjectures, it is impossible to guess whether they are men or women. It *was* impossible, but as the carriages return, the wind suddenly blows aside the shawls of two of the party, and discloses the gowns and hoods of the—friars!"

Morning callers in Mexico are sometimes treated to strange sights, especially at the aforesaid penitential season.

"I paid a visit the other day which merits to be recorded. It was to the rich Señora ——, whose first visit I had not yet returned. She was at home, and I was shown into a very large drawing-room, where, to my surprise, I found the lamps, mirrors, &c., covered with black crape, as in cases of mourning here. I concluded that some one of the family was dead, and that I had made a very ill-timed first visit. However I sat down, when my eyes were instantly attracted by something awful, placed directly

* The term se-sze or "*floss silk*," is applied to the standard silver, as denoting its fineness and purity, from whence comes the word *sycee*.

Digitized by Google

in front of the sofa where I sat. There were six chairs ranged together, and on these lay stretched out a figure, apparently a dead body, about six feet long, enveloped in black cloth, the feet alone visible from their pushing up the cloth. Oh, horror! Here I sat, my eyes fixed upon this mysterious apparition, and lost in conjecture as to whose body it might be. The master of the house? He was very tall, and being in bad health might have died suddenly. My being received argued nothing against this, since the first nine days after a death, the house is invariably crowded with friends and acquaintances, and the widow, or orphan, or childless mother, must receive the condolences of all and sundry, in the midst of her first bitter sorrow. There seems to be no idea of grief wishing for solitude. Pending these reflections, I sat uneasily, feeling or fancying a heavy air in the apartment, and wishing most sincerely that some living person would enter. I thought even of slipping away, but feared to give offence, and in fact began to grow so nervous, that when the Señora de —— entered, at length, I started up as if I had heard a pistol. She wore a coloured muslin gown and a blue shawl; no signs of mourning. After the usual complimentary preface, I asked particularly after her husband, keeping a side glance on the mysterious figure. He was pretty well. Her family? Just recovered from the small-pox, after being severely ill. 'Not dangerouly?' said I, hesitatingly, thinking she might have a tall son, and that she alluded to the recovery of the others. 'No;' buther sister's children had been alarmingly ill. 'Not lost any, I hope?' 'None.' Well, so taken up was I, that conversation flagged, and I answered and asked questions at random, until, at last, I happened to ask the lady if she were going to the country soon. 'Not to remain. But to-morrow we are going to convey a *Santo Cristo* (a figure of the Crucifixion) there, which has just been made for the chapel;' glancing towards the figure; 'for which reason this room is, as you see, hung with black.' I never felt so relieved in my life, and thought of the Mysteries of Udolpho."

Among the "lions" of the capital, we last week omitted to mention the Chinampas, or floating gardens, which have now ceased to float, being "fixed to the mainland in the marshy grounds lying between the two great lakes of Chalco and Tezcuco." Fruit and vegetables and flowers are, however, still grown upon them, as in the days of the nomadic Aztecs, by whom their wicker-work foundations were woven together; and plenteous is the tribute they yield to the churches during the ceremonies of the Holy Week, so brilliantly described by Madame Calderon, that it grieves us to pass them over. But we promised a glimpse of life in the *haciendas*, and our friends, therefore, will be pleased to fancy May come, with the freshening rains which mark that month in Mexico, and Madame Calderon issuing from her palace at five A.M. in a travelling carriage, which had been once the property of Charles Dix.

"In this carriage, drawn by six strong horses, with two first-rate coachmen, and several outriders well armed, we went along at great speed. The drivers, dressed Mexican fashion, with all their accoutrements smart and new, looked very picturesque. Jackets and trowsers of deerskin, the jackets embroidered in green, with hanging silver buttons, the trowsers were also embroidered, and slit up the side of the leg, trimmed with silver buttons, and showing an under pair of unbleached linen; these, with the postilions' boots, and great hats with gold rolls, form a dress which would *faire fureur*, if some adventurous Mexican would venture to display it on the streets of London."

The aspect of the country is dreary; there are few houses, and trees are still more scarce. The roads are not worthy of the name; and the company to be met with is such as to make armed outriders needful to a travelling Ambassadress.

"The first village we saw was Santa Clara, to our left, lying at the foot of some dark hills, with its white church and flat-roofed or no-roofed houses. There being no shade, frequently not a tree for leagues, the sun and dust were disagreeable, and became more so as the day advanced. Here it came to pass, that, travelling rapidly over these hot and dusty plains, the wheels of the carriage began to smoke. No house was in sight—no water within ken. It was a case of difficulty; when sudddenly —— recollected that not far from thence was an old rancho, a deserted farmhouse, at present occupied by robbers; and having ordered the coachman to drive to within a few hundred yards of this house, he sent a servant on horseback with a *medio* (fourpence) to bring some water, which was treating the robbers like honourable men. The man galloped off, and shortly returned with a can full of water, which he carried back when the fire was extinguished. Meanwhile we examined, as well as we could, the external appearance of the robbers' domicile, which was an old half-ruined house, standing alone on the plain, with no tree near it. Several men with guns were walking up and down before the house—sporting-looking characters, but rather dirty—apparently either waiting for some expected *game*, or going in search of it. Women, with rebosos, were carrying water, and walking amongst them. There were also a number of dogs. The well-armed men who accompanied us, and the name of ——, so well known in these parts, that once when his carriage was surrounded by robbers, he merely mentioned who he was, and they retreated with many apologies for their mistake, precluded all danger of an attack; but woe to the solitary horseman or unescorted carriage that may pass thereby! Nor, indeed, are they always in the same mood; for Señor ——'s houses have been frequently attacked in his absence, and his hacienda at Santiago once stood a regular siege, the robbers being at length repulsed by the bravery of his servants. We set off again *au grand galop*, drivers and outriders giving, from time to time, the most extraordinary shrieks to encourage the horses and to amuse themselves, wild and shrill enough to frighten any civilized quadruped. The road grew more picturesque as we advanced, and at length our attention was arrested by the sight of the two great pyramids, which rise to the east of the town of San Juan Teotihuacan, which are mentioned by Humboldt, and have excited the curiosity and attention of every succeeding traveller."

At the posada of St. Juan, a pretty village where the party halted, they were treated with rancid sheep's milk, cheese, and flinty biscuits. A figure encountered shortly after this wretched repast stands out in droll relief from a picture of such discomfort.

"Soon after leaving San Juan we were met by the Señora de ——, in an open carriage, coming with her children to meet us: and though she had travelled since sunrise from her hacienda, she appeared as if freshly dressed for an evening party; her dress, amber-coloured crape, trimmed with white blonde, short sleeves and *décoltée*; a set of beautiful Neapolitan strawberry-coral, set in gold, straw-coloured satin shoes, and a little China crape shawl, embroidered in bright flowers; her hair dressed and uncovered. We stopped at their hacienda of Sopayuca, an old house standing solitarily in the midst of great fields of maguey. It has a small deserted garden adjoining, amongst whose tangled bushes a pretty little tame deer was playing, with its half-startled look and full wild eye. We found an excellent breakfast prepared, and here, for the first time, I conceived the possibility of not disliking *pulque*. We visited the large buildings where it is kept, and found it rather refreshing, with a sweet taste, and a creamy froth upon it, and with a much less decided odour than that which is sold in Mexico. This hacienda is under the charge of an administrador, to whom —— pays a large annual sum, and whose place is by no means a sinecure, as he lives in perpetual danger from robbers. He is captain of a troop of soldiers, and as his life has been spent in 'persecuting robbers,' he is an object of intense hatred to that free and independent body, and has some thoughts of removing to another part of the country, where he may be more tranquil. He gave us a terrible account of these night attacks, of the ineffectual protection afforded him by the government, and of the nearly insuperable difficulties thrown in the way of any attempt to bring these men to justice. He lately told the president that he had some thoughts of joining the robbers himself, as they were the only persons in the Republic protected by government. The president, however, is not to blame in this matter. He has used every endeavour to check these abuses; and difficulties have been thrown in his way from very unexpected sources."

The want of keeping in the Señora's strawberry coral ornaments, worn by way of travelling appendages in such a country, is not one of the least inconsistencies noted by Madame Calderon. Arrived at the *hacienda*, the Señora gave her guests a ball, at which all the people of the establishment assisted. A bull fight, too, was got up for the ambassador's diversion.

"In the afternoon, we all rode to the Plaza de Toros. The evening was cool, and our horses good, the road pretty and shady, and the plaza itself a most picturesque enclosure, surrounded by lofty trees. Chairs were placed for us on a raised platform; and the bright green of the trees, the flashing dresses of the *toreadors*, the roaring of the fierce bulls, the spirited horses, the music and the cries; the Indians shouting from the trees up which they had climbed; all formed a scene of savage grandeur, which, for a short time, at least, is interesting."

We must now have a paragraph touching the provincial toilette of the Mexican ladies.

"We met to-day the prettiest little ranchera, a farmer's wife or daughter, riding in front of a *mozo* on the same horse, their usual mode, dressed in a short embroidered muslin petticoat, white satin shoes, a pearl necklace, and earrings, a reboso, and a large round straw hat. The ladies sit their horse on a contrary side to our fashion. They have generally adopted English saddles, but the farmers' wives frequently sit in a sort of chair, which they find much more commodious. Some country ladies, who attended mass in the chapel this morning, were dressed in very short clear white muslin gowns, very much starched, and so disposed as to show the underpetticoats, also stiffly starched, and trimmed with lace; their shoes coloured satin. Considered as a costume of their own, I begin to think it rather pretty. The oldest women here or in Mexico never wear caps; nothing but their own gray hair, sometimes cut short, sometimes turned up with a comb, and not unusually tied behind in a pigtail. There is no attempt to conceal the ravages of time."

It struck Madame Calderon that the anxiety of "the sex" to get married, and the opprobrium attached to spinsterhood, is less in Mexico than in any other country. Yet sad are the expedients resorted to for the disposal of superfluous daughters, as we shall presently see. In the mean time an excursion to one of the far-famed mines claims our attention.

"Rose in Guasco at four o'clock; dressed by candle-light, took chocolate, and set off for Real del Monte. After we had travelled a few leagues, tolerably cold, we rejoiced when the sun rose, and dispelling the mist, threw his cheerful light over mountain and wood. The trees looked green and refreshed after their last night's bath; the very rocks were sparkling with silver. The morning was perfectly brilliant, and every leaf and flower was glittering with the rain-drops not yet dried. The carriage ascended slowly the road cut through the mountains by the English company; a fine and useful enterprise; the first broad and smooth road I have seen as yet in the republic. Until it was made, hundreds of mules daily conveyed the ore from the mines over a dangerous mountain-path, to the hacienda of Regla, a distance of six or seven leagues. We overtook waggons conveying timber to the mines of Real, nine thousand feet above the level of the sea. The scenery was magnificent. On one side mountains covered with oak and pine, and carpeted by the brightest-coloured flowers; goats climbing up the perpendicular rocks, and looking down upon us from their vantage ground; fresh clear rivulets, flinging themselves from rock to rock, and here and there little Indian huts perched amongst the cliffs; on the other, the deep valley with its bending forests and gushing river; while far above, we caught a glimpse of Real itself, with its sloping roofs and large church, standing in the very midst of forests and mountains. We began to see people with fair hair and blue eyes; and one individual with a shock of fiery red hair and an undeniable Scotch twang, I felt the greatest inclination to claim as a countryman. The Indians here looked cleaner than those in or near Mexico, and

Digitized by Google

were not more than half naked. The whole country here, as well as the mines, formerly belonged to the Count de Regla, who was so wealthy, that when his son, the present Count, was christened, the whole party walked from his house to the church, upon ingots of silver. The Countess having quarrelled with the Vice-Queen, sent her, in token of reconciliation, a white satin slipper, entirely covered with large diamonds. The Count invited the King of Spain to visit his Mexican territories, assuring him that the hoofs of his Majesty's horse should touch nothing but solid silver from Vera Cruz to the capital. This might be a bravado; but a more certain proof of his wealth exists in the fact, that he caused two ships of the line, of the largest size, to be constructed in Havana at his expense, made of mahogany and cedar, and presented them to the King. The present Count was, as I already told you, married to the beautiful daughter of the *Güera Rodriguez*. * * After breakfast, we went out to visit the mines, and it was curious to see English children, clean and pretty, with their white hair and rosy cheeks, and neat straw bonnets, mingled with the little copper-coloured Indians. We visited all the different works; the apparatus for sawing, the turning-lathe, foundery, &c.; but I regretted to find that we could not descend into the mines. We went to the mouth of the shaft called the Dolores, which has a narrow opening, and is entered by perpendicular ladders. The men go down with conical caps on their heads, in which is stuck a lighted tallow-candle. In the great shaft, called Terreros, they descend, by means of these ladders, to the depth of a thousand feet, there being platforms at certain distances, on which they can rest. We were obliged to content ourselves with seeing them go down, and with viewing and admiring all the great works which English energy has established here; the various steam-engines, the buildings for the separation and washing of the ore; the great stores, workshops, offices, &c. Nearly all the workmen are British, and of these the Scotch are preferred. Most of the miners are Indians, who work in companies, and receive in payment the eighth part of the proceeds. The director gave us some specimens of silver from the great heaps where they lie, sparkling like genii's treasure. * * We were obliged to leave Real about two o'clock, having a long journey to perform before night, as we had the intention of returning to sleep at Tepenacasco. We took leave of our hospitable entertainers, and again resumed our journey over these fine roads, many parts of which are blasted from the great rocks of porphyry; and as we looked back at the picturesque colony glistening in the sun, could hardly believe the prophecies of our more experienced drivers, that a storm was brewing in the sky, which would burst forth before evening. We were determined not to believe it, as it was impossible to pass by the famous hacienda and ravine of Regla without paying them at least a short visit. This stupendous work of the Mexican miners in former days, is some leagues to the south of Real del Monte, and is said to have cost many millions of dollars. One should view it as we did, in a thunderstorm, for it has an air of vastness and desolation, and at the same time of grandeur, that shows well amidst a war of the elements. Down in a steep barranca, encircled by basaltic cliffs, it lies; a mighty pile of building, which seems as if it might have been constructed by some philosophical giant or necromancer;—so that one is not prepared to find there an English director and his wife, and the unpoetic comforts of roast mutton and potatoes! All is on a gigantic scale: the immense vaulted storehouses for the silver ore; the great smelting-furnaces and covered buildings where we saw the process of amalgamation going on; the water-wheels; in short, all the necessary machinery for the smelting and amalgamation of the metal. We walked to see the great cascade, with its rows of basaltic columns, and found a seat on a piece of broken pillar beside the rushing river, where we had a fine view of the lofty cliffs, covered with the wildest and most luxuriant vegetation: vines trailing themselves over every broken shaft; moss creeping over the huge disjointed masses of rock; and trees overhanging the precipitous ravine. The columns look as if they might have been the work of those who, on the plains of Shinar, began to build the city, and the 'tower whose top was to reach to heaven."

We had marked several passages illustrative of morals in Mexico—the insecurity of property—the respective position of the sexes—the distribution of intellectual cultivation—and other such topics; but, on consideration, we prefer the descriptive passages, more especially as another section of the book is still to come, on the arrival of which we may be statistical, economical, or philosophical, if need be. Let us, then, make room for one other picture. We have already hinted at the ways and means by which unmarried daughters may be provided for, but shall now raise the curtain higher.

"Some days ago, having received a message from *my nun* that a girl was about to take the veil in her convent, I went there about six o'clock, and knowing that the church on these occasions is apt to be crowded to suffocation, I proceeded to the *reja*, and speaking to an invisible within, requested to know in what part of the church I could have a place. Upon which a voice replied—'Hermanita (my sister), I am rejoiced to see you. You shall have a place beside the godmother.' 'Many thanks, Hermanita. Which way shall I go?' *Voice.*—'You shall go through the sacristy. José Maria!' José Maria, a thin, pale, lank individual, with hollow cheeks, who was standing near like a page in waiting, sprang forward—*Madrecita*, I am here!' *Voice.*—'José Maria—That lady is the Señora de C——n. You will conduct her excellency to the front of the grating, and give her a chair.' After I had thanked the *voice* for her kindness in attending to me on a day when she was so much occupied with other affairs, the obsequious José Maria led the way, and I followed him through the sacristy into the church, where there were already a few kneeling figures; and thence into the railed-off enclosure destined for the relatives of the future nun, where I was permitted to sit down in a comfortable velvet chair. I had been there but a little while when the aforesaid José Maria reappeared, picking his steps as if he were walking upon eggs in a sick room. He brought me a message from the Madre —— that the nun had arrived, and that the Madrecita wished to know if I should like to give her an embrace before the ceremony began. I therefore followed my guide back into the sacristy, where the future nun was seated beside her godmother, and in the midst of her friends and relations, about thirty in all. She was arrayed in pale blue satin, with diamonds, pearls and a crown of flowers. She was literally smothered in blonde and jewels; and her face was flushed, as well it might be, for she had passed the day in taking leave of her friends at a fête they had given her, and had then, according to custom, been paraded through the town in all her finery. And now her last hour was at hand. When I came in, she rose and embraced me with as much cordiality as if we had known each other for years. Beside her sat the Madrina, also in white satin and jewels; all the relations being likewise decked out in their finest array. The nun kept laughing every now and then in the most unnatural and hysterical manner, as I thought, apparently to impress us with the conviction of her perfect happiness: for it is a great point of honour amongst girls similarly situated to look as cheerful and gay as possible. * * This girl was very young, but by no means pretty; on the contrary, rather *disgraciée par la nature*; and perhaps a knowledge of her own want of attractions may have caused the world to have few charms for her. But José Maria cut short my train of reflections, by requesting me to return to my seat before the crowd arrived, which I did forthwith. Shortly after, the church-doors were thrown open, and a crowd burst in, every one struggling to obtain the best seat. Musicians entered, carrying desks and music-books, and placed themselves in two rows, on either side of the enclosure where I was. Then the organ struck up its solemn psalmody, and was followed by the gay music of the band. Rockets were let off outside the church, and, at the same time, the Madrina and all the relations entered and knelt down in front of the grating which looks into the convent, but before which hung a dismal black curtain. I left my chair and knelt down beside the godmother. Suddenly the curtain was withdrawn, and the picturesque beauty of the scene within baffles all description. Beside the altar which was in a blaze of light, was a perfect mass of crimson and gold drapery; the walls, the antique chairs, the table before which the priests sat, all hung with the same splendid material. The Bishop wore his superb mitre and robes of crimson and gold; the attendant priests also glittering in crimson and gold embroidery. In contrast to these five-and-twenty figures, entirely robed in black from head to foot, were ranged on each side of the room prostrate, their faces touching the ground, and in their hands immense lighted tapers. On the foreground was spread a purple carpet bordered round with a garland of freshly gathered flowers, roses and carnations and heliotrope, the only things that looked real and living, in the whole scene; and in the middle of this knelt the novice, still arrayed in her blue satin, white lace veil and jewels, and also with a great lighted taper in her hand. The black nuns then rose and sang a hymn, every now and then falling on their faces and touching the floor with their foreheads. The whole looked like an incantation, or a scene in Robert le Diable. The novice was then raised from the ground and led to the feet of the Bishop, who examined her as to her vocation, and gave her his blessing, and once more the black curtain fell between us and them. In the *second act*, she was lying prostrate on the floor, disrobed of her profane dress, and covered over with a black cloth, while the black figures kneeling round her chanted a hymn. She was now dead to the world. The sunbeams had faded away, as if they would not look upon the scene, and all the light was concentrated in one great mass upon the convent group. Again she was raised. All the blood had rushed into her face, and her attempt at a smile was truly painful. She then knelt before the Bishop and received the benediction, with the sign of the cross, from a white hand with the pastoral ring. She then went round alone to embrace all the dark phantoms as they stood motionless, and as each dark shadow clasped her in its arms, it seemed like the dead welcoming a new arrival to the shades. * * When the sermon was concluded, the music again struck up—the heroine of the day came forward, and stood before the grating to take her last look of this wicked world. Down fell the black curtain. Up rose the relations, and I accompanied them into the sacristy. Here they coolly lighted their cigars, and very philosophically discoursed upon the exceeding good fortune of the new-made nun, and on her evident delight and satisfaction with her own situation. As we did not follow her behind the scenes, I could not give my opinion on this point. Shortly after, one of the gentlemen civilly led me to my carriage, and *so it was*."

Other pageants of a like character were witnessed by Madame Calderon. Her rank, too, enabled her to gain access into some of the stricter convents, where are exercised those practices of self-torture and maceration which we had hoped were obsolete. She even, we believe, bore to be present at a *flagellation*, for an account of this, however, the curious must wait till the remainder of her journals is given to the public. Such scenes and incidents are very dark shadows to the life of balls, frolics, and tertulias, which our authoress describes so gaily, but they add a reality to her picture of Mexico. For this it is, that we have been so much pleased with her book, and shall so cordially welcome the second part.

Life Assurance and Annuity Tables. By Edward Sang. Edinburgh, Ballantyne & Hughes.

It is not often that we have to attract the notice of our readers to a work which costs ten guineas, under the name of a *cheap book*: but we must do so in the present instance, as will sufficiently appear.

Mr. Sang was an engineer and actuary at Edinburgh, and is now located at Manchester. The tables before us were computed and printed in the former city, and have been published about a year. Like most works printed for the author, they have not been sufficiently advertised; we only heard of their existence a few days ago. They are constructed upon the Carlisle table, which is daily becoming more and more the standard for the life of the middle and higher classes in England, and their rate of interest is 3 per cent., which all prudent offices adopt, when their tables of mortality are taken in absolute accordance with observed facts.

Digitized by Google

This enormous mass of tables contains the value of every annuity of 1*l.* which can be proposed, long or short, immediate or deferred—the present value of every assurance of 1*l.* which can be proposed, in like manner—the value of every policy of 1*l.*, whatever may be the age at its commencement, and during whatever period it may have lasted—the risk during each year of every policy—the value of increasing annuities—a collection of rates of premium, increasing and decreasing, for assurances—with premiums for deferred annuities, endowments, annuities enjoyed with assurances,—and various other matters. The number of what would be called separate tables, that is, which would require different headings to describe them, is stated at nearly 1500: the price, therefore, is not twopence a table, one with another.

This is the first work of the kind in which *every result has its logarithm by its side*, so that even the little which is left to the computer is materially facilitated. Mr. Sang has also given a table of logarithms *and of antilogarithms*, all to five figures. These we do not much care about: we would rather use a duodecimo table than Mr. Sang's folio, on this one point. Neither do we see the use of always employing a comma turned the wrong way for the decimal point: but these are small matters. When we see so enormous an undertaking carried into effect by the labour and at the cost of an individual, we are naturally led to fear that he will be a considerable loser. Mr. Sang has given an account of the means used by him to insure accuracy, both in computing and printing, which would meet with the approbation even of the Nautical Almanac office. He ought, we think, to obtain the support of the Assurance Offices, most of whom would find his work very useful. We do not say that they should, for some time to come, trust these tables implicitly: but they know the value of a check on calculations; and with so reasonable a prospect of ultimately finding a work of authority, on which they may rely without verification, accompanied by a check on the office calculations in the mean time, there is every ground to suppose that these tables are well worth the money. The preliminary explanations point out various modes of extending their use: the knowledge of a practised actuary will suggest a great many more. But, independently of the offices, there are many individuals who interest themselves in these matters, whom we heartily recommend to give these tables a trial, feeling satisfied that they will thereby add a hundred fold to their power of producing results. We take our leave of this very energetic effort of private labour and private risk with our best wishes for its success.

OUR LIBRARY TABLE.

Blaydes's Birds of Aristophanes.—A critical edition of the comedy of the 'Birds,' correct in the text, learned in the notes, and judicious in its elucidation of difficulties. We should have been better pleased if the editor had shown himself more alive to the fun of his author: grave disquisitions on jokes should be abandoned to the German commentators, for the laugh is worth little, to which we are led by logic.

Willich's Tithe Commutation Tables for 1843.—The useful character of these Tables has been heretofore described to our readers. The present supplement contains in addition the decennial fluctuations in the price of wheat, from 1646 to 1842, with decennial averages.

Cabinet Shakspere.—The first number, just published, contains *The Two Gentlemen of Verona*, from Mr. Knight's text, printed on good paper, with good type, got up with taste and even elegance, a brief introduction and a few glossarial notes, for *Sixpence!*

The Economy of Nations, by T. S. Smith, Esq.—We have found the perusal of this pamphlet very inconsistent with the economy of time: the writer has contrived to perplex some of the most simple subjects in the whole range of social science.

The Chronicles of Iernè, by Thos. Day, Esq.—The publisher of these Tales seems to have shared our opinion, that they were not worth paper and print; for he has given the worst specimens of both which we have seen for many a long day.

Wesleyan Missions, by R. Alder, D.D.—Dr. Alder earnestly appeals for an increase of the Wesleyan Missionary Fund; and states that it is at present inadequate to meet the calls made upon it from every quarter of the globe.

SHAKESPEARE'S FEMALE CHARACTERS, AND THEIR PRESENT REPRESENTATIVES ON THE STAGE.

THE present essay is one result of certain reflections into which we have been led on the state of our current theatrical criticism,—especially of that upon the acting of Shakespeare's plays,—so unsatisfactory does it seem to us upon the whole, so inadequate either to guide the taste and judgment of the public, or to instruct and encourage the performer.

This, no doubt, is partly attributable to the very limited space and time which alone any kind of periodical can devote to such notices, in the form which is almost exclusively assigned to them, as articles of *news*. However, we cannot but regard the deficiency in question as arising in some degree from deeper sources, distinct from each other, yet closely akin;—first, the still crude and imperfect state of such criticism as we possess of Shakespeare's plays themselves, viewed, not under a merely literary aspect, as poetry in the limited sense, but in their proper and primary character, as productions of dramatic art; and secondly, the prevalent want, in the theatrical reporter himself, of diligently and conscientiously applying such critical light as has been thrown upon the general spirit of a play, or the conception of its individual characters, in forming his judgment as to the truth and efficacy of any given histrionic expression of them. It is in the hope of contributing, however slightly, towards remedying each of these critical deficiencies, that we have resolved to notice, from time to time, in a form distinct from and independent of our articles of ordinary theatrical intelligence, and without binding ourselves to any strictly systematic review, such points of interest regarding the spirit, structure, or characters of the piece, the general management of its representation, or the acting of the particular parts, as shall most conveniently present themselves to us in such of the Shakespearian dramas, as derive a more immediately vivid interest in the public mind, from the fact of their being for the time before the public *eye*, upon the actual stage.

We are strongly persuaded that no revolution of national manners, still less any mere variation of fashionable habits, will ever, with Englishmen, confine the study of Shakespeare to the closet, and destroy their appetite for having his creations placed before them visibly and audibly. Of no other dramatist whatever, of any country, are we prepared to affirm so much; but of him, the *one*, unrivalled and alone in his human omniscience and his dramatic omnipotence, we believe it. Nay, we believe the very contrary of that which some people seem to anticipate—that the present great extension of the reading of Shakespeare, by the publication of such multiplied editions, so accessible by their cheapness or so attractive by their embellishments, will more or less relax the public desire to see and hear his imaginings "bodied forth" in vivid reality of sight and sound. We believe that the more intently his "Delphic lines" are perused—the more that "deep impression," which Milton attributes to them, is imbibed in the closet—the more irresistible will be the reader's inclination to repair thither where he can be assured of having them rendered to him with all the glowing and thrilling expressiveness of eye, and voice, and action. Why this is so transcendently the case with the drama of Shakespeare, will, hereafter, receive some particular illustration; but the greatest, most comprehensive reason of all exists, we conceive, in the happy fatality which ordained that the man who, of all men known to us, possessed the truest and most pervading insight into every condition of the human mind and heart, was trained in dramatic composition upon the very boards,—that the great poet and the great manager grew as one,—that the great artist, whom they combined to form, composed immediately for

> The very faculties of eyes and ears.

How much this constant writing, or rather, we should say, creating, to a living and present audience, must have contributed to that wonderfully concentrated force, and that exquisite fitness for dramatic effect, which are found in every part of his action, character, and dialogue, it needs little reflection to discover. No wonder that the real world so habitually presented itself to him as

> This wide and universal theatre.

No wonder that he could, with such consummate art, introduce the theatre itself upon the scene, and so give double force to the illusion of his principal action.

It is in the play of 'Hamlet,' as every one knows, that he has done this most systematically and elaborately. Here he has not only made use of this means to deliver, in a form at once brief and luminous, all the essential principles both of dramatic and of histrionic art, but has triumphantly vindicated the true dignity of both; that dignity to which, in his own age and country, he must have been conscious that he had chiefly contributed to raise them. In *Polonius's* estimate of the players, and the style of his criticism, are admirably exhibited the manner in which they were actually treated in Shakespeare's time, and the spirit in which they were commonly regarded by the court and by the great—by those who looked upon the theatre as they did upon the domestic fool, merely as a source of idle and profitless pastime; while in all *Hamlet's* discourses to, or concerning them, we trace the great dramatist's own ideal of the high moral as well as æsthetic purpose of their art, and the corresponding appreciation which it merited from the highest order of cultivated intellect and taste. It was, in fact, an unanswerable assertion of the highest prerogatives of the drama, as the noblest field of art and the most effective school of morals, not only in his own time, but for all time to come.

So long as the great poet and manager could preside over the rehearsal of his own plays, it is clear that no other guide was necessary or admissible to direct the actors to the true conception and expression of every character they contain. Neither could the termination of his personal connexion with the stage, nor even his decease, prevent the tradition of his own *readings*—his own view of the histrionic rendering of each part—from being handed down pretty faithfully during the comparatively short period which elapsed until the conclusion of the first great era of our dramatic history, by the entire closing of the theatres under the *régime* of the Puritans.

"It was one of the vital and lasting injuries inflicted on the theatrical system by the puritanical suppression, that the old line of actors, which had risen and flourished along with the great and vigorous dramatic school of the age of Elizabeth and James, and had intimately imbibed its healthy natural tone—had 'grown with its growth and strengthened with its strength'—was violently and fatally interrupted. A new race of actors had to arise, who, not having, like their predecessors of the former period, the example and the awe of the great histrionic models of the old school before them, found it a much easier task to strut and rant in the delivery of unnatural bombast, than to sound the depths and reach the delicacies of Nature's favourite poet. And thus an additional facility was opened for the introduction and perpetuation upon the stage of the factitious taste of Dryden and his followers.

"Garrick's restoration of Shakespeare to his rightful supremacy over the English theatre, has entailed upon his countrymen a permanent debt of gratitude, which is yet more glorious to the memory of that great performer than the idolatrous admiration of his contemporaries for his unrivalled histrionic powers. It was nothing less than the removal of one great mark, worn for eighty years before, of national degradation, morally and intellectually. Here, too, we have a signal instance of the great degree in which the dignity and prosperity of a national theatre, at any given period, may depend on the taste and genius of a single actor, especially when that actor becomes a leading manager also. In the instance in question, this was more peculiarly and necessarily the case. When the condition of the English stage for three generations before is considered, it is quite evident, that no person but an actor of very high genius could achieve the theatrical resuscitation of the greatest of all dramatic poets. Had any such actor existed at the Restoration of Charles the Second, he might probably have done much to prevent the wretched denationalization of the theatre, which was so much favoured by that king's exotic and vitiated taste. It was left for one qualified to be the great actor of nature, to lead forth the sublime poet of nature from his long theatrical obscurity. The clear, deep, quick, and varied truth which appeared in Garrick's interpretation of Shakespeare's leading characters, after all the cold, leaden, formal declamation under which even the best-esteemed performers had so long been accustomed to smother their spirit, was nothing less than a revelation to the play-going public of that day."*

Yet the injury done by the loss above mentioned, of all theatrical tradition on the subject, to the true conception, both on the part of the actors and the public, not only of each individual character of Shakespeare, but of its relation to every other in the same play, and to the general spirit of the piece, was not capable of being repaired by a theatrical manager, how high soever his qualifications might otherwise be, who had become such, not like Shakespeare, by virtue of being a great dramatist, but through his being a great actor merely. The engrossing attention which his histrionic vocation occasioned him to give to a certain number of the most prominent parts, and that full share of professional vanity which constantly inclined him to attach to those parts a too exclusive and absorbing importance, were quite enough to prevent even Garrick from ascending to that highest artistic view of any one of the dramas of Shakespeare, which had occupied their first great manager's own mind. Yet the full possession of this highest view can alone enable the individual who presides over the distribution and rehearsal of the parts in any one of those plays to discharge his high office with such perfect comprehension and discrimination as to realize, in the whole performance, and in all its details, the true and original idea conceived of the work by its great creator. Garrick, then, we repeat, did all, and more than all, that an actor could have been expected to do in this matter—he gave the first grand and decisive impulse towards the revivification of Shakespeare on the stage. But before this great resuscitation could be thoroughly accomplished, it was an indispensable prelude, that not only the genius of Shakespeare in general, but the spirit, structure, and execution of each particular drama, should be expounded by a criticism of the very highest order.

Why, down to the early part of the present century, no such exalted criticism in any department of art, and most of all, in dramatic art, arose in England, is beside our immediate purpose to inquire. We must, however, observe, that our Shakespearian criticism of the last century was too much in the spirit of Polonius's own; dwelling exclusively on parts and details—showing an analytic mind of a vulgar order. "This is too long"—"That is good; *mobled queen* is good"—"That's an ill phrase, a vile phrase; *beautified* is a vile phrase."—Such is the critical style of Shakespeare's loquacious and pedantic lord chamberlain, and much about the same is that of his commentators of the old school. In Hamlet himself, on the contrary, we find, among so many other ideal qualities, a type of the superior critic, who not only examines and judges, but who understands and feels. Again, Polonius criticizes like a true matter-of-fact man, abounding in worldly wisdom, as we see in his admirable parting advice to his son; Hamlet, like a poet—and a dramatic poet especially—for we find him playing both the manager and the dramatist yet more than the critic. Indeed, none but a poetic mind is a competent judge of poetry, literary or artistic.

Such minds, within the present century, have seriously and systematically applied themselves to appreciate and illustrate the dramatic genius of Shakespeare. But even the Schlegels and the Coleridges have scarcely done more than trace out and indicate the central idea, the individual spirit, which informs each one of his greater dramas, and moulds every one of its features in harmony with that peculiar inspiring soul. To descend to those features themselves—to trace the vital ramification through all the details of character, incident, and dialogue—a process indispensable to the reader's thorough conception and feeling of the piece, and to the manager's perfectly intelligent preparation of its performance, is the important and attractive labour which remains to be performed by English criticism. We say remains to be performed, for it is remarkable that even Hazlitt, in his 'Characters of Shakespear's Plays,' while assigning the publication of Schlegel's 'Dramatic Lectures' in English as his immediate motive to the composition of that volume of essays, and citing Schlegel's estimate of Shakespeare so largely in his

* Article on Dramatic Art and Literature, in the Penny Cyclopædia.

Digitized by Google

preface, does not apply to any one play as a whole, nor to any individual character in it, that method of examination which an attentive perusal of Schlegel's book should, we think, have naturally suggested. The English critic, with all his sagacity, keen sense of poetic beauty, and logical acuteness, seems but imperfectly to have apprehended the inmost spirit of Shakespeare as the great *dramatic artist*. This fundamental deficiency, leaving him without that sure guide which he would otherwise have found to the surveying of each play, and each character in it, from the *one* right point of view, not only prevented him from clearly expounding to us the distinguishing individual spirit of each drama as a whole, but has caused him, even among so many striking and instructive observations which those essays contain, to fall into some serious misconceptions respecting divers of the prominent characters, which we shall venture to point out, should occasion require it from us.

Still less does the authoress of the 'Characteristics of Women' seem to us to display that highest artistic as well as philosophically poetic appreciation of Shakespeare's dramatic personages, which can only be acquired by surveying each entire drama, in the first instance, from the most elevated point of view. Nevertheless, Mrs. Jameson's work contains much agreeable and some original remark; and gives a more systematic and complete account of Shakespeare's female characters, than Hazlitt's volume affords of his characters in general.

Now, the more that a deep and intimate knowledge of the noble and subtle essence of Shakespeare's leading characters is acquired and diffused, the stronger and more general, assuredly, will be the feeling of reverence for the qualities of a great Shakespearian performer, and the nearer will the spirit of current criticism on Shakespearian acting approach to that double character which the sublimely humane influence of Shakespeare's own genius should infuse into it,—of gratitude for all of that divine essence which the actor has succeeded in embodying,—and of the most urbane admonition and kindest instruction respecting his apparent deficiencies. Since, then, it so happens, that in that literary examination and appreciation of the characters, which we deem indispensable for preparing the public mind to render discriminating justice to the histrionic performance of them, it is the female ones, in all their rich and delicate variety, that have been most fully and elaborately treated, and that by a feminine hand,—for this reason chiefly it is—this greater preparation which the wide circulation of Mrs. Jameson's 'Characteristics' has given to the public mind for the study of Shakespeare's women, beyond what has hitherto reached it respecting the characters of his men, that we may be led, as their theatrical performance shall furnish the occasion, to consider his principal female characters before entering, except incidentally, on the examination of his male ones.

We confess, too, that another feeling—surely a natural and a manly one—inclines us to this course—the peculiar interest which we cannot but feel for the position, personal and artistical, of the representatives of his matchless heroines. Ministering as they do in the noblest of all temples of art and poetry, they seem to us, in their professional vocation, to bear a character peculiarly sacred, adding to the Shakespearian scene that crowning charm, that "bright consummate flower" of genuine female grace, which the mighty magician who so transcendently conceived it was destined never to behold upon his boards. In this view, the shade of Shakespeare himself might be grateful to them, for their sweet enrichment of the modern stage. What though it be given to few of them to approach the excellence of a Barry or a Siddons—let us consider how much we have to thank them for attaining—and it will strike us that we shall sin far less in being "to their faults a little blind," than we should in withholding from them our cordial acknowledgments for rendering to us so much of what is most delightful in the most delicate beings of the poet's creation. And the greater the variety of powers in the actress, the more should this feeling be deepened in our hearts. Some few weeks ago, for instance, we beheld the same young performer who, the very evening before, had shaken us with the passionate indignation, melted and thrilled us with the awfully beautiful despair, of Constance of Bretagne, in that stately historic play, infuse into the part of Rosalind all the tender though lively grace which the poet has made its principal attribute and most exquisite attraction—breathing the soul of elegance, wit, and feeling, through that noble forest pastoral. Reflecting upon this, we said to ourselves, Truly there is something in female genius and female energy—something worthy of Shakespeare—worthy to be cherished with the holiest of all sacred feelings, that of affectionate veneration.

As the historical play of 'King John,' produced by Mr. Macready with so much care and magnificence, has occupied so large a place among the performances of the present season, we shall, in pursuance of the course we have indicated, devote one or two following papers to the characters of the three royal ladies in that richly various drama, Constance of Bretagne, Elinor of Guienne, and Blanch of Castile—not quite forgetting the Lady Faulconbridge "whose fault was not her folly." In the course of this, as of all our subsequent examinations, while freely acknowledging such indications as we may derive, either from Hazlitt's 'Characters of Shakespear,' or from Mrs. Jameson's work, we shall point out with equal freedom those instances in which it shall appear to us that either the deceased or the living critic has formed an erroneous or imperfect conception of their common subject.

THE GREAT EXPLOSION AT DOVER.

To the Editor of the Athenæum.

Having witnessed the great explosion at Dover, on Thursday the 26th, from the summit of the cliff next adjoining it to the southward, and from the nearest point to which any access was permitted, I would gladly place on record, in your valuable Journal, some features of this magnificent operation, which struck me at the time as extremely remarkable, and which have not, I think, been adequately placed before the public in any account that I have seen. These features are, the singular and almost total absence of all those tumultuous and noisy manifestations of power which might naturally be expected to accompany the explosion of so enormous a quantity (19,000 lb.) of gunpowder, and which formed, I have no doubt, the chief attraction of many who came from great distances to witness it,—viz. noise, smoke, earthquake, and fragments hurled to vast distances through the air.

Of the noise accompanying the immediate explosion, I can only describe it as a low murmur, lasting hardly more than half a second, and so faint, that had a companion at my elbow been speaking in an ordinary tone of voice, I doubt not it would have passed unheeded. Nor was the fall of the cliff (nearly 400 feet in height, and of which no less than 400,000 cubic yards were, within an interval of time hardly exceeding ten seconds, distributed over the beach on an area of eighteen acres, covered to an *average* depth of 14 feet, and in many parts from 30 to 50,) accompanied with any considerable noise; certainly with none which attracted my own attention, or that of several others similarly stationed, with whom I afterwards compared notes. A pretty fresh breeze from the south-west might be regarded as influential in wafting it away, were it not that the fall took place under the lee of the cliff on whose edge we were stationed.

The entire absence of *smoke* was another and not less remarkable feature of the phenomenon. Much *dust*, indeed, curled out *at the borders* of the vast rolling and undulating mass, which spread itself like a semi-fluid body, thinning out in its progress; but this subsided instantly; and of *true smoke* there was absolutely not a vestige. Every part of the surface was immediately and clearly seen—the *prostrate* flagstaff (speedily re-erected in the place of its fall)*—the broken turf which a few seconds before had been quietly growing at the summit of the cliff—and every other detail of that extensive field of ruin, were seen immediately in all their distinctness. Full in the midst of what appeared the highest part of the expanding mass, while yet in rapid motion, my attention was attracted by a tumultuous and somewhat upward-swelling motion of the earth, whence I fully expected to see burst forth a volume of pitchy smoke, and from which my present impression is, that gas, *purified from carbonaceous matter in passing through innumerable fissures of cold and damp material*, was still in progress of escape; but whether so or not, the remark made at the moment is sufficient to prove the absence of any impediment to distinct vision.

As regards the amount of tremor perceived, I must confess having speculated with some little anxiety on the probable stability of the abrupt and precipitous ridge on which I stood; and might therefore have somewhat underrated the exceedingly trifling movement which actually reached that point, and which I think I have felt surpassed by a heavy waggon passing along a paved street. The impression, slight as it was, was single and brief, and must have originated with the first shock of the powder, and not from the subsequent and prolonged rush of the ruins, which I can positively say communicated no perceptible tremor whatever.

I have not heard of a single scattered fragment flying out *as a projectile*, in any direction—and altogether the whole phenomenon was totally unlike anything which, according to ordinary ideas could have been supposed to arise from the action of gunpowder. Strange as it may seem, this contrast between the actual and the expected effects, gave to the whole scene a character rather of sublime composure than of headlong violence, of graceful ease than of struggling effort. How quietly, in short, the gigantic power employed performed its work may be gathered from the fact that the operators themselves who discharged the batteries were not aware that they had taken effect, but thought the whole affair a failure, until reassured by the shout which hailed its success.

The remarkable absence of noise and tremor which characterized this operation is explained by the structure of chalk as a material, and by the rifty state of the cliff as a body. Of all substances, perhaps chalk is the worst adapted for conveying sound, and the best for deadening the vibration propagated through it by a heavy blow. The initial hammer-like impulse of the newly-created gas on the walls of the chambers of the mines (of which it must be recollected there were *three*, simultaneously exploded), was doubtless thus deadened by traversing at least 75 feet of chalk, even in the shortest direction, or line of least resistance—and *this* must have taken place before the mass could have been sensibly moved from its seat by the expansive force generated, which, however vast, proved incapable (as indeed it was expressly provided it should be) to communicate to its enormous load any greater velocity than barely sufficient to rift and bulge it outwards, leaving gravity to do the rest. Nothing can place in a more signal light the exactness of calculation which (basing itself on a remarkably simple rule, the result of long practical experience,) could enable the eminent engineer (Mr. Cubitt), by whom the whole arrangements are understood to have been made, so completely to task to its utmost every pound of powder employed, as to exhaust its whole effort in useful work—leaving no superfluous power to be wasted in the production of useless uproar or mischievous dispersion, and thus saving at a blow not less than 7,000*l.* to the railway company. I have the honour, to be, &c.

J. F. W. Herschel.

Collingwood, Jan. 31, 1843.

* It has been stated that the flagstaff continued erect, but this (if I can credit the distinct evidence of my own senses) is incorrect.

MODERN RUSSIAN ARCHITECTURE: THE NEW WINTER PALACE.

Brilliant as are, for the most part, the pen-and-ink descriptions with which travellers have, from time to time, favoured us of St. Petersburgh, its street-scenery, and out-stretched lines of palaces, they have as yet induced but few of our English artists and draftsmen to visit the Northern Capital, for the purpose of bringing away in their portfolios more complete and satisfactory evidence of its architectural grandeur. We do not mean to say, that we have no views or engravings to afford us an idea of any of its public edifices; but there are comparatively few, and those calculated to convey anything but a favourable impression of what they profess to represent. Some of these *graphic* descriptions seem flatly to contradict nearly all the *verbal* ones, and almost take away all desire to behold more, lest we should be disenchanted altogether. Our chief satisfaction, on looking at such

Digitized by Google

productions, has arisen from their obvious want of verisimilitude—from their tastelessness as views, their bad drawing, and wretched perspective; because so represented, the finest structures would lose all their charms. Even were the views hitherto produced really good in themselves, there are none, as far as we are aware, of any buildings erected within the last ten years, though an architectural decennium at St. Petersburgh is equal to a century in many other places. There, architecture may be said to work by steam, so truly astonishing is the rapidity with which the most gigantic piles are reared. The New Winter Palace is a striking proof of this: the former edifice was destroyed by fire, about a fortnight before a similar calamity befel our Royal Exchange, and huge as it was, the building itself was the least part of the loss, for it contained treasures of almost incalculable value, all of which fell a prey to the flames in a few hours.* Scarcely, however, were its ashes cold—at least poetically speaking—than it began to rise again, in equal splendour, and in more refined taste. And as Köhl gives no account of the new structure, we presume that such a notice as we have been able to collect respecting it, will not prove unacceptable, although we have no account of the entire edifice, but merely of some of the state, or, rather, private apartments. These were designed and executed by Alexander Bruilov, one of the most eminent among the native architects of Russia—one gifted with fancy and invention, which he may be said to have produced on this occasion *all' improviso*, little time being allowed between their first conception and the designs being put into the workmen's hands for execution: a dangerous sort of precipitancy.

Among the rooms most worthy of notice in the suite upon which Bruilov was employed, the first named is the *Bolshaya Stolovaya*, or Great Dining Room. This was one of those which partly escaped destruction at the time of the fire, and which have been incorporated in the new structure; but though its plan and dimensions are the same as before, it has been completely metamorphosed in other respects, being now ornamented with twenty columns, supporting a vaulted roof, whereas the ceiling of the former room was a flat one. Bruilov has also given arched and vaulted ceilings to many of the other rooms; in which features he has displayed great variety of design and diversity of character. Adjoining this room, is the *Malaya Stolovaya*, or Small Dining Room, decorated in the Pompeian style, and in very elaborate and splendid mode of execution, the patterns and designs being not merely painted on the walls, but inlaid in scagliola, on a surface of the same material; and whether it be the first instance of the kind or not, it is certainly most charming in effect; and the embellishments themselves display equal taste and fancy. Next comes the *Malachite* or Golden Drawing Room, which, in length, is equal to both the preceding put together: well does it deserve its name, for gold, malachite, and marble, are almost the only visible materials employed; yet, notwithstanding its extraordinary sumptuousness in that respect, the whole has been so skilfully managed, that there seems to be no excess—no wearisome glare: on the contrary, the beauty of the general design, and the high finishing of all the details, furniture included, give as much value to the materials themselves, as they derive from them. To this *gostinaya*, or drawing room, succeed some smaller rooms, and a cabinet, all fitted up in the Renaissance style, and attractive, if not for the purer graces, for the playful coquetry of art. These communicate with the *Potchevalnaya*, or Bed Chamber, where the architect has resumed the Grecian style, and has aimed at sobriety, there being scarcely any other colour than white, and the ceiling being quite plain. Yet the room itself is of considerable dimensions, and is divided into three compartments, one of which forms a spacious and tastefully fitted-up alcove for the bed. The *Rozovaya Ubornaya*, or Rose Dressing Room—so called from its draperies, for, like those of the Bed Chamber, the walls themselves are entirely white—communicates immediately with the *Vanna*, or Bath. Notwithstanding the privacy of its destination, this last is far from being the least striking or least captivating of the rooms in this suite. The effect, on first entering it, is described as being quite magical: it seems like a scene from the 'Thousand-and-one Nights,' or a fragment of the Alhambra revived in more than its original splendour. Yet, though we are assured of this, and of a great deal more—among other things, that it may be considered the *chef-d'œuvre* of the "great" Bruilov, who has here shown himself *plus Arabe que l'Arabie même*, and has surpassed the most Oriental of Oriental fancies—description, we are sorry to say, we obtain none—nothing for our own fancy to work upon and shape; for on this, as well as on many other occasions of the same kind, we are only put off with the old ready-made excuse, that it is impossible for words to do justice to it, or for description to convey any idea of this most exquisite room. An adjoining boudoir, whose decorations consist chiefly of carved foliage work, leads into the *Tzvætnik*, or Garden; that is, a small *indoor* garden, formed upon two levels, the upper one of which serves as a terrace, looking down on the other. Here, to the natural beauty of the luxuriant and fragrant plants, art has added some of its most *recherché* attractions; tesselated pavements, marble and Mosaic, a fountain in one part, a grotto in another, combine to produce a *bijou* garden, limited in space, but enchanting in effect. From this fairy spot, a door opens into the 'Great Corridor' attached to this suite, and which leads again to the Great Dining Room, and also to the *Rotunda*, a charming specimen of Grecian, or, rather, Greco-Roman architecture, with a peristyle of Corinthian columns supporting a dome, and with walls of pale-coloured marble, in which are niches for statues. Beyond this Rotunda is another corridor, called the Great Central Corridor, which, altogether unlike those in the old building—they being no better than gloomy and inconvenient passages—is a handsome, well-lighted gallery, 42 *sazhins*, or 294 English feet, in length, and communicating with numerous other suites appropriated to the grand-dukes, &c.; above which are corresponding ones for the grand-duchesses, and other female members of the Imperial Family.

Attached to the Corridor just mentioned is the Central Staircase, from which other corridors diverge, and form a communication with the remotest parts of what may be called "a mighty maze, yet not without a plan." This staircase and its roof are entirely of cast and wrought iron; and in the nobleness of its conception, the boldness and mastery of its construction, and the skill displayed in its execution, Bruilov has here shown as much scientific ability as he has elsewhere displayed refined taste and artistical invention; thereby giving proof that his numerous studies with his pencil, in the æsthetic department of his art, and in all that relates to pictorial composition and decoration, have not interfered with other and more severe ones. Neither have these lust at all blunted his imagination or checked his fancy; if the 'Bath' aforementioned is a piece of architectural poetry,—what may be termed an *Anacreontic* effusion,—the 'Hall of Alexander the First' is one in a more epic strain. Imposing, almost colossal, in its dimensions, it is no less striking for the invention shown in its design: its numerous columns are of Corinthian *character*, but their capitals are original compositions, in which the Russian eagle is introduced, with, we are told, equal felicity and propriety. Niches filled with trophies, and a series of bas-reliefs (after the designs of Count Tolstoi) on the upper part of the walls, impart an historic dignity to this hall, and render it a monument of the memorable reign of the sovereign whose name it bears.

Another architect employed in the interior of the Palace, is Stasov, and that, too, upon some of the principal and most striking parts, viz. the public and state rooms. Of the ability with which he has acquitted himself, the *Bolshaya Paradnaya Læstnitza*, or Grand State Staircase, affords convincing proof. Stupendous in size—in which respect it is perhaps unrivalled by anything of its kind, it is no less remarkable for the richness of its materials—chiefly polished granite and Carrara marble, and for the novelty as well as splendour of its decoration, for instead of confining himself to any one style, the artist has endeavoured here to combine the excellencies of many, selecting from them whatever suited his purpose, without regard to chronology, or to other authority for what he did, than the applicability of the respective parts, which he has woven together into a species of architectural *arabesque*, constituting a style apart, and in itself, yet less licentious perhaps—certainly more attractive—than many things coming under the denomination of "regular architecture." In the first ante-room of the suite to which this staircase leads, the *rococo* style prevails, but is afterwards dropped. What is termed the *Bolshaya Zala*, or saloon, is a noble room, but rather simple and quiet in character, deriving its chief decoration from its marble columns, of a pale bluish tint. Near this is the Concert-room, which is in the Italian style; and further on are two Chapels, the larger of which, or *Bolshaya Tzerkov*, is lighted by a handsome dome, and is adorned with paintings by Bruni and Bassin, two distinguished artists. The *Pompeian Gallery* which now comes in, in that part of the plan, occupied in the former building by inconveniently intricate and dark passages, forms a pleasing architectural feature, particularly of an evening, when a glowing light is diffused through its whole extent, the light itself being transmitted through coloured glass; but in what way is not explained. This very long Gallery affords access to the 'Hall of Fieldmarshals,' to that of 'Peter the Great,' to the 'White Hall,' to that of 'Grenadiers,' and to the 'Military Portrait Gallery,' all of which are apartments of such dimensions in themselves, that any one of them would be a prominent feature, in almost any other royal palace. In this part of the building, is also situated the 'Hall of Alexander' which has been referred to above, as being the work of Bruilov. In regard to the others scarcely anything is said, either in the way of description, or of comment; of which, to say the truth, there is altogether far less than at all satisfies our curiosity. What is said is in fact so favourable as to cause in us some misgivings: therefore we do not offer it to our readers as one that may be entirely relied upon because it is furnished by an eye-witness, for he may have viewed the architectural achievements of his countrymen by the "glamour light" of patriotic feeling. However, all due allowance being made for high colouring, there can be little doubt that this palace is one of the most splendid as well as most extensive piles of building in Europe.

* This could not have happened, had there been thick party walls within the building—not between every room, but at certain intervals, so that the fire could not extend beyond the rooms where it first broke out; such walls (or double walls with a space between them) being carried from the foundations to and through the roof; whereby all communication would be cut off at known intervals, except through doors, which should be made of iron. Some such precaution ought, we think, to be adopted in all national edifices of great extent, such as palaces, museums, &c. We hope the architect of the New Houses of Parliament has fortified them against another general conflagration something after the manner here suggested.

WESTMINSTER ABBEY.

YOUR late remarks on Westminster Abbey suggest some few queries, which, perhaps, you will allow me to propound in connexion with so interesting a subject. First I would ask, whether the irreverent and indecorous system, whereby this sacred edifice has been turned into a kind of colossal show-box, or nest of show-boxes, be excusable any longer, now that the "show-men" are superfluous attendants? What further need of these *ciceroni*, parrotting their nasal common-places from chapel to chapel, when visitors can now consult *three* Guide-books—Mr. Cole's, Mr. Cunningham's, and the anonymous Description? Why should those menial functionaries have a right to thrust their importunate assistance or their ignorant explanations upon us, instead of keeping silent watch and ward, like their brethren at the British Museum, and other public collections? Mere sight-seers could learn as much as they require from the pasteboard plans scattered amongst the monuments—as much too as the said ciceroni could impart; whilst investigators would have quiet and leisure for profitable research. Besides the unseemliness of the present system, it appears calculated by design to do the least good possible; gratifying with fruitless gapeseed the idle and frivolous visitors, but only tantalizing the earnest inquirer, who is compelled to make one of the verger's tail—to attend this profound archeologist's lectures!—and is then hurried forward before he can examine a single object better than the vacant mob of wonderers about him. I repeat my question—wherefore should not the Abbey attendants *now* leave visitors to their own resources and researches, limiting themselves to close observance, which would be more efficient were it undistracted by other duties? Have Protestants a greater zest for sacrilege than

Digitized by Google

Papists,—for plundering and mutilating memorials of the dead and shrines of the divinity? Roman Catholic churches on the continent are left open all day, without a guardian, yet *their* treasures of art lie as untouched as the golden Cherubim did in the Holy of Holies.

Question II.—If modern sculptors have sinned against architectonic and pictorial principles, by their statues of glaring Carrara marble unharmoniously contrasted with the walls, pillars, and antique monuments, of so opposite a tone and taste,—has not an experienced modern Gothic architect fallen into the same error? His *Organ-screen* makes sad ocular discord at Westminster Abbey; that it is both out of colour and architectural character must, I think, strike every connoisseur. How indeed could it harmonize, being a bright sandstone piece of *Decorated* filagree work amidst a dark gray church of the simplest *Early English* model? Perhaps Mr. Blore took his pattern from Crouchback's and Pembroke's canopied tombs in the choir; but first, these are of a duskish material, and are umbered all over besides; again, they are very minor details compared to a screen flung across the nave from column to column; finally, the admission of distinct orders into one edifice seems a classic licence which no precedent can make other than a plain outrage upon all Gothic principles. Yet our architect has introduced a similar false concord at Peterborough, or rather a worse, for there the broad and massive style of the Norman structure clashes still more with his rich and elaborate screen-work of Pointed tracery. Principles would appear to govern practice as little in the Fine Arts as in Morals.

Question III.—Westminster Abbey itself belongs to the simplest earliest order of Pointed architecture; Henry VIIth's Chapel to the floridest and latest: why then should a modern parapet or battlement of *the same* continuous character run round *both* buildings characteristically distinct from each other? Must it not either be too light for the Abbey or too ponderous for the Chapel? Where is the exquisite unison which ought to subsist between masses and details? If a Doric church had a Corinthian chancel of gracile proportions and very ornate design, should one and the same balustrade run round both entablatures?

Question the last.—Would it ill become the British public to have their beautiful metropolitan Minster restored thoroughly at the national expense? A spire, or handsome embattled crown (were this safer) on the Central Tower, would make it a suitable pendant to the Victoria Tower in prospect; and the Chapter-House being repaired, Wren's mongrel additions, and all other specimens of "Vandal" architecture being removed, along with the modern monuments as you propose, would make Westminster Abbey a pendant to Cologne Cathedral.—I am, &c.,

AN AMATEUR.

OUR WEEKLY GOSSIP.

WE hope to be excused if we are this week a little prosy in our gossip—profitable rather than pleasant. The truth is, that, following the example of the great 'National' schemers, who thought it becoming in them to libel those who at a public meeting protested against their selfish project, as alike injurious to art and artists, the projectors of the 'Little-go,' finding public opinion running desperately against them, have been pleased to throw suspicion on our motives: as if our motives had, or could have, anything to do with the question at issue. But the parties know well, that private and personal feelings would have led us to remain silent, had we not felt that it was public duty to denounce the moral pestilence which is fast spreading over the country; and they were forewarned that it was our intention to do so.

They are shocked, it appears, at our presuming to call the 'Polytechnic Union' a 'Little-go.' Why the word is not ours—the offence is so described in the 42 Geo. 3, cap. 119; and for the further information of the parties, extracts from the Act are given among the Miscellaneous paragraphs at the end of this day's paper. However, we are not wedded to a name—we will call it, if they please, the 'Poly-pic-nic'; and this will serve to distinguish it from the parent Institution. Poly-pic-nic, indeed, will well characterize it, seeing that it is a sort of chance-medley affair, to which Art and Science contribute prizes of prints, drawings, paintings, sculptures, bronzes, mathematical, astronomical, and "all kinds" of philosophical apparatus, working models, &c.—the last comprehensive phrase leaving open to the imagination of provincial subscribers all that is associated with dips into lucky-bags, and ventures with Mr. Merryman. The writer in question, too, is not a little indignant that in the face of such a lottery scheme, we should have associated the Polypicnic with Derby sweeps, Twelfth-Cake raffles, and other sporting speculations, which do not even profess to encourage art, or science, geology, conchology, or indeed anything in particular, except the love of gambling. The Polypicnic, it is admitted, resembles a lottery, inasmuch as it proposes to give prizes: but then it does not resemble one, in as far as it does not encourage rash and improvident ventures when the chance of success is remote and uncertain. But where is the essential difference? The chance of winning one of the great government prizes may have been remote and uncertain; but they were described and supposed to be quite otherwise, or Messrs. Bish, Goodluck, Swift, and Co., might have shut up their offices. In fact, the bribe of a bird in the hand, with the prospect of the bird in the bush—say an improved fiddle or a patent mangle—all prizes and no blanks—is strictly in the style of the old contractors, and admirably adapted to excite the spirit of speculation. But we are told, that Art-Unions are a "*fait accompli*," otherwise the writer "would put forth opinions" not very "palatable to those concerned in the project"—that is to say, would denounce them as we have done. Now, that the cause of public morals may not lose the support of any man, let us remind the writer that lotteries were at one time quite as well established as Art-Unions—had "assumed the form, and were endowed with all the prerogatives, of that combination of circumstances which diplomatists call a *fait accompli*"—nevertheless they were put down by law, and were denounced as "public nuisances," because it was universally admitted that they did encourage gambling—"rash and improvident ventures."

Our association of the great-Go with the little one was, therefore, perfectly natural. We can no more disconnect them, than some of the Polypicnic prizes from the working models, philosophical apparatus, &c. &c. in the Polytechnic Exhibition. But are we, therefore, averse to mere trading speculations? Certainly not; except where they may tend to demoralize the public, or are carried on under false colours. We will suggest a case. The *Polly*, freighted by a private company of merchant adventurers, arrives on a savage coast, inhabited by a rude and barbarous race, as ignorant as unlearned pigs of Painting, Sculpture, Astronomy, Mechanics, Music, and as innocent as Adam of the Parisian fashions. However, a profitable traffic is established on the terms, that for each ounce of gold dust the naked savage subscriber shall receive, instanter, a string of cut-steel buttons, with a ticket, giving him a chance of obtaining, by raffle, a pair of shoe-buckles, a pocket looking-glass, or a gold-laced cocked hat. Now, the introduction of the ardent spirit of gambling, with, or without, that of fire-water, is objectionable enough; but what can or ought to be said if, looking up at the mast-head of the *Polly*, we behold a large flag, or bunting Prospectus, inscribed, "For the Promotion of Morals and Civilization!" Why, what *can* be said, but that the trading voyage has as much to do with the diffusion of moral or intellectual enlightenment as the Polypicnic with the encouragement of art and science? Of what avail to a civilized savage, as ignorant of the fine arts as a fine-drawing tailor—who knows no more of painting in oil than a whale, of water-colours than a water-kelpy, of sculpture than a stone-blind, of bronzes than the green man in Hyde Park, of conchology, than a shell-fishmonger, or of statuary, than a parish stone-breaker—of what avail to such an ignorant, benighted Hottentot, that he is entitled, as a prizeholder, to enter and select, to the value of 10*l.*, from the stock of six picture galleries and the Polytechnic? It is not difficult to guess into which exhibition he will eventually walk, where he will encourage Art and Science by choosing a miniature steam-engine, which will serve at any rate for a toy for the boys, or a model of a frigate, which he thinks will look well on the garden-pond. The Polypicnic encourage art and science? yes, as much as the twelfth-cake lotteries will induce a taste for polite literature—the tea-board raffles promote tee-totalism, and the Derby sweeps improve the breed of horses: aye, as certainly as throwing dice will revive carving in ivory—as drawing lots will give rise to lots of drawing, and the union of thimble-rig with capital acting (by the decoys) will foster and encourage the regular drama! Nay, we think that the Polypicnic may effect quite as much for Art and Science as the following "*Distribution*," the scheme of which was advertised in *The Times* of Tuesday last:—

York Ham and Tongue Distribution.—All Prizes.—T. YEATES, Ham-dealer and Confectioner, 23, Strand, and corner of Dean Street, Westminster (established 50 years), intends DISTRIBUTING 1,000*l.* worth of real YORK HAMS, Tongues, &c., in 8,000 shares, at 2*s.* 6*d.* per share, to take place on Wednesday, May 3, 1843. List of Prizes—2 at 20*l.*, 5 at 10*l.*, 10 at 5*l.*, 40 at 2*l.*, 100 at 1*l.*, 200 at 10*s.*, 1,000 at 5*s.*, and 6,643 at 1*s.* The holders of shares to select from the stock themselves. To prevent the disappointment so many experienced in his late Twelfth-cake Distribution, an early application is necessary. Persons residing in the country sending 31 post-office stamps, or post-office orders, will have the requisite number of shares forwarded by return of post. T. Y. assures his friends every article shall be of the best quality procurable.

To the foolish questions asked of us, for the purpose of insinuating motives, we shall not condescend to reply; and as to the assertion, that by mixing up the 'Polypicnic' with the 'National,' we made the statement of Mrs. Parkes—that "respectable persons, whose names had been *advertised* in conjunction with it, had withdrawn"—apply to the former, we will merely remark, that *no names*, except those of the secretary and clerk, who receive subscriptions, *have ever been advertised in conjunction with the Polypicnic*—the very fact adverted to by our Correspondent being, that the scheme was marked by "unknown proprietors, nameless directors, and nondescript managers." We are now admonished, with a very solemn face, that our correspondent was in error; that the 'Prospectus states, that the directors of the Polypicnic are the directors of the Polytechnic, "whose names are to be found in every Catalogue sold at its doors." What! call on the public to subscribe their thousands of pounds, and then tell them, if they will put more money in the purse of the projectors—will buy a Catalogue of their Exhibition, they may learn to whom they have intrusted their money? But, as speaking by the card is the fashion, we will observe, that the Prospectus referred to does not say, "the directors of the Polytechnic," but the directors "*in conjunction with others*," so that the subscriber will not be informed on this point, even after *paying* for the information.

We have now done, so far as the Polypicnic is concerned, but have a few words to say with reference to 'the National.' Some time since (*ante*, p. 63), at the request of Mr. Moon, we published a letter from Mr. Lloyd wherein he was pleased specifically to contradict an assertion, as to a fact, made by Mrs. Parkes. Here is her reply:—

I much regret having overlooked in the *Athenæum* of the 21st inst., a note from Mr. Richard Lloyd, addressed to Mr. Francis Graham Moon, and by that gentleman forwarded to you. My attention has since been called to that epistle, and I beg to thank you for having given it a place in your columns, as I have great hopes that you will suffer me to say a very few words in reply.

To address Mr. Moon or Mr. Lloyd, would no longer become me. Neither assertion on their side, nor denial on mine, can gain strength by repetition, and I will not be provoked into a war of words with either. It is in your power, Sir, to afford the most conclusive evidence of the general truth or falsehood of Mr. Richard Lloyd's statement, for he has obligingly declared in your columns, that "such a thing as a proof of *The Lattice* never was either sold or advertised, or even printed;" and he politely refers to my letter to Mr. Moon. Now, Sir, I send you a print of *The Mantilla*, and a proof of *The Lattice*, evidently printed, probably advertised, but certainly sold; the former has the letters filled in, the latter open letters; and Mr. Moon himself will tell you, that for an impression with open letters, he charges double the price of an impression with letters filled in, as the former mark the proofs, and the latter indicate the print. I should apologize for making this trite remark to you, who are doubtless as familiar with the technicalities of art as with its principles, but such of the public as are not purchasers of prints, might mistake this for a mere quibble or trick of trade, unless sanctioned by critical authority. The public interests, however, are deeply staked upon the honesty of the acting managers of the National Art-Union, and for their sake, I entreat you to compare the accompanying proof and print with each other, and to state the result of your examination. If you will do this, Mr. Richard Lloyd's assertions, past, present, and to come, are disposed of for ever.

How it is, that Mr. Moon, who is "nothing among the magnates of the National Art Union," should call its Secretary to such severe and strict account; and how that functionary should so implicitly and repeatedly submit to the imperious authority of "one of the humblest of his own

Digitized by Google

agents," is a question which I leave to those mysterious gentlemen to settle between themselves; and, apologising for this intrusion,—I remain, &c.

22, Golden Square, Jan. 30, 1843. M. PARKES.

The copies which Mrs. Parkes has submitted to us for examination fully justify her assertion. Not only have impressions been taken, but impressions with *open* letters, and such therefore as are always described as *proofs*. Unwilling, however, to trust our judgment on a technical point, we submitted all the copies to Mr. Molteno, the well known print-seller of Pall Mall, and we have permission to state, that, in his opinion, the copy was correctly described by Mrs. Parkes.

Other schemes and schemers are in the market. We have received Prospectuses from the North and the West of England, and Mr. Boys proposes a 'Fine Art *Distribution*' (the very word of the Ham and Tongue man), and submits his whole stock of pictures, prints, picture-frames, &c., to the fortune of the die. But this is a bold, open, undisguised trade project, to which, and to the others alluded to, we may advert hereafter.

Another word on a subject not wholly connected with these proceedings. Since Mr. Moon flashed in the face of "the trade" and "the court" (notable conjunction!) the brilliant pin and gold pencil-case which he received from the King of the French, in return for some numbers of Roberts's 'Views of the Holy Land,' several publishers have, we are informed, been seized with a fit of generosity, and copies of prints are being prepared for presentation to Louis Philippe, with the most disinterested motives; indeed, the number of cases from England which will unexpectedly arrive at the Tuileries, may, we fear, startle the French court, and the stock of jewellery appropriated for the exercise of the King's liberality, large as it is, may be insufficient to keep pace with the influx of gifts from England. In justice to the "trade," it should be observed, that it is not so much the intrinsic value as the honour that is thus coveted; a speculative publisher being reported to have offered an artist a certain sum "down" for the chance of obtaining a royal return for a copy of the work which the artist was urged to present to Louis Philippe. As a set-off against this, we have heard of a diamond ring, intended for an artist, finding its way to his publisher; though the disappointed artist has been subsequently compensated by a gold watch, given him, not by his publisher, but by the King of the French. Such proceedings, though only contemplated, ought to be exposed, not only as a warning to munificent monarchs, whose bounty it is thus intended to abuse, but that we may separate artists and others really worthy of such marks of distinction from the jobbers, and even vindicate the national character, which might suffer undeserved imputation from the indecent meanness of these mercenary speculators, were their practices to be connived at. This is the more necessary, inasmuch as the custom of rewarding with medals or presents, artists, whether native or foreign, is not the custom at the English court.

The Marquis of Northampton, President of the Royal Society, has issued cards of invitation for his *soirées*, which will take place on the 25th inst., March 11th and 25th, and April 8th.

We learn from the daily papers that the Archbishop of Canterbury has conferred the degree of doctor of music on Mr. H. J. Gauntlett.

Till Mr. Lumley's "speech" be put forth at the opening of his Opera session, we can but record rumours as they come and go. These announce the engagement of Signor Conti, a tenor, of Signori Fornasari and Buccini, and the return of Signora Molteni. By way of *contralto* it is said we are once more to have Signora Brambilla. The foreign musical stars of the Concert season will be many, if only one-half of those talked about arrive. Madame Cinti Damoreau and M. Artot, the violinist, make one party—then the handsome Mdlle. Cathinka Heinefetter, the heroine of the recent Brussels tragedy, is said to be meditating a visit. We are also to have Signor Camillo Sivori, *the double* of Paganini, and, if we recollect right, Paganini's favourite pupil; and perhaps M. Servais, the violoncellist, who, since his former appearances here, is said to have made himself the first performer on his instrument.

At the English theatres, music seems to be the order of the night. A new version of 'Der Freischütz' is said to be in preparation at Drury Lane, to be followed by the production of Auber's two last operas, 'Le Duc d'Olonne,' and 'La Part du Diable.' At Covent Garden, Herr Staudigl and an English version of 'Jessonda' are promised for Easter Monday. We hear, too, that Mr. Charles Braham will possibly appear there. The *corps* at the Princess's Theatre will be strengthened shortly by the accession of Mrs. Alban Croft and Miss Flower, the young lady whose *début* as *Pippo* made so strong a sensation at Drury Lane. A new opera, too, to be called 'Little Red Riding Hood,' the music by a Lady, will be shortly produced in the Oxford Street Theatre; and we hear of another by Signor Schira, the conductor of the orchestra, as in preparation.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS will be OPENED on MONDAY NEXT, the 6th Instant, and continue open DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.

WILLIAM BARNARD, Keeper.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.

Jan. 23.—W. R. Hamilton, Esq., in the chair.

1. A Letter was read from Mr. Jamieson, in which that gentleman mentions that he is preparing for publication an account of Mr. Becroft's late ascent of the Cros River.

2. The President read portions of a Letter from M. Dureau de la Malle, Member of the Institute of France, from which it appeared that M. Texier has transmitted to that country a large portion of the sculptured frieze of the Temple of Diana Leucophryne from the ruins of Magnesia ad Meandrum, in Asia Minor, and that M. Eugène Boré, in following a new route from Constantinople to Tabriz, has explored the sources of the Halys, Lycus, and Iris rivers.

3. The next paper was Extracts from a tour through the southern provinces of Persia, with a description of the sculptures of Tenghi Soulek, by the Baron Clement de Bode. The Baron having heard, while at Bebehan, of the existence of ancient sculptures and inscriptions in the Bachméï Mountains, resolved to visit them, the more particularly as it was new ground. He accordingly started on the 28th January of last year, and leaving to his left the route which had been followed by M'Donald Kinneir, took a N.W. direction along the foot of the mountains towards Tenghi Soulek. Here, on the rock, he found some interesting sculptures, of which he took drawings, as well as of the inscriptions, which latter have been given in the French *Journal Asiatique*. The Baron's paper describes the sculptures minutely, and he says they appeared to him different from all that he had seen at Persepolis, Nakshi Rústam, Nakshi Redjib, Bissitún, Takhtí-Bostán, Shapúr, and Nakshi-Bagram, in the country of the Mamaceni. The character of the inscriptions, likewise, differs from the Babylonian arrow-headed and the Pehlvi letters, and may only be traced, perhaps, to the Old Zend, or even the Phenician alphabet. From Tenghi Soulek, crossing the head waters of the Kurdistan, and its northern tributaries, the traveller proceeded to Mannijak, and thence by Kale Tul to Mal Amir, a plane with several mounds, and having caves and sculptures on its confines. From this place the Baron intended going over the mountains to Ispahan, but the pass was blocked up with snow, though the Governor of Ispahan had passed that route shortly before with troops and artillery. The traveller, therefore, turned eastward, and passing over a hilly country and crossing the southern tributaries of the Kuren, arrived, by the villages of Kori-Shutur-Zer and Beï-tavend, at Shuster. The paper was accompanied by a map of the route and country, drawn by the Baron, and valuable as adding to our maps the geographical features of a part not before traversed by any European.

STATISTICAL SOCIETY.

Jan. 16.—Lieut.-Col. Sykes, V.P. in the chair.

A paper was read by the Rev. E. W. Edgell, giving a summary of the labours of the Committee of Education appointed by the Council of the Society, from which it appears that they have examined the schools in the city of London, the city of Westminster, the boroughs of Marylebone and Finsbury south of the New Road,—in short, the whole of London north of the Thames, with the exception of the Tower Hamlets. In this space, containing 700,000 inhabitants as nearly as can be ascertained, there were found the following number of schools, and children attending them:—

No. of Schools.		Boys.	Girls.	Total.
465	Dame Schools	3,016	4,184	7,200
444	Common Day Schools	5,071	5,604	10,675
177	Charity Schools	13,091	8,307	21,398
54	Infant Schools	—	—	7,612
135	Sunday Schools	—	—	22,262
1275		21,178	18,095	69,147

The more immediate purport of the paper was the state of education in the borough of Finsbury, as examined in 1839 by agents appointed by the Society. The field of the Committee's labours included all that part of the borough which is covered with streets and houses, and the population of which may be considered as, strictly speaking, a town population. The borough thus restricted comprises the following parishes and parts of parishes:—St. James, and St. John, Clerkenwell, St. Luke, St. Andrew, part of St. Sepulchre, part of St. Botolph, and a very small part of Islington extending across the City Road. These parishes put together form an area of 1000 acres as nearly as possible, which may be described as nearly a square. Clerkenwell is known as being the principal place in England for the manufactory of watches and jewellery. In looking over the census lists of this district, it would appear that every other male returns himself as jeweller or watchmaker, or as belonging to some of the numerous subdivisions of the latter trade. It has, however, none of the usual characteristics of a manufacturing town. There are many miles of open well-ventilated streets containing exclusively small private houses which look neat and comfortable; and a stranger is not struck by the appearance of extreme misery and wealth alternating with each other in close juxtaposition. The cause of this peculiarity of Clerkenwell, which so distinguishes it from other parts of the metropolis, is to be found in the nature of the manufacture, which requires no machinery or large buildings, but is carried on by the workmen at their own residences. Small private schools abound throughout the district. The charity schools are few, and by no means good. South of Clerkenwell is situated the *Saffron Hill district*, proverbially the dirtiest in London; very possibly the dirtiest in the world. At least it would be difficult to imagine a more thorough combination of the worst characteristics of an English and a continental town, the closeness, darkness, and confinement of the former with all the disgusting objects of the latter, that is exhibited in the small streets and alleys between Saffron-hill and Fleet-ditch. The trades carried on are those of horse-killers, horse-hair dressers, feather curers, &c. Some alleys consist of lodging-houses occupied exclusively by Italian boys. The Committee counted eight of these, each containing from 30 to 40 boys, and each under the superintendence of a man and his wife (also Italians) who bring them over to this country as a speculation. The alleys so inhabited had a somewhat picturesque or foreign appearance: the rest looked like what they were, abodes of utter wretchedness and filth. In one important particular, it is still more remarkable, viz. in the number of persons living in the same dwelling: 25 to a house was the average throughout many schedules of the census! But the most striking circumstance connected with the two above-mentioned districts, is the total want of any private schools for the reception of children of the lowest orders. Indeed, the absence of private schools throughout all the very poor districts is one of the most remarkable facts elicited by the present inquiry. The Saffron Hill district was searched by three agents on three several occasions at considerable intervals of time, but no dame school or common day school was found by either: that part of St. Giles's parish which extends northward from St. Giles's church, and which is inhabited exclusively by Irish, contained no dame school: and again, in the whole of Whitecross registry, a much larger district than either of the former, (although perhaps not so exclusively poor,) there were only three. Moreover the testimony of the agents on this head is confirmed by the census lists of 1841, which have

Digitized by Google

been minutely examined with a view to this very question. The number of dame schools found in the above district (by which term is to be understood schools kept by females of the lower class, and in which the amount of weekly payment for a child averages 5*d.*,) was 180, containing 2,693 children, of which number half were under and half above five years of age (the number of girls to that of boys being as 16 to 11). The number of common day schools was 137, with 169 teachers, the whole number of scholars was 3,416, being, on an average, 25 to each school; the payments were about 11*d.* per week for each child. The number of middling schools was 75, of which 15 were kept by masters, and were for boys only; 44 were kept by mistresses, and were for girls only; while 16 were kept by mistresses, or masters and mistresses, and received both sexes. The whole number of children educated in these schools was 2,107, (or 28 on the average to each school), 884 being boys, and 1,223 girls. The number of charity schools was 75, which were found to contain 4,835 boys, and 3,622 girls. In the charity schools there is a marked difference between those which are endowed, and those which are supported by subscriptions, the former being much the most orderly and efficient; and it was found that those schools where instruction was given gratuitously were very superior in this respect to those which exact payment from the children. In the last-mentioned case, and especially where the existence of the school depends on children's payments, it may be doubted whether any moral good is conferred at all. In the dame schools the Committee found no poverty or dirt at all similar to that described in the Manchester and Liverpool reports. The houses they were held in were as good as others in the same locality. Except in a few instances, where they were held over old boot and shoe shops, or old clothes shops, there was nothing particularly disgusting in them. There was only one instance of a school held in a cellar. This general appearance of the dame schools, combined with the fact before alluded to, of none ever being found in the lowest situations, leads to the conclusion that they are not attended by children of parents in the very lowest grade of life, such either not being able, or not caring to pay any sum for their children's schooling. Hence may be inferred the great benefit which must arise from the location of charity schools in bad neighbourhoods. In a decent neighbourhood, where the effect of a charity school is only to draw away the children from the surrounding dames and common day schools, the advantage of it is very questionable: at least it resolves itself into a question between the relative merits of the respective teachers. But in such localities as St. Giles and Saffron Hill, it can hardly do otherwise than produce unmixed good, and every child received into it may be considered as so much saved from the general mass of ignorance and vice. The most striking fact with respect to the proprietors of the private schools for the lower orders is the immense preponderance of female teachers, the schoolmistresses being to the schoolmasters in the ratio of 9 to 1, although the children placed under their care are, in respect to sex, nearly equal. The greatest portion of them seemed to be persons of good moral, and many of them of decidedly religious, characters. The mistresses of common day schools were sometimes young persons unable to go out to service from ill health, or desirous of staying at home with a sick or aged parent, and glad to add something to their means of maintenance, in which cases they were not of course the most active of teachers; but in other cases again they were very efficient persons, generally the daughters of journeymen, and living in the houses of their parents: few were of the lowest class (that is to say, they were generally more respectable than the average of the population in the same street or alley.) The following details refer to the above class of persons. Of 299 teachers, 200 belonged to the Established Church; 87 were orthodox dissenters, including Wesleyans; 6 were Roman Catholics; 2 Quakers; 1 Swedenborgian. Two did not know to what they belonged; and one said that she did "not belong to any sect in particular."—Of 304, 38 said that they adopted the profession of teacher from preference; 264 said they adopted it for a maintenance; and 2 that they did so on account of ill health.—Of 290 who were asked the question whether they devoted their whole time to the school, 29 answered that they also kept a shop, or had other laborious occupation; 21 females that they maintained themselves by needlework; and the rest that they had no other employment than the school (but it must of course be understood that the dames do their own household work).—Of 294, 176 were Londoners; 111 came out of the country; 7 were Irish; and 1 Swiss. Of those who came from the country, there was rather a predominance of persons from Norfolk and Suffolk.—Of 290, 60 only professed to have been educated for the employment.—Of 296, 73 represented themselves as having been engaged in teaching above 20 years; 70 between 10 and 20 years, and the remainder had been less than 5 years. The examination of the middling schools elicited some interesting information, as it appears that the children attending them form the great mass of the London population; here the children paid about 23*s.* per quarter, or 4*l.* 12*s.* per annum, and as the number of children in each school averaged 28, the annual receipt of the proprietor would be about 130*l.* per annum. There are however extra payments for books and stationery, which make the average payment of children at middling schools to amount to about 6*l.* per annum. The education given in these schools differs from that given in national schools, rather in point of quantity and of certainty, than in point of quality. At the national school an industrious child may learn to read and write, and do accounts, but at the middling schools he is more certain of learning these accomplishments, and learns them quicker. More pains are taken with children of slow capacities, and less opportunity is allowed for idleness; but it may be doubted, whether any higher kind of learning is imparted in the middling schools than in charity schools. The tables which were appended to the paper gave a detailed account of the books found in the various schools, but these were of so miscellaneous a nature, that it is impossible to give any abstract of them. In the boys' schools the greatest stress was laid on writing; the first object of the schoolmaster was always to show his copy books, as proof of his scholars' proficiency.

MEDICO-BOTANICAL SOCIETY.—*Jan.* 25.—The Secretary read a paper by M. Guibourt, 'On the Ceylon Moss,' a large quantity of which had been sent to him by M. Saillant, a pharmacien, at Nantes. The moss has been described and figured by Turner under the name of the *Fucus lichenoides*, by Agardh as the *Sphærococcus lichenoides*, and by Lamaroux, as the *Gigantina lichenoides*. This moss, or alga, is in whitish ramifying filaments about three or four inches long, and about the thickness of strong sewing thread. It appears to be cylindrical to the naked eye, but under the microscope it offers an unequal, and as it were nervous or reticulated surface. Its branches are either dichotomous, pedulated, or simply alternate. It has a slightly saltish savour, and is scarcely, if at all, soluble in cold water. Iodine colours it of a blackish-blue, mixed with a red tint; it therefore contains amylaceous matter. The Ceylon moss affords by boiling an abundant nutricious jelly, well suited for invalids. The residue of the decoction may be employed as food; it may be prepared in the same manner as the leguminous vegetables. Such, in fact, is its principal use in the countries where it is indigenous.

Some fine specimens of native medicinal plants were placed on the table by Dr. Houlton, among which was the *Prunus lauro cerasus*. With respect to this, Dr. Houlton mentioned that a patient of his, who had been engaged for several hours collecting it, was after a time seized with all the symptoms of poisoning by prussic acid, from which he recovered by the use of medicinal and dietetic stimulants.

SOCIETY OF ARTS.—*Jan.* 25.—B. Rotch, Esq., V.P. in the chair. Mr. Hughes exhibited and explained his metallic lath sun-shade, the novelty of which consists in the moveable laths being constructed of wire gauze in two thicknesses, with a space between them of $\frac{1}{10}$ of an inch; this arrangement produces an appearance very similar to that of watered silk; the ends of each moveable lath are bound with brass.

Mr. Young, one of the inventors of the type-setting machine, explained the construction and uses of the several parts of this contrivance. One of the machines being in the room, the inventor was enabled to show it in full work. The upper part consists of the type reservoirs, which are long rectangular channels, fixed in an inclined position to prevent the letters falling out, and of a size corresponding with that of the type to be used. Immediately below these reservoirs, are as many knives or cutters, the use of which is to cut off or displace the bottom letter of each column of type. The motion is given to these cutters, by the manipulation of the performer sitting in front of the instrument, who in playing on the keys (altogether 96 in number) draws down the vertical rods, connecting the keys and the cutters, and thus displaces the cutters, which, pressing against the lowest letter of each column of type, causes it to pass through an opening in the bed plate of the cutters, and thus enter on to the top of an inclined plane at the back of the machine. The inclined plane is constructed of brass, and contains several curvilineal channels, down which the types glide gradually at intervals, regulated by the manipulations of the performer. At the bottom of the inclined plane is an eccentric movement (worked by a treadle) to regulate the admission of the stream of type into a long open trough or channel leading to the composing case, where the type is adjusted ready to form into pages for the press. When in full work, as many as 8000 letters, &c., may be set up by this machine, worked by two young women, in one hour—whereas, by the ordinary mode, a good compositor cannot set up more, on an average, than 1700 letters.

MEETINGS FOR THE ENSUING WEEK.

FINE ARTS

1. *A Guide to the Architectural Antiquities in the Neighbourhood of Oxford.* Part I.—Deanery of Bicester.
2. *Views and Details of Saint Giles's Church, Oxford.* By J. P. Harrison, B.A., Christ Church. Both published for the Oxford Architectural Society.
3. *A few Hints on the Practical Study of Ecclesiastical Antiquities, for the use of the Cambridge Camden Society.* Third edition.
4. *Church Schemes, or Forms for the Classified Description of a Church.* Eleventh edition. Published by the Camden Society.

"IT never rains but it pours," says the old proverb, and certainly there never has been such a flood of talk and prying about the width of chancels, the length of naves, the groining of apses, &c. as at the present time. The Skeleton Forms (No. 4 on our list of works,) will be found a useful monitor in visiting a church; and any one whose taste leads him to investigate Church Architecture, in practical examples, by far the most efficient means of investigation, should be prepared with numbers of these outlines. Taking them as guides, it is scarcely possible to omit noticing any feature of interest. Every one who is accustomed to observation of any kind,—of natural objects, of Pictures, Sculptures, Architecture,—must have felt how impossible it is, without actual memoranda made on the spot, to bring away a recollection of precise details. The 'Scheme' is divided into six grand divisions, more or less applicable to every church. 1. Ground plan. 2. Interior. 3. Tower. 4. Exterior. 5. Crypt, 6. Miscellaneous. Each of these, again, is subdivided, and from first to last, there are not less than two hundred and fifty points of detail, to which the attention is called. We will give a specimen of them, relating to the Tower.

Digitized by Google

The points of observation stand in the following order: 1. Form. 2. Stages. 3. Spire-lights. 4. Lantern. 5. Parapet. 6. Pinnacles. 7. String Course. 8. Belfry Windows. 9. Windows of Tower, S. W. N. E. 10. Buttresses. 11. Construction and ages of Wood-work, and floors of the Tower and Spire. 12. Bells: α, Number; β, Tone; γ, Inscription and Legendal History; δ, Chime (Treble clef); ϵ, Remarkable Peals rung; ζ, Saint's Bell; η, Arrangement, &c., of Frames. 13. Beacon or Belfry Turret: α, Situation; β, Form; γ, State of Defence and Line of Beacons. 14. Staircase: α, Construction; β, Doorways; γ, Spiral Bead. 15. Defensive Arrangements of Tower. 16. Thickness of Walls. 17. General character of Tower, as peculiar to the district, or adapted to scenery and situation. A space is left against each one of these items, which the visitor is to fill up. He is requested to send a copy of one of the 'Schemes,' so filled up, to the Cambridge Society. If every one who visits a church will take this trouble, a most valuable and unrivalled national collection will be formed of the details of ecclesiastical architecture.

The Architectural tourist will obviously be saved trouble by all this specification, and he will do well to provide himself, also, with a copy of the 'Few Hints,' which contain a concise and clear summary of the peculiarities of the styles of Architecture, beginning with the Romanesque, and ending with the debased—with references to larger works, for more copious details. Among them is recommended the Society's 'Monumental Brasses,' whilst no reference is made to Stothard, or Cotman, or Waller, which is not over modest, seeing the immense inferiority of the first to all of them. Since our notice of the 'Monumental Brasses,' it has occurred to us, that instead of taking Waller's brasses as a model for a new edition, the best *amende* which the Society could make to their subscribers and offended art, would be to enter into some arrangement with the Messrs. Waller for a supply of their work. The Cambridge Camden Society cannot hope to surpass it; and it appears to us, that it is a sort of duty in them to encourage such a work, for which there cannot be a very extensive demand, rather than oppose it by any work of their own, even if they could make it superior.

We would venture to caution these Architectural Societies against falling into the error of sectarianism—the Cambridge Society, especially. We are ready to go all lengths with them in admiration of our Middle-Age Architecture, but we cannot assent to a dogma they seem disposed to enforce, that there should be nothing else. The most essential feature of the Architecture of their admiration, was progressive change; so much so, that no better type of progression can be found, than in most Gothic cathedrals. We should never have had Salisbury Cathedral, had the ecclesiastics of the time seen perfection in Rochester. And we might have stood still at Salisbury, if every one had been pronounced a heretic who saw beauties in the choir of York Minster. The principle of improvement has never been *retrogressive*; and the Cambridge Camden Society will have difficulty in reversing the order of nature. Restore our ancient buildings, we say, with scrupulous care: they are beautiful in themselves, and they are genuine marks of past ages. But it is absurd to call on the architects of the nineteenth century to reproduce such works, and none other—to attempt to supersede the invention and judgment which have been the aim and end of all their professional studies. It is a revival of the old error which misled Jones and Wren, in whose alterations and mutilations, much as we dislike their anachronisms, we still read the same truth as in the works they mutilated and despised: they represent the spirit of the seventeenth and eighteenth centuries—a very disagreeable spirit, we are ready to admit—as accurately as the most perfect of William of Wykeham's structures typify their age.

There is either a narrowness of view about the 'Guide to Architectural Antiquities,' or the title is more comprehensive than was meant. It might properly be called a 'Guide to Ecclesiastical Antiquities,' and, as such, is done in a business-like style; rather dry, but precise; aiming to be correct, and steering clear of all imagination or sentiment. The wood-cuts, which are numerous, are executed in a corresponding spirit—accurate, but not picturesque. We see no impossibility in an union, and it does not seem altogether a hopeless task to fill a book with details and yet make it readable. This work is practically a guide only to the churches in the neighbourhood. But it is not intended, we are told, to confine its object to churches, whenever any other Gothic buildings are to be met with. The district to which the present part relates, is stated to be "not rich in them." It would appear to be absolutely destitute. There is much modesty, however, about the execution of the work, coupled, at least, with judicious aspirations. The historical accounts are avowedly derived from Bishop Kennett's 'Parochial Antiquities,' and Mr. Dunkin's 'History of the Hundred of Ploughley.'

The 'Views and Details of St. Giles's Church, Oxford,' are chiefly intended for the use of the architect: the elevations, &c., lithographed in outline, are on a scale of sufficient size, to serve as practical working drawings. They afford some good specimens of the Early English style, of about the year 1210.

MUSIC AND THE DRAMA

New Translated Operas.—Popular taste has manifested itself too resolutely in the matter of dramatic music to be denied. The English public will have operas; and, till native composers prove themselves up to the mark, translated operas are the inevitable resource of managers. It is more than probable that this frank acknowledgment will subject us to the accusation of injustice—and the *Athenæum* be again accused of an undue preference for foreign art. Yet our English madrigalists, our English choralists, our great English singers, our English instrumental composers have not been grudgingly praised in this journal—complimented indeed, if only by the very manner of our treatment—in that we have commented upon them with the same scrupulous closeness that we have applied to the great names and the great performances of Europe. It is our fixed conviction, that nothing in Art falls, save by its own weakness, or can stand on undeserved praise. In proof, more pains have been lavished on attempts to revive the music of Purcell and Arne, than have been brought to bear by the most intrepid speculators on the naturalization of foreign opera and foreign pageantry. Abler pens have been devoted to the glorification of our imperfectly-trained musicians—who *could not*, under circumstances, have learned their art as concerns the stage—than have done justice to Beethoven's grandeur or Rossini's brilliancy. Educated prejudice has ranged itself on the side of popular ignorance, to applaud and to encourage the slightest manifestation of native talent, as if it were some complete work of perfect genius. Yet, what is the result? Another emphatic answer, in the success of 'Lucia di Lammermoor' at the Princess's Theatre, and of the 'Donna del Lago' at Covent Garden.

That the favourable reception of the first of these operas, however, is largely a matter of tradition cannot be denied. The success of Persiani's flourishes and Rubini's pathos is enough for a while to buoy up any work: the music of the 'Lucia' is good to sing, the parts graceful to act, and impassioned for those who have passion. It is remarkable, too, how long agreeableness of form and adaptability to the average powers of artists will sustain that which is in itself merely mediocre; and this is a truth not unworthy the consideration of such among our younger composers as intend to write for the stage. To say that the English performance of the 'Lucia' comes in any respect near the Italian, would be ridiculous. No magic can make Madame Eugenie Garcia agreeable as a vocalist, or divest Mr. Templeton of a dash of the absurd when he ventures on the pathetic, or—but we are touching on English ground, and are bound over to civility. Well then, all that we shall gather for the present from this representation of 'Lucia' is the extreme readiness of our public to welcome operatic entertainments, and to encourage their own countrymen. For if story even were deemed requisite for a musical drama, there is hardly a child, in pit, boxes, or gallery, who could not ask, why Sir Walter Scott's legend has been divested of all its dramatic contrasts?—what has become of its witch-work of prophecy and omen? of the three hags crouched like Mischief, Malice, and Revenge on the "through stane"?—and why have the last scenes been so needlessly emasculated; when a simple adherence to the original catastrophe—the interrupted ball—the cry from the bridal chamber—and *then* the apparition of the frenzied bride—would have given such admirable scope to composer, singer, and stage-manager?

But, instead of wandering wide in speculation and question, we ought, perhaps, to confine ourselves to a report on the other *Scottish* opera, 'The Lady of the Lake,' presented on Tuesday last at Covent Garden. Perhaps the musical beauty of this work never stood a fairer chance of being appreciated than on the present occasion by comparison with the meagre graces of Donnizetti's version of so much finer a story. The dramatic situations in the 'Donna del Lago' are few; those even falling into the province of the scene-painter and the group-master, rather than calculated to develope the genius of the principal artists. And yet what a variety of beauty pervades the work! from *Elena's* simple 'Aurora,' onwards to the brilliant *rondo* 'Tanti affetti,' which closes the opera—not forgetting *Malcolm's* two songs, the superb *entrata* of *Roderick Dhu*, the duet between tenor and soprano in the first act, and the whole first *finale!* Lovelier music was never written by Rossini, though he had oftentimes more forcible situations to illustrate. The execution at Covent Garden was good as far as Miss Rainforth is concerned—excellent on the part of Mrs. Shaw who enacted *Malcolm*. She looked to greater advantage, sung with more fire, and acted with a more original spirit than in any preceding character: and her success was brilliant. Messrs. Harrison and Manvers had studied their parts carefully; and the former sang an introduced *cavatina* from 'Zelmira' so much to the taste of the audience as to gain an *encore*; but the music written for David and Nozzari demands artists consummately perfect in their vocal acquirements. A word must be added in recognition of Mr. Giubilei's effective performance of the part of *Douglas*—and a last word to the credit of the chorus and the scene-painters.

ST. JAMES'S THEATRE.—'L'Omelette Fantastique,' one of the most popular of the *folies* produced last year at the *Théâtre Palais Royal*, and already travestied at the Princess's Theatre, has been given in King Street, but the texture is so slight that without the original actors it stands a poor chance of pleasing. Madame Albert's 'Nuit d'Attente' and 'Georgette' have been more attractive; but her best performance is in 'Arthur,' one of those sentimental dramas which, to our thinking, is disagreeable in proportion as it is successful. A betrayed maiden; a mother called upon, like another Griselda, to sacrifice her mother's love to the overweening pride of the father of her child—and the agonies and outrages of long years at last wound up and forgotten in the tardy justice extorted from the heartless author of so much misery:—of ingredients such as these, no drama can be made that we care to look upon. The emotions excited wring the heart without mitigation; the moral reached at last (if moral there be) is bad. It is not fit or becoming that Woman should be thus gratuitously tortured before our eyes: it is not possible that, after years of such protracted wretchedness, there could be any future for her worth enjoying, save in the quiet of the grave! And Madame Albert, by the feminine power and truth of her acting, makes us doubly alive to the faults of the fable. Her great scene with her son was deeply pathetic, in spite of the management having allotted to her as the object of her tenderness a youth who resembled nothing so much as one of those costume-dolls, arrayed in a sailor's jacket and trousers of an impossible neatness, who stand sentinel at so many shop-doors in Oxford Street. The acting of M. Gamard, who performs the part of a faithful but absurd follower of *Marie's* fortunes, is an extremely clever balance between farce and feeling, not to be overlooked in these degenerate days.

MISCELLANEA

Paris Academy of Sciences, Jan. 24.—A paper was read on the respiratory functions of the human species at the different periods of life, and according to sex, by M. Bourgery. M. Bourgery deduces from his experiments that the respiration of a healthy man of thirty years of age is equal in strength to that of two weak men, or two strong or four weak women, or two boys of fifteen, or four boys of seven, or four old men

Digitized by Google

of eighty-five.—Papers were red on the Olfactory organs, and on the character and functions of the Spleen.—M. Arago made two communications connected with astronomy. The first referred to M. Encke. This gentleman, in watching the progress of the short-period comet to which he has given his name, has attempted, from the sensible perturbations which it experiences from the action of the planet Mercury, to judge of the mass of that planet. He makes it only five-eighths of the size supposed by Laplace. M. Encke is also of opinion that he will be able to appreciate the resistance of the ethereal medium through which it has to pass when near the sun. The second communication related to M. Laugier. This astronomer has carefully observed the course of the comet of 1842, which he had the honour of discovering. It quitted our hemisphere towards the end of November, and will make its re-appearance in the first week of February. Circumstances, however, will then be much less favourable for observation than at the period of the discovery. The comet will, day by day, become more and more distant from the sun, and will only rise a few degrees above our horizon.—A communication was received from M. Fremy, stating that he has discovered a test for the precipitation of soda in alkaline solutions and its separation from potass.—Mr. Milne Edwards read a report of a Paper on Crustaceous Animals, by M. Joly.

Shakspeare.—[*To the Editor of the Athenæum.*]—That Shakspeare was a perfect ignoramus in classic lore seems a tenet to which those excellent believers, the good English people, stick as fast as if it were a fortieth article of their faith. Perhaps some dread of appearing heterodox occasioned your reviewer of 'Timon' (see *ante*, p. 33,) to countenance the popular creed on this point, nay even to admit that our great dramatist "knew not the form of a Greek letter." Why or how such a prejudice should be fostered among his idolizing countrymen, might puzzle Shakspeare's own imagination to conceive: one would think they hated Greek, like Milton's puritan critics, "worse than toad or asp," and considered it a kind of *Black Art*, any dealings with which threw discredit on his powers of Natural Magic. There is proof enough, I grant, that Shakspeare was not the Porson of his age, but the self-same line so triumphantly quoted ever and anon against his learning, attests as irrefragably his knowledge, albeit limited, in *both* the classic languages:

And though thou hadst small Latin and less Greek—

this declares, not that he had *no* Greek, but that he had *some*,—otherwise plainspoken Ben would have written down the whole abrupt truth; would have used instead of the diminutive, the negative pregnant. Besides: what manner of man was he who thus appreciated Shakspeare's proficiency in Greek? Jonson, one of the most erudite scholars then alive, one of the most fastidious and unmerciful Aristarchi too? A pedant, amidst all his poetry, a classical martinette! To such a man, even a very respectable smattering in that tongue would have appeared contemptible. How many schoolmasters of the present "enlightened" period would Ben favour with a more complimentary opinion? How many of us authors, who yet can spell out our Homer and Horace, would so learned a Theban allow to have any Greek or Latin at all? Surely an intuitive mind like Shakspeare's, however neglected during youth, could have mastered Greek enough at a later period to attain its own poetic purposes, if not Ben Jonson's panegyric. I beg leave then to tell my countrymen on the strength of the above cited poetical diploma, that Shakspeare knew somewhat more about his *alpha-beta* than many of themselves who disparage him; and to submit that he needed neither "translation of Lucian" nor "conversations with learned friends" to give him a competent notion of Timon's character as drawn by the satirist of Samosata. Any smart schoolboy could acquire this; much more could Shakspeare, notwithstanding his less-than-little Greek.—I am, &c. G. D.

Lotteries and Little-Goes.—The following are extracts from statutes in force respecting lotteries and little-goes:—"All lotteries shall be deemed public nuisances." 10 & 11 Will. 3. c. 17. s. 1.—"No person shall, either publicly or privately, exercise, keep open, show or expose, to be played at, drawn or thrown at, or shall draw, play at, &c., any lottery, either by dice, lots, cards, balls, or other numbers or figures, or any other way; and every person who shall exercise, &c. any lottery, shall forfeit 500*l.*" Id. s. 2.—"Every person who shall play, throw, or draw at any such lottery, &c., shall forfeit 20*l.*" Id. s. 3.—"All persons who shall be adventurers in, or pay any money or other consideration, or any way contribute to any such sales, lotteries, proposals or schemes, shall forfeit double the sum so paid or contributed." 8 Geo. 1. cap. 2. s. 37.—"All sales of houses, lands, advowsons, presentations to livings, plate, jewels, ships, goods, or other things, by any game, lottery, or other device to be determined by chance or lot, are hereby declared to be void: and all such houses, &c. so exposed to sale, shall be forfeited to such person who shall sue for the same by action or information in any court of record, or at the assizes for the county, where the offence is committed, in which action, no essoin, &c., and only one imparlance, shall be allowed." 12 Geo. 2. c. 28. s. 4.—"If any person be convicted of setting up or keeping any of the said lotteries or games, or therein shall adventure, and have not sufficient goods whereon to levy the penalties, or do not immediately pay or give security for the same, the justice before whom such person is convicted, may commit such person to the common gnol of the county or place where such offence is committed, for any time not exceeding six months." Id. s. 8.—"All games or lotteries called *Little Goes* shall be deemed and are hereby declared common and public nuisances, and against law." 42 Geo. 3. c. 119. s. 1.—"No person shall publicly or privately keep any office or place to exercise, keep open, show, or expose to be played, drawn, or thrown at, or in, either by dice, lots, cards, balls, or by numbers or figures, or by any other way or device, any game or lottery called a *Little-Go*, or any other lottery not authorized by parliament, or shall knowingly suffer to be exercised, kept open, &c. shown or exposed to be played, drawn, or thrown at or in, either by dice, lots, &c. or any other device, any such game or lottery, in his house, room, or place, upon pain to forfeit 500*l.*" Id. s. 2.—"No person shall, under any pretence, device, form, denomination, or description whatsoever, promise or agree to pay any sums, or to deliver any goods, or to do or forbear doing anything for the benefit of any person, whether with or without consideration, on any event or contingency relative or applicable to the drawing of any tickets, lots, numbers, or figures, in any such game or lottery, or publish any proposal for any such purposes, on pain that the persons offending herein shall forfeit 100*l.*" Id. s. 5.

Epigram on Mrs. Parkes' Pamphlet.

Such strictures as these
Could a learned Chinese
Only read on some fine afternoon,
He would cry with pale lips,
"We shall have an eclipse,
For a Dragon has seized on the Moon!"

New Monthly Magazine.

Engravings.—The catalogue of the engravings in the Royal Library, Paris, made out to the 1st January, 1841, contains 1,895 by Rembrandt, and 2,498 by Callot. The portraits, from the earliest period down to that of the Count de Paris, amount to 90,565. Of Henri IV. there are 300 portraits; of Napoleon 433; and of Louis XIV. 531. The division allotted to the costumes of all nations contains 36,973 plates, 11,991 being costumes of France in different ages. This collection presents great interest, from the singularity and strangeness of an innumerable portion of the dresses. The historical prints are in number 24,118. Of these, 14,387 relate to France. To these are added 7,831 caricatures, 36,859 architectural pieces, 39,901 from natural history, and 41,840 scriptural subjects.

Paris Theatricals.—There were produced in 1842, at the different theatres of Paris 191 new pieces. At the Académie Royale de Musique 2 operas and a ballet; the Théâtre Français 2 dramas and 5 comedies; at the Odéon 2 tragedies, 11 dramas, and 15 comedies; the Italian Opera 4 pieces; the Vaudeville 11; at the Variétés 28 vaudevilles and an English pantomime; the Gymnase 18 vaudevilles; the Palais Royal 24 vaudevilles and a parody; the Porte St. Martin 3 dramas, 1 vaudeville, 1 ballet, and a monologue; the Gaité 8 dramas and 8 vaudevilles; the Délassemens Comiques 37 vaudevilles; and at the Théâtre Beaumarchais 2 dramas and 6 vaudevilles.

IMPORTANT NEW WORKS

PREPARING FOR PUBLICATION.

1.

On March 1st, price 2*s.* 6*d.*, PART I. of

A CYCLOPÆDIA OF

BIBLICAL LITERATURE,

By JOHN KITTO, Editor of 'The Pictorial Bible,' &c.

Assisted by various able Scholars and Divines, whose initials will be affixed to their respective contributions.

The design of the Editor is to produce a work, which, within reasonable limits, and at a moderate price, shall present not only a digest of all the information contained in the Voluminous Works of this description, but also the results of those modern researches in Biblical Literature and Science with which it is so important that English Readers should be acquainted.

The Work will be printed in double columns, in a clear and distinct type, and will appear in monthly parts, each of which will be embellished either with a highly-finished Engraving on Steel, or with a Map. The volume will also be profusely illustrated with Wood Engravings, representing Landscapes, Buildings, Monuments, Plants, Animals, Illustrations of Manners and Customs, and whatever can be more clearly displayed by pictorial than by written description, or by which the written text may be in any degree elucidated.

2.

On March 1st, price 6*s.*, PART I. of

A NEW EDITION OF

BLACK'S GENERAL ATLAS OF THE WORLD.

TO BE COMPLETED IN EIGHT MONTHLY PARTS.

Comprehending Sixty-six Folio Sheets, engraved on Steel in the first style of the art, by SIDNEY HALL, HUGHES, and others, with Geographical Descriptions, Statistical Tables, and an Index of all the Names occurring in the several Maps, amounting to upwards of 50,000, with their Latitude and Longitude, and the number of the Map in which they will be found.

To the present edition have been added a NEW MAP OF INDIA on a large scale, with the scene of the recent warlike operations West of the Indus; MAPS OF CHINA, NEW ZEALAND, VAN DIEMEN'S LAND, WESTERN AUSTRALIA, SWAN RIVER, and NEW SOUTH WALES. For the accommodation of the readers of Ancient and Scripture History, there have also been added, TWO MAPS OF THE WORLD AS KNOWN TO THE ANCIENTS, while important improvements have also been made on the MAP OF PALESTINE.

The Work having been revised and corrected throughout, the Publishers are satisfied that in every respect it is accommodated to the present advanced state of geographical research, and whether on the ground of accuracy, beauty of execution, or cheapness, they invite a comparison with any other work of the class.

3.

On March 1st, price 3*s.*, Part I. of

A NEW EDITION OF

A SYSTEM OF UNIVERSAL GEOGRAPHY.

Founded on the Works of MALTE BRUN and BALBI.

To be completed in Ten Monthly Parts.

This Work having now received the general approbation of the Press, as one of the most comprehensive and best compiled Systems of Geography in the English language, the Publishers are induced to bring out the new and improved Edition in a form which renders it accessible to all classes.

The Volume embraces a Historical Sketch of the Progress of Geographical Discovery, the Principles of Mathematical and Physical Geography, and a complete Description, from the most recent sources, of all the Countries in the World, with numerous Statistical Tables, and an alphabetical Index of 12,000 names.

"Executed with masterly ability."—*Atlas.* "The most complete existing book upon geography in one volume. We strongly recommend it as a book of reference."—*Examiner.* "One of the most comprehensive and best compiled books of the class ever published."—*Britannia.* "The task of reducing, within just limits, the somewhat prolix eloquence of the learned Dane has been ably executed by the Editor of this volume, which, though we have styled it an abridgment, yet extends to more than 1600 closely printed pages. It has an index also which contains more names than are to be found in most Gazetteers."....." A work the careful elaboration of which is equal to its utility."—*Athenæum.*

ADAM & CHARLES BLACK, Edinburgh;
LONGMAN, BROWN, GREEN, & LONGMAN, London;
and sold by all Booksellers.

Digitized by Google

In a few days will be published, in 2 vols. post 8vo.

THE MEMOIRS of a GRIFFIN; or, a Cadet's First Year in China. By CAPT. F. J. BELLEW. With Illustrations from Sketches by the Author.
London: Wm. H. Allen & Co. 7, Leadenhall-street.

This day is published, price 2s.

FACTS *versus* THEORY; or, a Retrospect of our past Policy, with Hints for future Improvement.
By G. R. ROBINSON, Esq. Chairman of Lloyd's, And late Member of Parliament for the City of Worcester.
London: Smith, Elder & Co. Cornhill.

TAYLOR'S SCIENTIFIC MEMOIRS.

MOSER on VISION, and on LATENT LIGHT in Connexion with Photography. The three Memoirs on this subject are now published in Part XI. of SCIENTIFIC MEMOIRS; which contains also Memoirs by Ehrenberg (with Plates), Peltier, Melloni, Gauss, and Lamont.
R. & J. E. Taylor, Red Lion-court, Fleet-street.

Just republished, in post 8vo. on fine paper, handsomely bound in cloth gold lettered, price 6s.

CAIN AND ABEL; an Oratorio Poem in Two Parts. Minor Pieces.
By ADAM CHADWICK, M.D.
London: Benjamin Steill, 20, Paternoster-row.

On Tuesday, the 7th instant, will be published, price 2s. 6d.

ON the TREATMENT of the DISEASES of the EYE by means of PRUSSIC ACID VAPOUR, and other Medical Agents. By A. TURNBULL, M.D
London: John Churchill, Princes-street, Soho.

2nd edition, revised, with a large Map, 2 vols. 8vo. 30s.

A HISTORY of INDIA. The Hindoo and Mahommedan Periods.
By the Honourable MOUNTSTUART ELPHINSTONE.
John Murray, Albemarle-street.

Now ready, with Plates, 2 vols. 8vo. 24s.

TRAVELS in NEW ZEALAND, by Routes never before Explored. With Contributions to the Geography, Geology, Botany, and Natural History of the Islands.
By ERNEST DIEFFENBACH, M.D.
Naturalist to the New Zealand Company.
John Murray, Albemarle-street.

Now ready, 3 vols. post 8vo. 24s. 6d.

LETTERS on SOUTH AMERICA; comprising Travels on the Banks of the Paraná and Rio de la Plata. By J. P. and W. P. ROBERTSON,
Authors of 'Letters on Paraguay' and 'Francia's Reign.'
John Murray, Albemarle-street.

Now ready, new edition, 3 vols. post 8vo. 27s.

THE BIBLE in SPAIN; or, the Journeys, Adventures, and Imprisonments of an Englishman in an Attempt to circulate the Scriptures in the Peninsula.
By GEORGE BORROW, Author of the 'Gypsies in Spain.'
John Murray, Albemarle-street.

Now ready, with a Map, 8vo. 10s. 6d.

THE RUSSIAN CAMPAIGN of 1812. By VON CLAUSEWITZ. Translated from the German.
John Murray, Albemarle-street.

Now ready, post 8vo. 7s. 6d.

SKETCHES on the COAST of the MEDITERRANEAN, in Verse and Prose.
By the Right Hon. Lord FRANCIS EGERTON, M.P.
John Murray, Albemarle-street.

THE LATE SIR ALEXANDER BURNES.

Now ready, 2nd edition, with Portrait and numerous Plates, 8vo. 18s.

CABOOL: being the Personal Narrative of a Journey to, and Residence in, that City.
By the late Sir ALEXANDER BURNES, C.B.
Of the India Company's Service.
John Murray, Albemarle-street.

Now ready, 3rd edition, revised, 8vo. 18s.

CHEMICAL MANIPULATION: being Instructions to Students in Chemistry, on the Methods of performing Experiments of Demonstration and Research with accuracy and success.
By MICHAEL FARADAY, F.R.S.
John Murray, Albemarle-street.

Now ready, post 8vo. 12s.

APHORISMS and REFLECTIONS; a Miscellany of Thought and Opinion.
John Murray, Albemarle-street.

Just published, 5th edition, with Woodcuts, fcap. 8vo. 6s. 6d.

NATURAL HISTORY for SCHOOLS.
By EDWARD JESSE.
John Murray, Albemarle-street.

MR. WORLEY'S NEW TRAGEDY.

Now ready, in 8vo.

BORGIA. By H. T. WORLEY, Esq.
"Videtis in Phœdrâ etiam scelere et amentiâ furente non esse penitus extinctam indolem pudoris et honestatis."—*Osorius de Gloria*, p. 139.
Saunders & Otley, Publishers, Conduit-street.

New and Cheaper Edition, price 5s.

LETTERS TO THE YOUNG.
By MARIA JANE JEWSBURY.
5th edition. 1 vol. fcap. cloth.
Hatchard & Son, 187, Piccadilly.

Now ready,

TOM BURKE OF 'OURS.' By HARRY LORREQUER. No. I., price One Shilling, with Two Illustrations by PHIZ. *Contents:* Chap. 1, Myself—Chap. 2, Derby the Blast—Chap. 3, The Escape.
Dublin: William Curry, jun. & Co.; Fraser & Co. Edinburgh; W. S. Orr & Co. London; and all Booksellers.

In 1 volume, the 2nd edition, considerably enlarged, price 5s.

CRIMINAL JURISPRUDENCE considered in Relation to CEREBRAL ORGANIZATION.
By M. B. SAMPSON,
"We heartily recommend the work."—*Legal Observer.*
S. Highley, 32, Fleet-street.

Now ready, 3rd edition, price Half-a-crown,

TAYLOR'S ROYAL BRIGHTON GUIDE; with an Account of the principal Objects worthy of notice in its Vicinity; Biographical Sketches of Royal, Noble, and Eminent Persons, Visitors to Brighton; &c. &c. 12mo. fine Plates, with the Royal Arms of Her Majesty, in gold, impressed on the sides.
Brighton: James Taylor & Co. London: James Gilbert, 49, Paternoster-row.

THE BISHOP OF ST. DAVID'S CHARGE.

Now ready, in 8vo. price 2s., the Second Edition of

A CHARGE delivered to the CLERGY of the DIOCESE of ST. DAVID'S, at his Primary Visitation, in October, 1842. By CONNOP, LORD BISHOP OF ST. DAVID'S.
Rivingtons, St. Paul's Churchyard, and Waterloo-place, London; and Evans, Carmarthen.

NEW POEM.

In small 8vo. price 7s. 6d.

NATURE A PARABLE: a Poem. In seven Books. By the Rev. J. B. MORRIS, M.A., Fellow of Exeter College, Oxford.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In small 8vo. price 6s., the Second Edition of

THE BISHOPRIC OF SOULS.
By the Rev. ROBERT WILSON EVANS, M.A.,
Vicar of Heversham; Fellow of Trinity College, Cambridge; and Author of 'The Rectory of Valehead.'
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
The Section entitled 'The Clergyman in his Study,' may be had separately, price 6d.

NEW EDITION OF MR. PALMER'S TREATISE ON THE CHURCH.

In 2 vols. 8vo. price 1l. 1s. (dedicated, by permission, to the Archbishops of Canterbury and Armagh), the Third Edition, revised and enlarged, of

A TREATISE on the CHURCH of CHRIST.
Designed chiefly for the Use of Students in Theology.
By the Rev. WILLIAM PALMER, M.A.,
Of Worcester College, Oxford; Author of 'Origines Liturgicæ.'
*** The chief design of this Work is to supply some answer to the assertion so frequently made, that individuals are not bound to submit to any ecclesiastical authority whatever; or that if they are, they must, in consistency, accept Romanism with all its claims and errors.—*Preface.*
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In small 8vo. price 8s.

THOUGHTS on the STUDY of the HOLY GOSPELS; intended as an Introduction to a HARMONY and COMMENTARY. By the Rev. ISAAC WILLIAMS, B.D., late Fellow of Trinity College, Oxford.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Of whom may be had, by the same Author, (uniformly printed)
The GOSPEL NARRATIVE of the PASSION of our LORD HARMONIZED. With Reflections. Second Edition. 8s.

NEANDER'S CHURCH HISTORY.

In 8vo. price 12s. the Second and Concluding Volume of

THE HISTORY of the CHRISTIAN RELIGION and CHURCH during the THREE FIRST CENTURIES.
By Dr. AUGUSTUS NEANDER.
Containing the History of Christian Sects and Doctrines, and an Account of the Chief Fathers of the Church.
Translated from the German, by HENRY JOHN ROSE, B.D. Rector of Houghton Conquest, and late Fellow of St. John's College, Cambridge.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Of whom may be had,
A New Edition of the First Volume, price 10s. 6d.

In small 8vo. price 5s. 6d. the 2nd edition of

MEMOIR of the CHISHOLM, late M.P. for Inverness-shire.
By the Rev. JAMES S. M. ANDERSON, M.A.
Chaplain in Ordinary to the Queen, Chaplain to the Queen Dowager, and Perpetual Curate of St. George's Chapel, Brighton.
Rivingtons, St. Paul's Churchyard, and Waterloo-place; Bell & Bradfute, Edinburgh; Smith, Inverness; and the Booksellers in Brighton.
Also, by the same Author,
1. Sermons on Various Subjects. 2nd edit. 9s. 6d.

XXIV.; derived from an Examination, according to the principles of Swedenborg, of the commonly received Doctrines of the Trinity, Incarnation, Atonement, and Mediation; to which are added, Remarks upon the Time of the End. By the Rev. AUGUSTUS CLISSOLD, M.A., formerly of Ex. Coll. Oxon.
London: Simpkin, Marshall & Co.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.
This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.
Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.
The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.
Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.
PETER MORRISON, Resident Director.
A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

Edward Harman, Esq.	Claude George Thornton, Esq.
Felix Ladbroke, Esq.	George Smith Thornton, Esq.
H. Francis Shaw Lefevre, Esq.	

JOSHUA MILNE, *Actuary.*
LOW RATES.—PARTICIPATION IN PROFITS.
THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.
Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

ARGUS LIFE ASSURANCE COMPANY,
39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.
Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Cliff, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 3, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.
Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.
In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of 50,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.
The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.
Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

Two-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

UNION ASSURANCE OFFICE.—Fire, Life, Annuities.—Cornhill and Baker-street, London; College-green, Dublin; and Esplanade, Hamburgh. Instituted A.D. 1714. Bonus of the year 1841.
NOTICE.—The bonus for the year 1841 amounts with the reserve to two-thirds of the whole profits of the life department, the reserve being to accumulate towards the next division in the year 1848, and the ample capital invested during the long period of more than a century and a quarter guarantees the insured from responsibility.
Life insurances effected also upon a reduced scale of premiums, to which profits do not attach.
Fire insurance upon every description of property.
THOMAS LEWIS, Secretary.

NORTH BRITISH LIFE INSURANCE COMPANY, 4, New Bank-buildings, Lothbury, and 10, Pall Mall East. Established 1809. Protecting Capital 1,000,000*l.*, fully subscribed.
His Grace the Duke of Sutherland, *President.*
Sir Peter Laurie, Alderman, *Chairman of the London Boards.*
Francis Warden, Esq. *Vice Chairman.*
The next Division of the Profits of this Company will take place in December, 1844. Prospectuses and every information may be obtained as above. JOHN KING, Actuary.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.
Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.
This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.
The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.
Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

NATIONAL PROVIDENT INSTITUTION, 13, Nicholas-lane, King William-street, London, for Mutual Assurance on Lives, Endowments, Deferred Sums, immediate and Deferred Annuities, enrolled under the Acts of Parliament relating to Friendly Societies.
Directors.

C. P. Bousfield, Esq.	Robert Ingham, Esq.
John Bradbury, Esq.	Joseph Janson, Esq.
William Cash, Esq.	S. Hayhurst Lucas, Esq.
Thomas Castle, Esq.	C. Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.
Thomas Hodgkin, M.D.	

Medical Directors.
J. T. Conquest, M.D. F.L.S. Thomas Bevan, M.D. F.L.S.
Solicitors—Messrs. Hardwick & Davidson.
THIS INSTITUTION completed the Seventh Year of its establishment on the 15th of December, 1842, and, in accordance with a Rule made at its commencement, a careful valuation of its liabilities and assets has been made by an eminent Actuary, Charles Ansell, Esq. for the purpose of making the first division of profits amongst its members, the gratifying result of which is exemplified in the following instances, showing the profit assigned to policies which have existed from one to seven years:

Policies in Existence.	Age at commencement.	Sum Assured.	Amount of Bonus.	Original Premium.	Reduction in Premium in lieu of Bonus.	Equal to a Reduction per Cent. on the Original Premium of
Years.	Years.	£.	£. s. d.	£. s. d.	£. s. d.	
7	59	1,000	163 11 0	63 0 0	27 17 2	44
7	46	1,000	115 12 0	40 1 8	16 3 5	40
7	33	2,000	177 10 0	54 1 8	20 11 6	39
7	32	500	44 7 6	13 2 11	5 1 4	39
6	52	2,000	227 19 0	97 11 8	34 5 10	35
6	50	1,000	106 5 0	45 10 10	15 10 7	34
6	31	500	37 2 0	12 17 6	4 2 5	32
5	51	1,000	91 3 0	47 2 6	13 6 4	28
5	41	2,000	146 13 0	69 10 0	18 11 0	26½
5	30	600	37 2 0	15 8 0	4 1 2	20
4	42	500	28 19 0	17 12 1	3 13 3	20
4	28	1,000	46 14 0	24 3 4	4 16 5	19½
3	46	800	37 8 0	31 16 8	4 18 10	15½
3	35	2,000	69 6 0	44 5 0	6 14 11	15½
2	53	3,000	140 15 0	224 15 0	23 11 7	10½
2	26	800	11 11 0	11 10 0	1 2 6	9½
1	42	2,000	26 14 0	70 8 4	3 3 9	4½

The Directors refer with great confidence to the above statement, as exhibiting the most satisfactory proof of the superiority of the principle on which this Institution is founded, namely, that of MUTUAL LIFE ASSURANCE, carried out under the protection and advantages afforded by the acts of Parliament relating to FRIENDLY SOCIETIES, and fully warranting them in thus directing the public attention to the peculiar privileges secured to all assurers.
The Report of the Directors to the Annual Meeting of the Members, held on the 15th of December last, Prospectuses, and every other information, may be had on application at the Office, or to the Country Agents.
The next Division of Profits will take place in December, 1847. JOSEPH MARSH, Sec.
London, Jan. 17, 1843.
The business of the Institution will be removed to new premises, at No. 48, Gracechurch-street, during the month of March next.

DISEASED AND HEALTHY LIVES ASSURED.
MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.*
This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.
The *extra Premium* discontinued on restoration of the Assured to permanent health.
Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease.
Members of Consumptive Families assured at Equitable Rates.
Healthy Lives are assured at *Lower Rates* than at most other Offices. F. G. P. NEISON, Actuary.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

CRESTS ENGRAVED on VISITING CARDS in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*; and also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at the Warehouses of Messrs. BARRY & SON, EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 6*d.*, 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream.
Either of the above papers may be stamped with crest, coronet, or initials, for the additional charge of 10*s.* per ream, Messrs. Barry & Son finding the dies and wafers from it at 7*s.* per 1,000. Their miscellaneous stock embraces dressing cases, writing desks, inkstands, fancy note paper and envelopes, suitable for invitations, complimentary notes, weddings, &c.; wafers from the antique, diurnal note and envelopes, envelope cases, Bibles and Prayers richly gilt, Mordan's gold and silver gauntlet pencil cases, elegant penholders and toilet and smelling bottles, souvenirs, card-cases, pocket-books, and every description of useful stationery, with postage stamps and envelopes at Government prices.

KEENE'S PATENT MARBLE CEMENT.—This cement, which exceeds every other in hardness, is intended for interior uses, where strength and despatch in execution are required. From the smoothness of its surface, it is an advantageous substitute for wood in its application to skirtings, architrave, mouldings, &c., as it resists the action of fire, and keeps back vermin.
The coarse qualities form a paving not distinguishable from stone in colour and hardness, but of one-third the price. The best white quality takes a brilliant polish, and the scagliola made from this cement has a peculiar richness of colouring. The imitations produced in it of Florentine and other Mosaics, encaustic tiles, &c., for ornamental paving, are unequalled in their effect and moderate cost.
Keene's Cement has been applied with success for the altars of Catholic and other churches both in England and Ireland; and to its use in the Royal palaces, and Government buildings, besides numerous public and private works, the patentees can refer with confidence.
Patentees and Sole Manufacturers, J. B. WHITE & SONS, MILLBANK-STREET, WESTMINSTER.
Agents for its sale are appointed in the principal cities of the United Kingdom.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and are famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.
Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S——. Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

CASTOR OIL.—H. TAYLOR, Chemist, 10, Pall Mall, London, has prepared Castor Oil in a concentrated form, enclosed in Capsules of Gelatine, by which the disagreeable taste of this medicine is entirely avoided. They will be found the most pleasant method of taking that safe aperient medicine. The Dose is from one to four capsules. In Boxes at 2*s.* 6*d.* each, and can be sent by post for 4*d.*

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustache, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling the scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.
CAUTION.—Ask for "ROWLAND'S MACASSAR OIL," and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as "MACASSAR OIL" by Perfumers of apparent respectability.
Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

THE HORSE: ITS HISTORY, TREATMENT, AND DISEASES,

By WILLIAM YOUATT.

To which is added, a TREATISE ON DRAUGHT; showing the Power of the Horse, how calculated—difference of opinion as to Wheels—the Power of the Horse and Steam Carriages compared, and their relative expense—real Action of the Horse in Walking, Trotting, and Galloping—the best Roads for Draught—most useful Direction of the traces—how best to load Carriages for easy Draught—Springs, Railways, Canals, &c. The whole illustrated by numerous Cuts, and forming a large volume in 8vo., of which upwards of 30,000 copies have been sold. Price, now reduced to 6*s.* 6*d.*

II.

CATTLE: THEIR BREEDS, MANAGEMENT, AND DISEASES.

Illustrated by beautiful Cuts,—from Drawings, by Harvey, from Living Subjects,—of the finest Specimens of the various Breeds, Anatomy, &c. By the same Author. In one large volume, 8vo. price 10*s.* 6*d.* cloth.

III.

SHEEP: THEIR BREEDS, MANAGEMENT, AND DISEASES,

By the same Author. To which is added, THE MOUNTAIN SHEPHERD'S MANUAL. The whole illustrated with Cuts, not only of the finest Specimens of the various Breeds, but also of Microscopical Views of different sorts of Wool, very interesting to the Manufacturer. To the important subject, THE DISEASES OF SHEEP, very great attention has been paid. In one large volume 8vo. price 10*s.* 6*d.* cloth.

IV.

BRITISH HUSBANDRY,

Exhibiting the FARMING PRACTICE in various parts of the United Kingdom; and embellished with numerous Cuts of Farm Buildings, Utensils, Instruments, &c. In 2 large vols. 8vo. price 20*s.* 6*d.* in cloth.

V.

HUSBANDRY, VOL. III.

Price 10*s.* bound, consisting of the following Subjects, which are sold separately, at the prices affixed:

1. REPORTS of the CULTIVATION of TEN SELECT FARMS. Seven Numbers, price 6*d.* each.
   *** These Reports comprise an Account of the Farming Processes carried on by eminent Cultivators, at the following places:—North Hampshire; Waulby, Scoresby, and Ridgemont, in Yorkshire; a Hill Farm and a Vale Farm in Gloucestershire; at Netherby in Cumberland; in Sutherland; and in Eastern Ross.
2. OUTLINES of FLEMISH HUSBANDRY. In Three Numbers, price 6*d.* each.
3. On PLANTING TIMBER and ORNAMENTAL TREES. With Cuts. In Five Numbers, price 6*d.* each.
4. A TREATISE on ROAD-MAKING. Price 6*d.*
5. The COTTAGER'S MANUAL of HUSBANDRY ARCHITECTURE. DOMESTIC ECONOMY, and GARDENING. In Two Numbers, price 6*d.* each.

Also under the Superintendence of the same Society,

THE LIBRARY OF USEFUL KNOWLEDGE.

First published in Numbers at 6*d.* each, in which shape most of the Subjects are still to be procured; but many of them being now complete, they are formed into Volumes as follow—

Class I. NATURAL and EXPERIMENTAL PHILOSOPHY.

1. NATURAL PHILOSOPHY, in 4 vols. price 1*l.* 17*s.* 6*d.*, viz.:
   Vol. I., containing the Preliminary Treatise—Hydrostatics—Hydraulics—Pneumatics—Heat—Mechanics—Optics—Polarization of Light—Index and Glossary. Price 8*s.*
   Vol. II., containing Popular Introductions to Natural Philosophy—Newton's Optics—Optical Instruments—Thermometer and Pyrometer—Electricity—Galvanism—Magnetism—Electro-Magnetism—Glossary and Index. Price 10*s.* 6*d.*
   Vol. III., containing Astronomy—History of Astronomy—Mathematical Geography—Physical Geography—Navigation—with Glossary and Index. Price 9*s.* 6*d.*
   Vol. IV., containing Chemistry—Botany—Animal Physiology, and Animal Mechanics, with Index. Price 9*s.* 6*d.*
2. MATHEMATICS, in 2 vols. price 17*s.* 6*d.*, viz.:
   Vol. I., containing Difficulties in the Study of Mathematics—Arithmetic and Algebra. Price 6*s.*
   Vol. II., containing Geometry, Plane, Solid, and Spherical—Elements of Trigonometry—Spherical Trigonometry—Algebraical Geometry. Price 11*s.* 6*d.*
   *** Any Subject in either of the six preceding volumes may be had separately, in one or more numbers, at 6*d.* each, as originally published.
3. PRACTICAL GEOMETRY, LINEAR PERSPECTIVE, and PROJECTION.
   Including Isometrical Perspective, Projections of the Sphere, and the Projection of Shadows, with Descriptions of the Principal Instruments used in Geometrical Drawing, &c. Illustrated by Eight Plates, and a very large number of Cuts. For the Use of Artists, Architects, Engravers, Engineers, Mechanics, &c. By THOMAS BRADLEY. In 8vo. price 7*s.* cloth.
4. A TREATISE on FRIENDLY SOCIETIES.
   In which the Doctrine of Interest of Money, and the Doctrine of Probability, are practically applied to the Affairs of such Societies; with numerous Tables, and an Appendix containing the Acts of Parliament relating to Friendly Societies. By CHARLES ANSELL, Esq. F.R.S. In 8vo. price 5*s.* cloth.
   ☞ In this small work the particular attention of the Author has been given—1. To the *actual experience of a large number of Friendly Societies*, as to the quantity of Sickness, as well as rate of Mortality, among the Members; now for the first time published, as regards such Societies in England;—and 2. The mode of applying that Experience in determining the requisite Contributions to provide an Allowance in Sickness.
5. An EXPLANATION of the GNOMONIC PROJECTION of the SPHERE;
   And of such points of Astronomy as are most necessary in the use of Astronomical Maps; being a description of the construction and use of the larger and smaller Maps of the Stars, and also of the Six Maps of the World. By AUGUSTUS DE MORGAN, of Trinity College, Cambridge, Secretary of the Royal Astronomical Society. In 8vo. price 3*s.* 6*d.* cloth; or in royal 8vo. 5*s.*
6. A TREATISE on DIFFERENTIAL and INTEGRAL CALCULUS.
   By the same Author. In 1 vol. 8vo. price 14*s.* 6*d.*
7. On ANNUITIES and REVERSIONARY PAYMENTS.
   With numerous important Tables. By D. JONES, Esq., Actuary of the Universal Life-Assurance Office. In 2 vols. 8vo. price 1*l.* 1*s.*

Class II. HISTORY, GEOGRAPHY, and BIOGRAPHY.

1. HISTORY of GREECE. 5*s.*
2. HISTORY of GREEK LITERATURE. Vol. I. 7*s.* 6*d.*
3. HISTORY of FRANCE, A.D. 843—1529; with a Map. 9*s.*
4. HISTORY of SPAIN and PORTUGAL. 7*s.*
5. HISTORY of the CHURCH to the REFORMATION. 13*s.* 6*d.*
6. THE SAME, in larger type, and enlarged. 3 vols. 1*l.* 10*s.*
7. HISTORY of the AMERICAN REVOLUTION. Two Numbers, 1*s.*
8. LIVES of EMINENT MEN. 10*s.*
9. HISTORY of ENGLAND UNDER THE HOUSE OF STUART, including the COMMONWEALTH. 2 vols. 8vo. 16*s.*
10. HISTORY of ROME. (At present incomplete.)
11. OUTLINE of HISTORY. Ditto.
12. GEOGRAPHY of ENGLAND. Ditto.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh:—for IRELAND, J. Cumming, Dublin.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 798. LONDON, SATURDAY, FEBRUARY 11, 1843. PRICE FOURPENCE. (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1*l.* 2*s.* the year. To other Countries, the postage in addition.

[James Holmes, Took's Court, Chancery Lane.]

TUTOR.—A Gentleman, who studied under a Cambridge man of high standing, and was for several years Second Classical Master in a large public school, being particularly engaged in preparing the second edition of a classical work, wishes to DEVOTE his spare time to TUITION. He has good testimonials in proof of his classical and mathematical proficiency; is well acquainted with French, and knows something of German and Italian.—Address (pre-paid) to E. S., 9, Rood-lane, Fenchurch-street.

SCHOOL, FAMILY, and CLERICAL AGENCY, 30, Soho-square.—Mr. HINTON, late of Trinity Hall, Cambridge, Author of 'Stenography for Schools,' &c., respectfully states that he forwards the views of Schools, Families, Clergymen, Tutors, and Assistants, in any changes they may contemplate; also in the transfer of scholastic and clerical property.—Mrs. Hinton, who has resided many years on the Continent, can introduce superior English and Foreign Governesses with good references. Letters must be free.

A CLERGYMAN'S WIDOW, aged 40, wishes for a SITUATION as COMPANION and HOUSEKEEPER to a GENTLEMAN [illegible] HOUSEKEEPER TO A LADY or GENTLEMAN [illegible]. She is accustomed to tuition, and understands her own language perfectly; is well read in history, geography, &c., and French, which she speaks. The most unexceptionable references will be given both with regard to capability, moral conduct, and genteel connexions.—Address (pre-paid) to M. P—, Mrs. Swallow's, Stationer, Pratt-street, Camden Town.

ART-UNION OF LONDON.

President.

H.R.H. the Duke of Cambridge.

Vice-President.

The Most Noble the Marquis of Northampton, P.R.S.

Finished Proofs of THE SAINTS' DAY, engraved for the Subscribers of 1841, may be seen at the Office, No. 4, Trafalgar-square, Charing-cross; and at

Messrs. P. & D. Colnaghi & Co.'s, 14, Pall Mall East;	Mr. C. Roberson's, 51, Long Acre;
Mr. R. Jennings', 62, Cheapside;	Messrs. Leggatt & Neville's, 79, Cornhill;
Messrs. Ackermann & Co.'s, 96, Strand;	Mr. J. Mitchell's, 33, Old Bond-street; and
Messrs. Colnaghi & Puckle, 23, Cockspur-street;	Messrs. S. & J. Fuller, 34, Rathbone-place.

Due notice will be given to every Subscriber when the impressions are ready for distribution.

The Engraving for the year 1842 is nearly completed.

The LISTS for the present year WILL CLOSE on the 31st of MARCH, and an early subscription is solicited, to enable the Committee to make advantageous arrangements.

GEO. GODWIN, F.R.S. F.S.A. } Honorary
LEWIS POCOCK, F.S.A. } Secretaries.

Office, 4, Trafalgar-square, 1st Feb. 1843.

THE ROYAL POLYTECHNIC ASSOCIATION and ST. GEORGE'S CHESS CLUB, 5, Cavendish-square.—Noblemen and Gentlemen are respectfully informed that three spacious Drawing Rooms of the house, No. 5, Cavendish-square, are now appropriated to the use of the Members.

Libraries purchased or exchanged.

Just published, 1 vol. royal 8vo. cloth boards, price 7*s.*

BOSSANGE, BARTHES & LOWELL'S GENERAL CATALOGUE of FOREIGN BOOKS for 1843.

This Catalogue contains all the best productions of French, Italian, and Spanish literature of the last century, and is the only one of any importance that has appeared in England for many years.

The prices have been marked generally at the rate of shillings for francs for modern French Works. With regard to Second-hand Books, their rarity, condition and circumstances attending their purchase, preclude the same plan from being followed, but in every instance the most reasonable prices have been affixed.

For the convenience of teachers and heads of families, the elementary part may be had separate, price 2*s.*

*** It is presumed that this Catalogue will be found useful to public libraries and literary institutions, as it contains a copious index, and a detailed notice of the Transactions of many celebrated Learned Societies of Europe, and all the most important Works now publishing under the sanction of the French Government, and of various Antiquarian and Historical Societies of that country.

14, Great Marlborough-street.

MILLER'S CATALOGUE of CHEAP BOOKS can be obtained by every Book-buyer GRATIS AND POSTAGE FREE. A New List will appear on the 15th of February, comprising some excellent Works in HISTORY, BIOGRAPHY, and GENERAL LITERATURE, amongst which will be found the following low-priced sets of Books:—

SALE OF AN IMPORTANT AND GENUINE COLLECTION OF PICTURES, DRAWINGS, ENGRAVINGS, &c.

MANCHESTER.

MESSRS. T. WINSTANLEY & SONS, of Liverpool, have the honour to announce that they have received directions from the Executors of the late

BENJAMIN HICK, Esq., OF BOLTON,

to SELL by AUCTION, at the EXCHANGE GALLERY, Ducie-place, Manchester, on TUESDAY, the 21st February, and Three following days, at half-past Ten o'clock each day, the valuable, well-known, and much-admired COLLECTION of the late Proprietor; comprising capital PAINTINGS by celebrated Masters of the Italian, Flemish, Dutch, and British Schools; a tasteful Selection of Modern DRAWINGS in Water-colours; select Proofs of celebrated ENGRAVINGS, after Sir David Wilkie and other Painters, collected during a period of thirty years, from the most favourable public and private opportunities, with acknowledged taste and judgment, and at a very liberal expense.

The productions of the Foreign Schools of Painting consist of a 'Holy Family,' by Raffaelle; a duplicate of the principal Group of the 'Virgin and Child, with the Magdalen,' from his celebrated picture called 'St. Jerome,' and undoubted from the hand of that great master Correxio; a magnificent 'Head of Christ,' painted with powerful expression by the masterly pencil of Annibale Carracci; a Portrait of the 'Painter's Daughter,' by Carlo Dolce; a brilliant 'View of Dresden,' by Canaletti; with fine Specimens of the high talents of Parmegiano, Sasso Ferrato, Paul Veronese, Carlo Marratti, Murillo, and Gaspar Poussin; a most capital and highly-finished 'Interior, with Figures,' by Egbert Hemskirk the younger, truly valuable for its extraordinary quality and the purity of its preservation; select Specimens of the Works of Wouvermans, Paul Potter, David Teniers, Brawer, Gerard Dow, Ostade, Backhuysen, Platzer, Vernet, Van Stry, and other Masters.

The Selection of MODERN ART, which shows the liberality and good taste with which Mr. Hick patronized the British School, comprises the original finished Sketch of 'John Knox administering the Sacrament at Calder House,' by the late Sir David Wilkie, purchased at the sale of his Pictures in London; four genuine Landscapes, by Richard Wilson; two Ditto by Loutherbourg; two Pictures by George Morland; a beautiful Landscape, sunset effect, by Sir A. W. Callcott; 'The Letter from Sea,' by Knight; with other pleasing and interesting Subjects, by Howard, Eastlake, Lee, Tenant, John Wilson, Stephanoff, Sharpe, Poole, Carmichael, Zeitter, Bradley, Barker, the Nasmyths, the late Benjamin West, P.R.A., Westall, &c. &c.; the 'Rivers of Bliss,' and 'Pandæmonium,' by John Martin; the 'Return of a Greek Armament,' by Linton; and a Selection from the Works of the late Henry Liverseege, several of which were painted for Mr. Hick; amongst them will be found the 'Inquiry,' 'Captain Macheath,' 'The Black Dwarf,' 'The Benediction,' 'Lucy Ashton,' and others.

The WATER-COLOUR DRAWINGS comprise the original Sketch of the 'Presentation of the Keys of Edinburgh to George the Fourth at Holyrood,' by Sir D. Wilkie; with other judiciously selected Specimens of David Roberts, Danby, Stanfield, Stothard, Westall, Cattermole, Prout, Cox, Cooper, Austin, Holland, J. M. Wright, Liverseege, Richardson, Vickers, Stephanoff, Nash, Copley Fielding, and other eminent Artists of the justly-admired English Water-colour School.

Amongst the Engravings is a complete set of the well-known and celebrated subjects after Sir David Wilkie, some of them in states of great rarity, and the whole in excellent condition; numerous specimens of the able talent of Doo, Robinson, and other English and Foreign Engravers.

The whole may be viewed three days previous to the Sale. Catalogues may be had at Mr. Grundy's, Exchange-street, Manchester; of Messrs. Winstanley, Patternoster-row, London; at the Office of the 'Midland Counties' Herald,' Birmingham; at the place of Sale; and of Messrs. T. Winstanley & Sons, Church-street, Liverpool.

To prevent intrusion, no person will be admitted to the view or sale without a Catalogue, which will be charged 1*s.* each.

PLATE ENGRAVED on REASONABLE TERMS.—J. PAYNE begs to inform the Nobility and Gentry that he has removed from 22, Fleet-street, to 16, Great Castle-street, Regent-street, where he will continue to engrave Silver and Plated Spoons and Forks, Table Knives, &c. with Crest or Cypher, in a superior manner, at 3*s.* per dozen. Waiters, Tea Sets, and other articles of plate engraved with Arms or Crest at equally reduced prices. Joshua Payne has engraved plate for several members of the Royal Family and many of the Nobility, specimens of which may be seen at his house, 16, Great Castle-street (one door from Regent-street), near the Polytechnic Institution.

H. WALKER'S NEEDLES (by authority the Queen's Own), with the new large eyes, are easily threaded, even by blind persons, and work with great ease, having improved points, temper, and finish. The labels are correct likenesses of Her Majesty and His Royal Highness Prince Albert, in relief, on coloured grounds. H. Walker's improved fish hooks, steel pens, hooks and eyes are recommended. For the home trade neat packages of needles or pens, from 1*s.* to 10*s.* value, can be sent free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value. Every quality, &c. for shipping. H. WALKER, Manufacturer to the Queen, 20, MAIDEN-LANE, WOOD-STREET, London.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.*

This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The *extra Premium* discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are assured at *Lower Rates* than at most other Offices. F. G. P. NEISON, Actuary.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, Bridge-street, Blackfriars, London; established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

ANNUITIES. — In the AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

Directors.

Edward Barnard, Esq. F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun. Esq.	William Walker, Esq.

Solicitors—Messrs. Swain, Stevens & Co.

Bankers—The Union Bank of London.

Colonial Bankers—The Bank of Australasia, incorporated by Royal Charter, 1835, No. 2, Moorgate-street.

Secretary—Edward Ryley, Esq.

Prospectuses, with Tables, Forms of Proposal for the purchase of an Annuity or for making an Assurance, and every information, may be obtained by application at the Office of the Company, No. 126, Bishopsgate-street, City.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

By EDWIN LEE,

Member of the principal European Medical and Chirurgical Societies; Author of the 'Baths of Germany,' &c.

J. Churchill, Princes-street; Folthorp, Brighton.

Now ready, in 1 large vol. 8vo. price 21*s.* bound and lettered, with the Arms of the Prince of Wales, from a Drawing in the possession of Her Majesty, and the Arms of the Peers beautifully engraved,

MR. LODGE'S PEERAGE and BARONETAGE for 1843.

The Twelfth Edition.

Revised and corrected throughout, from the Personal communications of the Nobility.

This work will be found an important acquisition to all gentlemen and heads of families, and particularly to the learned profession. It answers, more readily and satisfactorily than any work previously published, the various questions which continually arise respecting the connexions and relationships of the higher classes. Every page being kept standing in type, and constantly revised by each of the noble families, an authenticity and correctness are thus attained which may justly be considered unexampled in so large a mass of family history, embracing the entire aristocracy of the British Empire, with their various connexions and collateral branches.

Also,

BOYLE'S COURT GUIDE for 1843;

With the Addresses of the Members of both Houses of Parliament.

Saunders & Otley, Publishers, Conduit-street.

GRAMMARS USED AT THE PUBLIC SCHOOLS.

Just published,

GRÆCÆ GRAMMATICÆ RUDIMENTA in USUM SCHOLARUM. 4th edit. 12mo. 3*s.* 6*d.* bound.

[THE SYNTAX is in the press.]

II.

RUDIMENTA GRÆCA MINORA in USUM SCHOLARUM. 12mo. 1*s.* 6*d.* bound.

RUDIMENTA GRÆCA MINORA in USUM SCHOLARUM, editio altera ad disciplinam Etonensem, auctoris consensu, accommodata. 12mo. 1*s.* 6*d.* bound.

These Editions of the 'Greek Rudiments for the Use of Schools,' consist of those parts of the former work, which are printed in larger type. The latter, with the consent of the Author, has been adapted to both systems of Conjugations; and Notes have been added by the highest authority, at Eton.

III.

LATINÆ GRAMMATICÆ RUDIMENTA, or LATIN GRAMMAR, for Use of Schools. 12mo. 3*s.* 6*d.*

This Grammar is intended to serve also as an English Latin Grammar and a Latin Exercise Book; and being based on that enjoined by the Royal Founder of very many noted Grammar Schools in England, and many of his Successors, is called KING EDWARD VIth's Latin Grammar.

It is printed in the same size as the 'Græcæ Grammaticæ Rudimenta' published by Mr. Murray, to which references are made throughout the volume.

John Murray, Albemarle-street; And may be obtained of all Booksellers.

In 3 vols. post 8vo.

MRS. GORE'S NEW NOVEL,

'THE MONEY LENDER,'

IS NOW READY AT ALL THE LIBRARIES.

Also, just published,

THE TUFT HUNTER: a Novel. By LORD WILLIAM LENNOX. 3 vols.

"The interest of this novel is admirably kept up. The story is most romantic, and remarkably well told; and some of the comic scenes are worthy of Hook's pen."—*Age.*

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

☞ Orders received by all Booksellers.

On the 1st of April will appear, price 3*s.* 6*d.* full coloured, Part I. of

A NEW EDITION OF

BETTS'S FAMILY ATLAS.

To be completed in FOURTEEN MONTHLY PARTS, each containing Four single or Two double Sheet Maps, and embracing ALL PARTS OF THE KNOWN WORLD.

The Proprietor has much satisfaction in appearing before the Public with a NEW EDITION of a work which has already elicited for him much public and private commendation, and of thus affording (he trusts to many individuals) the opportunity of supplying themselves with a valuable work at a very reasonable price, and on a plan which is found most convenient by a large portion of the community.

The present Edition will possess the advantage of having several new and very important Maps, the whole work having also undergone a thorough revision, and every new and important discovery and settlement being carefully introduced. The Maps of ENGLAND, WALES, SCOTLAND, and IRELAND, are on an unusually large scale, accurately showing the various lines of RAILROAD, the Turnpike and principal Cross Roads, Rivers, Canals, &c. (that of England and Wales alone embracing no fewer than 8,900 names). The Maps of the BRITISH COLONIES are also on a large scale; and, as a whole, the Proprietor feels satisfied that the work will be found fully to support the character it has obtained, and he confidently anticipates even a larger share of patronage than on its first appearance. Extracts from a few Literary Notices of the former Edition are subjoined:—

"This work is correctly described in its title—it is a GOOD FAMILY ATLAS; compiled with care, executed with great beauty, and sold at a moderate price; and we observe that creditable exertion has been made to bring down the information to the latest moment."—*Athenæum.*

"This is a very elegant book of maps, the whole of which appear to have been got up with great care, and to be exceedingly accurate: they are printed from steel plates, and are remarkably clear... Mr. Betts deserves the thanks of the public for the manner in which he has executed his labours."—*Times.*

"Independently of these claims to notice, the cheapness of the work, and its elegance of appearance, must insure its popularity."—*Morning Herald.*

"In this, the expense of the old and elaborate, as well as the errors of the hasty and superficial, are happily avoided, and the FAMILY ATLAS is worthy of its name."—*Atlas.*

"The work is a valuable one; we have tested its accuracy in districts as familiar to us as the face of a country possibly can be, and we feel ourselves quite secure in recommending it to all who wish to supply themselves with a FIRST-RATE ATLAS."—*Conservative Journal.*

MR. HORACE SMITH'S NEW NOVEL.
Now ready, at all the Libraries, in 3 vols.
ADAM BROWN, THE MERCHANT.
By the Author of 'Brambletye House,' &c.
"Of all delights, the delight of one more novel from the pen of Horace Smith, was least anticipated or hoped for by us; and the novel of 'Adam Brown' comes with a double zest and welcome therefore. The heart of our old friend is as young as ever, and his genius, ever a fine one, seems even more mellowed and refined by time. At the same time his shrewdness of observation, graphic power, and controlling English feeling, are as calculated to render him extensively popular with the masses, as the Horatian purity of his mind recommends him to kindred readers; and in no one of these respects will the novel of 'Adam Brown' disappoint the public—rather they will, we incline to think, be disposed to place it in the very first rank of our author's productions."—*Weekly Chronicle.*
Henry Colburn, Publisher, 13, Great Marlborough-street.

On the 28th of February, price 4s.

MECHANICAL PHILOSOPHY

And its Application to the Arts;

BEING THE THIRD PART OF THE

POPULAR CYCLOPÆDIA OF NATURAL SCIENCE.

By Dr. W. B. CARPENTER,
Author of 'Principles of General and Comparative Physiology.'

The design of the Publishers in the present undertaking has been to produce a connected series of Treatises upon the principal departments of Natural Science, founded upon such knowledge as every person of ordinary capacity possesses.

The high position in the scientific world of the gentleman to whom its execution has been confided, affords the best guarantee that the whole work will be completed in a manner worthy of its importance; and the Publishers refer, with much satisfaction, to the Treatises on VEGETABLE PHYSIOLOGY and BOTANY, already published.

It is intended that the following Treatises shall be produced during the present year, viz.:—

Part III.—MECHANICAL PHILOSOPHY and its APPLICATION to the ARTS, on February 28th.

Part IV.—ASTRONOMY, with its PRACTICAL APPLICATIONS, on April 29th.

Part V.—ANIMAL PHYSIOLOGY, Part I., July 31st.

Part VI.—ANIMAL PHYSIOLOGY, Part II., Sept. 30th.

Part VII.—HYDROSTATICS, December 30th.

☞ The attention of all parties engaged in Education is respectfully requested to this work.

"It is full of the facts of Science, recited with the clearness of the Philosopher, and the piety of a Christian."—*Congregational Magazine.*

"The volume before us possesses merit of a very high order. The talents and attainments of its author are evidently such as qualify him to take his station as an original author, experimenter, and discoverer among the most exalted sons of science."—*Eclectic Review.*

"We know not when we have met with a work more clearly and pleasantly written."—*British and Foreign Medical Review.*

"The treatise is well written, and is stored with useful and valuable information."—*Lancet.*

"The cheapness and goodness of the volume ought to give it a large sale."—*Colonial Magazine.*

Just published, price 25s. royal 8vo. cloth lettered,

THE NATURAL HISTORY AND ANTIQUITIES OF SELBORNE.

By the Rev. GILBERT WHITE, A.M.

A New Edition carefully revised, with Notes, by EDWARD BLYTH. A Map of the Locality, beautifully engraved on Steel, and copiously illustrated with highly-finished Engravings on Wood, and an interesting account of the state of Selborne in the summer of 1836, by Mr. MUDIE.

In 3 vols. 8vo. price 36s.

A HISTORY OF BRITISH LAND BIRDS,

INDIGENOUS and MIGRATORY: including their Organisation, Habits, and Relations; Remarks on Classification and Nomenclature. Illustrated by numerous Engravings.

By WILLIAM MACGILLIVRAY, A.M.
Member of the Wernerian Natural History Society of Edinburgh; of the Natural History Society of Philadelphia; of the Lyceum of New York; of the Literary and Philosophical Society of South Carolina; and Professor of Natural History, Marischal College, Aberdeen.

WM. S. ORR & Co. Amen-corner, Paternoster-row.

NEW WORKS

PRINTED FOR

LONGMAN, BROWN, GREEN and LONGMANS.

1.

REPORT on the GEOLOGY of the

COUNTY of LONDONDERRY, and of Parts of Tyrone and Fermanagh. Examined and described under the Authority of the Master-General and Board of Ordnance. By J. E. PORTLOCK, F.R.S. F.G.S. M.R.I.A. M.R.D.S. &c. With a large coloured Map, 9 large Sections (most coloured), 45 Plates of Fossils, containing very numerous Figures. 26 Illustrations on Wood, and above 800 pages of letter-press, 8vo. 24s. cloth.

REPORT on the GEOLOGY of

CORNWALL, DEVON, and WEST SOMERSET. By HENRY T. DELABECHE, F.R.S. &c., Director of the Ordnance Geological Survey. With Woodcuts, Map, and 12 large Plates of Sections, &c., 8vo. 14s. cloth.

FIGURES and DESCRIPTIONS of

the PALÆOZOIC FOSSILS of CORNWALL, DEVON, and WEST SOMERSET; observed in the course of the Ordnance Geological Survey of that District. By JOHN PHILLIPS, F.R.S. F.G.S. &c. With 60 Plates, comprising very numerous Figures, 8vo. 9s. cloth.

2.

BIOGRAPHICAL DICTIONARY of

the SOCIETY for the DIFFUSION of USEFUL KNOWLEDGE. The Third Half-Volume (Vol. 2, Part 1,) 8vo. 12s. cloth.

It comprises Alexander of Selencta to Auguste Amell; including Lives of Alfieri, the Alfonsos, Alfred, the Alis, the Allens, Alleyn, the Alvarez, Ambrosius, &c.

*** The First Volume, containing 1661 Memoirs, 8vo. 24s. cloth; or in Two Parts, 12s. each, cloth.

"This important undertaking seems destined to do lasting honour to the Society under whose auspices it has been commenced, and to the literary gentlemen engaged in its compilation and construction. The first volume reaches in alphabetical progression to Alexander, and includes no fewer than 1661 memoirs, to each of which, with scarcely an exception, are added the authorities on which it is founded. The more important lives are detailed with perspicacity and eloquence commensurate to the subject; and the whole are the fruit of cautious and painstaking research on the part of the different writers whose initials are appended, and whose names are given at the end of the volume. We think no library, private or public, will be long without this gradually accumulating addition to biographic literature."
Caledonian Mercury.

3.

The EDINBURGH REVIEW, No. 155,

will be published next week.

4.

NEW HOLLAND: its Colonisation,

Productions, and Resources: with Observations on the Relations subsisting with Great Britain. By THOS. BARTLETT, Assistant-Surgeon, 51st Light Infantry. Post 8vo. 7s. 6d. cloth.

"Mr. Bartlett's volume will be a valuable manual to the intended settler. It corrects much misrepresentation."
Morning Post.

"A volume deserving the most serious attention of the advocates of emigration."—*Sunday Times.*

5.

NOTES and REFLECTIONS during a

RAMBLE in the EAST, an OVERLAND JOURNEY from INDIA, VISIT to ATHENS, &c. By C. R. BAYNES, Esq., of the Madras Civil Service. Post 8vo. with Engravings, 10s. 6d. cloth.

"Mr. Baynes has produced a really novel narrative of his journeyings through many a well-known region. His description of the celebrated cavern of Elephanta and its sculptures, with his comments on the manifest adumbration of Biblical truths, is, we without hesitation say, better fitted to convey to general readers a notion of their solemn character than any already before the public. Mr. Baynes is a cheerful traveller; but with his Bible evidently impressed upon his memory, he omits no opportunity of showing how its history is confirmed by almost every scene presented in every region of the eastern world; and his entertaining, yet pious and instructive, 'Notes and Reflections,' we cordially recommend to public favour."
The Times, Feb. 7, 1843.

6.

Maunder's Popular Treasuries.

The TREASURY of KNOWLEDGE

and LIBRARY of REFERENCE: a Dictionary of Universal Knowledge.—A New Edition (the 14th), revised and enlarged. Fcap. 8vo. 8s. 6d. cloth; embossed roan, with gilt edges, 10s. 6d.

The BIOGRAPHICAL TREASURY;

a Dictionary of Universal Biography: comprising 12 000 Memoirs.—A New Edition (the 4th), with a Supplement, completing the work to 1843. Fcap. 8vo. 8s. 6d. cloth; embossed roan, with gilt edges, 10s. 6d.

The SCIENTIFIC and LITERARY

TREASURY; a copious Popular Encyclopædia of the Belles-Lettres.—A New Edition (the 3rd). Fcap. 8vo. 10s. cloth; embossed roan, with gilt edges, 12s.

7.

A DICTIONARY of the ART of

PRINTING. By W. SAVAGE, Author of 'Practical Hints on Decorative Printing,' &c. 8vo. with Diagrams, 26s. cloth.

*** The object has been to make a practical work, that might meet the exigence of the printer while in the exercise of his art, and would serve as a book of reference to the author, the librarian, and to every one interested in books or their production.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

A GRAMMAR of VOCAL MUSIC,

for the Use of Public Schools and Classes of Adults. Founded on the Method of Wilhem, and adapted to English use, under the Sanction of the Committee of Council on Education. By JOHN HULLAH. Royal 8vo. 7s. bound.

The GRAMMAR of VOCAL MUSIC is, in its plan and general details, the same work as the MANUAL of WILHEM'S METHOD of TEACHING SINGING; but the Words of the Songs are for the most part different, and more particularly fitted for the use of Adult Classes: considerable additions, also, have been made both to the theoretical and practical portions.

OBSERVATIONS upon the TREATY

of WASHINGTON, signed August 9, 1842. By GEORGE WM. FEATHERSTONHAUGH, Esq. F.R.S. F.G.S., late one of Her Majesty's Commissioners for the North American Boundary. 8vo. with Map, 3s.

A SYSTEM of LOGIC, Ratiocinative

and Inductive; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. *Next week.*

THE PHYSIOLOGICAL ANATOMY

and PHYSIOLOGY of MAN; with Original Illustrations. By R. B. TODD, M.D. F.R.S.; and W. BOWMAN, F.R.S. of King's College, London. To be completed in Three Parts. Part I. *Next week.*

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER,

BART. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait, from the Original Picture by Sir Thomas Lawrence. 21s.

CHRISTMAS DAY, and other SER-

MONS. By FREDERICK DENISON MAURICE, M.A., Chaplain of Guy's Hospital, and Professor of English Literature in King's College, London. 8vo. 10s. 6d.

The Second Volume, price 25s. (completing the Work,) of The

BIBLE CYCLOPÆDIA, a Compre-

hensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings; illustrated by several Hundred Woodcuts.

Subscribers are requested to complete their Sets, as the Numbers will be sold separately for a short time only.

BIBLE MAPS. A Series of New and

Accurate Maps, accompanied by Explanatory Memoirs, and forming a complete Historical and Descriptive Atlas of Scripture Geography; the Ancient Authorities being verified and corrected, from the information of Travellers and Writers up to the present time. By WILLIAM HUGHES, F.R.G.S. Uniform with the BIBLE CYCLOPÆDIA. Price 7s. 6d.

AN INTRODUCTION to the STUDY

of CHEMICAL PHILOSOPHY; being a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Professor of Chemistry in King's College, London. With numerous Illustrations, the 2nd Edition, revised and much enlarged. 21s.

MECHANICS APPLIED TO THE

ARTS, including STATICS and HYDROSTATICS. By the Rev. HENRY MOSELEY, M.A. F.R.S., Professor of Astronomy and Natural Philosophy in King's College, London. 2nd edition, with numerous Illustrations. 6s. 6d.

By the same Author, with numerous Illustrations, 5s. 6d.

LECTURES ON ASTRONOMY,

Delivered at King's College.

THE ELEMENTS of ALGEBRA;

chiefly intended for SCHOOLS, and the JUNIOR CLASSES in COLLEGES. By the Rev. T. G. HALL, M.A., Professor of Mathematics in King's College, London. 6s. 6d.

By the same Author,

AN ELEMENTARY TREATISE on

the DIFFERENTIAL and INTEGRAL CALCULUS. 3rd edition. 12s. 6d.

THE ELEMENTS of DESCRIPTIVE

GEOMETRY; chiefly intended for Students in Engineering. 6s. 6d.

EXAMPLES of the PROCESSES of

the DIFFERENTIAL and INTEGRAL CALCULUS. Collected by D. F. GREGORY, M.A., Fellow of Trinity College, Cambridge. 18s.

MATHEMATICAL TRACTS.—

I. Lunar and Planetary Theories—II. Figure of the Earth—III. Precession and Nutation—IV. Calculus of Variations—V. Undulatory Theory of Optics, and Theory of Polarization. By GEORGE BIDDELL AIRY, M.A. F.R.S., Astronomer Royal. 8vo. 3rd edition, corrected. 15s.

LONDON, SATURDAY, FEBRUARY 11, 1843.

REVIEWS

Travels in New Zealand; with Contributions to the Geography, Geology, Botany, and Natural History of that Country. By Ernest Dieffenbach, M.D. 2 vols. Murray.

HERE we have an excellent work on an interesting subject; for no one can deny that the colonization of New Zealand, however unsound may be the specious plans of its promoters, is an event of the most interesting kind, so far at least as regards the fate of the indigenous population. In a new country there is no explorer equal to a zealous naturalist. No ordinary dangers can deter him from penetrating the distant forest; the hope of finding new plants hurries him to the mountain top; there is nothing so minute as to be valueless in his eyes; monsters delight him; flies and reptiles charm him onward, and lead him breathless through brake and flood; he holds his nose over all the solfataras; he drinks from all the bitter springs; he fills his pockets with stones till ready to sink under the load, and, happy in his martyrdom, the more he suffers the more pleased he is with the consciousness of having done something. With the zeal and knowledge of a naturalist, Dr. Dieffenbach enjoyed also the opportunities arising from his connexion with the New Zealand Company. He evidently took great pains to make himself acquainted with the language of the natives, with whom, in the course of his travels, he had a great deal of intercourse; and he acknowledges their uniform civility, hospitality, good sense, and kindly feelings, in terms which redound as much to his credit as to theirs.

We confess that we find in Dr. Dieffenbach's volumes a merit which will probably escape the eyes of others, namely, that his opinions respecting the process of colonization now going forward in New Zealand, appear to agree completely with our own—(see *Athen.* No. 787). He says nothing, it is true, respecting the progress and present condition of the Company's settlements; but this silence on so important a topic indicates at least the absence of sanguine hope or of hearty concurrence. Perhaps, also, it may be more or less attributable to the influence of the Company, and the official revision of our author's sheets; if so, we must praise the candour of the censor, who spared the commendations bestowed by our author on the site chosen for the government settlement, Auckland, which has been hitherto so unsparingly reviled by the Company's partisans. The general tenor, however, of our author's sentiments is plainly discernible, as will be seen hereafter: but we shall give our attention, in the first place, to the narrative of his explorations.

On the 16th of August, 1839, after a voyage of three months, during which land had been seen but once, our author's eyes were gladdened with the sight of New Zealand. The snowy heights of the middle island just rose above the horizon. On the following day the ship entered Queen Charlotte's Sound, on the southern side of Cook's Straits, and was moored to a tree, in a snug cove surrounded by hills, and overhung with primeval forest. Here was no sign of winter; a luxuriant vegetation, dripping moisture, covered the steep sides of the hills, for there was little level ground. This is a frequently-recurring feature in the scenery of New Zealand. We shall say nothing of the newly explored inlet connecting the southern part of Queen Charlotte's Sound with the sea, and which has been named, from the vessel that bore our author, Tory Channel. Such a discovery, on a coast where there are so many superb harbours, demands from us no especial notice. But the singular social condition of the country must not be passed over so lightly. At first Queen Charlotte's Sound seemed to our author to be uninhabited; the songs and cries of the birds alone gave signs of animal existence. But the natives soon made their appearance; and, on a better acquaintance with the inlet, it was found to contain several whaling establishments, in which a few Europeans reside, surrounded by natives, intermarrying with them, and governing them by moral influence, or that acquired by their practical talents. The offspring of these marriages of Europeans with native women are remarkably vigorous and handsome, according to Dr. Dieffenbach, and a great improvement on the parent races. Their number in the islands is altogether about 400; in Cook's Straits alone about 140. As a preparatory sketch of the native character, the following will suffice:

"On landing all the natives left their huts to receive us, and offered a shake of the hand as a welcome. Amongst the houses was a large one, which they had built for an Englishman, who at the end of the whaling season lived with them. His house formed also the meeting-house for the tribe, as they had lately become converted to Christianity by a native, who had been with the missionaries in the Bay of Islands, and had learned to read and write. Some of the tribe in Ananho had already acquired from him these arts, and all were anxious to learn them. These people were well provided with the necessaries of life; provisions were plentiful, and we were enabled to lay in a large stock of potatoes and pigs at a very moderate price. From the neighbouring whaling establishments they had obtained articles of European clothing in exchange for their commodities, and their condition seemed to be a happy one. I was astonished to find it so easy to deal with them; and instead of sinister savages, brooding nothing but treachery and mischief, as many travellers have depicted them, they were open, confident, and hospitable, and proved of the greatest service to me during my frequent rambles in the woods."

The European whalers living in Queen Charlotte's Sound are about 40 in number. Some of them are runaway convicts, and desperate characters. They command the whaling boats, and direct all the operations, while the natives pull the oar. The latter profit, we are told, by the energy and information of those men, without being infected with their vices. The female whales, or cows, as they are termed, betake themselves to the sheltered inlets and coves about Cook's Straits towards the close of their period of gestation. The young calves are easily taken, and then the cows, which never desert their young, are sure to be the victims. The shores of Queen Charlotte's Sound and Cloudy Bay are strewed with the bones of these gigantic animals. The produce of this fishery has been nearly 24,000*l.* a-year, but the trade will soon be annihilated. As the calves are killed for the sake of killing the mother also, the whales are rapidly diminishing in number, and the whale fishery of New Zealand will be destroyed, as has been the case with the seal fishery, by the reckless and cruel mode of carrying it on.

But it is time for us to proceed to the northern island and to Port Nicholson, at the purchase of which territory our author assisted. He observes respecting it;—

"Nearly three years have elapsed since our first visit; and a spot scarcely known before that time, and rarely if ever visited by Europeans, has become the seat of a large settlement, with nearly 5000 inhabitants. Where a few hundred natives then lived in rude villages, fearful of their neighbours, but desirous of intercourse with Europeans, and just beginning to be initiated into the forms of Christian worship by a native missionary, there is now a town, with warehouses, wharfs, club-houses, horticultural and scientific societies, racecourses—in short, with all the mechanism of a civilized and commercial community; at this very place, where I then enjoyed in all its fulness the wild aspect of nature, and where the inhabitants, wild and untamed, accorded well with their native scenery, there is now the restless European, spreading around all the advantages and disadvantages of civilization and trade."

The populousness of Wellington, in Port Nicholson, proves the success of the New Zealand Company, but not the prosperity of the settlement. It is true that a large number of settlers, possessing capital, is an important element of success in a new colony, but it is not all-sufficient; and the numerousness of the emigrants is no proof that their hopes have been realized. On the important question here suggested we find no satisfactory information. Our author tells us that, among the hills around Port Nicholson there is a sufficiency of good land for the support of a town, "although (he adds) connexion with a larger agricultural district would be indispensable." For this larger agricultural district he points to Taranaki, 100 miles distant, and lying along a coast which has no harbours! The sale of Port Nicholson to the Company was temperately opposed by a chief named Puakawa, who warned his people of the cupidity and usurping temper of Europeans: he was outvoted, however; and, though joining reluctantly in the engagement, he observed it faithfully. For this fidelity he was sacrificed not long after. His mangled body was found in the woods, his head cut off, and heart taken out. The murderer was supposed to have been one of a tribe which, having been recently driven from Port Nicholson, thus avenged the alienation of territories to which, though dispossessed, it still maintained a right. Several districts in New Zealand have been sold, again and again, to different individuals, by its successive native possessors, and it is hard to say how the right of property can be settled among the different claimants.

In the neighbourhood of Port Nicholson, our author discovered a tree, which yielded a well-flavoured milk, though he was unable to decide whether it belonged to the same family as the famous cow-tree of Guyana. He informs us, also, that shocks of earthquake are frequent, though not very violent, in Port Nicholson and Cook's Straits; proceeding, as he supposes, from Tongariro, in the centre of the island. The volcanic peak of Taranaki, or Mount Egmont, is quite extinct, nor have the natives any tradition of its activity. Our author was the first traveller who ascended this mountain, which rises from a perfectly level plain to an elevation of 8,839 feet, or about 1,600 feet above the limits of perpetual snow. He approached it through a thick forest, which at night assumed a beautiful appearance, the fallen trees, and the whole ground glittering with phosphorescent matter. His native attendants, on reaching the limits of perpetual snow, squatted down, took out their books, and began to pray. No native had ever ascended so high before, and in addition to the awe with which the scene inspired them, their bare feet suffered severely from the cold. Our author, however, cutting steps in the snow, which was very steep, continued the ascent, and found on the summit a snowy plain, of a mile in extent. This, we presume, is a crater filled with snow. Here he found, also, what might have very naturally recalled to his mind the Horatian jeer, "parturiunt montes;" having toiled, in fact, to the summit of Mount Egmont, he there discovered nothing but—the skeleton of a rat!

At a subsequent period, Dr. Dieffenbach visited the northern portion of the island, and found it not so uniformly barren as it has been recently represented. Of the country and people at Wangaunu he gives a favourable description:

"The natives form the tribe of the Rarewa, and their whole number is about 8000, including all those who inhabit the valley of the Awaroa. Of all the

Digitized by Google

natives, who are under the influence of the missionaries, this tribe is the most advanced in the arts of civilization. This must be ascribed partly to the endeavours of the missionaries, and partly to the comparative isolation of the natives, resulting from their having been powerful enough to resist the aggressions of E'Ongi from the Bay of Islands, and of the neighbouring tribes. The traveller does not meet here with that begging and grasping behaviour which renders the natives on the coast so importunate ; on the contrary, they are a quiet hard-working people, and they have, for a very small payment, cut a road thirty-two miles long through the primitive forest, between Kaitaia and Waimate, in the neighbourhood of the Bay of Islands ; they have also cut roads in the neighbourhood of their own village. During my stay I saw them reap wheat, and plough several acres of land, and the missionaries encourage them to exchange their former unwholesome food of decayed maize and potatoes for bread. Several of the natives have one or two head of cattle and horses ; and I have every reason to believe that here at least the missionaries will encourage their acquiring them, in order to dispose of the increase of their own stock.

"The village has quite an English appearance ; a large church, with a steeple of kauri boards, has been constructed almost entirely by the natives ; gardens with roses are before the houses, and at the foot of the hill wheat alternates with vines, with hops, which thrive extremely well, and with various fruit-trees and vegetables : there are also several patches planted with tobacco."

The chief, E'Ongi, here alluded to, was the same distinguished New Zealander who visited this country some thirty years ago, and received so much attention from the Prince Regent. He received, at the same time, presents of guns and sabres, and complete suits of armour, which decided the wavering tendency of his spirit. While appearing to imbibe the politeness and humanity of Europe, he was meditating a career which should outdo the much vaunted victories of Napoleon or of Wellington. On returning to his native country, E'Ongi (whose name is, we believe, an attempt at George) commenced a series of exterminating wars, which have ended in the almost total extinction of the native power. He had the satisfaction, however, of being able to say to his family, on his death bed, "who will desire to eat you all? none!"

Our author's approbation of the site of Auckland is an important admission in favour of that settlement; we shall therefore extract his opinion at length :—

"The government town of Auckland, considering the short time it has existed, has made considerable progress. Its population, which amounts to more than 2000, has been drawn together from all parts of the island. A bank has been formed, fine barracks have been built of scoriæ ; and were it not for a general spirit of over speculation in land, without any attempt to explore the home resources of the island, there would be every ground for hoping that the place would gradually and steadily rise into importance. The thing that chiefly recommends the situation of this place for the central town of the northern island, is its easy communication with the coast, both to the north and to the southward. An inland communication through Kaipara with the Bay of Islands can be effected in five days, even with the present insufficient means of communication. With the western coast, and with the interior, over Manukao and the river Waikato, nothing interrupts the water-communication but two small portages ; and even with Cook's Straits relations can be easily established, either by the river Thames, or the Waikato and Waipa, and the river Wanganui. The coast trade particularly is of the greatest importance, as the nature of the country will cause its colonization at many different points at once : and already a great number of small coasting vessels communicate with Auckland. We must not forget that the Thames and the Piako form an extensive agricultural valley, and that, as their natural harbour, Waitemata is preferable to Coromandel Harbour. In short, it appears to me that there can be no question but that the place has been very judiciously chosen for the site of a town, as commanding a great extent of cultivable land in its neighbourhood, great facility of communication with the coast and the interior of the northern island, and as being a central point for the most powerful native tribes, the Nga-pui to the northward, the Waikato to the southward, and the Nga-te-hauwa to the eastward, separating them in a military point of view, but uniting them for the purposes of civilization and commerce."

To the south of Auckland there is much fine country, through which our author passed on his way to Waikato. From this place he set off on a long journey into the interior, to Lake Taupo and the mountain of Tongariro. After passing numerous fearful boiling ponds, he reached the shores of Lake Taupo, which is the largest of several lakes scattered over a country in which volcanic action is still going on. The account of the boiling springs, on its southern shore, is thus summed up :—

"The whole of this assemblage of springs covers an extent of about two square miles. Many of them are difficult and dangerous to approach, as the whole arena seems to be only a thin crust over subterranean and volcanic caverns. The surface is hard, white, and thin ; below this is a whitish, pumiceous, and friable earth ; then a yellowish earth, containing sulphate of iron or sulphur ; then a chalcedony, perfect in some places, in others in process of formation. The whole is about a foot in thickness ; and below this is a grey, soft, and generally hot mud. It often happens that this crust breaks in, and dreadful scaldings not unfrequently occur. Near one of the springs beautiful saucer-shaped aggregations of silex shoot up, not unlike fungi on a moist surface."

The mountain of Tongariro, an active volcano, about twelve miles south of the lake, was "tapu," or sacred, and consequently the ascent of it was forbidden to our indefatigable traveller. The tapu was placed on the mountain in consequence of the audacity of an English traveller, who ventured to climb it, and who narrowly escaped being caught by a flood of melted lava—(see *Athen.* No. 731). We have described Mr. Bidwell's ascent of this remarkable mountain, and imagined that he had satisfied the scruples of the territorial chieftain, by a present of tobacco ; but we were deceived, as it appears ; it is strictly forbidden to disturb the genius of the mountain, and our author found, that in the absence of the chief himself, no presents of tobacco could prevail over the sense of duty or the superstition of his followers. He therefore recrossed Lake Taupo, and proceeding north-eastward, in the line of the volcanic action, he arrived, after some days, at a scene which he thus describes :—

"Towards evening we reached the hills which surround on all sides the Rotu-Mahana (warm lake). When we arrived on the crest of these hills, the view which opened was one of the grandest I had ever beheld. Let the reader imagine a deep lake of a blue colour, surrounded by verdant hills ; in the lake several islets, some showing the bare rock, others covered with shrubs, while on all of them steam issued from a hundred openings between the green foliage without impairing its freshness. on the opposite side a flight of broad steps of the colour of white marble with a rosy tint, and a cascade of boiling water falling over them into the lake! A part of the lake was separated from the rest by a ledge of rocks, forming a lagoon in a state of ebullition, which discharged its waters into the Rotu-Mahana. We descended to the lake, but a heavy rain came on and night surprised us. After having crossed a streamlet of a blood-heat, we found ourselves up to our knees in a muddy swamp, without knowing how to proceed, as our native attendants were still far behind. At last they arrived, and led us to a higher piece of ground, where we pitched our tent, as we did not venture, though all our provisions were exhausted, to go any farther, for our two guides, who were well acquainted with the place, said there was a very bad swamp to be passed before we could reach the native settlement, and that it was doubtful whether there were any natives there. They themselves, however, started, and promised to be back early in the morning with a canoe and food. On rising the next morning we found the lake covered with waterfowl, among which were the beautiful porphyrio, ducks, and snipes, and also gulls, which feed upon a small fish that abounds in the lake. Before our guides returned, I had shot a great many of the unwary pukeko, or porphyrio, which proved excellent game. Some natives came in a canoe to fetch us over the lake to their settlement. * * The boiling pond on the top, which was clear and blue, could not be approached, as the concretions at its margin were very thin and fragile. The pond was about ten yards round, and perhaps one hundred feet above the level of the Rotu-Mahana. The water which is discharged into the lake from this pond and from other places, warms its waters to 35° Fahr. above the temperature of the air, that is, to 95°. There are also springs in the lake itself, as in many places bubbles are seen rising up. On the banks of the lake are a great many openings from which steam issues. We afterwards landed on a small rock in the lake, composed of a felspathic lava ; the natives had some houses on it, and cooked our food over a steaming crevice, while I bathed in the warm lake."

Further on, in the same direction, is the romantic lake of Roturua, where there is a missionary establishment. Here the people have learned to turn the volcanic heat to some account :—

"The circumstance that renders the lake of Roturua particularly interesting, is the number of hot springs, which at several places rise close to its banks : those on the south side of the lake are the most powerful ; they consist of numerous smaller or larger basins, and from several of the openings every five minutes a column of steam and water, of two feet in diameter, is thrown up with great violence to the height of three or four feet. All around the springs a jasper-like deposit is found, which is either soft, like chalk, or forms what is called porcelain jasper and magnesite. In some places it is of a white or grevish colour, and when soft, adheres to the tongue, in which state the natives use it for making pipes, which, however, are now scarce, as the European pipes have superseded them. The largest village is built close to the springs, and the natives have from time immemorial used them as a natural kitchen for boiling their food. The water of several of these springs is clear and nearly tasteless, and its temperature is above the boiling-point. The pa, which is the finest I have seen in New Zealand, occupies a large surface, which is actually intersected by crevices from which steam issues, by boiling springs, and by mud volcanoes. It requires great care even for the native to wind his way through this intricate and dangerous labyrinth. Accidents are very common, as the thickness and solidity of the insecure crust upon which the pa is built are continually changing, and the ground sometimes suddenly gives way at a place where shortly before it appeared to be perfectly firm. At one time a part of the village close to the edge of the lake subsided several feet, and the water took its place. The palisades are still visible, and standing upright under water. In some places only a narrow path leads through a field of boiling mud ; and in the neighbourhood of the pa are a great many of those curious mud-cones, which I have already described. Some of them were ten feet in height."

We cannot forbear extracting the account of the native village at Roturua :—

The structures in this pa—the houses, doors, and palisades—displayed the most ingenious pieces of native workmanship. I have nowhere else seen carvings in such profusion, and some of them were apparently very old. Many of the figures are representations of the progenitors of the tribe, and the collection of figures in and around each house may be considered as serving as the genealogical tree of its owner. Each of the representations of the human figure bears the name of some tupuna, or ancestor, and the whole is actually a carved history. Nowhere in New Zealand have I seen anything that could be regarded as an idol, although some persons have said that such exist. This absence of all carved gods among the New Zealanders appeared to me a very attractive trait in their national character. They are too much the children of nature, and perhaps too intellectual, to adore wooden images."

From Roturua our author travelled north-

Digitized by Google

wards to Port Tauranga, from which place he again crossed the hills into the interior, to visit Mata-mata, the valley of the Thames. On the whole, we believe there is no single traveller who has seen more of New Zealand than he has done; and not one, certainly, who has written a more instructive or dispassionate account of what he saw. We regret much that he has not devoted a chapter of his work to the Chatham Islands, which have been recently peopled by a large body of New Zealanders, but which a company of English speculators nevertheless talk of colonizing. By buying for a trifle the title of landlords, and introducing the English law, the latter would oust the natives from their independence, and gradually sink them to poverty and servitude. It need hardly be stated here, that Dr. Dieffenbach's volumes abound with facts and observations pertaining to natural history. We have no space for details of this kind, but feel pleasure in apprising our readers that appended to his work is a complete Fauna of New Zealand, drawn up chiefly by Mr. J. E. Grey, of the British Museum, a gentleman to whose obliging disposition, no less than to his learning and ability, all lovers of natural history are much indebted.

We may here mention the general fact, that the introduction and increase of the European dog and cat have already reduced the comparatively few animal species inhabiting the woods and wilds of New Zealand; the cat, in particular, makes terrible havoc among the birds which nestle near the ground. The moa, a struthious bird, is now extinct. The apteryx, or wingless bird, the kiwi of the natives, is become extremely rare. This singular creature is said to be found in Barrier Island, nine miles from the mainland, fronting the Gulf of Houraki; and as it cannot fly, our author thence infers that Barrier Island must have been formerly united to the main. He makes a similar deduction respecting an island in the Bay of Islands, where there is now found a species of guana, which has become extinct on the mainland. But this geological mode of explaining the distribution of species, does not appear to us to rest on any logical foundation. Why should we suppose the little island to be peopled from the mainland? Does the size of the land explain in any degree the mystery of the first production? We must admit of some other modes of disseminating animal existence, which shall be capable of superseding that assigned, or how shall we explain the curious fact, that the rocks called Houtman's Abrolhos, a coral formation, fifty miles at least from the shores of Australia, are yet covered with kangaroos?

We now turn to consider the social and economical prospects of our new dependency. Though our author seems to approach this topic with extreme caution, and barely touches on it, yet he uses expressions and arguments which leave us in no doubt as to his opinions. He tells us that New Zealand has no trade; the seal-fishery is at an end; the whale-fishery nearly so; exportable timber is found in very small quantity; the phormium tenax, or native flax, is no longer brought to market; foreign shipping no longer resort to the ports: and in short, all those views which first suggested the colonization of New Zealand have proved delusive. He concludes, therefore, that its prosperity must be founded in agriculture, and that in this way it will rise *slowly*—(the italics are his own). He adds, with much truth, "every farthing drawn from the colonists in shape of payment for land, is so much lost to the colony; and if any other way could be devised to provide an emigration fund besides that of selling lands, no one can doubt that it would be better to give it to the emigrant for nothing, on condition of his cultivating it." Now an emigration fund, taken from the pockets of emigrants for their own use, is obviously delusive; it is a necessary part of a bad system which acknowledges only two classes of emigrants, namely, proprietors and labourers. Dr. Dieffenbach tells us plainly enough, that surprise and disappointment have been the general feelings of the emigrants; and he drops a hint of "deception and ruin, notwithstanding the halo of the wealth to be produced by the new system, which still attracts thousands to New Zealand."

Dr. Dieffenbach sympathizes heartily with the native population; he sees clearly, that having sold their lands, they have little chance of escaping degradation and servitude. The system of land-reserves for their use, cannot, he thinks, be carried into effect: it is, in fact, a kind of poor law, which proposes to remove them to such spots as the surveyors shall point out. On one point alone, we are compelled to dissent from our author. He chides rather sharply the insolence and superciliousness of English shopkeepers, who venture to think themselves superior to the New Zealanders. The Englishman grows up under laws which are intimately connected with his habits and manners. The training under those laws and manners, which makes him bigotted to them, also renders him a valuable citizen. This energetic citizen, it is true, is apt to be restless and pragmatical, as well as intolerant of those, who, from want of similar training, are incapable of marching with him. Yet we cannot expect all men to be philosophers, or independent of habits. Placing the English savage and the New Zealander side by side, we cannot help thinking that the former has the superiority, though not perhaps to the extent which is commonly imagined. It were well, indeed, if he treated his weaker neighbour with less arrogance; but the fact is, that the happy union of both under the same institutions is utterly impracticable, and we must take care not to impute to individuals the vices which are inherent in the social organization. Such a proceeding suits very well with the spirit of party in our disputes at home; but let us try, at least, to be reasonable and candid in discussing the affairs of the Antipodes.

We have already said enough to show the value of Dr. Dieffenbach's work, and only add a word to state that his Appendix contains a grammar and very copious vocabulary of the New Zealand language.

Eighteen Treatises from the Mishna. Translated by the Rev. D. A. de Sola, and the Rev. M. J. Raphall. Sherwood & Co.

A century has elapsed since Eisenmengez declared that the nature of modern Judaism could only be understood by diligent study of the Talmud, and since that period various portions of it have been translated into French and German. The Abbé Chiarini commenced the Herculean task of giving a complete version of the Talmud, two volumes of which were published at Leipsic, in 1831, but further progress was prevented by his death, and we had begun to despair of ever seeing an effort made to complete his design. Few Christian scholars could overcome the multitudinous difficulties which beset such an undertaking, and the Mishna forbids the Jews to give the Gentiles any interpretation of their sacred writings. As this prohibition has been sometimes denied, we quote the words, אין מוסרין דברי תורה לגוי "Let there be no explanation of the words of the law to the Gentiles" (see Chagiga, fol. 13, col. 1). Indeed, the publication of the present translation, which has been made by two eminent Jewish teachers, has given rise to some skirmishing in the newspapers, and to some sharp controversy in the synagogues. These disputes can have little interest for general readers: we shall therefore pass them without further notice; but as the attention of the religious world has been long directed to the state of modern Judaism, and the nature of the tenets actually believed by the Jews, we shall endeavour to give our readers a brief account of the origin of the Mishna, or that portion of the Talmud which has most influence on the creed and observances of the existing Jews, and also some indication of the nature of its contents.

The word Mishna has the same signification as Deuteronomy, that is "a second law;" for the Jews believe, that when God gave Moses the 613 precepts contained in the Pentateuch, he gave him oral commentaries on each precept, which were preserved by tradition only, until the second century of the Christian era, when they were collected and arranged by Rabbi Judah the Holy. To this was subsequently added the Gemara, "a supplement" designed, as its name indicates, to fill up the deficiencies discovered in the Mishna, and these together constitute the Talmud, or "collection of those things which ought to be learned." According to the Talmudic dictionary, called Aruch, a work of high authority and repute among the Rabbins, "The law, which all the people of Israel heard on Mount Sinai, was the written law (מקרא *Mikra*), but Moses heard the second law (משנא *Mishna*) from the mouth of God on a second occasion, and it was the oral law. It is named the second, because it came after the first, not because it is inferior to it." This distinction between the *Mikra* and the *Mishna* is of some importance to students of ecclesiastical history, on account of the frequent references made by the Fathers, and particularly by St. Epiphanius and St. Augustine.

There can be no reasonable doubt that traditional commentaries on the Levitical Law must have commenced at a very early period of Jewish history; that law was not merely a religious code, but it was also the basis of the entire criminal and civil law; difficulties must consequently have arisen in applying it to cases not directly specified by the legislator, and the decisions of distinguished judges; and prophets must have become precedents of authority nearly equal to the original laws, as they have amongst the Mohammedan nations. The analogy, in fact, almost approaches to identity, for the Arabic *Koran*, or "written law," and *Sonna*, or "oral law," are derived from the same roots as the Hebrew *Mikra* and *Mishna*. The consistency of these decisions with the written law was most probably discussed in "the schools of the prophets," so often mentioned in the Old Testament, for it is a mistake to suppose that the theocracy ended when the monarchy was established; on the contrary, a royal edict was null and void, if it were in opposition to the Mosaic institutions; and the schools of the prophets were chiefly instituted for the purpose of maintaining the superior authority of the Divine Law over the administration of public affairs, both in Israel and Judah. After the return of the Jews from the Babylonish captivity, schools for legal instruction were multiplied, and the decisions of influential Rabbis acquired more and more of the authority of law; so that, in the time of Jesus, the Pharisees were open to the imputation of having superseded the commandments of God by their traditions. There are many allusions to the discussions of intricate points of law by the Jewish doctors, in the New Testament; and the multitude of glosses, commentaries, and forced analogies thus produced, must have been incalculable. Rabbi Johannan Ben Zakai thus quaintly describes the voluminous rhapsodies of the doctors of law in his day, "If all the heavens were skins of parchment, and all the children of men scribes, and

Digitized by Google

all the trees of the forest writing pens, it would be impossible to write down all that I have learned from my teachers."†

We have already mentioned, that Rabbi Judah the Holy was the first who collected these traditions. There is internal evidence that they were principally derived from the Pharisees, for they are deeply imbued with all the characteristics of that sect, as pourtrayed in the New Testament. Take, for instance, the following specimen of the rigid rules laid down for the observance of the Sabbath:—

"It once happened that the inhabitants of Tiberias carried a pipe of cold water through an arm [streamlet] of their hot well; but the sages explained to them that on the Sabbath, [this water] like any [other that had been] heated on the Sabbath-day, is prohibited either for washing or drinking; and that on festivals [this water] like any [other that had been] heated on the festival, is prohibited for washing, but permitted for drinking. A common warming-pan that has been cleansed of coals [it is lawful to] drink out of [on the Sabbath]; a double warming-pan even though it has been cleansed of coals [it is] not lawful [to drink out of]."

St. Jerome, in fact, calls the Mishna a collection of Pharisaic traditions, and insinuates what Maimonides asserts, that the collection was made for the purpose of checking the progress of Christianity.

It would be impossible to decide on the relative antiquity of the various traditions collected, but most of them certainly belong to the schools of Hillel, Shammaï, and Gamaliel, who flourished about the time of the first establishment of the Roman government in Judea. The style of the Mishna is dry and concise, even to obscurity. It treats much less of doctrines than of ceremonies, prescribing the ritual to be observed in the six great divisions which the Rabbis had made of the law, viz. Agriculture, Festivals, Women, Damages, Consecrations, and Purifications. On all these subjects it lays down minute regulations, entering into gross and offensive particulars, the worst of which are, however, omitted in the present translation. The language is tolerably pure, and unlike the barbarous jargon of the Gemara; for the Rabbis of the second century had not learned to pride themselves on being ignorant of the laws of analogy and the rules of grammar; they did not, like the Talmudists of a later age, regard barbarism as a proof of inspiration.

It is generally known, that many influential persons among the modern Jews have doubted the divine origin of the Oral Law, while the great bulk of their brethren ascribe it to an authority little inferior to that of the Pentateuch. The present translation has originated in this controversy, but we regret to find, that it is not likely to throw much light on the subject. The Gemara, which, according to the Talmudists, is of equal authority with the Mishna, is omitted; sections have been left untranslated, some from motives of delicacy, but others from a very well-founded jealousy of criticism. There is no table of contents, or index, both of which are indispensable to the use of a volume in which the titles of sections very rarely correspond with the subjects discussed; the notes are meagre beyond measure, and in fine the translators appear to have done everything in their power to keep the Mishna a sealed book even in its English form. Biblical scholars must still have recourse to the old Latin version of Surenhusius, or to the unfinished work of Chiarini, for M. de Sola's work is constructed on the principle of giving as little information as possible. The subject of the Mishna, as we have already mentioned, is chiefly ritual: it is so very exact, that we doubt whether any action of life escapes from its regulation; from his earliest infancy the Jew has the ceremonial law present to him at every instant, and must exercise the utmost vigilance to escape an involuntary violation of its ordinances. This is the great secret of the permanence of the Jewish religion; in the words of Dryden—

> The priest continues what the nurse began,
> And thus the child imposes on the man;

he is shielded from conversion by an armour of forms, impenetrable to reason or argument, because they are, for the most part, indifferent in themselves, but are, at the same time, highly valued, as sustaining his confident belief that he belongs to the chosen people of God. A translation of the Talmud would tear away the veil of sanctity with which this ritual is invested; the absurd fables with which the Gemara supports the precepts of the Mishna, would do more to refute the latter than all the learning and eloquence of our modern controversialists. Of this the Rabbis are well aware; they will take good care that none of their number shall ever give us the Talmud in an English dress, and we suspect that the present translation of the Mishna is not approved in the synagogue, because it enables Gentiles to discover the nakedness of the land.

† The Rabbi's hyperbole was probably the model of Barrett's whimsical specimen of amatory strains in The Heroine:

> If White sea, Black sea, Red sea ran
> One sea of ink to Ispahan;
> If Holland old or Holland New,
> One wondrous sheet of paper grew;
> If all the geese in Lincoln fens
> Were cloth'd with Brunnah's patent pens;
> And were I to describe the grace
> Of half a dimple in thy face;
> Each hair-stroke then would be a Rhine,
> Each verse an Equinoctial line.

Frederick the Great, his Court and Times. Edited by T. Campbell, Esq. Vols. III. & IV.

[Second Notice.]

FROM the conclusion of the Seven Years' War, Frederick passed the rest of his life (with a brief exception scarcely worth noticing,) at peace with his fellow kings; and this, it should appear, was effected by a political adroitness scarcely less admirable than his strategic skill. The interval was filled by a continuous effort to revive the prosperity of his exhausted country, to consolidate and improve its institutions, and to put the army and the finances in a condition, which would enable his successors to maintain the station he had acquired for them in the hierarchy of sovereigns. It is by exertions like these, that nations best are served, and that the capacities of kings are the most severely tried: they form the truly valuable materials of history, if, indeed, they do not contain all that is worth remembering of those whom nations have flattered with the epithet of "great." Unfortunately, it is with this portion of the 'Life and Times of Frederick' that we have the least reason to be satisfied. The admirers of the man in general have been more eager to celebrate his *bons mots* and his eccentricities, than to record his administrative characteristics; and it is not from an English compiler that we can look for details, which are probably still buried in the archives of the Prussian government: we shall, therefore, abstain from any attempt to enter methodically into the consideration. In estimating the character of Frederick as an administrator, we are not to judge by the sentiments expressed by him as a poet or a philosopher. Whether he was content to act on the maxim that theory is one thing and practice another, or that he was conscious of restraints from the prejudices of the people, or whether, lastly, he felt that, let philosophy dictate what it may, "his business was that of a king," it seems certain that his conduct did not always coincide with his expressed sentiments as an author and a correspondent. Those, indeed, in the exercise of arbitrary power become almost of necessity capricious; and Frederick was pre-eminently apt to act upon sudden impulses, when not on his guard. One instance of inconsistency sufficiently striking is, that he was a stickler for taking his military officers from the ranks—not of the army as Napoleon did, but as far as possible from those of feudal superiority. As a poet, he could afford to say that "talent and virtue have no need of ancestors;" and that "notwithstanding the pride of rank, all are born equals and of the same blood." So, also, in an essay on education, he observes, "in the departments of justice, finance, diplomacy, and the army, high birth is indeed honoured; but it would be ruin to the state, if birth were preferred to merit." Yet when, after the peace of Hubertsberg, the king remodelled his military forces, he

—"admitted none but officers of noble birth into the line. He says himself,—'Nothing but the deficiency of nobles, and the number of vacancies in the regiments, rendered it necessary to have recourse during the war to *la roture*—to commoners; but, in order to obtain that degree of perfection in the army which is so important for the welfare of the state, after the peace, all who belonged to the commonalty were removed from the corps of officers to garrison regiments; and, as the country itself could not furnish so many nobles as were required for the army, foreigners from Saxony, Mecklenburg, and the empire, among whom were some good officers, were admitted into the service. The supplement to the infantry regulations, issued in 1779, inculcates the same principle—'Should there be nobles from foreign countries who manifest intelligence, ambition, and a real zeal for the profession, they may be proposed to his majesty for officers, and the commanders must endeavour to engage such for their regiments.'"

We find, indeed, the prejudice of caste so strong in him, as to influence even his very thoughts:—

"'I know not how it is,' said the king one day at table, 'that commoners are not good for much as officers, even though I ennoble them.'—'Begging your majesty's pardon,' replied one of the company, 'we have in the army the brave colonel R., who could prove the very reverse.' The king appeared to bethink himself, repeated the colonel's name several times, and at length said: 'But I'll tell you what; I know better than you; colonel R. is of an old noble family.' This was not the case; but here we see with what pertinacity the king would defend a position which he had once taken up."

To this line of conduct, Frederick might be disposed by the unconscious influence of the atmosphere in which he had been bred; but there can be but little doubt that, to a certain extent, he must have been governed by the necessities of the case: for, in his times, not only were armies composed of the very scum and refuse of the population, and recruited from the offscourings of other nations, but the middle classes, tradesmen, farmers and artificers, had been trained by long use to consider themselves rather as the sheep destined to enrich their superiors, than as the dogs who should guard their properties. He who had been born and bred a serf, had little chance of possessing the elements of self-esteem, necessary to make a valiant and an ambitious officer.

This is a consideration that should predominate in our estimate of Frederick in every department of his administration. When we witness the difficulties with which, under the most favourable circumstances, the smallest portions of common sense can be insinuated into the practical government of affairs, we have little right to accuse the philosophical king, for not always ruling his country upon encyclopædic principles. It is by the results, and not by details, that we must decide on his merits as a domestic legislator. Thus with respect to the barbarous punishments employed in the discipline of the army, Frederick received the system as an heritage from his predecessors; while the composition of his forces, and the circumstances of the first part of his reign, were little adapted to

Digitized by Google

sudden and comprehensive reforms. The composition of his army, as far as the mere soldier was concerned, was unfavourable to a liberal system of discipline. But in the king's conduct to his officers he mingled necessary severity, with extraordinary lenity, where punishment might safely be dispensed with; and this even when natural justice might have pointed another way:

"In August, 1761, when the king had taken post with his army in the vicinity of Schweidnitz, orders were given to throw up a redoubt in the churchyard of the village of Jauernick; and a great number of men belonging to different regiments were sent to work at it, under the superintendence of one officer. In turning up the earth the men found an old pot. Pulling it out very carelessly, they broke it at the top, and perceived that it contained money. They were ready to seize it, when the officer drove them away, and took charge of the pot himself, saying that the money which was in it should be fairly divided among them, when they were relieved. The men were content. The pot was deposited in the church porch. The officer retired, pulled off his stockings, put on his boots over his bare feet, poured the money out of the pot unobserved, put his stockings at the bottom of it, and covered them with a small quantity of the pieces of coin. As soon as the men were relieved, they demanded the pot of the officer, who immediately produced it, poured out the money, and showed them that so far from containing nothing else, it was partly filled with old rags. The soldiers loudly declared that they were cheated, which provoked the officer to threaten them with his cane. Just at that moment the king arrived to inspect the redoubt. He inquired what was the matter, the soldiers related the whole affair, and the king desired to see the money and the rags in question. An old grenadier had the latter in his hand. 'Your majesty,' said he, 'these are not old rags, but a pair of worsted stockings, with a name upon them.' At the same time he showed them to the king, who distinctly perceived the name with which they were marked. The king ordered the officer to be called, and asked what was his name. The officer mentioned the same that was on the stockings. 'Well, then,' said his majesty, 'it is clear that the money belongs to you. Your ancestors must have buried it here. There is the name upon the stocking, as fresh as if it was only just put into the pot. I'll tell you what, my lads,' said he, turning to the soldiers, 'let the officer keep his money; I will have the pot filled with two-groschen pieces, and these shall be equally divided among all that are here. Are you satisfied?'—'O yes, your majesty,' was the unanimous reply: and well they might be, for the coins in the pot were old, small, and partly copper. By this expedient the king extricated the officer from the dilemma in which he had involved himself, and left him mute and covered with shame."

As an instance of the king's debonnaire manner, we may add another anecdote. On one occasion when the king had erroneously been displeased with an officer in the field, and he was about to strike him with his cane, the officer escaped at full gallop, the king pursuing him for some time in vain. The officer requested his dismission from his commander, "the gallant General W.", who entreated a short delay. In the mean time, —"the king had that day a large company to dinner. The conversation turned on the manœuvre. Frederick ascribed the success of the second experiment to the admirable direction which the general's regiment had given to the whole, and bestowed the highest praise both upon it and its commander. The general was of course highly gratified, but observed, with his usual fearlessness, 'That capital manœuvre deprives my regiment of its best officer.'—'How so?' asked the king eagerly. 'Lieutenant M., whom your majesty promoted from private hussar to officer on the field of battle, after the affair of Burkersdorf, solicits his dismission.' The general paused. Frederick was silent for some moments. He then asked—'Is the lieutenant really such an excellent officer?'—'I know not one who surpasses him.'—'Why does he desire his dismission?' The general explained the cause in the most unreserved manner. The king said no more, and a new subject of conversation was presently started. The troops were to manœuvre again on the following morning. The regiments were drawn up, and M. was in front of his division, when the king approached. 'Is not your name M.?' inquired Frederick. The lieutenant replied in the affirmative. 'Hark you, my son,' resumed the king, with his peculiar benignity, 'you are captain. I would have told you so yesterday, but could not overtake you. You ride like the very devil.' With these words he passed on, and M. relinquished all thoughts of applying for his dismission."

Notwithstanding, then, the severities practised on the troops, the canings, the running the gauntlet, and the remorseless tyranny of the officers, the king contrived to render himself, like the *petit caporal* of the French soldiers, the favourite of his armies, with whom he was known by the similar *sobriquet* of "old Fritz"; and that he really did not of choice sanction a brutal code is clear, from the amendments introduced towards the end of his reign. We quote with pleasure, from a circular of General Möllendorfs, sentiments on the subject well worthy the consideration of our own legislators:—

"'For two years past,' he says, 'that is, ever since I have been governor of this capital, it has been one of my first cares, for the honour of humanity, to put an end to the tyrannical and barbarous conduct of the officers to the privates; and I confess with pleasure that in six regiments of this garrison I have perceived evident fruits from my efforts. In one regiment only, which I will not now name, the old practice, founded on erroneous notions, of keeping the common soldier to his duty by barbarous flogging, caning, and abusive language, is still the fashion. But I warn the commander who has hitherto pursued this practice to desist from it, and to lead the private soldier more by ambition than by tyranny to that discipline and military dexterity which his majesty requires. The king has no scoundrels, blackguards, dogs, and clodpoles in his service, but honest soldiers, as we are too, only that chance has given us higher characters. For among the common soldiers many are as good, and some might perhaps be a great deal more clever than we. Every officer ought to rejoice in being the leader of soldiers eager after honour; but he is not so if he degrades those whom he commands into so low a race of men.'"

Of the king's financial measures we, of the present day, have still less right to speak with harshness. In Frederick's times, the truths, which have now become commonplaces, were scarcely known even as theories; and if they had, the necessities of a war, on which every thing was at stake, left little opportunity for respecting principles. To meet the current expenses every expedient was deemed good, even to that coarsest of frauds, the debasement of the currency. Of this state of things, we have the following picture:—

"To such a degree was the value of the current coin at last reduced, that a ducat was worth nine dollars. Instead of their salaries, all the civil servants of the state received tickets payable after the peace. The hardships inflicted upon a very numerous class of the public servants by this measure may be conceived, when it is known that these tickets were not taken in the ordinary course of trade, and that at last, when discounted by the brokers, they were liable to a loss of four-fifths. Such as were able, through the assistance of friends or their own resources, to hold these tickets till the peace, were paid the amount in the base current coin; so that even in this case they must have sustained a loss of about two-thirds. In the struggle for life and death, Frederick's attention was absorbed by one grand object—how to raise the twenty-five million dollars requisite for the ensuing campaign. To this sum his own dominions, or at least those provinces which were not in the hands of his enemies, contributed upon an average but four million; seven were squeezed out of Saxony; the English subsidy was converted into eight million; and the exclusive privilege of coining, granted to the Jewish firm of Gumpertz, Isaak, and Itzig, produced seven million more."

That Frederick was not insensible to the evil, is clear from his conduct on the conclusion of the peace, when he hastened to restore the metallic currency, calling the war standard "a violent and melancholy expedient." Of this, his opinion, the author records an illustration sufficiently characteristic:—

"'During the circulation of the base money, a great quantity of which consisted of pieces of six pfennings, the soldiers, the workmen, part of the salaries of the civil and military officers, were paid in this money, but it was not received at the royal treasury. One day, as Frederick was passing the door of a baker, he saw him disputing with a countryman. He inquired the reason, and was told that the baker insisted on paying the man for his corn in six-pfenning pieces, which the countryman refused to take. Frederick stepped up to the man. 'Why will you not take the money?' he asked. The peasant, looking hard at the king, peevishly replied: 'Wouldst thou take it thyself?' The king said no more, but passed on."

With respect to the king's efforts to restore the exhausted country, the statements must be received with great reserve. Our uninquiring author, repeating what he has read, observes—

"The munificent donations in money, corn, and cattle, which he bestowed on the unfortunate, saved many of his subjects from the brink of despair. The fields were again cultivated; towns and villages sprang up out of their ashes; a fresh impulse was given to manufactures; regularity and confidence returned to trade; and the arts of peace brought back by degrees integrity, order, and morality. The old revenue was found inadequate to the many heavy demands made upon it. These were increased by unforeseen calamities: many towns were ravaged by destructive fires, and all of them in their distress looked up to the king for pecuniary aid. Frederick felt the necessity for increasing the revenue of the state by two million dollars, that he might be enabled to assist his country to recover itself, to maintain a respectable military force, and to collect funds to meet any emergency. His ministers were of opinion that the imposts ought to be diminished, not augmented."

In these days, we need hardly say, that the ministers, and not the king, were right, or remind our readers, that whatever was thus "munificently" bestowed upon certain sufferers, must have been extorted from the rest of his subjects, who all stood in need of relief, rather than additional exactions. The merit of the king was great, in devoting what sums he could spare, not to his own private gratification, or to a useless extravagance of representation and show; but we find him also eulogized for building the new palace of Sans Souci, at an expense of three million of dollars, under the fallacious plea of finding employment and circulating capital. Another most extraordinary error into which the king was betrayed, was the sudden cashiering of his whole body of financial officials, and inviting an army of hungry Frenchmen to undertake that branch of the government. This, we are told, was done by the advice of Helvetius; and it is somewhat strange, that the florid fortunes of the Farmer General himself did not open the King's eyes as to the economy of French finance. It would have been hard indeed for the individual corruption of his German servants to have equalled the wholesale extravagance of the system he was induced to imitate; and he accordingly found cause to lament a step, which he subsequently retraced, by dismissing the foreigners, and again remodelling the system.

But whatever may have been the mistakes incidental to a time of ignorance, the energy of Frederick, and his perseverance, did act as a stimulus on his people; and if we view the result as we ought, that is, as a proof of the recuperative energies of an industrious population, few events in history are more instructive than the rapidity with which Prussia, under his government, recovered from the stunning blows it had received. It seems likely, that among other consequences of his zeal and prudence, the influx of capital from other countries should be reckoned. We

Digitized by Google

do not otherwise see how, in a time of such general poverty, much good could have arisen from the following measure, which was known to have succeeded to a great extent:—

"In Silesia, as in the other provinces of Prussia, the nobility, at this time the only landed proprietors, had been so drained by the ravages of the war, that they were reduced to extreme distress for want of money. Unable to pay the interest of the sums borrowed, they had lost their credit, and their property was seized. The more estates there were for sale, the lower was the price offered for them. The whole class of nobles was brought to the brink of ruin, and agriculture and the public revenue suffered along with them. This state of things suggested the idea of an institution, the salutary effects of which surpassed the most sanguine expectations. Under the designation of Provincial Credit System, all the proprietors of estates in Silesia associated for the maintenance of their joint credit; and a bank was established at Breslau, which took up money for the purpose of advancing it upon the security of immovable property to the amount of half its value. The lenders receive in exchange mortgage notes or bills, printed on parchment and stamped, of the amount of from 100 to 1000 dollars, which pass, like our bank-notes, as ready money. On these bills is expressed the name of the estate for which they are given; the holders have the preference before all other creditors, and receive 5 per cent. interest half-yearly, not from the owner of the mortgaged property, but from the provincial association, which is their debtor."

The King's attention to the administration of justice was more thoroughly praiseworthy than his administration of the finances. Like Catherine of Russia, he was desirous of mitigating the severities of the criminal code; and he anticipated some of those reforms, for which Romilly and his coadjutors, years afterwards, so long struggled in vain in England. It is worthy of remark, however, that Frederick, on coming to the throne, found himself supreme over the whole administration of justice, and that he maintained, unimpaired, a prerogative, that annihilated the independence of his judicial functionaries. He not only revised their sentences, increasing, as well as mitigating, their severity, but even punished the judge himself for what he considered either his corruption or ignorance, when he thought the interests of justice required such an act of rigour. This was memorably instanced in the case of Arnold the miller:

—"a case which excited the strongest sensation, not only in Prussia, but throughout the whole civilized world, in which the king, taking a common-sense view of the matter, unbiassed by the quirks and quibbles of lawyers, and exercising the authority of chief-justiciary of his kingdom, not only reversed the sentence of the judges, but punished them severely for what he considered as a most iniquitous decision. Frederick's interference in behalf of the poor miller, though it extorted the admiration of his contemporaries in foreign countries, has since been very generally censured by the lawyers of Prussia as an arbitrary stretch of power; but, a few years since, M. Sietze undertook to vindicate the honour of the great king in reference to this matter, and has proved that no [unlawful] encroachment on the administration of justice was committed, neither could it have been intended."

It is perfectly true that, in this instance, the King had a legal right to act as he did; nor is it less so, that he was substantially correct in his decision, giving relief from a gross, if not a corrupt, blunder of the judges. But it is not the less true, that there was a good deal of Cadi justice in the King's high-handed intervention, and that such powers cannot be intrusted with safety to a monarch. Independence is the first element of judicial purity. The following is less questionable:—

"If Frederick wished capital punishment to be inflicted without unnecessary torture, he was equally solicitous that its effects should not be weakened. He could not overlook the mischief likely to result from the officious zeal of certain clergymen for the conversion of criminals under sentence of death; from the self-complacent commendations of the process by which men who all their lives had been steeped, body and soul, in crime, were suddenly transformed, as it was blazoned abroad, under the operation of divine grace, into patterns of piety and heirs of assured salvation; and from the practice of accompanying malefactors, as it were in triumphal procession, to the place of execution. The baneful effects of such exhibitions on the imagination of unenlightened persons must be self-evident. The king, therefore, ordered that criminals should be conducted to execution unattended by clergymen and without the singing of hymns. The wisdom of this innovation, which at first incurred severe censure, and was ascribed to the irreligious spirit of the king, was in the sequel universally acknowledged and imitated by reflecting legislators."

After perusing this passage, who will venture to say that the march of intellect is not sometimes very slow, if not retrograde, in England!

The following, too, merits quotation:—

"Philippi [president of the Police] made a report to the king, in which he showed that, in order to attain the same results as M. de Sartine [obtained in France], it would be necessary to organize a secret police and a system of espionage, and he proposed the means of accomplishing these objects, in case the king should be pleased to resort to them. Frederick answered him in these memorable words:—'Anxious as I am for the maintenance of the public security, the discovery of every crime committed, and the prevention of every one contemplated, still I consider the means by which alone these objects can be attained as far more mischievous than all the evils which they would be intended to remedy. I will not disturb the quiet and the confidence of my good subjects, nor suffer the morals of my people to be corrupted.'"

We cannot follow the author through a chapter intended to whitewash Frederick's character for irreligion. As respects the man, we arrogate not to ourselves the right to sit in judgment on the opinions of others; but as a king, we may remark that Frederick is shown by our author to have had a due sense of the importance of religion; though he certainly kept the intolerance of the clergy and their pretensions in a strong check. His protection of the Jesuits, when under the ban of all Europe,—whether whim or reason of state dictated the measure,—was a singular event. On the whole, he seems to have kept the man and the sovereign perfectly distinct in this department of his government. We must indulge ourselves, however, in quoting an instance of the Frederesque mode of dealing with clerical abuses:—

"Nothing excited in the king greater indignation than religious frauds. On one of his journeys in Silesia, he was informed, before he reached Breslau, that the Capuchins were selling agnus deis at six kreutzers each to the credulous country-people, as a specific against a disease then prevailing among the cattle in that province. They were directed to mix them up with the fodder of the beasts, which would be sure to recover. Indignant at this imposition, the king sent, on the very same evening that he arrived at Breslau, for the three superiors of the Capuchin convent there, and received them with one of his most withering looks, and the following apostrophe: 'Ah, you Shakers, how dare you presume to sell to the country-people for a trifle that which in your religion is accounted the most venerable and the most sacred? Nay, more—you sell it to be eaten by cattle! Along with this impiety you have the effrontery to assure the bigotted peasants that this representation of your God is an infallible remedy for the distemper among the cattle. Shakers you, are ye not afraid that all the world will set you down for the miserable hypocrites ye really are? But what do you do with the money, you who want for nothing, but are abundantly supplied with alms for your support by your credulous people?—buy ribbons, perhaps, for your concubines?' Here one of the Capuchins would have spoken, probably to rebut the charge, but Frederick, with flashing eyes, cried, 'Silence! If it is not you, it is your religious, or rather the irreligious and impious monks under your authority. They do it, I know. If you know it, you are guilty; if you know it not, you are equally so. I ought to put a stop to the public scandal by punishing you, but this time I will spare you. But, beware! Depend upon it you shall be narrowly watched; and woe betide you if anything of the kind should happen again! I would have all your beards shaved off. Now march!' Trembling beneath the lightnings of the king's eye and the thunder of this harangue, the Capuchins retired, and they were prudent enough not to repeat the offence."

One of the tests of the King's real greatness was his indifference to the writings and gossippings of little politicians, which weigh so heavily on the susceptibilities of ordinary governments:

"The king's toleration, his efforts in behalf of liberty of conscience and of opinion, his solicitude for the diffusion of knowledge among his subjects, were not consequences of any personal indifference to matters of religion; but these objects were pursued by him as means for enlightening and humanizing his people. This is proved by the almost unlimited liberty of the press enjoyed in his dominions, to the essential benefit of science, as well as of the book-trade. So great was the freedom not only of the press but also of conversation in Prussia, that it astonished foreigners, impressed with the arbitrary nature of the form of government. 'Nothing more surprised me,' observes the well-known English traveller, Dr. Moore, 'when I first came to Berlin, than the freedom with which people spoke of the measures of the government and of the conduct of the king. I have heard political topics, and others which I should have thought still more ticklish, discussed here with as little ceremony as in a London coffee-house. The same freedom appears in the booksellers' shops, where literary productions of all kinds are sold openly. The pamphlet lately published on the division of Poland, wherein the king is very roughly treated, is to be had without difficulty, as well as other performances, which attack some of the most conspicuous characters with all the bitterness of satire."

The efforts at present made to promote national education by the Prussian government, which excite such universal admiration, are not a novelty in that state. The subject engaged much of Frederick's attention. In a letter to D'Alembert, he thus speaks:—

"'The more one advances in age, the more one is convinced of the harm done to society by the neglected education of youth. I strive in every way to prevent this mischief, and am reforming the universities, the gymnasiums, and even the provincial schools. But it takes thirty years before one sees the fruit; I shall not reap it: but I shall rejoice in having procured my country this benefit, which it is still without.'—'The education of youth,' says Frederick, in another place, must be considered as one of the principal objects of a government: it has an influence upon everything:' and to this object he dedicated his admirable Essay on Education."

Frederick's propensity to joking is too notorious to dwell upon. Sometimes it provoked retorts, which he bore with more or less of philosophy, according to the humour of the moment:—

"When his sister, the duchess of Brunswick, was at Berlin, Frederick one day made a present to Count Schwerin, his grand equerry, of a snuff-box, on the lid of which was painted an ass. No sooner had the count quitted the king than he sent his valet to Berlin with the box, and directions to get the ass taken off, and the king's portrait put in its place. Next day, at dinner, the count affected to leave his box carelessly on the table, and the king, who wished to amuse the duchess at the expense of the grand equerry, spoke of the box which he had given to him. The duchess asked to see it. The box was handed to her; she opened it, and exclaimed:—'Bless me, what a likeness!' the resemblance is perfect! Upon my word, brother, this is one of the best portraits of you I have ever seen.' The king was quite disconcerted, and thought that the joke was carried too far. The duchess handed the box to her next neighbour, and it was passed from one to another round the table, every one joining in admiration of the resemblance. The king knew not what to think of the matter, till the box, coming at length under his inspection, he discovered the trick, and joined in the laugh."

Digitized by Google

Still better is the following:—

"The king never [ever?] was known to have a particular dislike to double or compound names. An old nobleman once solicited permission, in compliance with the will of a lady who had left him a large fortune, to add her name to his own. 'The man has a name already,' replied Frederick; 'what does he want with two?' General Zaremba had a long Polish name. The king had heard of it, and one day said to him:—'What is your proper name, Zaremba?' The general repeated it at full length.—'Why,' exclaimed Frederick, 'the devil himself has not got such a name!'—'No, your majesty,' replied Zaremba drily, 'but then he does not belong to my family.'"

In another instance he received the "retort valiant" by deputy:—

"In the early part of his acquaintance with Frederick, when Quintus Icilius still went by the title of aulic councillor (*Hofrath*), he was taking a ride one day with the king, when they chanced to meet a clergyman mounted on a fine spirited horse, which he sat uncommonly well. 'Only see, Quintus,' said Frederick, how consequential yon parson looks on his bit of blood. Go to him and humble his pride a little.' Quintus did not need bidding twice. He rode up to the clergyman. 'How is it, sir,' said he, 'that you are riding such a fine horse, while your lord and master was content with an humble ass?'—'So should I be too,' rejoined the witty son of the church, 'only his majesty has since made all the asses aulic councillors, so that now there is not one to be got.'"

But it is time for us to stop. Two circumstances in Frederick's life we must thus pass by untouched—his share in the plunder of Poland, and his quarrels with Voltaire. Our author attempts to justify the former, as an act of political necessity, and it probably was so; but all subsequent history protests against the precedent thus set, as pregnant with insecurity to states, and with misery to people. The treaty of Vienna, at the restoration, which parcelled Europe like a plum cake, may be traced, through an undoubted pedigree, to this abominable outrage of the strong against the weak.

In reference to the second subject we shall merely state, that the author has taken a very one-sided view of Frederick's "lovers' quarrels" with Voltaire. To us it has ever seemed, that each of these personages acted after his kind; and that the one fault committed by them in common, was the overlooking "the *genus irritabile*," as incidental to kings as it is to poets, and the consequent supposition that either could long maintain uninterrupted a close intimacy with the other.

Life in Mexico, during a Residence of Two Years in that Country. By Madame C—— de la B——. Part II. Chapman and Hall.

THE continuation of Madame Calderon's amusing journals (English edition) has arrived opportunely, and thus enabled us to continue our extracts. It opens with a characteristic scene. After taking her part in the Roman Catholic solemnities which distinguish the second of November ("The Day of the Dead")—she started for Santiago, "to be present at the *Herraderos*—the marking of the bulls with a hot iron, with the initials of the proprietor's name"—a festival eagerly anticipated. Arrived there—

"We set off early to the plaza de toros. The day was fresh and exhilarating. All the country people from several leagues round were assembled, and the trees up to their very topmost branches presented a collection of bronze faces and black eyes, belonging to the Indians, who had taken their places there as comfortably as spectators in a one shilling gallery. A platform opposite ours was filled with the wives and daughters of agents and small farmers, little rancheras, with short white gowns and rebosos. There was a very tolerable band of music, perched upon a natural orchestra. Bernardo and his men were walking and riding about and preparing for action. Nothing could be more picturesque than the whole scene. Seven hundred bulls were driven in from the plains, bellowing loudly, so that the air was filled with their fierce music. The universal love which the Mexicans have for these sports, amounts to a passion. All their money is reserved to buy new dresses for this occasion, silver rolls or gold linings for their hats, or new deerskin pantaloons and embroidered jackets with silver buttons. The accidents that happen are innumerable, but nothing damps their ardour. It beats fox hunting. The most striking part of the scene is the extraordinary facility which these men show in throwing the laso. The bulls being driven all into an enclosure—one after another, and sometimes two or three at a time, were chosen from amongst them, and driven into the plaza, where they were received with shouts of applause if they appeared fierce, and likely to afford good sport; or of irony if they turned to fly, which happened more than once. Three or four bulls are driven in. They stand for a moment proudly reconnoitering their opponents. The horsemen gallop up, armed only with the laso, and with loud insulting cries of 'Ah, toro!' challenge them to the contest. The bulls paw the ground, then plunge furiously at the horses, frequently wounding them at the first onset. Round they go in fierce gallop, bulls and horsemen, amidst the cries and shouts of the spectators. The horseman throws the laso. The bull shakes his head free of the cord, tosses his horns proudly, and gallops on. But his fate is inevitable. Down comes the whirling rope, and encircles his thick neck. He is thrown down, struggling furiously, and repeatedly dashes his head against the ground in rage and despair. Then, his legs being also tied, the man with the hissing red-hot iron in the form of a letter, brands him on the side with the token of his dependence on the lord of the soil. Some of the bulls stand this martyrdom with Spartan heroism, and do not utter a cry; but others, when the iron enters their flesh, burst out into long bellowing roars, that seem to echo through the whole country. They are then loosened, get upon their legs again, and like so many branded Cains, are driven out into the country, to make way for others. Such roaring, such shouting, such an odour of singed hair and *biftek au naturel*, such playing of music, and such wanton risks as were ran by the men! I saw a toreador, who was always foremost in every thing, attempting to drag a bull by the horns, when the animal tossed his head, and with one jerk of one horn, tore all the flesh off his finger to the very bone. The man coolly tore a piece off a handkerchief, shook the blood off his finger with a slight grimace, bound it up in a moment, and dashed away upon a new venture. One Mexican, extraordinarily handsome, with eyes like an eagle, but very thin and pale, is, they say, so covered from head to foot with wounds received in different bull-fights, that he cannot live long; yet this man was the most enthusiastic of them all. His master tried to dissuade him from joining in the sport this year; but he broke forth into such pathetic entreaties, conjuring him 'by the life of the Señorita,' &c., that he could not withhold his consent.

"After an enormous number of bulls had been caught and labelled, we went to breakfast. We found a tent prepared for us, formed of boughs of trees interwined with garlands of white moss, like that which covers the cypresses at Chapultepec, and beautifully ornamented with red blossoms and scarlet berries. We sat down upon heaps of white moss, softer than any cushion. The Indians had cooked meat under the stones for us, which I found horrible, smelling and tasting of smoke. But we had also boiled fowls, and quantities of burning chile, hot tortillas, atole, or atolli, as the Indians call it, a species of cakes made of very fine maize, and water, and sweetened with sugar or honey; embarrado, a favourable composition of meat and chile, very like mud, as the name imports, which I have not yet made up my mind to endure; quantities of fresh tunas, granaditas, bananas, aguacates, and other fruits, besides pulque *à discrétion*. The other people were assembled in circles under the trees, cooking fowls and boiling eggs in a gipsy fashion, in cauldrons, at little fires made with dry branches; and the band in its intervals of tortillas and pulque, favoured us with occasional airs. After breakfast we walked out amongst the Indians, who had formed a sort of temporary market, and were selling pulque, chia, roasted chesnuts, yards of baked meat, and every kind of fruit. We then returned to see a great bull-fight, which was followed by more herraderos—in short, spent the whole day amongst the toros, and returned to dinner at six o'clock, some in coaches, some on horseback. In the evening all the people danced in a large hall; but at eleven o'clock I could look on no longer, for one of these days in the hot sun is very fatiguing. Nevertheless, at two in the morning, these men, who had gone through such violent exercise, were still dancing jarabes."

On returning to Mexico, Madame Calderon had an opportunity of describing an earthquake; which, however, appears to have terrified a poor little clerk, who came in with dispatches at the critical moment, and her scarlet *hucamaya*, far more than the lady. This brings her chronicle up to Christmas, which festival is celebrated in Mexico with an infinite number of quaint usages:—

"Christmas eve is the last night of what are called the *Posadas*, a curious mixture of religion and amusement, but extremely pretty. The meaning is this: At the time that the decree went forth from Cæsar Augustus, that 'all the world should be taxed,' the Virgin and Joseph having come out of Galilee to Judea to be inscribed for the taxation, found Bethlehem so full of people, who had arrived from all parts of the world, that they wandered about for nine days, without finding admittance in any house or tavern, and on the ninth day took shelter in a manger, where the Saviour was born. For eight days this wandering of the Holy Family to the different *Posadas* is represented, and seems more intended for amusement to the children than anything serious. We went to the Marquesa's at eight o'clock, and about nine the ceremony commenced. A lighted taper was put into the hand of each lady, and a procession was formed, two by two, which marched all through the house, the corridors and walls of which were all decorated with evergreens and lamps, the whole party singing the Litanies. K—— walked with the Dowager Marquesa; and a group of little children, dressed as angels, joined the procession. They wore little robes of silver or gold lama, plumes of white feathers, and profusion of fine diamonds and pearls, in *bandeaux*, brooches, and necklaces, white gauze wings, and white satin shoes, embroidered in gold. At last the procession drew up before a door, and a shower of fireworks was sent flying over our heads, I suppose to represent the descent of the angels; for a group of ladies appeared, dressed to represent the shepherds who watched their flocks by night upon the plains of Bethlehem. Then voices, supposed to be those of Mary and Joseph, struck up a hymn, in which they begged for admittance, saying that the night was cold and dark, that the wind blew hard, and that they prayed for a night's shelter: a chorus of voices from within refused admittance; again those without entreated shelter, and at length declared that she at the door, who thus wandered in the night, and had not where to lay her head, was the Queen of Heaven! At this name the doors were thrown wide open, and the Holy Family entered singing. The scene within was very pretty: a *nacimiento*. Platforms, going all round the room, were covered with moss, on which were disposed groups of wax figures, generally representing passages from different parts of the New Testament, though sometimes they begin with Adam and Eve in paradise. There was the Annunciation—the Salutation of Mary to Elizabeth—the Wise Men of the East—the Shepherds—the Flight into Egypt. There were green trees and fruit trees, and little fountains that cast up fairy columns of water, and flocks of sheep, and a little cradle in which to lay the Infant Christ. One of the angels held a waxen baby in her arms. The whole was lighted very brilliantly, and ornamented with flowers and garlands. A padre took the baby from the angel, and placed it in the cradle, and the posada was completed. We then returned to the drawing-room—angels, shepherds, and all, and danced till supper time. The supper was a show for sweetmeats and cakes."

We will now bear Madame Calderon company in an excursion to *Tierra Caliente*, which she made in the month of February. To enter fully into the spirit of this, the reader must forget the driving sleet and roaring winds, which just now confine him to the fire side: and fancy the authoress

Digitized by Google

availing herself "of a quiet day in a hospitable country house, too sunny to go out," to journalize her ramble for his edification. We cannot give the journey complete, but shall begin at Cuernavaca, at the entrance of *Tierra Caliente*, to which city Madame Calderon's party was escorted by soldiers. For robbers make a prominent figure in all Mexican adventures—the diligence from Puebla, at the time here referred to, was robbed as regularly as it started—and the road to Cuernavaca was yet more dangerous:—

"Cuernavaca (*cow's horn*), the ancient Quauhnahuac, was one of the thirty cities which Charles the Fifth gave to Cortes, and afterwards formed part of the estates of the Duke of Monteleone, representative of the family of Cortes, as Marquis of the valley of Oajaca. It was celebrated by the ancient writers for its beauty, its delightful climate, and the strength of its situation; defended on one side by steep mountains, and on the other by a precipitous ravine, through which ran a stream, which the Spaniards crossed by means of two great trees that had thrown their branches across the barranca, and formed a natural bridge. It was the capital of the Tlahuica nation, and, after the conquest, Cortes built here a splendid palace, a church, and a convent of Franciscans, believing that he had laid the foundation of a great city. And, in fact, its delicious climate, the abundance of the water, the minerals said to exist in the neighbourhood, its fine trees, delicious fruits, and vicinity to the capital, all combined to render it a flourishing city. It is, however, a place of little importance, though so favoured by nature: and the conqueror's palace is a half-ruined barrack, though a most picturesque object, standing on a hill, behind which starts up the great white volcano. There are some good houses, and the remains of the church which Cortes built, celebrated for its bold arch; but we were too tired to walk about much, and waited most anxiously for the arrival of horses and men from the sugar estate of Don Anselmo Zurutuza, at Atlacamulco, where we were to pass the night. The house where the diligence stopped was formerly remarkable for the fine garden attached to it, and belonged to a wealthy proprietor. We sat down amongst the fruit trees, by the side of a clear tank, and waited there till the arrival of our horses and guides. It was nearly dusk when they came—the sun had gone down, the evening was cool and agreeable, and after much kicking, and spurring, and loading of mules, and barking of dogs, we set off over hill and dale, through pretty wild scenery, as far as we could distinguish by the faint light, climbing hills and crossing streams for two leagues; till at length the fierce fires pouring from the sugar oven chimneys of Atlacamulco, gave us notice that we were near our haven for the night. We galloped into the court-yard, amongst dogs and negroes and Indians, and were hospitably received by the Administrador (the agent). Greatly were we divided between sleep and hunger; but hunger gained the victory, and an immense smoking supper received our most distinguished attention. This morning, after a refreshing sleep, we rose and dressed at eight o'clock—late hours for *tierra caliente*—and then went out into the coffee plantation and orange walk. Anything so lovely! The orange trees were covered with their golden fruit and fragrant blossom; the lemon trees, bending over, formed a natural arch, which the sun could not pierce. We laid ourselves down on the soft grass, contrasting this day with the preceding. The air was soft and balmy, and actually heavy with the fragrance of the orange blossom and starry jasmine. All round the orchard ran streams of the most delicious clear water trickling with sweet music, and now and then a little cardinal, like a bright red ruby, would perch on the trees. We pulled bouquets of orange blossom, jasmine, lilies, double red roses, and lemon leaves, and wished we could have transported them to those lands where winter is now wrapping the world in his white winding-sheet. The gardener, or coffee-planter—such a gardener!—Don Juan by name, with an immense black beard, Mexican hat, and military sash of crimson silk, came to offer us some orangeade; and having sent to the house for sugar and tumblers, pulled the oranges from the trees, and drew the water from a clear tank overshadowed by blossoming branches, and cold as though it had been iced. There certainly is no tree more beautiful than the orange, with its golden fruit, shining green leaves, and lovely white blossom with so delicious a fragrance. We felt this morning as if Atlacamulco was an earthly paradise."

Now for a few of the minor plagues of *Tierra Caliente:* a more engaging list we have not seen since the reverend Sydney specified the pleasant creatures catalogued in Mr. Waterton's "Wanderings" for the *Edinburgh Review*. Scorpions and their varieties having been dismissed,—

"There are other venomous reptiles," says Madame Calderon, "for whose sting there is no remedy, and if you would like to have a list of these interesting creatures, according to the names by which they are known in these parts, I can furnish you with one from the best authority. These, however, are generally to be found about outhouses, and only occasionally visit your apartments. There is the *chicaclina*, a striped viper, of beautiful colours—the *coralillo*, a viper of a coral colour, with a black head—the *vinagrillo*, an animal like a large cricket. You can discover it, when in the room, by its strong smell of vinegar. It is orange-coloured, and taps upon the person whom it crawls over, without giving any pain, but leaving a long train of deadly poison—I have fancied that I smelt vinegar in every room since hearing this—the *salamanquesa*, whose bite is fatal: it is shaped like a lizard—the *eslaboncillo*, which throws itself upon you, and if prevented from biting you, dies of spite—the *cencoatl*, which has five feet, and shines in the dark; so that fortunately a warning is given of the vicinity of these animals in different ways; in some by the odour they exhale, in some by the light they emit, and in others, like the rattlesnake, by the sound they give out. Then there is a beautiful black and red spider, called the *chinclaquili*, whose sting sends a pain through all your bones; the only cure for which is to be shut up for several days in a room thick with smoke. There are also the *tarantula* and *casampulga* spiders. Of the first, which is a shocking looking soft fat creature, covered with dark hair, it is said, that the horse which treads on it, instantly loses its hoof—but this wants confirmation."

The principal "lion" of *Tierra Caliente* is the cave of Cacahuamilpa. This is almost inaccessible to ladies, so steep are the roads, and so numerous the perils of the way. But Madame Calderon was not to be dismayed—she made the journey, and was rewarded for it by splendid prospects, a poetical moonrise, with airs of orange-blossom and jessamine, which (figuratively) give to her pages the hue and the odour of a faëry tale. The wonder was at last reached in safety:—

"We arrived at the centre of the cave, a superb portal, upwards of seventy feet high, and one hundred and fifty wide, according to the computation of a learned traveller—the rocks which support the great arch so symmetrically disposed as to resemble a work of art. The sun was already high in the heavens, shining with intense brightness on the wild scenery that surrounded us, the rocks and trees and rushing waters; a sensation of awe came over us as we stood at the mouth of the cave, and, turning from day to night, strained our eyes to look down a deep descent into a gigantic vaulted hall, faintly lighted by the red embers of a fire which the Indians had kindled near the entrance. We made our way down a declivity of, it may be, one hundred and fifty feet, surrounded by blocks of stone and rock, and remained lost in astonishment at finding ourselves in this gloomy subterranean palace, surrounded by the most extraordinary, gigantic, and mysterious forms, which it is scarcely possible to believe are the fantastic productions of the water which constantly trickles from the roof. I am shocked to confess it—I would prefer passing it over—but we had tasted nothing that morning, and we had rode for eight hours, and were dying of hunger! Moreover we travelled with a cook, a very tolerable native artist, but without sentiment—his heart in his stew-pan; and he, without the least compunction, had begun his frying and broiling operations in what seemed the very vestibule of Pharaoh's palace. Our own *mozos* and our Indian guides were assisting his operations with the utmost zeal; and in a few minutes, some sitting round the fire, and others upon broken pyramids, we refreshed ourselves with fried chicken, bread, and hard eggs, before proceeding farther on our exploring expedition. Unromantic as this proceeding was, we looked, Indians and all, rather awful, with no other light than the ruddy glare of the fire, flickering upon the strange, gigantic forms in that vast labyrinth; and as to what we felt, our valour and strength of mind were increased sevenfold. Twenty-four huge pine torches were then lighted, each man carrying one. To K—— and me were given lighted wax candles, in case by accident any one should go astray from his companions, and lose his way, as would too certainly happen, in the different windings and galleries and compartments of the cave, and be alone in the darkness! We walked on in awe and wonder, the guides lighting up the sides of the cavern with their torches. Unfortunately, it is indescribable; as in the fantastic forms of the clouds, every one sees some different creation of his fancy in these stupendous masses. It is said that the first *sala*, for travellers have pretended to divide it into halls, and a very little imagination may do so, is about two hundred feet long, one hundred and seventy wide, and one hundred and fifty in height—a noble apartment. The walls are shaded with different colours of green and orange; great sheets of stalactites hang from the roof; and white phantoms, palm trees, lofty pillars, pyramids, porches, and a thousand other illusions, surround us on all sides. One figure, concerning which all agree, is a long-haired goat, the Evil One in that form. Some say that there are no living animals here, but there is no doubt that there are bats; and an exploring party, who passed the night here, not only heard the hissing of the rattlesnake, but were startled by the apparition of a fierce leopard, whose loud roarings were echoed amongst the vaults, and who, after gazing at them by the light of the torches, stalked majestically back into the darkness. We passed on into the second *sala*, collecting as we went fragments of the shining stones, our awe and astonishment increasing at every step. Sometimes we seemed to be in a subterranean Egyptian temple. The architecture was decidedly Egyptian, and the strange forms of the animals resembled those of the uncouth Egyptian idols; which, together with the pyramids and obelisks, made me think, that perhaps that ancient people took the idea of their architecture and of many of their strange shapes from some natural cave of this description, just as nature herself suggested the idea of the beautiful Corinthian pillar. Again, we seemed to enter a tract of country which had been petrified. Fountains of congealed water, trees hung with frozen moss, pillars covered with gigantic acanthus leaves, pyramids of ninety feet high losing their lofty heads in the darkness of the vault, and looking like works of the pre-Adamites; yet no being but He who inhabits eternity could have created them. This second hall, as lofty as the other, may be nearly four hundred feet in length. We then passed into a sort of double gallery, separated by enormous pyramidal formations—*stalagmites*, those which are formed by water dropping on the earth. The ground was damp, and occasionally great drops trickled on our heads from the vaults above. Here Gothic shrines, odd figures; some that looked like mummies, others like old men with long beards, appal us like figures that we see in some wild dream. These are intermingled with pyramids, obelisks, baths that seem made of the purest alabaster, &c. * * Here the cave is very wide—about two hundred feet, it is said. When we left this double gallery, we came to another vast corridor, supported by lofty pillars, covered with creeping plants, but especially with a row of the most gigantic cauliflowers, each leaf delicately chiselled, and looking like a fitting food for the colossal dwellers of the cavern. But to attempt any thing like a regular description is out of the question. We gave ourselves up to admiration, as our torches flashed upon the masses of rock, the hills crowned with pyramids, the congealed torrents that seem to belong to winter at the north pole, and the lofty Doric columns that bring us back to the pure skies of Greece. But amongst all these curious *accidents* produced by water, none is more curiously exquisite than an amphitheatre, with regular benches, surmounted by a great organ, whose pipes, when struck, give forth a deep sound. It is really difficult not to believe that some gigantic race once amused themselves in these petrified solitudes, or that we have not invaded the sanctuary of some mysterious and superhuman beings. It is said that

Digitized by Google

this cavern has been explored for four leagues, and yet that no exit has been discovered. As for us, I do not know how far we went: our guides said a league. It seemed impossible to think of time when we looked at these great masses, formed drop by drop, slowly and rarely and at distant intervals falling, and looked back upon the ages that must have elapsed since these gigantic formations began. At length, on account of the loose stones, the water, and the masses of crystal rock that we had to climb over, our guides strongly recommended us to return. It was difficult to turn away our eyes from the great unformed masses that now seemed to fill the cave as far as the eye could reach. It looked like the world in chaos—nature's vast workshop, from which she drew the materials which her hand was to reduce to form and order. We retraced our steps slowly and lingeringly through these subterranean palaces, feeling that one day was not nearly sufficient to explore them, yet thankful that we had not left the country without seeing them. The skeleton of a man was discovered here by some travellers, lying on his side, the head nearly covered with crystallization. He had probably entered these labyrinths alone, either from rash curiosity or to escape from pursuit; lost his way and perished from hunger. Indeed to find the way back to the entrance of the cave is nearly impossible, without some clue to guide the steps amongst these winding galleries, halls, and issues, and entries, and divided corridors. Though there are some objects so striking that they may immediately be recognized, such as the amphitheatre for instance, there is a monotony even in the variety! and I can imagine the unfortunate man wandering amongst obelisks and pyramids and alabaster baths and Grecian columns—amongst frozen torrents that could not assuage his thirst, and trees with marble fruit and foliage, and crystal vegetables that mocked his hunger; and pale phantoms with long hair and figures in shrouds, that could not relieve his distress—and then his cries for help, where the voice gives out an echo, as if all the pale dwellers in the cave answered in mockery—and then, his torch becoming extinguished, and he lying down exhausted and in despair near some inhospitable marble porch, to die. As we went along, our guides had climbed up and placed wax candles on the top of all the highest points, so that their pale glimmering light pointed out the way to us on our return. The Indians begged they might be left there 'on account of the blessed souls in purgatory,' which was done. * * I never saw or could have imagined so beautiful an effect as that of the daylight in the distance, entering by the mouth of the cave; such a faint misty blue, contrasted with the fierce red light of the torches, and broken by the pillars through which its pale rays struggled. It looked so pure and holy, that it seemed like the light from an angel's wings at the portals of the '*cittá dolente*.' What would that poor traveller have given to have seen its friendly rays! After climbing out and leaving the damp, cool subterraneous air, the atmosphere felt dry and warm, as we sat down to rest at the mouth of the cavern, surrounded by our Indian torch-bearers."

We must pass a visit to Puebla, and a letter or two principally concerning Mexican balls, Mexican toilettes, and Mexican operas—merely noting, *apropos* of the last, that Madame Calderon makes mention of Signora Cesari, a *contralto* singer of some promise, who was in England in 1834, and of whom we have since lost sight. Here, indeed, we had better pause—though we hope to return to the work once again.

Punch's Letters to his Son. By Douglas Jerrold. Orr & Co.

THESE epistles of the Chesterfield of the show-box made their first appearance in the columns of the *London Charivari*; and as the other performances of Mr. Jerrold are still better known, formal criticism is not required from us, which, for many reasons, we are not sorry for. If breaking butterflies on wheels be a sorry occupation, breaking wasps, without being more dignified, is a less pleasant occupation. That our friend *Punch* is, on the present occasion, more waspish, than wooden heads (to use a phrase of Mr. Dickens's) "usually are," is the great fault, which, if critically disposed, we should find with the volume. Mr. Jerrold has taken for his motto, "A laugh there is of contempt or indignation, as well as of mirth and jocosity;" and he has kept the word of promise very strenuously throughout the volume. Now, as far as Mr. Jerrold is concerned, it must be admitted, that the vices he lashes are worthy of contempt or indignation; and we say, "ditto, to Mr. Burke." The great blemish, indeed, of the literature of the day, is being mirthful and jocular (when not maudlin and sentimental) about thoughts and actions which disgrace humanity. So far, therefore, Mr. Jerrold's satire is appropriate; but in its relation to the imputed correspondent, there is a little want of dramatic keeping. *Punch* is a fellow of infinite merriment, and if he does dally with interdicted subjects, like Hamlet's player, he only murders "in jest," or, like the Irishman at Donnybrook fair, "meets his friend, and for love knocks him down." *Punch*, according to our notion of his humours, regards only the funny side of human affairs: and, lacking the gall necessary for turning mankind the seamy side outwards, is more disposed to laugh in their face, than to sneer—a manifestation purely bilious. This oversight may be thought a pardonable slip, and so it is; but in a dramatist, we own it surprises us:—the more so, because Mr. Jerrold doubtless is aware, that consistency in puppets is a serious business. Puppets have no brains to warrant their ratting *à l'indiscretion*, on their own account; they must be contented to follow their leaders. They are also too wooden-headed, to possess the requisite flexibility. With statesmen, indeed, it is different; and consistency, as regards them, is but "a scoundrelly virtue." But *Punch*, more especially, exists only in his idiosyncracy; and he might as well part with his hooked nose and his broken back, as with his moral peculiarities. How is it, that at the first squeak of his voice, on turning a corner, a host of pleasant associations rise in the mind of the hearers, that the whole drama of his life passes in mental vision before us, and that gentle and simple, quicken their pace to greet their old friend? It is precisely because he is not an old friend with a new face; that he is no weathercock, turning with every gale of doctrine, running round the entire diapason of opinion at the puffing of expediency; but ever the same, true (as the dial to the sun) to his own nature, constant to the same principles, faithful to the same predilections, and, in short, a person altogether to be depended on: but something too much of this. It is enough to state, that pretermitting usage, *Punch*, in these letters, does not confine his hard hits to his *bâton*, but lays about him with his pen most manfully, scattering the gall of his ink on every side, after the most approved style of magazine writing. At starting, he dedicates his book to the Lord Chamberlain, to show his independence:—

"I resolved to dedicate these Letters to you. The reason is obvious:—THE LORD CHAMBERLAIN NEVER DID ANYTHING FOR PUNCH! You have graciously let me alone; and I have flourished under the benignity of your neglect. I pitch my stage wheresoever I will, in Westminster or not, without your warrant: I act my plays without your licence. I discourse upon the world as it is, on the life that is moving about us, and on the invisible emotions of the heart of man, and pay no penny to your deputy. I increase in social importance; for I am not withered by your patronage. Had fate made me, for these last two hundred years, the master of a play-house, how different might have been my condition!—Had I, since the act which made you protector and censor of the dramatic sisters, Melpomene and Thalia—poor girls! there are people who swear you have treated 'em worse than Mrs. Brownrigg used her apprentices—had I felt your patronage, how often had I been *banco rotto*,—how often had I played—understand me, not paid—a 'doleful dump' in Portugal Street!"

This is the key-note of the entire work, and with it sounding in the ear, the dullest reader may know what he has to expect. We shall, therefore, only give a slight sample or two of his quality, and commit him to the benevolence of his readers. We begin with the history of Mrs. Muggeridge's two pokers:—

"The widow Muggeridge, in her best room, had two pokers. The one was black, and somewhat bent; the other shone like a ray of summer light—it was effulgent, speckless steel. Both pokers stood at the same fire-place. 'What!' you ask, 'and did the widow Muggeridge stir her fire with both?' Certainly not. Was a coal to be cracked—the black poker cracked it; was the lower bar to be cleared—the black poker cleared it; did she want a rousing fire—the black poker was plunged relentlessly into the burning mass, to stir up the sleeping heart of Vulcan; was a tea-kettle to be accommodated to the coals—the black poker supported it. 'And what,' methinks you ask, 'did the bright poker?' I answer nothing—nothing save to stand and glisten at the fire-side,—its black, begrimed companion, stoking, roking, burning, banging, doing all the sweating work. As for the bright poker, that was a consecrated thing. Never did Mrs. Muggeridge go to Hackney for a week to visit her relations, that the bright poker was not removed from the grate; and, carefully swathed in oiled flannel, awaited in grensy repose the return of its mistress. Then, once more in glistening idleness, would it lounge among shovel and tongs; the jetty slave, the black poker, working until it was worked to the stump, at last to be flung aside for vile old iron! One dozen black pokers did the bright poker see out; and to this day—doing nothing—it stands lustrous and inactive! My son, such is life. When you enter the world, make up all your energies to become—A Bright Poker."

There is a whole encyclopædia of wisdom in the chapter on the choice of a profession, with its bright poker conclusion in favour of being "nothing,"—the short road to eating of the fat of the land, and being clothed in purple and fine linen. But, alas! every one cannot go to Corinth by wishing; and therefore the Corinthian capital of the social column needs must be within the reach only of the few. In illustration of a very trite piece of morality, we have an apposite story:—

"How, or by what accident they escaped from the Mint, was never known, but certain it is that one hundred guineas of pure gold, without the least alloy, were once upon a time issued to the world. Old Gregory Muckly, by chance, obtained half-a-dozen pieces of this coin, which, together with a few other pieces, were carefully hoarded in a worsted stocking; and when Gregory was safely deposited in churchyard clay, they became the rightful property of his son Hodge. Hodge was a simple, honest creature; caring nothing for the pomps of the world;

> The sum of all his vanity, to deck
> With one bright bell some fav'rite heifer's neck.

Business however brought him to London. Well, before he returned to Gammon Farm, he would purchase a London present—a bran new scarlet shawl for sister Suke. Two guineas did Hodge, with fraternal self-complacency, set apart for this gift. Caught by the truthful assurance exhibited in a mercer's window that the stock was 'selling off under prime cost,' Hodge thought he was sure of at least a three guinea shawl for two. Hereupon, he entered the shop; rolled his eyes from side to side, seeking the radiant present for sister Suke. * * 'There, sir,' said the mercer, throwing the shawl upon the counter; 'there's a scarlet.' 'Ha! ha! so it be—like a poppy,' chuckled Hodge. 'A poppy, sir,—a poppy's brick-dust to it,' said the tradesman. 'Nay, nay, not so,' cried Hodge; 'and I think I have seen more poppies than thee.' 'Ha! ha! no doubt, sir—very true. Well, I assure you, to anybody else this article would be three guineas and a half; but to you, we'll say two.' 'There they be,' said Hodge; and he laid down the two unalloyed guineas on the counter. As the tradesman took up the coin, a shadow fell upon his face; and turning to his shopman, he whispered, 'Run for a constable.' Then addressing himself to Hodge, he said, 'Walk this way, if you please.' In two minutes Hodge was in the mercer's back parlour; in five, in the custody of a constable; and in ten more arraigned before a magistrate, being charged with an attempt to pass off bad money, 'Look at the things, your worship; look at their colour—feel 'em—they'll bend like pewter; and to attempt to pass such pocket-pieces upon an honest tradesman,—really!' and the mercer was bursting with indignation. Hodge's defence was not listened to, and he was sent to gaol for two days, until a proper officer from the Mint could be in attendance to pronounce judgment on the suspected guineas. 'Indeed, this is curious,' said Mr. Testem, the Mint functionary: 'but I don't wonder at your suspicions: the fact is, these

Digitized by Google

guineas are *too good*.' Mr. Testem then narrated that a hundred pieces of coin, of pure, unalloyed gold, had been accidentally issued, and that Hodge's two guineas were of them. My son—he who in this world resolves to speak only the truth, will speak only what is *too good* for the mass of mankind to understand; and, like Hodge, will be persecuted accordingly."

On the subject of umbrellas *Punch* thus enlargeth,

"I have now to speak of Umbrellas. Would you, my son, from what you have read of Arab hospitality—would you think of counting out so many penny-pieces, and laying them in the hand of your Arab host, in return for the dates and camel's milk that, when fainting, dying, with thirst, hunger, and fatigue, he hastened to bestow upon you? Would you, I say, chink the copper coin in the man's ear, in return for this kindly office, which the son of the desert thinks an 'instrumental part of his religion'? if with an ignorance of the proper usages of society, you would insult that high-souled Arab by any tender of money, then my son—but no! I think you incapable of the sordidness of such an act,—then would you return a Borrowed Umbrella! Consider it. What is an umbrella but a tent that a man carries about with him—in China, to guard him from the sun, in England to shelter him from the rain? Well, to return such a portable tent to the hospitable soul who lent it,—what is it but to offer the Arab payment for shelter? What is it but to chaffer with magnanimity, to reduce its greatness to a mercenary lodging-house-keeper? Umbrellas may be 'hedged about' by cobweb statutes; I will not swear it is not so; there may exist laws that make such things property; but sure I am that the hissing contempt, the loud-mouthed indignation of all civilized society, would sibilate and roar at the bloodless poltroon, who should engage law on his side, to obtain for him the restitution of a—lent umbrella!"

On the borrowing of books, *Punch* is still more eloquent, but the theme is too sore a subject to us: and we will only add a maxim of our own,—that is, never lend a book to man, woman, or child, who would borrow only because he sees the volume on your table, and takes a fancy to it; the writ, in this case, depend on it, is never returnable.

ROYAL ACADEMY.

Professor Cockerell's Lectures on Architecture.

LECTURE IV.

Of the divisions of the art proposed, that of Domestic and Villa Architecture alone remained to be considered. On this subject, two important preliminary remarks were to be made. Firstly, that the republican form of government, which prevailed in the ancient world after the 7th century B.C., greatly influenced the style of domestic buildings, which were expressly unostentatious externally, towards narrow streets, lined with shops, reserving all their elegance for the interior, in the atrium impluviatum —porticatum—the exedra, &c. Secondly, that populations and fashions having been derived from the East, an oriental character was impressed on the ancient habits and arrangements of countries in which (as in Italy especially) the northern and occidental now prevail; as derived from an opposite source. Whoever walks through the streets of Pompeia, after having resided amongst the Turks, will be struck with this fact. The profuse employment of water, in the bath, the impluvium, and in the corner of every street—the narrow streets—the secluded mansions, within high walls—the internal air and space—the subdivision of the house into the men's apartments and the women's—the harem—the lightness of the costume—all express migration from warmer climates, and a marked distinction of the races of modern and ancient inhabitants.

The Jews lived chiefly on the terraced tops of the houses, as the Professor presumed the Pharaoh to have done. "Ahaziah" (II Kings, c. i.), King of Samaria, "fell down through a lattice in his upper chamber;" and it was thence that David, in a wanton moment, incurred the curse which fell upon his family. The house top is ever the scene of prayer. "Let him that is on the house top," says our Saviour, "not come down into his house, neither enter therein," (Mark, xiii. 15); yet it is possible that in latter ages they had adopted the Greek and Roman ichnography,—it was, perhaps, through the roof of the atrium testudinatum that the sick man was let down to be cured by our Saviour (Luke, v. 19).

The narrowness of the streets, and unostentatious style of the houses in Athens, occasioned disappointment to the traveller, as Dicæarchus expressly tells us; in Rome the same; and as the houses were *limited* by the Augustan law to 70 feet high, we must suppose them unattractive. The fragments of the great plan of Rome, inscribed on the pavement of the temple of Romulus, by order of Septimius Severus, and published by Bellori, show the resemblance of the houses to those of Pompeia. It was an extraordinary innovation on the ancient humility of the Roman house, which Cæsar proposed, in demanding permission of the Senate to erect a fastigium, or pediment, over his door.

But the complete account of the Roman aristocratic house is to be found in the 'Palais de Scaurus,' by Mons. Mazois, as also of the citizen's house, in the 'Ruines de Pompeia,' so admirably illustrated by that ingenious and lamented architect.

But if the Roman nobles accomplished the admirable works described, in favour of the public, they did not neglect their own comforts. Under the Empire they lived as individuals with the income of monarchs; and Strabo tells us expressly that "they built their villas after the palaces of the kings of Persia." The number of them was also extraordinary; for, as Lucullus said, "they were as wise as those birds which change their residence with the seasons."

Cicero had nineteen villas, and it was in one of these that Cæsar honoured him with a morning call, and paid him the very high compliment of taking a vomit in order that he might do justice to his lunch. In another he delighted to ornament his library with Greek paintings and sculptures, which his friend Herodes Atticus was always collecting for him.

It was a fortunate legacy to the architect-antiquary which Pliny had left, in the description of his villa at Laurentinum. It had often employed the ingenuity of the architect, since the revival, but with small profit, till the discovery of the ancient ichnography of Pompeia. The Professor exhibited his own restoration, founded upon those data, in which, though he differed in some points from his accomplished friend, Mons. Haudebourt, in his elegant version of the Laurentinum, yet he strongly recommended it to the student, on account of the great research and taste shown in the composition. Some of the features he would describe. You entered a small atrium, and thence a court in the form of the letter D, surrounded with a portico, which was enclosed partially with glass (the very original of our old conventual cloisters), and thus excluded rough weather. Thence through a gay court into a triclinium, which hung over the sea, and had windows all round three sides, giving the full enjoyment of the air, and view of wood and mountains beyond. To the left of this was a room, at the end of which was a rotunda (in apside curvatum), so contrived as to receive the sun's rays from the rising to the setting: in this was a case containing books, calculated to detain you, and such as "one loves to read over and over again." This arrangement afforded an angular parterre, protected on all sides except the south from the winds, and concentrating the sun's rays—a delightful refuge in the winter season. There were rooms heated by pipes from a hypocaustum, and others to retire to in stormy weather, to escape the roaring of the waves; a large bath for cold and hot bathing; a perfumery; and spheristerium, or fives court; a long gallery (crypto porticus) with windows on either side, which, when opened, admitted the fragrance of beds of violets, and the sun's rays at the rising and setting. "At the end of this," continues Pliny, "is a casino I built myself—my delight: in it I have an *Heliocaminus*, a sun chamber, warmed by windows all round; while reposing on my couch in a recess adjoining, I can see the garden, the landscape, and the sea, through a *glazed door;* I can study in perfect quiet here, and escape all the noise and disturbance of my servants, occasioned by the Saturnalia."

Pliny omits some features of great interest in the Roman house, as the Sacrarium, (the chapel,) in which the Lares (the household gods,) were placed, and sometimes the imagines majorum, of which the Romans, like ourselves, were justly proud. The Tablinium, for the archives, which also received these sometimes; and the Ergastulum, that room of the domestic side of the house in which chastisement was administered to the slaves, in the approved fashion of our schools at this day, as we see by various paintings preserved to us.

Pliny describes his gardens, his figs and mulberries, his gestatio bordered with box, and plantations disposed in the form of the Xystus and the Hippodrome; classical titles, which give a charm to features otherwise insignificant: and since "the world," says Sir C. Wren, "is governed by wordes," they may often be adopted by the architect with good effect, when introduced appropriately and without pedantry.

The attention to the sun's rays in the milder climate of Italy, so conspicuously shown in Pliny's letters, is confirmed by all the authorities of antiquity.

Vitruvius (b. 6, c. vii.) is very particular in his recommendations to this effect; but the wisest of men, in a still warmer climate, has enforced this point yet more strikingly:—"To make a house pleasant," says Socrates, "it should be cool in summer and warm in winter: the building, therefore, which looks towards the south will best secure these objects, for the sun which will enter into the rooms in winter, will, by its greater altitude, pass over its roof in summer. For the same reason, these houses ought to be carried up to a considerable height, the better to admit the winter's sun; whilst those to the north should be left much lower, as less exposed to the bleak winds from that quarter: for, in short," continues he, "that house is to be regarded as beautiful where a man may pass every season of the year pleasantly, and lodge whatever belongs to him in security."

The modern Italians are not less attentive to aspect, which they significantly express by the proverb, "Dove non viene il sole, viene il medico."

But the most extraordinary villa of the ancient world, was that of Hadrian, at Tivoli, in which he displayed all the acquirements and collections of taste, during twenty-one years' of constant travel through this vast empire; in it was reproduced every remarkable building of the world, and probably every statue of celebrity, since from this magazine the Baths of Caracalla were furnished eighty years after, and the Vatican in some of its most precious ornaments. The whole was said to be inclosed in a wall ten miles in circumference. Pizzo Legorio,

Digitized by Google

Kircher, Contini, and Panini, have engraved and written upon the remains.

The modern villas of Rome, built by the popes and cardinals since the fifteenth century, convey to us some of those graces in which the ancient villas abounded. In these all the great masters of the revival have displayed their research and ingenuity. They are described in the elegant work of Messrs. Percier and Fontaine, to which the Villa Pia, by Mons. Boucher, has lately been added.

Our own architects of the sixteenth, encouraged by Bacon, Burleigh, and Wotton, certainly studied these works, and engrafted some of their principles on our Elizabethan Architecture, which adapts itself admirably to our climate and the extent of our establishments. Bacon (Essays, vol. I.) describes his idea of a villa with great detail, insisting upon the aspect and the seasons as primary considerations. Indeed, all authorities agree upon this subject, except those of the nineteenth century, and especially the patentees of hot air or hot water apparatus.

'The Elements of Architecture,' by Sir Henry Wotton, being 'the Rules and Cautions of this Art cast into a Comportable Method,' are amongst the most precious and the earliest in our language. He was long ambassador at Venice, from Elizabeth and James, and seems to have been personally acquainted with Palladio. Domestic and villa Architecture are special subjects with him; for, says he, "Every man's proper mansion and home being the theater of his hospitalitie, the seat of self-fruition, the comfortablest part of his own life, the noblest part of his son's inheritance, a kind of private princedome, nay, to the possessor himself an epitome of the whole worlde, may well deserve by these attributes according to the degree of the master, to be decently and delightfully adorned."

In truth, during three centuries the cultivation of this branch of Architecture may be said to be peculiar to England, and that, while monumental and palatial edifices are better illustrated on the continent, the constitution of this country, and of the English mind —prone to the salutary retirements of home, the centre to which all its desires and warmest imaginings are ever pointing—have made the English house of every grade the most perfect in comfort and convenience, and the villa the beau idéal of individual possession, and the branch of the art in which our country excels beyond all others.

The compact square villa, after Palladio especially, was introduced by Inigo Jones, and much advanced by the model of those at Genoa, published by Rubens, who recommends them as full of beauty and convenience, and admirably suited to gentlemen of moderate fortune, such as the republic of Genoa is composed of. But the extension of the habits and the requirements of the present day have outgrown the square villa, and we are constrained to build a house beside the villa to accommodate them, with the worst possible effect in the group and in detail; for in vain the plantation attempts to hide it out; an anomalous composition is the result, and we had better have reverted to the Elizabethan mansion, which cast the house and offices into one in the extended E or H, or the French mansion, "entre cour et jardin," of the eighteenth century, reserving the centre for the best apartments, and the wings for offices, and the entrances in the angles communicating easily with all.

The least rational of English productions in this sort is seen in the castellated elevation adapted to this plan—the battlements and dungeon-keeps of Edward the Third upon the Italian villa of the sixteenth and seventeenth centuries. The menacing aspect, the machicolations, threatening hot lead upon the intruders, in the distance, are, on the approach, found to be peaceful and harmless; the fortress is accessible at every window, and expresses a security from danger on better acquaintance, in direct contradiction to its fortified exterior. On entering the baronial hall, where you expect the paraphernalia of chivalry and the chase, retainers and bondsmen, you are addressed by a powdered footman, or may discover a housemaid sweeping the marble pavement.

The Grecian villa is hardly better conceived; it may be taken for a library, or a philosophical institution. An extensive portico, borrowed from Minerva Polias, imposes its order on the whole composition, which is to be compressed accordingly, at the cost of all its internal proportions and accommodations. Every useful appendage of vulgar convenience is to be suppressed, as ill-suited to its Platonic refinement. As Swift says of Clelia,—

> You'd think that so divine a creature
> Felt no necessities of nature.

But such architectural solecisms derogate from the dignity of the art, and convert into a theatrical or romantic dream, that which should embody sound sense and rational invention.

The essential features should be prominently expressed; the nobler portions, the offices, kitchen, the clock, and the stables, should tell their own story. And fiction would be found unnecessary when all these are placed in due subordination and proper character by the artist's hand.

France, until recent times, essentially monarchical and aristocratic, has ever delighted in palaces; and since the reign of Francis I., they have been the most remarkable of Europe. Du Cerceau, Philibert de l'Orme, Mansards, and Blondel, and many able successors, afford us the fullest information on the ichnography adapted to these grades. In conception and design, and in many respects in execution also, the Louvre is the most magnificent palace of the world. Situated in the metropolis, and occupying thirty-two acres, its galleries, and museums, and its gardens, form the recreation of the people. The paternal monarch invites them into his courts and vestibules, of which he esteems them the best ornaments, the most familiar and acceptable guests at all hours; participating with them his refinements and his delights, they are endeared and elevated, and the Palace of the Arts and Sciences, a part of the entire composition, and ranging in the axis of the first court, forming the chief object from its windows, assure them of the nobleness of his views for their honour and real advantage. The palace itself, the work of centuries, still unfinished, is the great attelier of artists,—the field in which they may exercise their genius for centuries to come in their several works,—the great harbour in which talent may find protection and employment.

It was for the foundation of such schemes as these, that Francis I. invited Vignola and Serlio, and the painters of the school of Raphael, into France; and for their transmission to posterity, that he encouraged the publication of Cæsari Cæsariano's translation of Vitruvius, and the elementary works of Serlio and others, which obtained for him in return the title of the Father of Literature. Nor were his successors inferior in these encouragements, which enabled native artists afterwards to rival the great Italians,—for L'Escot was preferred to Serlio, and Perrault to Bernini.

The peculiarity of French orthography is in the high roofs, subdivided into pavilions, affording great effect in composition of various and cumulating forms, aided by their high chimney shafts and dormer windows, and their vast windows below them, suited to the northern climate. Indeed, Philibert de l'Orme, and the architects of his day, have rendered the Italian style homogeneous with the northern climate and circumstances in the happiest manner.

A military people delight in pavilions; each apartment was to represent a tent. So in the Tuileries the line of tents is terminated with two, distinguished by the name of Pavilions de Flore and Marsan. A maritime people delight in their ships: thus the English apartments convey the idea of "between decks," and the larger buildings are often like the man-of-war hulk laid up in ordinary. So in Russia the palaces have the air of barracks; vast and forlorn, they remind the spectator of the plains of Siberia. In Egypt, the Troglodite excavation was revealed in the temple palace; in Greece, the log-house in the temple structure: in China, still the tent, in its simplest form.

In the Middle Ages domestic architecture arose from the monastic structures in single rooms, lighted on either side like our colleges, the chimney shafts issuing from the eaves. The composite house of double rooms was borrowed from the Italians by Francis I., but even there the *dégagement* was wanting, and the chamber, ante-chamber, waiting-room, and guard-room, were all passage-rooms. It is in the English palaces that this problem has been best solved.

But the Professor observed, that this digression had led us from the chronology of the art, which terminated with the Roman villa; and we now entered that melancholy period of history, in which all ancient ideas of human enjoyment were absorbed in loftier and more serious aspirations; and the art during the next 1000 years was employed alone in military and ecclesiastical buildings, by means of the Freemasons. The original institution of that order is traced even to the Greeks and Romans. Numa established the first corporations of architects, Collegia Fabrorum, together with the inferior Collegia Artificum. They were invested with a religious character, and rights of framing laws and treaties amongst themselves. They greatly contributed to the increase of the Roman power amongst the barbarians, as have done our own people amongst the North American Indians, with whom an article of treaty, on their part, has always been to send a blacksmith amongst them. The Collegia were greatly promoted by the Roman Emperors in the rebuilding of cities, in the aqueducts and public works, and endowed with peculiar privileges, as freedom from taxation, holding councils with closed doors, &c. Victor relates that Hadrian was the first to attach a corps of architects to the Cohorts (about 120, A.D.)—an example which the admirable Institution of Civil Engineers at Putney, in favour of our Colonies, promises to follow with great advantage.

But it was at the termination of the eighth century, that the masons of Como assumed their peculiar form of Freemasonry, raised into importance by the patronage of the commercial and zealous Lombards, in the building of churches and monasteries with new materials; and dispersed after the destruction of that kingdom by Charlemagne, they spread themselves over Europe, obtaining bulls from the Pope, and maintaining peculiar rights and mysteries. Collegia had existed in England; but, destroyed by the ravages of the barbarians, the Freemasons (probably of Como) were invited by Alfred, and after by king Athelstan, who gave them a charter in York (926), the original of which is said to exist still in that ancient city. It cites the Oriental Church, the history of architecture from Adam, with Rabbinical tales of the building of Babel, the Temple of Solomon; Hieram, the Greeks and Romans, Pythagoras, Euclid, and Vitruvius, are quoted; that St. Albanus (300, A.D.) obtained a charter from king Carausius, with sixteen laws, agreeing with the *corpus juris*, relating to the Corpora or Collegia of ancient Rome. Another precious document preserved to us was written in 1450, under Henry VI., a great patron of Architecture, published in the *Gentleman's Magazine* (1753, p. 417).

In 1459 a grand lodge was erected at Ratisbon, of which the Architect of Strasbourg cathedral was the grand master. Charters and privileges were added by Maximilian, 1498. In 1717, Sir C. Wren was the grand master in England; but shortly after the ancient fraternity altered its original form and purpose, and became what we now understand by Freemasonry. Wren was then extremely old, and probably unequal to oppose the perversion which then took place; and which, from his known services to the craft, we cannot doubt was contrary to his wishes.

Thus the period of the revival was arrived at, and the Professor explained that in the previous and the present lecture he had devoted the more time to the review of ancient sacred and civil Architecture, from the persuasion that the art would never again effect similar productions; therefore that antiquity formed the great storehouse from which the architect was to draw his best instructions.

It might be said, that the problem of architectural power and combination had been worked out and solved, that the mastery of the ancients was admitted, and that such works would never again be performed; it would not again become a primary instrument of civilization. The human mind had passed through that stage of its discipline, and had embraced new sciences, engaging the faculties in occupations more advantageous to the improvement and happiness of our species. The intellectual growth to the manhood of our nature, now perhaps attained, would esteem Architecture ever a powerful engine in the attainment of the sublime and beautiful, but would probably never again indulge that preponderating regard given to it by the ancients.

The middle ages laboured after the ancient models with many divergencies: in the revival with the muses, the conviction of their pre-eminence was ad-

Digitized by Google

mitted, and their laws and principles were confessed as unalterable. Nothing then was wanted but to revive them, and the zeal with which this object was pursued was immense.

In 1416, Poggio Bracciolini, in searching for manuscripts, discovered a copy of Vitruvius, "covered with dust and rubbish, in a tower not fit to receive a malefactor," says he, "at the monastery of St. Gal, at Constance." Copies of this happy revelation were spread amongst the learned, until the invention of printing, in 1445, multiplied them amongst the great architects of the day—Brunelleschi, Cæsariano, Bramante, and others. The magnificent Alberti was one of the chief of these, but not finding in Vitruvius sufficient to inform and fire the student's mind, he composed that work which all competent judges have esteemed the most masterly compilation in the art extant. "Seeing," says he, (lib. vi.) "that of all antiquity Vitruvius alone has reached us, that such chasms and imperfections appear in his work, that his help is insufficient: his language, too,—Greek to the Romans, and Latin to the Greeks—leaves so much unintelligible, I thought it the duty of an honest and a studious mind to free this science from ruin; though the rehearing without meanness, reducing to a just method, writing in an accurate style, and explaining perspicuously so many various matters—so unequal, so dispersed, and so remote from the common use and knowledge of mankind—certainly required a greater genius and learning than I can pretend to," &c.

But he did not confine himself to the theory of his art; as a scholar, a mathematician, a Platonist, and of a noble family, he associated with all the greatest spirits of his day, and was intimate with the living masters, and the progress of their works. Whatever comes from him, therefore, is generous, moral, philosophical, practical, and elevating: he proves himself truly of the order of cavalieros; he mounts you upon his horse, which quickly you find a Pegasus; he raises you above the vulgar cares and labours of this nether world, and in his airy flight he shows you all the kingdoms of the world and their handiworks; and then he sets you down, cheered, instructed, delighted, and exulting in your profession.

The only English edition is that of Leoni, 1755. The spirit of that day deemed art a primary instrument of civilization; it became the boast and the occupation of the little courts of the rival states of Italy; literary societies, discussions, and conversaziones, discovered and refined upon the true principles of poetry and of fine arts; and a Bembo, Sadolet, Annibal Caro, Castiglione, Aretino, and a host of literary stars, all contributed their zeal and means to the æsthetical intelligence of artists. Architecture became the field of poetical imagination: and we have the 'Υπνοτερομαχια, 'The sufferings of love in a dream,' by the learned friar, Collonna, in which the wonders and delights of the art, and of its theories (full of original and beautiful conception, the source from whence the artists of the day drew continually), are accompanied with the romantic and amorous adventures of blighted love, of which the author was the victim. 'The Dream of Poliphilus,' printed by Aldus, in 1499, was published in French in 1600, with new plates, engraved from the drawings of Jean Gougeon.

From that period (early in the fifteenth century) to the present day we have a race of able architects in an uninterrupted chain, each adding some new grace or invention to the art, on which their merit and celebrity are founded; all these we now appropriate without appreciating their difficulties, and these progressions; or due acknowledgment to each for the contributions gradually made to our common stock. On the accompanying drawings of some of the great works of those masters, on which our present practice is based, the Professor proceeded to offer some comments. It must be premised, that the revival found the art under very different circumstances. The growth of liberty in the Middle Ages, magnifying the individual, whose house now became his castle, an aristocracy balancing the kingly authority, the increase of commerce, and many other causes, altered the whole face of domestic architecture; it might safely be asserted, that no palace of the solidity of the Strozzi or of Burlington House, ever existed in antiquity. The remains of the most insignificant temples and public buildings are still found, but the absence of any remains of such solid mansions as those throughout the ancient world might be adduced in proof, that the domestic architecture of the ancients was slight and ephemeral. The houses of the ancients, like those of the Turks, were of wood and brick, covered with plaster and with paint. Columns, indeed, abounded, but they were moveables, or furniture, the objects of manufacture at the quarries, and of trade. These reflections were sufficient to show, that the features which the architects of the revival, in their endeavour to restore classical architecture, were new in execution and design, and required a stretch and effort of mind, which we do not sufficiently take into account. Those who may be considered the active restorers of architecture are,—Brunelleschi, Bramante, Alberti, Peruzzi, Serlio, San Gallo, Michael Angelo, Raphael, San Micheli, Sansovino, Galleazzo Alessi, Vignola, Palladio, Scammozzi, L'Escot, Philibert de l'Orme; many others might be added, but none more remarkable than these. The question occurs, in what particulars were these men great? the answer will always be, that not only were they eminent practitioners, but they advanced their art, and contributed new views and inventions towards its perfection.

The first essays were in imitation of the system observed in the Colosseum and the Theatre, namely, the column and trabeation in relief, and superposed upon the frieze and arch, and this, in a small scale, formed a crowning order upon the tower on which Brunelleschi raised his dome at Florence. The same difficulties of constructing the trabeation, and of finding stone of sufficient size, and of funds for opening the quarries, which had induced the decline of architecture under Diocletian, occurred in its restoration; and it required the experience of one hundred and fifty years to suspend the disengaged entablature in the ancient manner, with any boldness of scale and projection, as in Perrault's Louvre, about 12 feet 6 in.

Brunelleschi, in his church of St. Spirito and St. Lorenzo, employed the orders in good proportion, but these supported arches. The celebrity of Bramante's St. Pietro, in Montorio, doubtless arose, in great measure, from the accomplishment of the trabeated entablature, though the scale was indeed small, only 3 ft. 10 in. from column to column. But the timid application of the classical orders to the middle age buildings, often of large dimensions, gave them rather the character of trinkets hung upon them than of constituent parts of the fabric. Bramante, indeed, made a great step in the palace of Cardinal Wolsey, but the orders are still delicate in low relief, the windows circular-headed (from the difficulty of executing the square trabeated head) with the horizontal entablature above them. The basement, though elegant, has a gothic character, and the crowning cornice has but a small projection: the whole is dry and timid. But Bramante had the merit of inventing the coupled columns, which gave breadth and proportion to the front not otherways attainable. The ancients had left no examples of this disposition—but such were its advantages that it was at once accepted by Raphael and his successors: Perrault used it in the Louvre and Wren in St. Paul's.

Alberti's bold and master mind originated many of those features which his successors knew how to adopt, particularly in his church at Mantua; he gave the hint which M. Angelo followed in St. Peter's, of incorporating the whole height of the interior (not done till then) in one order, and vaulting the ceiling. His church at Rimini bears the stamp of Roman magnificence, quite beyond his age.

Peruzzi was the first to render his orders homogeneous with the structure, and his giving to the entablature of the upper order (especially in the Farnesina) a proportion suited to the entire height of the two, was as beautiful as it was new: it was afterwards adopted by Sansovino in the Library at Venice with the greatest effect.

But Peruzzi executed an entablature in the Palace Massimi, and square-headed doors of no mean dimensions (six feet six inches between the capitals): but it was especially in perspective that he made advances far beyond the conception of his day. In other particulars, the merit of Peruzzi is unfolded by Serlio, his pupil, who possessed his collections and published them, through the patronage of Francis the First, in the first elementary work on the art written since the revival. The first edition in French is dated Paris, 1545; it was translated into Italian at Venice, 1550, and, by Robert Peake, into English, 1611, under James the First.

San Gallo was remarkable for the dignity which he gave to his buildings (especially the Palace Farnese), without the aid of the orders, except in subordinate dimensions, in the windows only, and in the interior court and vestibule. The verticality which is designed and usually conveyed by the orders he communicated to his buildings by rustic quoins, which carry the eye up, and enable it to embrace the whole front. This invention, which appears to be wholly his own, became popular and universal.

The windows, with their small orders, are undoubtedly taken from the Roman tabernaculum, or ornamented niche, so often seen in the baths and in the Pantheon, and was also a new application.

Raphael, as great in Architecture as in Painting, adopted his master Bramante's invention of coupled columns, as also San Gallo's windows and quoins, and if he did not invent, he employed the balustrade with singular grace and effect,—for grace united with strength and nobility, his Palace Pandolfini, Caffarelli, and Uggieri are unequalled; indeed, his letters show his enthusiasm for Architecture, his profound estimation of the antique, and his ardent aspiration for the restoration of Rome to its antique character and splendour. The backgrounds of his pictures are not less to be regarded as examples than his executed works, being designed with as much care as if they were to have been perpetuated in marble.

M. Angelo distinguished his designs by vastness and singularity, compared with the previous schemes of Raphael, Peruzzi, and San Gallo. We are surprised at his boldness in proposing one order, eight feet in diameter, for the external front, and a corresponding disengaged entablature for an extended portico in the west front—which latter, however, was never attempted. His Palace of the Capitol has many merits and peculiarities, one of which, practised in the Laurentian Library also, was the sinking his columns in niches.

Vignola has been deservedly regarded as a master of the first merit, and has been hitherto the great authority in the French school, as Palladio has been of the English. His stereotomy, profile, proportion, and composition are admirable; his orders are generally subordinate, often at the top of his buildings—they are never coupled as in Bramante and Raphael, but he reconciles the wide intercolumniation by a panel which gives proportion and sustains the pilaster with excellent effect. This expedient, much followed in Italy and in France, was original with him, as was also his modillion cornice, extending to the frieze, and giving extent and importance to the entablature, proportioned to the whole height of the building, in a better mode than that of Peruzzi. This beautiful invention is recommended without ostentation:—"Questa cornice," says he, "la quale ho mesa più volte in opera per finimento di facciate, ho conosciuto che riesce molto grata." This cornice was made the termination of the fabric, on which he never permitted a blocking or balustrade. But Vignola was chiefly remarkable for an artifice of composition, which, by subordinating the parts, gave apparent vastness to the whole; his doors and windows are remarkably small, the latter 3 feet 8 inches by 7 feet, only in Caprarola—but, being finely proportioned and complete in their members, deceive the spectator into the belief of actual scale. This artifice has been much used by his successors, especially in the upper portions of churches, with good effect, where no means of comparison or admeasurement are offered, just as a man becomes a giant when seen upon a hill and against the clouds.

Sansovino, the Lombardi, and San Michele, Palladio and Scammozzi, formed a school peculiar to Venice, uniting sculpture in the happiest manner with Architecture. In the Library of Venice, one of the most beautiful buildings of the world, Sansovino adopted two orders, to the upper of which he applied the deep frieze and entablature suited to the *entire* height, after the invention of Peruzzi, the intercolumnations being occupied with the Venetian window, so much employed afterwards in England,—these windows having columns doubled transversely in the thickness of the wall, by which an amazing solidity and richness is communicated to the architecture; an arrange-

Digitized by Google

ment subsequently adopted by Palladio in his town house at Vicenza with admirable effect.

San Michele, chiefly a military architect, and who first gave the gates of cities the character afterwards universal, is remarkable for the energy, richness, and expression given to his works. His employment of the orders and of rustics is exemplary. His gates at Verona, and his palaces in Venice, especially of the Grimani, are masterpieces.

Palladio, by much the most laborious and learned architect of the revival, produced his effects by a happy employment of two orders, the one on a scale comprehending the entire height, the other subordinate, comprehending about two-thirds of that height. This principle had been employed by the ancients in the adjustment of side porticoes to the temple, and in the Propylea of Athens. In this last, the subordinate being 10, the principal is 15; in the Casa del Capitano it is 10 to 16½; the same in the Basilica; in the Casa Valmarana 10 to 20½. This principle may be regarded as the secret of Palladio's magnificence, just as the subordination of windows and features was of Vignola's. But his employment of the arch in conjunction with the trabeated arrangement adopted from the baths, his classical plans, his mastery over all the features and parts of architecture, cannot be enough studied.

The two volumes on the architecture of Venice, by Cicognara—the single volume of the works of San Michele at Verona, by Albertolli—and the works of Palladio, by Bertotti Scammozzi, should be within the reach of reference to the architect at all times.

The pompous Scammozzi (braggadocio, as Inigo Jones calls him, probably from personal acquaintance, in his visit in 1614,) was a follower of Palladio, though he assumed to be an inventor. He was, however, the first to accomplish a portico, of any size, with a disengaged trabeation, in the church of the Theani. He was chiefly remarkable for the employment of orders above orders in well-studied proportions.

Galeazzo Alessi turned the peculiar locality of Genoa to immense advantage, and was the most active of those who have stamped upon the architecture of Genoa that sumptuous character so original and exemplary. This architect was in frequent competition with Palladio and Vignola at Brescia, Bologna, and other cities.

L'Escot and Philibert de l'Orme, in France, laboured with great advantage on the materials thus offered by the great masters of Italy; and they are chiefly remarkable for their adaptation of their inventions to the requirements of a northern climate, in large windows, chimney shafts, high roofs, &c.

The student will add many more peculiarities and titles of merit to the great masters of the revival, from the hints here offered.

FEMALE CHARACTERS IN 'KING JOHN.'

The Lady Constance.

In her elaborate consideration of the character of The Lady Constance, Mrs. Jameson falls somewhat into the error which has constantly, more or less, been committed in treating of Shakespeare's historical plays—that of failing to consider, not only the composition of each drama on the whole, but the conception and developement of every character in it, primarily and independently with relation to dramatic art, and without any regard whatever to real or alleged departures from the literal or even the substantial truth of history. Unless this point of view be steadily maintained by the critic in forming his *dramatic* judgment, his opinions will, at every moment, be liable to fall into inconsistency and injustice. A very little reflection should have sufficed to show any commentator the preposterousness of dragging Shakespeare, the dramatist—the dramatist transcendently and exclusively—to the bar of historical criticism—a kind of procedure which, in the following observations, we shall studiously avoid.

The subject of the piece before us, then, is not so much 'The Life and Death of King John,' as it is the triumph of right, and justice, and feeling, and beauty, and poetry, for all time, in the universal heart of mankind, over the very meanness, selfishness, and crime, which oppress and crush them for the hour. Whatever doubts might exist at the historic period in question, as to the validity of young Arthur's title to the crown of *England*, any such doubtful title would have been little to the purpose of the dramatist; and accordingly we find, in the play, that Arthur's claim and John's usurpation are regarded by all parties as clear and indisputable. In the very opening of the piece,

> Your strong possession, much more than your right,
> Or else it must go wrong with you and me,

says John's mother, Queen Elinor, assuredly his warmest and stauchest partizan. This clearness of Arthur's title cannot be overlooked for a moment, without essentially perverting and weakening the interest which the poet has attached to the position as well as the character of the widowed mother, Constance of Bretagne. Nor is it Shakespeare's fault, if the reader or spectator fail to be forcibly reminded of this fact, at numerous intervals throughout the play. Among the most remarkable of these instances, are the passages to that effect in those ruminating speeches of Faulconbridge (the most intelligent as well as devoted and spirited of John's adherents) which form, as it were, the chorus of the tragedy. Thus, when moralizing on the peace patched up between the two kings by the marriage of Blanch to the Dauphin, he speaks of the French monarch as one

> —whose armour conscience buckled on,
> Whom zeal and charity brought to the field,
> As God's own soldier;

and adds that this "commodity," this self-interest, against which the speaker is railing,

> Hath drawn him from his own determined aid,
> From a resolved and honourable war,
> To a most base and vile-concluded peace.

Again, at the close of the fourth act, over the dead body of Arthur, addressing Hubert, he says—

> Go, bear him in thine arms—
> How easy dost thou take all England up!
> From forth this morsel of dead royalty,
> The life, the right, and truth, of all this realm
> Is fled to heaven.

It is in tracing the course of the retribution upon John, political and personal, as a usurper and a murderer, brought upon him by those unscrupulous means which he had taken to prevent it, that the interest of the concluding act resides, and the satisfaction which it affords to the feelings of the auditor.

So far, then, from representing either Arthur or his mother as ambitious, the poet, in legitimate pursuit of his *dramatic* object, has studiously excluded from view every historical circumstance that could countenance the smallest impression of that nature. He has not only reduced the prince's age to such tender years as would hardly admit of his harbouring a political sentiment; but, in direct opposition to the recorded facts, represents the boy as one of a peculiarly mild and quiet temper, devoid of all princely airs and all appetite for command—simple-hearted, meek, and affectionate. He weeps at the violent scene produced by his mother's meeting with Queen Elinor, and exclaims,

> Good my mother, peace!
> I would that I were low laid in my grave;
> I am not worth this coil that's made for me.

Again, to his mother's violent grief at hearing of the accommodation between the two kings, he says,

> I do beseech you, madam, be content.

And again, in "his innocent prate" to his keeper Hubert,

> So I were out of prison, and kept sheep,
> I should be merry as the day is long, &c.

Is it not plain that this very inoffensiveness is designed by the dramatist to place in the stronger light the clearness of Arthur's title, as the *exclusive* reason for his uncle's hostility, at the same time that it deepens so wonderfully the pathos of the scene wherein he pleads for the preservation of his eyes? Another element of this pathos is, the exceeding beauty which the poet has ascribed to the princely boy, which is made to affect the hearts of all who approach him, even the rudest of his uncle's creatures, and gives to this only orphan child the crowning endearment to his widowed mother's heart.

That mother herself, it is most important to observe and to bear in mind, whatever she was in history, is *not* represented by the poet as courting power for its own sake. Had he so represented her, it would have defeated one of those fine contrasts of character in which Shakespeare so much delighted—that between Constance and Elinor, which is perfect in every way. The whole conduct and language of Constance in the piece, show that her excessive fondness for her son, and that alone, makes her so eagerly desire the restitution of his lawful inheritance. She longs to see this one sole, and beautiful, and gracious object of her maternal idolatry, placed on the pedestal of grandeur which is his birthright, that she may idolize it more fondly still—

> Thou and thine usurp
> The domination, royalties and rights
> Of this oppressed boy.

Such is her defiance to Elinor. Still more strikingly unfolded is the entire subordination, in the breast of Constance, of all ambitious view, to the concentrated feelings of the doting mother, in the well-known address to Arthur, when her sworn friends have betrayed her—

> If thou that bidst me be content wert grim,
> Ugly, and slanderous to thy mother's womb,
> * * * *
> I would not care, I then would be content;
> For then I should not love thee; no, nor thou
> Become thy great birth, nor deserve a crown.
> But thou art fair, and at thy birth, dear boy!
> Nature and Fortune joined to make thee great.
> Of Nature's gifts thou mayst with lilies boast,
> And with the half-blown rose. But Fortune, oh!
> She is corrupted, changed, and, won from thee,
> Adulterates hourly with thine uncle John.

If we could still doubt of the absolute and all-absorbing predominance of the maternal affection, it is disclosed to us in all its awful and beautiful depth, in those bursts of sublimest poetry that gush from her heart when informed of Arthur's capture. In all those she never once thinks of him as a prince, who ought to be a king—far less of the station to which she is herself entitled. It is the thought of never more beholding her "absent child," her "pretty Arthur," her "fair son," that is driving her to distraction—

> I will not keep this form upon my head
> While there is such disorder in my wit.—
> O Lord! my boy! my Arthur! my fair son!
> My life! my joy! my soul! my all the world!
> My widow-comfort, and my sorrow's cure!

We come now to consider the most important point of all that should guide us in judging of the histrionic expression of this character—namely, the indications afforded by the whole tenour of the incident and dialogue, as to the individuality of Constance's person and disposition as a *woman*—independently even of that maternal relation in which the drama constantly places her before us.

That Constance, in the poet's conception, is of graceful as well as noble person, we are not left to infer merely from the graces of her vigorous mind, nor from the rare loveliness of her child, and her extreme sensibility to it. We hear of her beauty more explicitly from the impression which it makes upon those around her,—especially from the exclamations of King Philip on beholding her distress for Arthur's loss, the greater part of which we regret to find omitted in the present acting of the play—

> O, fair affliction, peace!....
> Bind up those tresses. O, what love I note
> In the fair multitude of those her hairs, &c.

But it is the moral and intellectual beauty, the logic and the poetry of the character, that it is most essential to consider. And here we are called upon to dissent materially from the view of this matter which Mrs. Jameson has exhibited at some length. In commencing her essay on this character, she numbers among the qualities which the Lady Constance of Shakespeare has in common with the mother of Coriolanus, "self-will and exceeding pride." In a following page, she speaks again of "her haughty spirit" and "her towering pride." Again, of "her proud spirit" and "her energetic self-will;" and "her impetuous temper conflicting with her pride." Once more—"On the whole it may be said, that pride and maternal affection form the basis of the character of Constance;" and "in all the state of her great grief, a grand impersonation of pride and passion." But the contrary of all this inherent pride and self-will which the critic alleges, appears in the poet's delineation. It is the mild language of gratitude and patience that we first hear from Constance, in the scene where she thanks the French king and the Austrian duke for their espousal of her dear son's cause, but entreats them to wait for John's answer to the French ambassador before they proceed to bloodshed. In the scene where she encounters Elinor, all the "pride and self-will" are on the side of her enemies; the outraged right and feeling on her own. To Elinor's

> Who is it thou dost call usurper, France?

it is but natural that she should say

> Let me make answer—thy usurping son.

Digitized by Google

And Elinor's atrocious imputation upon her, of adultery and of guilty ambition,

> Out, insolent! thy bastard shall be king,
> That thou mayst be a queen, and check the world,

more than justifies all the keenness of retort that follows. That she resents the insults thus added to the injuries of her foes, infers but little *pride*. To have remained silent under them, would have been nothing less than meanness in any woman—most of all in a sovereign princess on so public an occasion. Again, in all her exclamations on the betrayal of her cause by her selfish allies, we find, indeed, all the sensitive and intellectual widow and mother,

> Oppressed with wrongs, and therefore full of fears;

but where is the proud self-will? It seems extraordinary that Mrs. Jameson and others should not have reflected that, had a particle of it been represented as belonging originally and inherently to the character of Constance, it would utterly have marred the grand, the sublime effect of her concluding words in this majestic scene. It is simply because there is no pride in her nature—nothing but the indispensable self-respect of the woman, the mother, and the princess, and more especially because the whole previous tenor of this scene itself exhibits her as anything but "an impersonation of *pride*"—

> For I am sick, and capable of fears;
> Oppressed with wrongs, and therefore full of fears;
> A widow, husbandless, subject to fears;
> A woman, naturally born to fears—

that the passage in question is so wonderfully impressive. It is not the proud, fierce, haughty woman, but the sensitive and apprehensive woman alone, lashed out of all her usual habits of mind and temper, by direst injury and basest treachery, into intense resistance and resentment, to whom it can ever occur to say,

> I will *instruct* my sorrows to be proud;
> For grief is proud, and *makes* his owner stout.
> To me, and to the state of my great *grief*,
> Let kings assemble; for my *grief's* so great,
> That no supporter but the huge firm earth
> Can hold it up. Here I and *Sorrow* sit;
> Here is my throne—bid kings come bow to it!

Here is pride indeed! wrung, for the first time, from a noble, tender nature, by the awful climax of indignant sorrow, and placing the "gentle Constance" on that towering eminence from whence, in the desolate majesty of afflicted right, she hurls the keen lightnings of her eloquence upon the mean-souled great ones around her. Theirs, indeed, is the gain, but hers is the triumph!

So much have we deemed it necessary to say in vindication of the moral qualities wherewith Shakespeare has endowed his heroine. We must now say something, for the guidance, it may be, both of the reader and the performer, in correction of some erroneous views, as we esteem them, to which the authoress above-cited, and others, have given circulation, respecting the intellectual powers developed in this character. The substance of Mrs. Jameson's observations on this head is contained in the following sentence:—"The moral energy, that faculty which is principally exercised in self-control, and gives consistency to the rest, is deficient; or rather, to speak more correctly, the extraordinary developement of sensibility and imagination, which lends to the character its rich poetica colouring, leaves the other qualities comparatively subordinate."

Following out this view of the matter, Mrs. Jameson speaks of the dramatic Constance as "a generous woman, betrayed by her own rash confidence." Generous she is; but where is the rashness of her confidence? What better resource have she and her son, than to trust in the solemn protestations which the potentates best able to assist them are made to deliver at the opening of the second act? What weakness of intellect is here implied? It is clearly her best policy to confide in them. Again, Mrs. Jameson desires us to observe, that the heroine cannot, from her intellectual resources, "borrow patience to submit, or fortitude to endure." But, all feeling apart, what, we would ask, betrayed on every hand, and friendless as she is, has she to gain by submitting and enduring? Constance herself understands her own position as clearly, as she feels it keenly; and states it, too, with her own ever forcible and coherent logic. In answer to the legate's observation, respecting the excommunication of King John,—

> There's law and warrant, lady, for my curse,—

most justly does she reply,

> And for mine too: when law can do no right,
> Let it be lawful that law bar no wrong;
> Law cannot give my child his kingdom here,
> For he that holds his kingdom holds the law:
> Therefore, since law itself is perfect wrong,
> How can the law forbid my tongue to curse? †

Equally logical—more strikingly and terribly consequential than the cool reasonings of the Cardinal himself—are these sentences addressed to him in her despairing scene:—

> And, father cardinal, I have heard you say,
> That we shall see and know our friends in heaven.
> *If that be true*, I shall see my boy again;
> *For*, since the birth of Cain, the first male child,
> To him that did but yesterday suspire,
> There was not such a gracious creature born.
> *But* now will canker sorrow eat my bud,
> And chase the native beauty from his cheek,
> And he will look as hollow as a ghost,
> As dim and meagre as an ague's fit;
> And so he'll die; and, rising so again,
> When I shall meet him in the court of heaven,
> I shall not know him: *therefore* never, never
> Must I behold my pretty Arthur more!

Here, indeed, her heart may be said to stimulate her intellect to a sort of preternatural activity; but she does not rave, she reasons herself into the climax of despair. Yet Mrs. Jameson speaks of "the bewildered pathos and poetry of this address;" and in a subsequent page proceeds in the same strain—"It is this exceeding vivacity of imagination which in the end turns sorrow to frenzy," and calls the sublime effusions of her despair "the frantic violence of uncontrolled feeling." This is nothing less than using to the afflicted mother the language addressed to her by the cold-blooded papal diplomatist,

> Lady, you utter madness, and not sorrow:

and Constance's own answer to the Cardinal is a triumphant refutation of all such criticism:—

> Thou art not holy, to belie me so.
> I am not mad: this hair I tear is mine;
> My name is Constance; I was Geffrey's wife;
> Young Arthur is my son, and he is lost:
> I am not mad;—I would to heaven I were!
> For then, 'tis like, I should forget myself:
> O, if I could, what grief should I forget!
> Preach some philosophy to make me mad,
> And thou shalt be canonized, cardinal;
> For, *being not mad*, but sensible of grief,
> *My reasonable part produces reason*
> *How I may be delivered of these woes*,
> And teaches me to kill or hang myself.
> *If I were mad*, I should forget my son,
> Or madly think a babe of clouts were he:‡
> I am not mad; too well, too well I feel
> The different plague of each calamity.

But in spite of this convincing protest, Mrs. Jameson sees only, in the lady's invocation to Death, that she "heaps one ghastly image upon another with all the wild luxuriance of a distempered fancy":—

> O amiable, lovely death!
> Thou odoriferous stench! sound rottenness!
> Arise forth from thy couch of lasting night,
> Thou hate and terror to prosperity;
> And I will kiss thy detestable bones,
> And put my eye-balls in thy vaulty brows,
> And ring these fingers with thy household worms,
> And stop this gap of breath with fulsome dust,
> And be a carrion monster like thyself!
> Come, grin on me, and I will think thou smil'st,
> And buss thee as thy wife! Misery's love,
> O come to me!

For our own part, we can only exclaim upon this, oh! tremendous and resistless logic of high and true passion! oh, "lion sinews" lent to the intellect by the fearful pressure of despair upon the heart!

We deem it requisite to dwell a little longer upon Mrs. Jameson's general view of this matter, because the error into which she seems to us to fall respecting it, is an essential one, and pervades her criticism of Shakespeare's more poetical characters. The two following passages from this same essay of hers shall be our text:—

"In fact, it is not pride, nor temper, nor ambition, nor even maternal affection, which, in Constance gives the prevailing tone to the whole character; it is the predominance of imagination. In the poetical, fanciful, excitable cast of her mind, in the *excess* of the ideal power, tinging all her affections, exalting all her sentiments and thoughts, and animating the expression of both, Constance can only be compared to Juliet." Again: "Some of the most splendid poetry to be met with in Shakespeare may be found in the parts of Juliet and Constance; the most splendid, perhaps, excepting only the parts of Lear and Othello; and for the same reason, that Lear and Othello as men, and Juliet and Constance as women, are distinguished by the predominance of the same faculties—passion and imagination."

Here seems to us to lie a radical error, that of regarding the "*excess* of the ideal power," the *predominance* of passion and imagination, as productive of "the most splendid poetry." For the very reason that Lear and Othello, Juliet and Constance, are sublime poets, that is, possess the creative mental faculties in the highest degree, neither fancy nor passion, however vigorous in them, can be predominant, but must exist in due proportion to the strength of the reasoning faculty. Otherwise, the result would be, not poetry, but mere wild, incoherent raving, such as Mrs. Jameson has mistakingly attributed to the most impassioned speeches of Constance herself. But, as she herself protests, she is not mad; and not being mad, her most impassioned are also her most logical passages; as is ever the case with a being like her, in whom a noble nature has unfolded itself in harmonious vigour. Her glowing heart, indeed, stirred by the deepest of all passions, a widowed mother's boundless and idolatrous love, puts her rich and lively fancy into most active play; but only her bright strong intellect could mould and elevate those crowding images into glorious and deathless imaginings. Whatever the actual princess might be, *Shakespeare's* Constance is a poetess of the first order: and so, in one sense, must the actress be who undertakes to personate her. Feeling, fancy, and reason, in her soul, must each be strong, and all harmoniously blended.

This brings us to the histrionic part of our observations; and, as in the course of Mrs. Siddons's theatrical career, the Lady Constance became one of her great parts, we turn, of necessity, to the record which Mr. Campbell's Life of that great performer affords us, of what were her conception and execution of this arduous character.

The remarks, then, extracted from Mrs. Siddons's memoranda, on the character of Constance, whom she designates as "the majestic, the passionate, the tender," show that she felt and appreciated the essential tenderness of the character more fully and justly than the literary critic of her own sex, from whom we have been quoting. Still we find, from a careful perusal of the great actress's observations, that the ideas of pride and majesty and command unduly predominate in her conception of the "gentle Constance." One source of this error it is important to point out. The first mention of Constance in the play speaks of her as "that ambitious Constance;" and we affirm most confidently, that there is not another syllable in the piece from which it is possible to infer ambition on her part. It is quite plain, that the indolence or carelessness of most readers—a carelessness or indolence of which we might cite many similar examples—has caused this description of Constance to pass with them as the *dramatist's own* view of the character. But what is the fact? That these words come from the lips of Constance's deadly enemy and rival, Queen Elinor, who almost in the same breath confesses to us the fact of her and her son John's usurpation. It is this same essential fact, attested by their own words, which leaves not the smallest scope for ambition in Constance, even supposing that the poet had, which he has not, represented her as loving power for its own sake. Surely, it is no more a proof of ambition that she desires to see her son possessed of a crown which is his birthright, than it is of covetousness for a man to desire the payment of a debt which is justly due to him. Yet we find even the acute perception of Mrs. Siddons to have been misled by the prevailing prepossession. Though abandoning the most absurd form of it, she says, "I believe I shall not be thought singular when I assert, that though she has been designated the ambitious Constance, she has been ambitious only for her son. It was for him, and him alone, that she aspired to, and struggled for hereditary sovereignty." The same mistaken impression leads the great performer to speak repeatedly of "disappointed ambition," "baffled ambition," as among the indignant feelings of Constance at the treachery of her allies. To the same source it must surely be attributed, that this interesting critic tells us at the very outset of her observations—"My idea of Constance is that of a lofty and proud spirit, associated with the most exquisite feelings of maternal tender-

† The omission of this passage in acting, mutilates the developement of the intellectual part of this interesting character.

‡ The omission of these eight lines in performance, is another mutilation, of the same nature as the one last-mentioned, and even more injurious.

Digitized by Google

ness." This mistake, on which we have already had occasion to descant, of regarding her in the grand scene with her treacherous protectors, as possessed by a pride *inherent* and *personal*, instead of seeing that her sublime scorn and indignation spring *exclusively* from her deep, keen sense of violated friendship, now added with lightning suddenness to outraged right and feeling and affection, lent, we suspect a colouring not quite appropriate, a too predominant bitterness and asperity of tone, to her acting of this scene, majestic and wonderful as it must have been. The sarcasms, we fear, were uttered too much in the manner of a woman *habitually* sarcastic; and she seems to have fallen somewhat into the same error which we have pointed out in Mrs. Jameson's criticism, of confounding with mere frenzy the awful poetry that bursts from the tortured heart of the heroine. "Goaded and stung," says she, "by the treachery of her faithless friends, and almost maddened by the injuries they have heaped upon her, she becomes desperate and ferocious as a hunted *tigress* in defence of her young, and it seems that existence itself must surely issue forth with the utterance of that *frantic* and appalling exclamation,—

A wicked day, and not a holy day! &c."

Yet Constance might more justly be likened to a hunted hind than a hunted tigress; nor should her exclamations on this occasion, however appalling, be termed frantic. In all this, the poet, ever true to nature, has observed a due gradation. Here, indeed, is grief in its utmost, its proudest intensity; but here is no despair—she is not even on the way to frenzy, as we find her to be in the scene which follows the capture of her son.

Mr. Campbell, who, in speaking of Mrs. Siddons's performance of this character, professes to have "almost as many circumstantial recollections of her as there are speeches in the part," and who saw her enact it when ten years of practice and improvement in it must have brought her performance to its greatest perfection, relates one particular of it, which seems to us to exemplify very strikingly the erroneous bias which we have indicated as warping her judgment respecting the essential qualities of the character. "When," says her biographer, "she patted Lewis on the breast with the words, 'Thine honour! oh, thine honour!' *there was a sublimity in the laugh of her sarcasm.*" Now, we must affirm, that anything like sarcastic expression of this passage is quite inconsistent with the essential character of Constance, and most inappropriate to the occasion upon which it is delivered. Here we must again insist upon the strict consequentiality and the sterling policy of the heroine's behaviour throughout this agitated scene. Her expressions of indignation and her appeals to heaven, are not only natural in themselves, but the inspiring instinct of maternal solicitude teaches her, that friendless and powerless as she is otherwise left, they are the only instruments, the only weapons, remaining to her. Her one sole chance of redress now lies in the effect which her indignant logic may yet work upon the sensibility to shame and guilt that lingers in the breasts of some at least of her selfish allies, and which, it is barely possible, may move them to recede from their last disgraceful compact. Her invocation, in itself so sublimely fervent and impressive—

Arm, arm, you heavens, against these perjured kings!
A widow cries; be husband to me, heavens!
Let not the hours of this ungodly day
Wear out the day in peace; but, ere sunset,
Set armed discord 'twixt these perjured kings!
Hear me, O hear me!

takes the awful character of prophecy from the almost immediate appearance of the legate, in whose mission there comes to her aid an accidental indeed, and indifferent, but a most powerful ally. She is now encouraged to strain every nerve of her intellect and her eloquence in enforcing the cardinal's denunciation against her principal oppressor, and his menace to the most potent of her treacherous friends. The dauphin, whose sense of honour, throughout the piece, is represented as more susceptible than his father's, is the first to show signs of retracting their late political engagements. Upon this relenting emotion she eagerly lays hold; and in opposition to the entreaty of his bride, the Lady Blanch, who kneels to beg that he will not turn his arms against her uncle, makes the fervent religious adjuration—

O, upon *my* knee,
Made hard with kneeling, I do pray to thee,
Thou virtuous dauphin, alter not the doom
Forethought by heaven!

And to Blanch's last appeal—

Now shall I see thy love. What motive may
Be stronger with thee than the name of wife?

she rejoins, by urging triumphantly the noble moral sentiment,—

That which upholdeth him that thee upholds,
His honour: O, thine honour, Lewis, thine honour!

And on Philip's consenting to break the treaty, she concludes with the grateful exclamation—

O, fair return of banished majesty!

Where, we would ask, is the tone of *sarcasm* in all this? The slightest touch of it might have defeated the very object, dearest to her on earth, for which she was pleading, by checking and offending those "compunctious visitings" the first symptoms of which she was alert to observe and to nourish in the breasts of her unfaithful friends. *Sarcasm* from her lips, at such a moment! No, indeed,—Constance and Shakespeare know too well what they are about!

OUR WEEKLY GOSSIP.

A most painful and affecting paragraph appears in the *Leeds Intelligencer*, to which, but for that previous circulation, we should have hesitated to give publicity; embodying an extract from a letter written by Mrs. Southey (so long a favourite with the literary public as Caroline Bowles) to Mrs. Sigourney, the American authoress, in answer to one from the latter lady, wherein she had desired to be remembered to the Laureate. The misery which it describes is too sad and sacred for the common gaze; and it is not without a feeling of awe that we contribute to draw aside the dark veil which has fallen between the world and him who was for so many years before it in the character of one of its teachers. "You desire (says Mrs. Southey) to be remembered to him who sang of 'Thalaba, the wild and wondrous tale.' Alas! my friend, the dull, cold ear of death is not more insensible than his, my dearest husband's, to all communication from the world without. Scarcely can I keep hold of the last poor comfort of believing that he still knows me. This almost complete unconsciousness has not been of more than six months' standing, though more than two years have elapsed since he has written even his name. After the death of his first wife, 'Edith,'—of his first love—who was for several years insane, his health was terribly shaken. Yet for the greater part of a year that he spent with me in Hampshire, my former home, it seemed perfectly re-established, and he used to say, 'It had surely pleased God that the last years of his life should be happy.' But the Almighty's will was otherwise. The little cloud soon appeared which was in no long time to overshadow all. In the blackness of its shadow we still live, and shall pass from under it only to the portals of the grave. The last three years have done upon me the work of twenty. The one sole business of my life is that which, I verily believe, keeps the life in me—the guardianship of my dear, helpless, unconscious husband."

An 'Old Subscriber' to the *Athenæum*, as well as to the Opera, kindly sets us right about some of the forthcoming appearances at Her Majesty's Theatre in a note containing the following information:—

February 6, 1843.

I have just read your short article on Mr. Lumley's Opera session. The following are the new engagements.—Sig. Conti, a tenor of the first order, and of the *pure* as opposed to the florid and artificial style; Sig. Dal Fiori, who was a very good *secondo tenore* at Modena in the autumn of 1841, and who is now at Paris, where he has succeeded so well, that he has been engaged for two more seasons, *at an advanced salary*; Sig. Zanchi, a *primo basso*, but not *primo assoluto*, at "La Fenice," at Venice, a year ago; Sig. Fornasari, a very eminent *basso cantante*, is engaged, not for London, but for Vienna; Signora Buccini is a *contralto* of a disagreeable quality of voice, who has obtained an unmerited reputation. Moltini and the bass Panzini are re-engaged: the latter has to leave Cremona, where he now is, in order to be in London on the 28th of this month.

We may add, that the 'Adelia' of Donnizetti has been spoken of as the opening opera, and that a treaty is said to be pending betwixt the management and Sig. Ronconi.

The tidings which are current respecting the Philharmonic Society, are even less promising than we had anticipated. The salaries of the orchestral performers have been cut down; and it is stated that Sig. Dragonetti has retired. This is ominous: as also the heavy defalcation said to have taken place in the subscription list. There is hardly time left for the Directors to consider any measures of thorough reform, but unless some be at once introduced, the Society *must* die, and that with little honour to itself: the reserve fund accumulated in former prosperous seasons being almost exhausted.—The *programme* of the Second Concert of the Paris *Conservatoire*, consisted of Beethoven's Symphony in A, a symphony by Haydn, a scene from the 'Iphigenia' of Gluck, a motett by Cherubini, and a violin performance by Sig. Camillo Sivori.

A one-act trifle, 'Les Deux Bergères,' by M. Boulanger, son of the excellent comic actress, was produced last week at the *Opéra Comique*. Here, by the way, we may add, that Madame Thillon, the pretty English *prima donna* of that lively theatre, is said to be engaged for our own Princess's Theatre after Easter. The rest of the musical news from Paris does not amount to much. The great organ in the Church of St. Eustache is about to be rebuilt: it is promised, when finished to be the most monstrous instrument in Europe. Never was reform more loudly called for than in the organs of Paris, the hoarse and metallic dissonance of whose tones is nearly as offensive as the use to which they are put. A revival, however, in church music, and, of course, in organ-playing, is on foot in the French metropolis. To the organ in question will be applied the improvements in the distribution of wind, of our ingenious countryman, Mr. Barker, which have already proved so successful in the new instrument at the Cathedral of St. Denis.—A musical performance recently given in the Church of St. Roch, deserves notice for the peculiarity of its character. It consisted of a mass, the composition of M. Gauthier, a blind man born, and executed entirely by blind artists, trained under his professorship, at the Royal Institution!

Paganini seems fated "to adorn a tale," if not "to point a moral," even after his decease. The Bishop of Nice—so the continental journals inform us—holding to the gross bigotry which denounced the artist when dead, of whom, when living, the Romish Church made such liberal use, has denied permission for the entrance of Paganini's remains into consecrated ground. The body, now embalmed, is said to be lying in state, in a house appropriated to the purpose, while the affair is under discussion at Rome.—The Emperor of Austria has just granted a pension to Madame Gottlieb, a singer of other days, whose claim on his bounty has been an autograph letter from Mozart, in which he congratulates her on the skill and taste with which she *created* the part of *Panina* in the 'Flauto Magico.'

The bust of the Duke of Newcastle, executed by Mr. Behnes, at the expense of the members of the College, is about to be put up in the Library at Eton. This is the fifth lately contributed—Lord North, presented by Lord Guildford; Charles Fox, by Lord Holland; Lord Grenville, by the Duke of Buckingham; and the Marquis Wellesley, by himself.

Letters from Berlin mention the death, in that city, at the age of sixty-six, of the Baron de Lamotte-Fouqué, known through all the world of letters as the author of the spiritual and beautiful legend of 'Undine.'—From Leipsic, it is stated, that a monument in honour of Sebastian Bach, the gift of Mendelssohn, has just been erected in front of the school of St. Thomas, in that town, where the illustrious composer formed so many excellent pupils. The monument, which is in white Carrara marble, after the design of the celebrated painter Bendemann, is composed of a richly-ornamented Byzantine column, enclosing a niche, within which is placed the bust of Bach. The inauguration is to take place on the 21st of March, the anniversary of the deceased composer's birthday, when a grand musical festival will be given in celebration of the event.

According to the *Kunstblatt*, a German painter, Edward Hansen, of Basle, has been commissioned to prepare cartoons for the oil paintings, intended to decorate the church at Oscott, which Mr. Pugin is about to build, at the Earl of Shrewsbury's expense. One of the designs, "the Last Judgment," is spoken of as exceedingly beautiful. On the same authority, we learn that Thorwaldsen has sustained a loss by the wreck of a ship, bound from Leghorn to Hamburg. On board were several of his works: most of which were saved, but were completely spoilt by the sea

Digitized by Google

water; from which we infer that they were plaster casts.

The choir of Strasburg Minster is about to be restored. The work is to be commenced next spring, and a sum of 15,500 fr. is already subscribed for the purpose.—The committee for completing the cathedral at Cologne, have met and voted 30,000 thalers, to enable the architect to begin the nave, and 10,000 for the north tower. King Louis, of Bavaria, has promised four painted windows to be executed in Munich, and ready for the cathedral in 1847.

A letter from Amsterdam, February 4th, states that the tower of the church of Westzaan, in southern Holland, one of the most remarkable monuments of the Middle Ages, had just fallen down. Last year it was observed that the upper part was slightly out of the perpendicular, and orders were given to prop it up. The architect to whom this operation was intrusted took up his residence with his family in a little wooden house, constructed at the foot of the tower. The fall took place during the night, and the whole mass came down on the house in which were the architect, his wife, three children, and four workmen. Of the nine persons, only four bodies, horribly mutilated, have been found, two of these being the architect and his wife, locked in each other's arms. The tower was built in the ninth century, and its height was about 200 feet.

The *Diario di Roma* mentions that a committee has been formed for erecting monuments to the honour of Metastasio, Visconti, and Pinelli. The models are finished.—The Academy of Saint Cecilia, at Rome, has admitted as one of its honorary members the Italian poetess, Rosa Taddei: and our countryman, Mr. Barry, the architect, has been elected a member of the Academy of St. Luke. He is, it is stated, the only English member of this celebrated and ancient society.

The Records of the First Fruits and Tenths Office —formerly an office of the Exchequer of Account, but recently dissolved—which were handed over to the charge of Queen Anne's Bounty Office, were, on Wednesday last, brought within the practical operation of the Public Records Act, and transferred from Dean's Yard, Westminster, to Carlton Ride. The most important of these Records are the Surveys of Ecclesiastical Benefices taken in Henry the Eighth's time, which were printed by the late Record Commission, and are known as the 'Valor Ecclesiasticus;' the certificates of all ecclesiastical livings not exceeding the yearly value of *50l.*; and the Bishops' Certificates of Institutions and Patronages, from the middle of the sixteenth century to the present time. The beneficial result of this transfer to our clerical readers and the public in general is, that they may now obtain that information for a shilling, for which they formerly paid seldom less than a mark, or thirteen shillings and fourpence.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.

WILLIAM BARNARD, Keeper.

THE CHINESE COLLECTION, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpasses in extent and grandeur any similar display in the known world, entirely filling the spacious saloon, 225 feet in length, and embracing upwards of fifty figures as large as life, all fac-similes, in their native costumes, from the highest mandarin to the blind mendicant; also many thousand specimens, illustrating the appearance, manners, and customs of more than three hundred million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d.; Children under Twelve years of age, 1s.

THE THAMES TUNNEL

OPEN to Visitors daily, (Sunday excepted,) from 9 A.M. until 6 P.M., and is brilliantly lighted with Gas. Admittance, 1s. each. The Entrance for a short time longer is only on the Middlesex side of the River, and next the Tunnel Pier, at Wapping, the Rotherhithe Entrance being closed, to finish the new Staircase, and make that Shaft available as a throughfare for foot Passengers.

By order of the Board of Directors,

Company's Office, 2, Walbrook Buildings, City, February, 1843. J. CHARLIER, Clerk of the Company.

N.B. Steam Boats to Wapping, from Hungerford, Adelphi, Temple-Bar, Blackfriars Bridge, Old Shades, Old Swan, and Adelaide Piers, London Bridge, at every hour.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

Jan. 18.—Mr. Murchison, President, in the chair.

1. 'On the Silurian Rocks of the South of Westmoreland and North of Lancashire,' by Mr. D. Sharpe, in continuation of a paper read on the 2nd of February 1842, (*Athen.* No. 751). The author again takes for the base line of his observations, the Coniston limestone, as laid down by Professor Sedgwick, and which Mr. Marshall has shown to be the lowest bed of the Silurian system; the list of fossils found here contains many well-known lower Silurian species. Above the limestone lies a series of beds of slates, shales, and flagstones, which are traced from Broughton in Furness to Shap Fells, gradually thinning away in their course eastward. Lower Silurian shells are found in one of these beds. Grey slaty grits succeed, described in Mr. Sharpe's first paper as the lower division of the Windermere rocks, but now classed in the lower Silurian formation, they are of considerable thickness, much cut up by cleaving, and contain no fossils; they extend from the banks of the Dudden to Shap Fells. The Blawith limestone, or second band of calcareous slate, of Prof. Sedgwick, has only been found in two localities, and seems not to be continuous across the country. Mr. Marshall found lower Silurian species of shells in this limestone near Blawith. The uppermost beds of the lower Silurian series, in the slates and flagstones of Kirkby Ireleth, which Mr. Sharpe traced in detail, from their rise from below the mountain limestone, near Ireleth, till they are lost below the old red sandstone, on the Birkbeck-beck near Shap Wells. The slaty character of the rocks is more developed in High Furness than in any other part of the district under consideration, and many beds furnish good slate in that neighbourhood, which are not worth working elsewhere. *Windermere Rocks.* This local name is still retained for an extensive series of hard grits which form the middle portion of the Silurian system of Westmoreland; probably they will ultimately be identified with the Wenlock formation, but from the scarcity of fossils it is doubtful whether a portion may not belong to the lower Ludlows. This formation covers the eastern part of Low Furness, and extends down the lower half of Windermere; but in following it into Westmoreland it is found to be gradually overlaid by the Ludlow rocks, until it is entirely lost near Borrowdale; it appears to rest conformably on the Kirkby Ireleth slate, but is quite unconformable to the Ludlow formation, next to be described. The Windermere rocks, on the east of the lane, were described before, but were erroneously made to unite with the western portion of the formation, from which they are separated by a strip of the lower Ludlow rock, extending in a sort of trough between Fawcett Forest and Whin Fell; they form the high hills of Creyrig Forest, Whin Fell, and Howgill Fell, and reach down the east of the lane to Casterton Fell; in these hills there are several axes of elevation, and the beds are frequently repeated.—*Ludlow Rocks.* The area covered by this formation is carried somewhat to the north of the boundary formerly described. The little *Terebratula navicula* has been found in great numbers in a bed which occurs in the middle of the formation, and it is scattered sparingly through the lower beds, but it appears to have died out suddenly, as it has not been found in the upper beds of the series; this species is found under the same circumstances, in the lower Ludlow shales, near Presteign, where there is no Aymestry limestone; and it has been used by Mr. Murchison to mark the division of the Ludlow formation, where the Aymestry limestone is wanting. Mr. Sharpe makes the same use of this shell in Westmoreland, classing as lower Ludlows all the beds in which it is found. This division of the Ludlow rocks coincides with that obtained from the difference of direction and dip of the beds; the lower series partakes of the north-east strike, which prevails in the older formations, and is traversed by many of the faults which cross those formations: but the upper Ludlow beds are thrown up into anticlinal ridges with a different direction. Mr. Sharpe gives a list of the fossils found in each division of the formation, containing forty-four of Mr. Murchison's species of the old red sandstone and upper Ludlow, fourteen of those of the Aymestry limestone, and twenty-two of those of the lower Ludlow beds. Of the shells placed hitherto in the old red sandstone all but two species have now been found in the Ludlow beds, showing that the red beds, containing those shells in Herefordshire, must be classed with the upper Ludlows.—*Old Red Sandstone.* The mapping of this rock in the upper valley of the lane is completed. The large masses of red and brown gravel, found in the valleys of the Lune, Kent, and Sprint, the age of which was before left open, are now referred to a modern surface drift.—*Mountain Limestone.* Mr. Sharpe examined that part of Low Furness covered by this rock, to ascertain the geological position of the Ulverston iron ore, which is usually found in perpendicular veins cutting through the limestone and bearing W.N.W. In no instance are the veins continued into the Silurian rocks. *Trap Rocks* are rare in the district under examination. Prof. Sedgwick has laid down some masses of igneous rocks on the south side of the road over Shap Fells; and a trap dyke was observed at Biglands, south of Newby Bridge; in both these cases the disturbance of the neighbouring rocks has broken up the regularity of the planes of slaty cleavage, from which it is argued, that the eruption of the trap was subsequent to that of the shap granite, as the cleavage planes of the slates pass through all the faults supposed to have been caused by upheaval of the granite. The author concludes by a detailed comparison of the beds he has observed in these counties with those of the borders of Wales, which Mr. Murchison has adopted as the types of the Silurian system, and also with the rocks of Denbighshire and Merionethshire, to which his attention was first drawn by the late Mr. Bowman's memoirs on Llangollen, &c., and he points out the closest resemblance between the Silurian rocks of North Wales and Westmoreland, which differ materially in mineral character from those of Shropshire, &c.; nevertheless, the divisions of the Silurian system, laid down by Mr. Murchison, can be traced in each district by the evidence of the organic remains.

2. 'On the Stratified Rocks of Berwickshire, and their Imbedded Organic Remains,' by Mr. W. Stevenson, of Dunse; communicated by the President.—The most ancient rock of this district is greywacke, forming the fundamental rock of the Lammermuirs. No undoubted organic remains have been found in it, but some curious markings occur on slabs, for which it is difficult to account, without supposing the influence of organic agency. The greywacke presents the uniform appearance of a deep sea deposit—perhaps laid down upon the bottom of a wide-spreading ocean of great profundity, and therefore removed from the disturbing agency of wind and tides. Resting unconformably upon it, are strata belonging to the upper division of the old red sandstone. The lowest of these is a conglomerate, varying much in thickness. Then occur red and greenish-white sandstone, with soft red argillaceous strata. Part of these seem to have been formed in a shallow sea, exhibiting ripple-marks, and containing remains of *Holoptychius* and *Dendrodus*. Another portion contains few traces of fossils, and appears to have been deposited in deeper water. Some curious spindle-shaped markings, and the impression called kelpies' feet occur. These strata appear to have subsided, when a re-deposition of deep water sandstones took place, without imbedded fossils. Next in order come calcareous shales, sandstones, and cornstones, without organic remains. The junction of these with the red sandstones is not seen, being cut off by faults and trap dykes. Then succeed shales, marls, clays, and sandstones, abounding in vegetable fossils, coniferæ, stigmariæ, &c. &c., containing very few shells; these are followed by thick-bedded reddish sandstone, carboniferous strata, containing three or four coal seams; and lastly, encrinal limestone; so that the Berwickshire coal measures must be regarded as lower in geological position than the Newcastle coal. Mr. Stevenson answers the question,—Does new red sandstone exist in Berwickshire? in the negative, and regards the beds at Cumbledge, described by Mr. D. Milne as such, as old red; the soft red clays and sands at Lintlaw, derived from the disintegration of the old red sandstone, and regarded by Mr. D. Milne as new red, Mr. Stevenson considers as of undetermined age, from want of sufficient evidence. The position of the Berwickshire greywacke is also indeterminate. The very disturbed character of the strata in this district, particularly in the neighbourhood of the Lammermuir Hills, where they are intersected by a complicated system of faults and trap dykes, renders the determination of their true order of succession a work of no small labour.

3. 'Notice of the Fossilized Remains of the Soft Parts of Mollusca,' by Dr. Mantell.—Substances resembling coprolites in general appearance and composition, but destitute of the spiral structure which those bodies present, have been classed with them under the name of pseudo-coprolites. In the upper green sand at Southbourne, in Sussex, such concre-

Digitized by Google

tions are thickly interspersed among remains of mollusca, and they are frequently found within the cavities of shells. Dr. Mantell considers them as having originated from the soft bodies of the mollusca. They had been observed in the Kentish rag near Maidstone, by Mr. W. H. Bensted, who, communicating with Dr. Mantell on the subject, expressed his belief that the carbonaceous matter filling the shells was derived from the soft bodies of mollusca, and that the concretionary and amorphous portions of the same matter, dispersed through the sandstone of that bed, were fossilized remains of the soft bodies of the animals which had become disengaged from their shells, and had floated in the sea, till enveloped in the sand and mud which is now concreted into coarse sandstone. Some of the substances of these bodies being submitted to chemical examination by the Rev. J. B. Reade, animal carbon was detected. Dr. Mantell proposes to name such fossils *Molluskite*.

4. 'Description of Three Fossil Fruits from the Chalk Formation of the South-East of England,' by Dr. Mantell.—These additions to the Flora of the cretaceous era, at present very limited, are:—1. *Zamia Sussexiensis*, from green sand, near Wellingdon, Sussex; 2. *Abies Benstedi*, discovered by Mr. Bensted in the green sand near Maidstone; and 3. *Carpolithes Smithiæ*, from the white chalk of Kent.

MEETINGS FOR THE ENSUING WEEK.

SAT. Asiatic Society, 2, P.M.
— Botanic Society, 4.
MON. Geographical Society, half-past 8.
— Royal Academy, 8.—Sculpture.
TUES. Meteorological Society, 8.
— Institution of Civil Engineers, 8.—'Description of the Roofs over Buckingham Palace, covered with Lord Stanhope's Composition,' by P. Hogg.—'Description of Burdon's Shingling Machine,' by L. Hill, jun.—'Account of a Series of Experiments on the Comparative Strength of Solid and Hollow Axles,' by J. O. York.—'Description of new Process for making Iron,' by W. N. Clay.
— Zoological Society, half-past 8.
WED. Society of Arts, 8.—Mr. Rotch 'On Mr. Hullmandel's Lithotint Process.'

FINE ARTS

NEW PUBLICATIONS.

THE publishing season has commenced with what looks like unusual activity after the stagnant state into which the print trade had subsided.

Foremost in magnitude and pretensions, though not in interest or excellence, is Mr. Ryall's elaborate engraving after Sir George Hayter's clever composition, but vulgar picture, of *The Coronation of Queen Victoria*. The arrangement of the groups, and the general effect of the scene, are good; but the figures remind one of Madame Tussaud's wax-work; and the royal and noble personages look with smirking meaningless stare, as if waiting for some signal to show that enthusiasm which ought to burst forth spontaneously, and characterize the very moment—the act of coronation being just accomplished. The immense size of the chin of almost every face, is an extraordinary peculiarity; and there is an expression about the mouth of each as if the jaw were, what is termed, "underhung." The brilliant appearance of the painting, which, after the tricky fashion of the day, was shown by gaslight, and the cleverness with which all the sumptuous accessories of the scene were represented, diverted attention from these defects, which have necessarily become more evident in the engraving, if indeed the facial peculiarities be not exaggerated.

Mr. Allan's best picture, *The Slave Market at Constantinople*, has been engraved, and makes a print which possesses the rare merit of being an animated and characteristic representation of a scene with some dramatic interest. The stately old Turk on horseback making his selection from the lovely group of Circassian captives, with grave indifference to their distress—the black Eunuch looking up to receive his commands, and the tearing away of one just sold from all those who made life precious—the eager eyes peering through the lattices in the background, and the attendants serving coffee, complete a picture that is but too often realized in "the City of the Sultan."

Mr. Edwin Landseer is in the field again with hawk and hound, and a whole pack of horses and dogs are behind, the huntsmen and whippers-in, who are to profit by the sport, harking them on. Some of the prints, however, are, to the original pictures, but as stuffed museum specimens compared with the living animals. This remark does not apply to the *Hawking in the Olden Time*—a hawk pouncing on a heron in mid-air—which Mr. F. C. Lewis has rendered in mezzotint with discrimination of character in the birds and of texture in the painting, and an artist's feeling for the painter's manner—qualities but rarely seen in modern engravings. The same engraver has translated, in a similar style of freedom and boldness, two studies of falcons, called *Mr. and Mrs. Hawk*—the tasselled hood of one reminding us of a duenna. The lustrous eye of the unhooded one glances as keenly as it did from the canvas; the plumage of both has the proper mixture of glossy smoothness and feathery softness, and even the tone and handling of the originals are imitated. Mr. Thomas Landseer has not been quite so successful in his mezzotint of Count d'Orsay's Lord Chancellor Poodle *Laying down the Law* to a canine court, though the print is effective and cannot fail to be popular. The gravity of the judge—whose long ears represent the lappets of the wig, and his soft, white hair, the judicial ermine—and the dogged pertinacity of some of the bar are whimsically pourtrayed. The loose, woolly texture of the poodle's shaggy coat, and the semi-transparent skin of his shorn limbs, are well imitated, and the character of the principal figure is well preserved; but the same praise cannot be extended to the other dogs, some of which are inferior in drawing as well as variety of texture.

The illustrations of *Shakespeare's Songs*, by the Etching Club, are so unequal, that it is impossible to pronounce a general judgment on the work. To what extent the artists have been perplexed by having to work a steel-plate, we can only conjecture; but it is manifest, from the results, that they have not been agreed either as to the mode of proceeding or the effects to be desired; indeed, some of the plates resemble lithographs, and are as feeble and woolly as the earlier specimens of that art; while in others we see more of the scraper than the needle, and more of burnishing and rubbing than is consistent with our idea of what a painter's etching ought to be. The mention of a painter's *etching* conveys to every educated mind a distinct idea. The art, indeed, may be well described as *sketching* with a needle instead of a pencil: an etching should therefore always have a similar rough freedom and spirited force, else its characteristic distinctiveness, its very essence, vanishes. This description is justified by the works of the old masters, and we would refer, in proof, to the well-known etchings of Ostade, Berghem, or Vandyck. We stopped, not a week since, at Mr. Molteno's window in Pall-Mall, to admire the 'Titian and his Mistress' of the latter, so that any one who is curious in the matter may institute a comparison for himself. Let such person, while the impression is strong in the mind's eye, turn to Mr. Stone's elaborate contribution to the work before us, and say whether it more resembles a painter's etching or the vignette to the 'Book of Beauty' or the 'Keepsake'; and then to Mr. Townsend's 'Ariel,' and Mr. Horsley's 'Serenader,' and say if they are not more like lithographs than etchings. If our opinion be correct, then, Messrs. Cope, Tayler, and Webster may be commended for having, at least, observed the right principle, which Mr. Knight has somewhat caricatured. Mr. Redgrave again trenches on mezzotint: he exhibits, however, full power over his tools (be it for good or ill); there is a velvety softness about his 'Barbara' that will, we suspect, make it a general favourite, and a sentiment that will recommend it to better judgments. Mr. Cope has dramatic humour, colour, and effect; the central figure of the group is capital—superior, we think, to anything in the collection. Mr. Webster, too, has merit, but there is a sort of rottenness about the lines, and a confusion in the light and shade, that mar the general effect. Mr. Creswick appears to be half-way between wood and steel engraving, without his usual originality of composition. Mr. Bell's 'Dancers' have grace, but want originality: and his 'Ariel' on the bat's back appears to us an unintentional plagiarism. Mr. Stonehouse's contribution might be mistaken for a (very bad) lithograph. Mr. Townsend's 'Ariel,' though open, as we have said, to a like objection, is pretty and fanciful; but it is not 'Ariel'; indeed, from the enormous length of the figure, exceeding even the heroic proportions, it suggests the idea of a young Hercules dying of atrophy. Mr. Horsley's 'Lady sweet' is anybody but the "lady sweet" and *innocent* of the poet's song; but there is a great deal of air, sunrise morning-air and freshness about the lover, which almost reconcile us to the feeble drawing—and both tell their story well.

Among the prints of minor importance, are two by young artists coming into notice: *Sunday Morning*—a peasant reading the Bible to his wife and father at their cottage-door—a sketchy picture by a Mr. Johnstone, showing nice feeling, though the figures have too much the set air of a group of models, in mezzotint by Bromley: and *Dolly Varden* in the wood, admiring her bracelet, and the plump little arm that becomes it so well, which Mr. Wagstaff has engraved in the mixed style of mezzotint, imitating successfully the lively effect of light and colour that was the great charm of the picture. Portraits of two Chief Justices also claim attention; Mr. Phillips's dignified picture of *Sir N. C. Tindal*, in mezzotint, by Samuel Cousins, and a likeness, bordering on caricature, of *Judge Bushe*, of the Irish bench, by W. Stevenson. Of lithography, there are two very neat specimens; a good copy, by L. Sebbers, of the *Three Graces*, engraved in line, by Foster (see *Athen.* No. 767), and a sheet of five pretty little views of churches at Hampstead, Highgate, Hornsey, and Muswell Hill, and the old chapel at Highgate, where Coleridge is buried, tastefully sketched by Mr. H. Gillman, a son of the poet's friend, and nicely lithographed in the tinted style by W. Walton.

The war in China is beginning to furnish its quota of pictorial spoil. M. Borget's *Sketches of China*, however, were taken during the artist's residence at Canton and Macao, before the war actually broke out; and are therefore limited to those places and their immediate vicinity. They form a folio volume, in tinted lithography, M. Eug. Ciceri, the lithographer, imitating the style of M. Borget's pencil sketches. These are doubtless faithful, as they are picturesque; and the artist seems, from his descriptive account of the subjects, to have sketched such groups as he actually saw on the several spots: yet these drawings are so mannered, that they have less of Chinese character than is desirable. They include views of the scenery, which is broken picturesquely; of the great temple and bridge at Canton; the junks, which seem built purposely for artists to sketch; the boat-cabins, in which the poorest classes stow themselves away as close as pigs in a stye; a triumphal arch, of elegant proportions and chaste style; views of the dwellings of mandarins and shopkeepers, which differ little externally, no dwellings being of more than one story. The heavy roofs, with projecting eaves, turned up at the corners, and ornamented with dragons and grotesque gables, are prominent features in the landscape; and the groups peopling the scene also contribute to the Chinese aspect of the views; but the figures are too small and slight to convey a distinct idea of the inhabitants and their costume, and the architecture wants colour to make its due impression. The importance of colour in the representation of Chinese scenes is apparent, from the value which it gives to three marine and coast scenes, representing the *Capture of Amoy*, sketched by Lieut. R. B. Crawford and aquatinted by Papprill; not only is the range of hills along the coast, the heights crowned with "red barbarians" made more distinct, but the gay hues of the junks in the fore-*sea*, give life and character to the views.

MUSIC AND THE DRAMA

COVENT GARDEN.—The ballet opera of 'The Maid of Cashmere,' with music from Auber's 'Le Dieu et la Bayadère,' was revived here on Wednesday, for the purpose of introducing M. Lecomte, a French tenor singer of slender pretensions, as "The Unknown," and Madame Lecomte, of the *Académie Royale*, who was dancing at our Italian Opera some dozen years ago, as the Maid of Cashmere. The lady is a dancer of ability and experience, but there is nothing very captivating in her pantomime or her *tours de force;* and Miss Ballin, though inferior in method, divided the applause with her. M. Lecomte

Digitized by Google

speaks English very well for a Frenchman, and sings with taste, but his voice is weak and ineffective, and he makes too free use of his *falsetto*. The audience laughed, but less at his enunciation, which was very distinct, than at the *mal-apropos* occurrence of such phrases as "I can no more," "I feel overcome with sleep," which the wearied audience eagerly adopted as expressive of their exhausted patience. Mrs. Grattan, a singer with a loud voice, plump person, and more confidence than talent as an actress, who has been transferred from the congenial atmosphere of the Adelphi, made her first appearance on these boards. She met with a cold reception, and some hisses were even heard: indeed, a person who appears to think she has only to exhibit herself, not to assume character, is unfit to appear on a classical stage.

DRURY LANE.—'The Lady of Lyons' is now alternated with Shakspeare's plays, and operas are made after-pieces, 'Der Freyschutz' being added to the number. To-night a new play, called 'A Blot on the 'Scutcheon,' and a new farce, are to be produced.

ST. JAMES'S THEATRE.—*Mr. Charles Braham.*—'*Non è tenore in Italia come Braham*' is a strain of praise as agreeably familiar to the English musical ear, as the melodies of 'Black-eyed Susan,' or 'All's Well.' On the appearance of another of the name, under the tutelage of his father, and obviously launched for a similar career, we have no choice—unpopular though the task be—but to review, in a few words, what *the* Braham has done for his art in England, and what may be expected for the future which lies before the son.

The adage we have quoted is true to the extent that neither Italy, nor any other land, has ever produced any voice of its register superior in the natural power and richness of its tones to that of our tenor. In the days when he was taught, the male *soprano* was not extinct, while the feminine *contralto* was struggling up into an importance of which recent operatic composers have deprived it: consequently there was no temptation for a tenor to stretch the voice upward to those extravagant heights of *falsetto* which the Rubinis of the more modern school have made so fashionable. And mark the result in the wear of the voice, thus naturally treated, not tortured.* Mr. Braham, who made his *début* at the Bath Concerts, in 1794, can still sing in 1843! Our tenor's vocal studies were carefully conducted after the solid Italian fashion. He became, too, a thorough musician; and though Nature had denied him the figure required for an actor, she gave him that dramatic element of passionate and versatile expression, in right of which the artist can sway his audience, though his face undergo no change, and his gestures have no variety. More lifeless and mechanical, as regards action, in the theatre, than even his brother vocalists—for loftiness and variety in his declamation in the church, Mr. Braham has left no peer behind him. Charles Lamb said not half enough of his triumphant delivery of the last tenor recitative from 'Israel in Egypt;' and we know not any words that could worthily praise the agony of Jephtha, or the melancholy of Samson's blindness, as we have heard them, delivered by him, in days gone by.

Rarely, then, has artist appeared in any country—assuredly never in England—more royally endowed with means to charm and to subdue than Braham. But the *will to educate* was either wanting, or was postponed to other less artistic considerations. He would please his public, of whatever quality, and at whatever cost—careless of to-morrow. Hence all the tribe of namby-pamby ballads—vulgar trumpet songs in which the voice bellowed a contest against the instrument—patriotic recitations, fit for no finer ear than that of a Lady Hamilton—alterations of composers' thoughts, which the musician so well knew how to esteem—interpolations, vulgar, trivial, and unmeaning, by which the English musical drama, instead of being gradually trained into such a form and consistency as should be permanent and respectable, was held back and left behind the age in a state of tavern and tea-garden degradation. It is not merely atrabilious critics, or fools of quality intent only on exotic rarities, or rapacious managers, who are to be charged with the present state of our musical stage, so disheartening to the native composer—but singers who *would* bring the galleries down, careless by what sacrifice; but artists who lingered behind instead of rising above their audiences. What hope of a Mozart amongst us, when 'The Bay of Biscay' was *encored* as the public favourite's song of predilection? What chance of a Rossini, when 'Nid Noddin' was thrust into the music lesson scene of 'Il Barbiere,' by way of make-weight to its less comprehensible music? That our operatic public has at all advanced under disadvantages so grave (to which, be it added, national partiality gave a charm and authority) is an evidence full of encouragement; but also, we think, bearing its weight of warning to all young singers commencing their career.

The statement of these considerations—in themselves opportune, the time and present circumstances of our stage considered—has been rendered inevitable by the manner of Mr. Charles Braham's introduction to the public. This was in what may be called a ballad concert, with the exception of Handel's well-worn *Scena*, of no higher musical worth than one of Mr. Russell's entertainments. When we have stated that our young singer has a prepossessing appearance, and a musical voice—hardly a tenor, yet not quite a baritone—that he seems to have adopted some of those peculiarities which were superinduced in his father's case by a too solicitous resolution to ingratiate himself with an imperfectly-cultivated audience—and that he has much to learn in intonation and execution, we have put the truth in its gentlest form, from a natural sympathy with the son of a veteran artist, who, despite of many faults, has, till now, no successor.

THE PRINCESS'S THEATRE.—Mrs. A'Beckett's opera of 'Little Red Riding Hood,' originally brought forward at the Surrey Theatre, has been produced in Oxford Street for the "off-nights." Why a female musical composer has hitherto never been successful, is a riddle which we are contented to hand over to Mrs. Jameson for solution in her 'Memoirs of Female Artists.' The fact stands as we have stated it: from the days of the Electress of Saxony, praised by Burney, down to Mdlle. Löisa Puget (whose romances are nevertheless pretty) and to Mdlle. Louisa Bertin, whom not even the powerful influence of M. Hugo's friendship, and the protection of her father's criticism, in the *Journal des Débats*, could save. At this moment of writing we are told of a Spanish lady, Donna Paulina Cabrero, who is largely praised for some mass-music performed before Queen Ysabel in the chapel of Buen-Retiro. This, however, promises little: since, as we travel southward, the music of the Roman Catholic Church, now-a-days, means an imitation of all the modern flimsy opera rhythms and opera flourishes. But some may ask, wherefore this *fantasia*, instead of an analysis of the production of the English lady? Simply to put off the evil moment when the unpalatable truth must out. The *libretto*, originally set by Boieldieu, has been, "overset," in the fullest acceptation of the word, from the French. The musical ideas are none of them new: neither is there construction or science to make amends for the want of novelty. On the whole, when Mr. Edward Loder is understood to have a 'Little Red Riding Hood' in his portfolio, we cannot but feel that the choice was injudicious. Mrs. Alban Croft has re-appeared in this opera, not, however, to the fulfilment of the promise made by her first performances. A version of 'I Puritani' is announced as in preparation. The management must be confident in its own strength or in public good-nature, seeing that abroad the opera has been nowhere a favourite, dissevered from the original Grisi, Rubini, Lablache, and Tamburini, under whose eyes and *for* whom it was written.

MISCELLANEA

An Avalanche.—The French papers give the details of a calamity which has occurred, in the department of the Isère—the destruction of the village of Valsenestre by an avalanche. The snow-fall buried 26 houses, containing 82 inhabitants,—72 of whom were, however, subsequently restored to the light of day, by means of ropes and ladders let down the chimneys of the houses, from wells dug through the snow which covered them. Amongst the ten persons who perished, nine were crushed to death, or smothered by the snow which enveloped them on every side. The tenth, the mother of the forest-keeper, died in the arms of her son, who was extricated from his critical position twenty-four hours afterwards. The following particulars are interesting. The fatal descent took place between the hours of three and four in the morning, when the villagers were buried in slumber, and the stealthy tread of the mountain-spirit is well expressed in the fact that but few of the sleepers in the buried houses, or in the cottages which it spared, were awakened by his coming. It was not till daybreak that the latter were aware of the calamity which had befallen their neighbours; and the former, (those of them whose homes the casuality had covered but not crushed,) fancied the dawn was long in appearing, and concluded at last, in each case, that the common occurrence among the mountains of a night of snow having blocked up their doors and windows, had made temporary prisoners of them, and awaited the succour of their immediate neighbours without alarm.

The Solar Eclipse.—Whilst watching the progress of the eclipse, in July last, with the aid of an excellent old refracting telescope, made by Dollond, with an object glass of 2¾ inches, I observed a projection on the surface of the moon, and I exclaimed—"I see something on the moon's edge, like a mountain, or like a lofty island when seen at sea" [such as Teneriffe]. This announcement excited intense interest. The Rev. H. H. Jones next saw it, and then Mr. Lamport. Our several descriptions corresponded so exactly, that there can be no mistake as to the fact of the appearance; and we repeated our observations for a considerable time. From that time (July 8) to the present, Mr. Jones and myself have been anxiously looking out for the reports of others on this eclipse, hoping that some scientific astronomers would have noticed and described this interesting appearance. It appears from the reports of those accomplished astronomers, Messrs. Baily and Airy (*ante*, pp. 18, 41), that both these gentlemen saw in the *totality* several of those appearances which are assumed to have been referable to the sun's light. I would submit, that one of those prominences seen by myself, cannot be referred to the sun, but was evidently, in some way or other, connected with the body of the moon, as seen on the edge of its disc. I will not presume to account for this very novel appearance; I only give the fact. That there was no optical illusion, which, had I only seen it, might have been suspected, is fully established by the concurrent testimony of three persons, two of whom, including Mr. Jones, have long been accustomed to astronomical observations with good telescopes. The *mountain, island, protuberance*, or *saw-tooth* prominence, was not of the same depth of tint as the rest of the eclipse: it was considerably more feeble, but maintained a similar form and tint throughout our observation of it. The time when the prominence was first noticed was about a quarter to six, and was distinctly visible till near the termination of the eclipse. In all other respects the discs both of the sun and moon were perfectly defined; and my friend, Mr. Jones, watched most distinctly the moment of disjunction.

Manchester. I am, &c. WM. JOHNS, M.D.

Mount Etna.—Extract of a letter from Palermo, Jan. 5:—"The eruptions of Etna have diminished, and the period of their termination seems approaching. Since my last the explosions have not been considerable. The torrent of lava has made little progress, and the damage which the burning mass occasions is now insignificant, but it always affords opportunities for scientific research and interesting observation. The mountain has become inaccessible, in consequence of the great fall of snow, which covers it to the very brink of the crater. Snow occupies all the other mountains, and entirely covers many other places, the valleys excepted, in which nothing can be more beautiful than the appearance of the vegetation, so remarkable for its extent and richness."

City Antiquities.—In the course of the last few days, while making the excavations for the formation of the sewer, which is to pass through Cloth Fair, West Smithfield, on the site of the ground formerly attached to the monastery of St. Bartholomew the Great, a variety of relics have been found, but nothing of either much interest or value.

Alcohol.—An experiment has been made, at the Theatre of Montpellier, of a new principle of lighting,—from alcohol,—said to be successful, and important to the vine-growing districts of France, as a fresh vent for their produce. The light is stated to be of dazzling brightness, and without either odour or smoke.

TO CORRESPONDENTS.—C. O'N.—A Constant Reader—J. F. H.—E. S.—A Subscriber—C. J. C.—A Pilgrim—J. C.—received.—We have not received a paper signed 'Ignotus.'—The picture is still in the collection referred to by 'An Old Subscriber.'

Errata—P. 89, col. 2, 13 lines from bottom, for "195*l.*" read 95*l.*; p. 114, col. 1, line 24, for "connected" read *unconnected*.

* It is to their determination to be stronger than Nature that we owe the rapid decline of some of the world's best singers. Pasta, for instance, who had a husky and limited voice, *would* sing up to C sharp; and, thanks to her indomitable will, did so. But the organ, thus painfully constructed, lasted only some ten years.

Popular Geographical School Books.

Lately published, 16th edition, in royal 18mo. price 3s. bd.

GUY'S SCHOOL GEOGRAPHY, on a New and Easy Plan. To which are added, a Treatise on the Globes, a copious List of Questions for Examination on the Maps, &c. and a Dictionary of Names of Places, &c., with their true Accentuation and Explanation. With 7 Maps. By JOSEPH GUY, formerly of the Royal Military College, Marlow.

*** The great popularity which Guy's Geography has gained, and its general introduction into schools of eminence, has induced the Author to give to the present Edition a very critical revisal; modern discoveries have been introduced, large additions made, errors corrected, and the whole has been adapted to the present advanced state of the science.

A KEY to the PROBLEMS. Price 1s. 6d.

GUY'S FIRST GEOGRAPHY; being an Introduction to the Author's 'School Geography,' and adapted for the Use of the Junior Classes in Ladies' and Gentlemen's Schools, and for Private Families; with Questions for Examination at the bottom of each page. Illustrated with 6 Maps, 18mo. price 1s. half-bound, or 9d. stiff cover.

GUY'S SCHOOL ATLAS of MODERN GEOGRAPHY, in 16 handsome Maps, royal 4to. coloured, Adapted for the Use of the Junior Classes, and as a First School Atlas. Price only 5s. 4to. half-bound.

RUSSELL'S ATLAS of MODERN GEOGRAPHY. 25 Maps, roy. 8vo. coloured, 12s. half-bd.: Maps plain, 10s.

OSTELL'S NEW GENERAL ATLAS. 30 Maps, royal 4to. coloured, 18s. half-bound; Maps plain, 14s.

RUSSELL'S ATLAS of CLASSICAL GEOGRAPHY. 23 Maps, royal 8vo. coloured, 12s. half-bound; or Maps plain, 10s.

*** New Editions of all Joseph Guy's popular School Books.

Valuable Works on General History for Schools.

GUY'S ELEMENTS of ANCIENT, MODERN, and BRITISH HISTORY. In 3 vols. 12mo. 3s. 6d. each.

*** As the above Volumes contain a copious History of Greece, Rome, and England, together with Egypt, Persia, Carthage, the Phillistines, Phœnicians, Jews, Goths, and Huns, besides all the Nations comprehended in Modern History, they are unquestionably the cheapest School Books in use, and their superior adaptation for teaching and extreme accuracy have given them a preference over all other school histories.

GUY'S CHART of UNIVERSAL HISTORY and BIOGRAPHY; from the Creation to the Present Time. A New and Enlarged Edition. On a large sheet, coloured, price 7s.; or done up as a book, and neatly bound and lettered, price 10s. 6d.; or on Canvas and Roller for the wall, 10s. 6d.

*** This Chart is equally useful for the study of History, as Maps are for Geography, and as a Tablet of Memory for Dates and Facts: nothing can be more useful on the library table.

GUY'S SCHOOL QUESTION BOOK on ANCIENT and MODERN HISTORY, BIOGRAPHY, GEOGRAPHY, ASTRONOMY, and Miscellaneous Subjects. With a Frontispiece Chart of History. 6th edition, 12mo. 4s. 6d. roan.

MAPS and TABLES of CHRONOLOGY and GENEALOGY, illustrative of the History of Europe from its Division under the Western Empire to 1453; with 7 finely coloured Maps, and Genealogical Tables of all the Royal Families of Europe. By Dr. LONGLEY, Bishop of Ripon. In a 4to. vol. price 8s. 6d. half-bound.

Superior Books for Grammar Schools.

Lately published, in fcap. 8vo. price 3s. 6d. bound,

P. VIRGILII MARONIS ÆNEIS in usum studiosæ Juventutis, accurate recensuit. By JOSEPH EDWARDS, A.M., Second Master of King's College School, London.

*** With this Edition of the Æneid great pains have been taken to render it as accurate a text-book as possible. The books are divided into paragraphs indicated by Roman numerals. It is the Virgil in use in King's College.

By the same, price 3s. bound, or with the Æneid, 6s.

QUÆSTIONES VIRGILIANÆ; or, Notes and Questions on the First Six and Ninth Books of the Æneid: adapted to the Middle Forms in Schools.

HORATIUS RESTITUTUS; with an Original Treatise on the Metres of Horace, a Preliminary Dissertation on the Chronology of his Works, and a Life of the Poet. By the Rev. JAMES TATE, Canon Residentiary of St. Paul's. 2nd Edition, 8vo. price 12s. cloth.

"It is a work, both in its design and execution, worthy of very high praise."—*Quarterly Review.*

A HEBREW GRAMMAR in the ENGLISH LANGUAGE. By the Rev. J. S. C. F. FREY, Author of a Hebrew, Latin, and English Dictionary, &c. The 10th Edition, revised, and enlarged by Reading Lessons, Rules, and Analyses from Genesis and the Book of Psalms, by the Author. In 8vo. price 8s. 6d. extra.

*** This Grammar possesses a high rank in Oriental Literature, and is well adapted for self tuition.

GERMAN GRAMMAR, EXERCISES, and KEY, in 1 vol. by F. STROMEYER, Ph. D., Professor of German Literature at the College of Civil Engineers. 12mo. price 2s. 6d. bound.

BENTLEY'S BRITISH CLASS BOOK; or, Exercises in Reading and Elocution, selected almost entirely from the Works of Modern Authors, in Prose and Verse, and designed for the Use of Schools and Families. By the Rev. HUGH BENTLEY. 12mo. price 4s. 6d. bound.

"Mr. Bentley has made the selections with an excellent discrimination and fine taste: and we have no doubt the book will take a station in the first class of works designed for tuition."—*Britannia*, Aug. 1.

GUY'S TUTOR'S ASSISTANT; or, complete School Arithmetic. 16th Edition, 12mo. price 2s. bound.

A KEY to the same; the Questions given much at length, with additional Questions added, for the Use of Teachers in examining their Pupils. 5th Edition, 12mo. price 4s. 6d. bound.

GUY'S ELEMENTS of ASTRONOMY, with 19 Plates, 6th Edition, royal 18mo. price 5s. bd. and lettered.

London: CRADOCK & Co. 48, PATERNOSTER-ROW.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the WESTMINSTER FIRE OFFICE, No. 27, King-street, Covent-garden.

A Dividend of the Profits of this Society was declared on the 1st January, 1842, by which an addition, amounting on the average to 45 *per cent.* on the Premiums received, was made to all Policies entitled to share therein.

Four-fifths, or 80 *per cent.* of the total profits, are divided among the Assured at intervals of five years; in which division all Policies on which two payments have been made, participate.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

UNIVERSAL LIFE ASSURANCE SOCIETY,

LONDON, CALCUTTA, MADRAS, and BOMBAY.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Colonel Sir Richard Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq.	Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

The Directors of the Universal Life Assurance Society invite attention of Assurers to the returns afforded to Policy holders by their offices, as detailed in the statement below, and having every reason to expect that the returns in future years will be equally favourable, the Directors recommend an early application to secure so important a benefit.

The following Table will show the operation of the Reductions made by the Society:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduction.	Annual Premium payable in 1840-41-42.
20	May 1834	£1,000	£19 6 8	£11 12 0	£7 14 8
30	—	1,000	24 8 4	14 13 0	9 15 4
40	—	1,000	31 10 0	18 18 0	12 12 0
50	—	1,000	42 15 0	25 13 0	17 2 0
60	—	1,000	66 11 8	39 19 0	26 12 8

Legal Advisers.
Sir Frederick Pollock, M.P. | William Hayes, Esq.

This Office unites the benefit of a Mutual Association with the security of a Proprietary Company, and offers to the Assured amongst others the following advantages:—

1. Credit until death, with privilege of payment at any time previously, for one-half of the premiums for the first five years, upon Assurances for the whole of life, a plan peculiarly advantageous for securing loans.
2. In loan transactions, the lender secured against the risk of the borrower going out of Europe.
3. Sums assured to become payable AT GIVEN AGES, OR DEATH, if previous.
4. Policies indefeasible; fraud alone, not error, vitiating them, and in case the Renewal Premium remains unpaid, the Assurance may be revived at any time within SIX MONTHS, upon satisfactory proof of health, and payment of a trifling fine.
5. Officers in the Army and Navy, and persons residing abroad, or proceeding to any part of the world, may be assured upon equitable terms.
6. Immediate, Survivorship, and Deferred Annuities granted; and Endowments for Children and every other mode of provision for families arranged.

All the rates will be found to have been computed as low as is consistent with security. JOSEPH BERRIDGE, Secretary.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4s. 6d. per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

KINAHAN'S L.L. WHISKY, WINE, and FOREIGN SPIRIT STORES, 25, KING WILLIAM-STREET, STRAND.—Messrs. Kinahan & Co. of Dublin, beg to call the attention of the Public to the above Establishment, where they can be supplied in any quantity with those choice Wines and Spirits for which their Dublin house has been so long celebrated. KINAHAN'S L.L. WHISKY (six years old) is well known to be the purest and most wholesome spirit ever imported. Prime Gin, Brandy, Rum, &c.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and are famous for the hairs not coming loose—1s. An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

Caution,—Beware of the words "From Metcalfe's," adopted by some houses.

CARD-PLATE ENGRAVED TO ANY PATTERN 2s., and 100 Visiting Cards, from plate, 2s.; Plate engraved with CREST and Name, 5s. Note paper 4s., 6s., 8s., and 10s. per ream; letter, 8s., 10s., 12s. 6d., and 15s. per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5s. per ream, or richly finished in gold, silver, or colours, at 1s. 4d. per quire: no charge for the die. Wafers from the die, 1s. per 100, or 6s. 6d. per 1,000; high satin palace note paper, five quires, 1s. 6d.; envelopes, 5s., 7s. 6d., and 9s. per 1,000, or 1s. per dozen stamped; sealing wax from 4s. per lb.; best drawing pencils 4s. per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1s. 6d. per pack, or four packs 5s. Newspapers lent to read at 9d. per week. CIRCULATING LIBRARY—Terms: 2l. 2s. per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

CRESTS ENGRAVED on VISITING CARDS in the first-rate style, 6s.; without the crest, 2s. 6d.; and 100 cards, 2s. 6d.; and also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at the Warehouses of Messrs. BARRY & SON, EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN, or sent on application any distance free of expense. Superfine letter papers, 27s., 23s., 20s., 18s., 17s., 14s. 6d., 12s., and 8s. per ream; note ditto, 18s., 16s., 12s., 8s., 6s., and 4s. per ream.

Either of the above papers may be stamped with crest, coronet, or initials, for the additional charge of 10s. per ream, Messrs. Barry & Son finding the dies and wafers from it at 7s. per 1,000. Their miscellaneous stock embraces dressing cases, writing desks, inkstands, fancy note paper and envelopes, suitable for invitations, complimentary notes, weddings, &c.; wafers from the antique, diurnal note and envelopes, envelope cases, Bibles and Prayers richly gilt, Mordan's gold and silver gauntlet pencil cases, elegant penholders and toilet and smelling bottles, souvenirs, card-cases, pocket-books, and every description of useful stationery, with postage stamps and envelopes at Government prices.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	d.		s.	d.
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	3	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1	6	Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike *the party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35s.; a best Gothic border 30-inch Japan tray, 12s.; a dozen ivory table knives, 11s.; dessert ditto, 8s.; a pair of carvers, 4s. 6d. A Palmer's Candle Lamp, bronze or lacquered, 9s.; a solar ditto, to burn common oil without smoke or smell, 25s.; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1s. each; best ivory-handle razors, 3s. 6d. per pair.

41 and 42, Barbican, and at 16 Norton Folgate.

CASTOR OIL.—H. TAYLOR, Chemist, 10, Pall Mall, London, has prepared Castor Oil in a concentrated form, enclosed in Capsules of Gelatine, by which the disagreeable taste of this medicine is entirely avoided. They will be found the most pleasant method of taking that safe aperient medicine. The Dose is from one to four capsules. In Boxes at 2s. 6d. each, and can be sent by post for 4d.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headache, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles at 1s. 1½d. or 2s. 9d. each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Rob. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Price 2s. 9d., 5s. 6d.; quarts, 8s. 6d. Sold by all Perfumers and Medicine Venders.

TO LADIES.

ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family*.—A creamy, odoriferous preparation from *Oriental Exotics*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion*, it imparts a juvenile roseate hue, and to the *neck, hand*, and *arm*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4s. 6d. and 8s. 6d. per bottle, duty included.

CAUTION.—Ask for "ROWLAND'S KALYDOR," and see that these words are on the envelope, as much *pernicious* trash is now offered to the Public as "KALYDOR" by Perfumers of *apparent* respectability.

*** To protect the Public from fraud, the *Hon. Commissioners of Stamps* have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20, Hatton-garden; sold by them, and by Chemists and Perfumers.

A Key to the German Language and Conversation; with an Easy Introduction to the German Grammar, by D. BOILEAU, 4th edition, 12mo. cloth boards, 3*s.* 6*d.*

The German Substantive developed in its Relations to Gender, Declension, and Number, by H. G. Mixault, German Master of the Liverpool Collegiate Institution, and the Royal Institution, 8vo. cloth boards, 5*s.*

Selections from the best German Authors, in Prose and Poetry, by Dr. L. Bernstein, Professor of the German Language in the Manchester New College, 8vo. cl. bds. 6*s.* 6*d.*

Paradigms, and Glossary to the German Reading Lessons, selected from Menzel's Geschichte der Deutschen, by Dr. Bialloblottsky, 8vo. cloth boards, 5*s.*

A Treatise on the Pronunciation of the German Language, adapted for the Use of Beginners, and for Students who require only to rectify their Pronunciation, by G. NAGEL, in 1 vol. small 8vo. neatly bound in cloth boards, 4*s.*
"It is altogether a very useful book, and unique in its kind—and we are not aware of any other that will fully supply its place."—*Times*, Oct. 4, 1841.

TIARKS' Introductory Grammar of the German Language, with an Introductory Reader and Introductory Exercises, 2nd edition, 12mo. cloth boards, 3*s.* 6*d.*

Fünf Märchen aus der Tausend und Einen Nacht, übersetzt von A. L. Grimm, 1 vol. 12mo. neatly bound, 3*s.* 6*d.*
This is a reprint of five of the most popular Tales out of the Thousand and One Nights, translated by the learned A. L. Grimm. The style is inimitable, and it is one of the most entertaining reading books which can be used by any person studying the German language.

Short Moral Tales (in German)—An Introductory Reading Book for School and Private Instruction, in the German Language, selected and illustrated with Explanatory Notes, by W. Berger, 12mo. neatly bound in cloth, 4*s.*
This is an extremely judicious and carefully made selection. It contains specimens from all the most celebrated modern writers of Juvenile and Moral Tales, and is incomparably the best reading book that can be put into the hands of a young person commencing the study of the German language.

DONATTI'S Grammar of the German Language, on a new and improved principle, 3rd edition, 12mo. cloth boards, 3*s.*
